

University of Colorado Boulder Catalog, 2011–12

By learning you will teach, by teaching you will learn.

—LATIN PROVERB

Redefining Learning & Teaching

*Above: Nobel Laureate and physics professor **Eric Cornell** in his lab with graduate students Kevin Cossel and Laura Sinclair. Cornell is best known for producing a Bose-Einstein condensate in a sample of trapped atoms. Recently he has begun a project to measure the electric dipole moment of the electron, a project designed to investigate the particle physics concept known as “supersymmetry.”*

About the Cover Photographs

Front cover:

Psychology and neuroscience professor **Yuko Munakata** (right) and **Hannah Snyder**, a psychology and neuroscience graduate student, in front of brain scans from their study that sheds light on the brain mechanisms that allow us to make choices. Their research ultimately could be helpful in improving treatments for the millions of people who suffer from anxiety disorder.

Back cover:

Left, **Adam Bradley**, associate professor of English, spent years combing through the Library of Congress in Washington, DC, to piece together and finish Ralph Ellison's second and long-awaited book, which was incomplete when he died. Ellison's first book was 1952's *The Invisible Man*, which appears on required reading lists in high schools and universities across the country.

Top right, Professor **Leslie Leinwand** of CU's new Colorado Initiative on Molecular Biology (CIMB) works with one of her students, Chris Wall. Their research studies snake hearts after the snakes have eaten. The reptiles' hearts grow larger when digesting prey and Leinwand's group is studying how this phenomenon can aid the human heart.

Bottom right, Associate Professor **Will Medlin** with the Department of Chemical and Biological Engineering is working to create new catalysts for biofuel production. Medlin and his students use this multi-spectrometer to view the structure and composition of catalytic surfaces so they can design cheaper and more efficient catalysts for producing biochemicals and biofuels.

Academic Calendar

The campus operates year round on a semester system, with fall and spring semesters of 16 weeks each, a 10-week summer session, and a three-week "Maymester" academic period between spring semester and summer session.

Summer Session 2011

April 1 (Thurs.)	Transfer application deadline for summer and fall sessions
May 9 (Mon.)	Maymester begins
May 26 (Thurs.)	Final exams for Maymester
May 30 (Mon.)	Memorial Day holiday; campus closed
May 31 (Tues.)	Classes begin for terms A, C, and D; 7:30 a.m.
July 1 (Fri.)	Final examinations for term A (first five-week term)
July 4 (Mon.)	Independence Day holiday; campus closed
July 5 (Tues.)	Classes begin for term B (second five-week term)
July 22 (Fri.)	Final examinations for term C (eight-week term)
Aug. 5 (Fri.)	Final examinations for terms B and D (second five-week and 10-week terms)
Aug. 6 (Sat.)	Official graduation date. No summer ceremony.

Fall Semester 2011

Aug. 22 (Mon.)	Classes begin; 8:00 a.m.
Sept. 5 (Mon.)	Labor Day holiday; campus closed
Oct. 1 (Fri.)	Freshman and transfer application deadline for spring semester
Oct. 14–16 (Fri.–Sun.)	Family Weekend
Nov. 21–23 (Mon.–Wed.)	Fall break; no classes
Nov. 24–25 (Thurs.–Fri.)	Thanksgiving holiday; campus closed
Dec. 1 (Thurs.)	Freshman non-binding early notification application deadline for fall and summer sessions
Dec. 9 (Fri.)	Last day of classes
Dec. 10–15 (Sat.–Thurs.)	Final examinations
Dec. 16 (Fri.)	Commencement

Spring Semester 2012

Jan. 15 (Sun.)	Freshman application deadline for summer and fall sessions
Jan. 16 (Mon.)	Martin Luther King Jr. holiday; campus closed
Jan. 17 (Tues.)	Classes begin; 8:00 a.m.
Mar. 26–30 (Mon.–Fri.)	Spring break
April 1 (Sun.)	Transfer application deadline for fall and summer sessions
May 1 (Tues.)	Freshman enrollment confirmation deadline
May 4 (Fri.)	Last day of classes
May 5–10 (Sat.–Thurs.)	Final examinations
May 11 (Fri.)	Commencement

Summer Session 2012

May 14 (Mon.)	Maymester begins
May 28 (Mon.)	Memorial Day holiday; campus closed
June 1 (Fri.)	Final exams for Maymester
June 4 (Mon.)	Classes begin for terms A, C, and D; 7:30 A.M.
July 4 (Weds.)	Independence Day holiday; campus closed
July 6 (Fri.)	Final examinations for term A (first five-week term)
July 10 (Tues.)	Classes begin for term B (second five-week term)
July 27 (Fri.)	Final examinations for term C (eight-week term)
Aug. 10 (Fri.)	Final examinations for terms B and D (second five-week and 10-week terms)
Aug. 11 (Sat.)	Official graduation date. No summer ceremony.

The university's calendar committee requests that make-up time be provided to students absent for religious reasons.

The Catalog

The 2011–12 *University of Colorado Boulder Catalog* contains a summary of campus facilities, programs, and services; descriptions of colleges, schools, and individual departments; and degree requirements, course descriptions, and faculty listings as of December 2010. Students should refer to the degree, major, and certification requirements listed at the time they formally enter a program. For additional information, students should consult their dean's office.

Because the catalog is compiled well in advance of the academic year it covers, changes in programs, policies, and the academic calendar may occur. Up-to-date information may be obtained by consulting departmental advisors, checking departmental bulletin boards, visiting MyCUInfo (mycuinfo.colorado.edu) and the catalog website (www.colorado.edu/catalog), and reviewing registration materials distributed each semester.

All catalog information is subject to change without notice or obligation.

Statement on Diversity

At the University of Colorado Boulder we are committed to building a campus community in which diversity is a fundamental value. People are different and the differences among us are what we call diversity—a natural and enriching hallmark of life. Diversity includes, but is not limited to, ethnicity, race, gender, age, class, sexual orientation, religion, disability, political viewpoints, veteran status, gender identity/expression, and health status. A climate of healthy diversity is one in which people value individual and group differences, respect the perspectives of others, and communicate openly.

Diversity is a key to inclusive excellence in education. A diverse learning environment better prepares all students for the world that awaits them. CU-Boulder is committed to enriching the lives of our students, faculty, and staff by providing a diverse campus where the exchange of ideas, knowledge, and perspectives is an active part of learning.

—from the *Guidelines for Diversity Planning*

The University of Colorado does not discriminate on the basis of race, color, national origin, sex, age, disability, creed, religion, sexual orientation, or veteran status in admission and access to, and treatment and employment in, its educational programs and activities.

CU-Boulder takes action to increase ethnic, cultural, and gender diversity, to employ qualified disabled individuals, and to provide equal opportunity to all students and employees.

University of Colorado Boulder Catalog (USPS 651-060). 3100 Marine Street, 584 UCB, Boulder, Colorado 80309-0584. Volume 2011, No. 2, April. Published six times a year: January, twice in April, November, and December. Periodicals postage paid at Boulder, Colorado, and additional mailing offices. POSTMASTER: Send address changes to the *University of Colorado Boulder Catalog*, University of Colorado Boulder, 584 UCB, Boulder, Colorado 80309-0584.

Administrative Officers

CU System

BRUCE BENSON
President. BS, University of Colorado Boulder.

LEONARD DINEGAR
Senior vice president and chief of staff. BA, Catholic University of America; MA, University of Colorado Denver.

KELLY FOX
Vice president and chief financial officer. BA, University of Nebraska; MA, University of Colorado Denver.

DANIEL J. WILKERSON
Vice president, university counsel, and secretary to the Board of Regents. BA, Cornell University; JD, Willamette University.

TANYA KELLY-BOWRY
Vice president for government relations. BA, University of Colorado Boulder; MA, Regis University.

CU-Boulder

PHILIP P. DISTEFANO
Chancellor; professor of education. BS, PhD, Ohio State University; MA, West Virginia University.

RUSSELL L. MOORE
Provost and executive vice chancellor for academic affairs. BS, University of California, Davis; PhD, Washington State University.

ROBERT BOSWELL
Interim vice chancellor for diversity, equity, and community engagement. BA, Marietta College; PhD, University of Colorado Boulder.

FRANK BRUNO
Vice chancellor for administration. BA, St. John's University; MS, New York Institute of Technology.

RIC PORRECA
Senior vice chancellor and chief financial officer. BA, North Adams State College.

STEIN STURE
Vice chancellor for research. BS, MS, PhD, University of Colorado Boulder.

JULIE WONG
Vice chancellor for student affairs. BA, San Jose State University; MA, Michigan State University; PhD, University of Southern California.

THANK YOU FOR YOUR INTEREST in the University of Colorado Boulder, and to those of you who will be attending CU-Boulder this year, welcome to our university community!

At CU-Boulder, we are proud to educate the future leaders of Colorado and the world, with renowned professors who help students think critically, build practical knowledge, and develop a broad global perspective—essential ingredients to our country's long-term growth and quality of life.

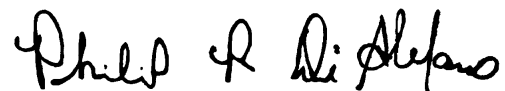

Our professors enable each student to create a unique pathway through the university, delivering a dynamic academic experience that goes well beyond the traditional classroom, while preparing them to make a tremendous difference in people's lives.

The end result? CU-Boulder students receive not only an unforgettable college experience and a competitive advantage in the marketplace; they enter the larger world as proud and loyal CU alumni and compassionate and well-informed global citizens.

I am fortunate to know first-hand the rewards of teaching since I have been a professor of education for most of my career. Since I joined CU-Boulder in 1974 it has been my honor to serve as professor, dean, vice chancellor, provost, and chancellor.

It is with great pride that I welcome you to CU-Boulder and invite you to participate in both the learning and the teaching that goes on here!

Sincerely,

PHILIP P. DISTEFANO
Chancellor, University of Colorado Boulder

Redefining Learning & Teaching: the Classroom

At the heart of the learning and teaching process is the CU-Boulder classroom, where more than 3,400 courses are taught in 150 fields of study.

College of Music student Derek Hebert (*above*) rehearses middle school students as part of the Trying on Teaching program. The program creates a mentoring and hands-on teaching experience for high school students in order to attract high-quality candidates to music education. Trying on Teaching was developed by **James Austin**, professor of music education, and **Peter Miksza**, assistant professor of music education.

Applied mathematics instructor Mary Nelson focuses on integrating active learning components into math and science courses to make the concepts more understandable and accessible to students. She has found that when freshman calculus students are encouraged to talk about the subject's concepts in small discussion groups, they are more likely to pass the class. "The awareness of the process of learning is a critical ingredient to successful learning," said Nelson.

Associate professor of classics Elspeth Dusinberre gained much of her knowledge in the field, digging in archaeological sites in Greece, Egypt, and Turkey. At CU-Boulder, she has applied a novel approach to teaching, using a variety of instructional techniques—including multimedia and the Internet—to bring the ancient world to life for her students. Dusinberre tells her students that "the emphasis should be on your learning, not on my teaching. After all, it is what you get out of a course that really matters."

Redefining Learning & Teaching: the Community

In 2010, Senior Instructor Susan Morley was influential in getting the **Tax Help Colorado** program up and running at the Leeds School of Business. The program offers free tax help to low-income individuals and families as part of an expanding statewide partnership with The Piton Foundation and other Colorado colleges—while providing undergraduate and graduate students with hands-on training and experience with tax returns.

Professor of planning and design Willem van Vliet helped develop a local children’s initiative called **Growing Up Boulder** (*above*). This initiative is a partnership with the City of Boulder, the Boulder Valley School District, and many non-profit organizations that focuses on making Boulder a more inclusive place for children and youth of all income levels, abilities, and ethnicities. It gives children a voice in creating places in Boulder that make young people feel recognized and valued.

Colorado Law’s Entrepreneurial Law Clinic (ELC) provides law students with practical experience in transactional law. The clinic’s clients include graduate students, professors, local entrepreneurs, and start-up companies. Third-year law students staff the clinic under the joint supervision of a full-time clinician and attorneys from top law firms in Boulder and Denver. They provide legal advice on a wide range of business-law issues, including entity formation, intellectual property, employment, and contracts.

Redefining Learning & Teaching: the Nation

From 2007 to 2010, linguistics professor David Rood and students in the linguistics master's degree program recorded and permanently archived Lakota conversational data (*above, from left: Babette Thin Elk, Gwendolyn Holmes, Della Bad Wound, David Rood, and Charles Thode*). Della, of Denver, is a Lakota elder and professional research associate who helped with the project and provided support for the students.

Assistant journalism professor Nabil Echchaibi, associate director of the Center for Media, Religion and Culture, is writing a cultural history for Muslims in the Rocky Mountain region. He and his students are producing a documentary, ***Muslims in the Rockies***, based on interviews with communities in Colorado, Wyoming, New Mexico, Utah, Idaho, and Arizona. "We want the local story," Echchaibi said. "Our research is part of that new consciousness that Islam is also an American story."

Chancellor Philip DiStefano affirmed to President Obama in 2010 that CU-Boulder would help fulfill a national shortage in math and science teachers. DiStefano was one of four public research university leaders invited to the White House to represent universities nationwide that have pledged to double the number of science and math teachers who graduate by 2015. During the visit, Obama praised CU's innovative programs.

Redefining Learning & Teaching: the World

In 2010, professor of education Shelby A. Wolf (*above*) completed a three-year research project, **Looking for Change**, with the Tate Modern museum in London. The project focuses on the “imaginative continuum” in young children and how that can be stretched to even greater capacity, not only through viewing the work of professional artists but through the children’s own creative endeavors. She co-designed a resource to help teachers use the art in galleries and museums to enhance curricular goals and is writing a book about her research.

Núria Silleras-Fernández, an assistant professor of **Spanish and Portuguese** and a Catalan native, has brought the study of Catalan language and culture to CU-Boulder for the first time this year. Catalan is a romance language spoken in four European countries: Spain, France, Italy, and the Principality of Andorra. Additionally, an interdisciplinary course titled **Barcelona: Understanding Local and Immigrant Cultures** will be taught in Barcelona in 2011. CU is one of only 13 U.S. universities to have a program in Catalan language and culture.

Architectural engineering students in Senior Instructor Sandra Vásconez’s Sustainable Lighting Workshop were challenged to create low-cost lighting kits that could be used by families in Afghanistan who either do not have access to electricity or who experience extended blackouts. The winning prototype consisted of a simple incandescent lamp retrofitted in a kerosene lantern and powered by a hand crank and battery pack. Six Afghan scholars served as resources to the students and helped to make up the final evaluation team.

AT ITS FIRST SESSION IN 1861, Colorado's territorial legislature passed an act providing for a university in Boulder. Between 1861 and 1876, Boulder citizens donated land south of town and made gifts from \$15 to \$1,000 to match the \$15,000 the state legislature appropriated for the university's construction. In 1875, Colorado citizens laid the cornerstone for the university's first building, Old Main, and officially founded CU in 1876, the same year Colorado joined the union. The university opened its doors the following year with 44 students, a president, and one instructor.

The University of Colorado

Today, the University of Colorado is a four-campus system that includes the University of Colorado Boulder, the University of Colorado Colorado Springs, the University of Colorado Denver, and the University of Colorado Anschutz Medical Campus. The campuses have a combined enrollment of more than 57,000 students. To meet the needs of its students, the university system offers an extensive number of undergraduate, graduate, and professional degree programs, as well as opportunities to study abroad, engage in public service, and conduct research.

CU ranks seventh among public universities and colleges in federal research expenditures and 13th among all universities in federally funded expenditures tracked by the National Science Foundation. Sponsored research within the university system represents annual awards totaling more than \$847 million. Federal agencies are the principal sources of these funds for research and training contracts and grants, but the state of Colorado also provides appropriations for university operations, teaching, and research activities. CU also relies on revenues from tuition and fees, contracts and grants, investments and interest income, health services, and the generous support of private foundations and donors.

An elected nine-member Board of Regents governs CU, and is charged by the state constitution with the general supervision of the university and the exclusive control and direction of all its funds and appropriations, unless otherwise provided by

law. The board conducts its business at regular meetings open to the public and through committees. The president is the chief administrative officer and is responsible for providing leadership to the university.

For more information about the CU Board of Regents, go to www.cu.edu/regents; to learn more about the CU system, visit www.cu.edu.

The Boulder Campus

Statutory Mission

CU-Boulder's vision is grounded in its statutory mission as a national public research university. In Colorado statute, the university is defined as the "comprehensive graduate research university with selective admissions standards . . . , offer(ing) a comprehensive array of undergraduate, master, and doctoral degree programs" of what is now designated the University of Colorado System.

CU-Boulder recognizes the exceptional opportunities associated with its role as a research university, and values the unique strength and character research achievements bring to undergraduate education. It is keenly aware of its responsibility for educating the next generation of citizens and leaders, and for fostering the spirit of discovery through research. Indeed, CU-Boulder believes that its students, both graduate and undergraduate, benefit from the comprehensive mix of programs and research excellence that characterize a flagship university. Thus, CU-Boulder's statutory mission is relevant today and will remain relevant tomorrow.

Since 2007, CU-Boulder's strategic plan, *Flagship 2030* (www.colorado.edu/flagship), has been guiding near-term actions and investments that will sustain CU's quality and competitiveness and, through visionary "flagship initiatives," will transform the university within the next quarter-century.

General Information

As a comprehensive university, CU-Boulder is committed to the liberal education of students via a broad curriculum ranging from the baccalaureate through the postdoctoral levels.

With an enrollment of more than 30,000 students, the University of Colorado Boulder is the largest campus in the four-campus system. The student population comes from every state in the nation and from more than 100 foreign countries. Many different ethnic, religious, academic, and social backgrounds are represented, fostering the development of a multicultural academic community that enriches each student's educational experience.

On the Boulder campus, the chancellor is the chief academic and administrative officer and is responsible for conducting campus affairs in accordance with the policies of the Regents, and overseeing the Athletic Department. Faculty participate in campus governance through the Faculty Senate and the Faculty Assembly. Students participate through the University of Colorado Student Union (UCSU) and the United Government of Graduate Students (UGGS).

CU-Boulder has 1,136 tenure and tenure track faculty, with more than 98 percent holding doctorates or appropriate terminal degrees. The faculty includes nationally and internationally recognized scholars with many academic honors and awards, including several CU-Boulder research faculty from the National Snow and Ice Data Center who shared the 2007 Nobel Peace Prize with former Vice President Al Gore for their contributions to the international report of the Intergovernmental Panel on Climate Change; John Hall, winner of the 2005 Nobel Prize in physics; Carl Wieman and Eric Cornell, winners of the 2001 Nobel Prize in physics; and Tom Cech, winner of the 1989 Nobel Prize in chemistry. Seven faculty have received MacArthur Fellowships, the so-called "genius grant." Twenty active or retired faculty are members of the National Academy of Sciences; 20 are included in the membership of the American Academy of Arts and Sciences; 14 are members of the National Academy of Engineering; and six are members of the National Academy of Education. Most faculty members, including full professors, teach both undergraduate and graduate classes. Faculty members incorporate their research and creative activities directly into instructional programs.

Research conducted at CU-Boulder is supplemented by research institutes devoted both to the advancement of knowledge in particular areas and to graduate training. Many of these institutes have developed international reputations. For a detailed description of research institutes and other important research facilities associated with the university, see the Graduate School section.

To enhance its research capabilities and to provide collaborative opportunities with government and business, CU-Boulder developed a 200-acre research park east of the main campus. The park provides expanded room for research institutes and centers that work closely with university researchers.

The educational environment of a research university is characterized by a broad range of experiences in many different settings. While the classroom is the location for most instructional activities, laboratories, seminars, and field work also are important features of the undergraduate and graduate experience. Some programs encourage off-campus internships and training; study abroad programs also have gained popularity. For students whose interests cross traditional disciplinary lines, a number of interdisciplinary programs are available.

The Campus Setting

CU-Boulder is located at the foot of the Rocky Mountains, at an altitude of 5,400 feet. The Flatirons geologic formation is visible from nearly everywhere on campus. The climate is temperate, with generally pleasant days and cool evenings. On average,

Boulder enjoys about 340 sunny or partly sunny days each year. The main campus covers 600 acres and includes about 200 buildings constructed of rough-cut Colorado sandstone with red tile roofs. The rural Italian (or Tuscan vernacular) architectural style evolved from a master plan developed by Philadelphia architect Charles Klauder in 1919. The Norlin Quadrangle, including the original Old Main building, is listed in the State and *National Register of Historic Places*. The campus has been noted as one of the most aesthetically pleasing in the country.

Boulder County encompasses five ecological zones, from 5,000 feet above sea level (plains grassland) to 14,000 feet (alpine tundra). Downtown Boulder is only 20 miles from the Continental Divide and boasts some of the most spectacular scenery in the United States. The city of Boulder, population 96,000, is committed to preserving its beautiful natural environment and is surrounded by 26,000 acres of open space.

Denver, the state's capital city, is 30 miles from Boulder. Denver offers the attractions and resources of a large metropolitan area and is accessible from Boulder by traveling on U.S. 36, also known as the Denver-Boulder Turnpike. Denver's international airport is served by most major carriers and is located approximately 60 minutes southeast of Boulder. Boulder and the Denver International Airport are connected by a public transportation system.

Undergraduate Enrollment and Graduation Rates

CU-Boulder's fall 2010 entering freshman class numbered 5,519. Of these, 49 percent were females, 59 percent residents of Colorado, and 16 percent members of minority groups (African Americans, Asian Americans, Hispanics, and Native Americans). Seventy-two percent enrolled in the College of Arts and Sciences, 11 percent in the Leeds School of Business, 13 percent in the College of Engineering and Applied Science, and 4 percent, combined, enrolled in the College of Architecture and Planning, the School of Journalism and Mass Communication, and the College of Music. About 20 percent of freshmen entering CU-Boulder transfer to another college or school within the university before they graduate.

Of the freshmen entering in summer or fall 2003 who enrolled full time, 41 percent graduated within four years; 63 percent graduated within five years; and 67 percent graduated within six years. Of the students who entered in fall 2008, 83 percent returned for their second fall semester.

CU-Boulder Academic Programs

The Boulder campus offers more than 3,600 different courses in approximately 150 fields of study. These courses represent a full range of disciplines in the humanities, the social sciences, the physical and biological sciences, the fine and performing arts, and the professions. CU-Boulder is accredited by the Higher Learning Commission and a member of the North Central Association (www.ncahigherlearningcommission.org; 312-263-0456). (See individual colleges and schools for additional accreditation information.)

For information on the content of academic programs and official degree designations, refer to the appropriate catalog sections. Additional graduate and professional programs are located on other campuses of the university.

Colorado Springs Campus

The University of Colorado at Colorado Springs, located on Austin Bluffs Parkway in Colorado Springs, is one of the fastest growing universities in the nation. The university offers 36 bachelor's, 19 master's, and five doctoral degrees. The campus enrolls about 9,000 students annually.

Degree Programs

B = Bachelor's Degree

JD = Juris Doctor

C = Certificate (not all programs are included here)

M = Master's Degree

(M) = Master's Degree offered as part of the PhD program only

University of Colorado Denver

The University of Colorado Denver offers comprehensive programs for undergraduate, graduate, and health sciences students on the Denver Campus, on the Anschutz Medical Campus in Aurora, and in centers and institutes across the state. Students study in more than 120 degree programs across 13 schools and colleges.

The university awards more than 4,000 degrees each year and confers more graduate degrees than any other institution in the state. More than \$384 million in sponsored research awards came to UC Denver in 2009-10.

Denver Campus

Near the heart of downtown, the campus is conveniently located on the Auraria Campus with easy access to Denver's commercial

and governmental hubs. Schools and colleges on this campus include:

College of Architecture and Planning
 College of Arts & Media
 Business School
 School of Education & Human Development
 College of Engineering and Applied Science
 College of Liberal Arts and Sciences
 School of Public Affairs

Anschutz Medical Campus

The Anschutz Medical Campus in Aurora delivers a broad network of health care programs. In addition to University of Colorado Hospital, a number of renowned institutes are affiliated with the campus. The Anschutz Medical Campus presents state-of-the-art educational and research facilities with an adjoining biomedical park. Schools and colleges on this campus include:

School of Dental Medicine
 School of Medicine
 College of Nursing
 School of Pharmacy
 Colorado School of Public Health
 Graduate School

Academic Affairs

Academic Advising

Academic advising is an integral part of a college education. Its goal is to assist students in making responsible decisions as they develop educational plans compatible with their potential career and life goals. Advising is more than offering information about academic courses and programs; it also involves encouraging students to formulate important questions about the nature and direction of their education and working with them to find answers to these questions.

Responsibilities of Students and Advisors

Within the advising system on the Boulder campus, both students and advisors have responsibilities.

Students are responsible for:

- attending a special orientation, advising, and registration program on campus before enrolling in their first semester;
- knowing the requirements of their particular academic program, selecting courses that meet those requirements in an appropriate time frame, and monitoring their progress toward graduation;
- consulting with their academic advisor several times every term;
- scheduling and keeping academic advising appointments in a timely manner throughout their academic career, so as to avoid seeking advising only during busy registration periods; and
- being prepared for advising sessions (for example, by bringing in a list of questions or concerns, having a tentative schedule in mind, and/or being prepared to discuss interests and goals with their advisor).

Academic advisors are responsible for:

- helping students clarify their values, goals, and abilities;
- helping students understand the nature and purpose of a college education;
- providing accurate information about educational options, requirements, policies, and procedures;
- helping students plan educational programs consistent with the requirements of their degree program and with their goals, interests, and abilities;
- assisting students in monitoring and evaluating their educational progress; and
- helping students locate and integrate the many resources of the university to meet their unique educational needs and aspirations.

NOTE: The university cannot assume responsibility for problems resulting from students failing to follow the policies stated in this catalog or from incorrect advice given by someone other than an appropriate staff member of the college.

Academic Advising Center

The Academic Advising Center coordinates academic advising, transfer credit evaluation, and graduation certification for all undergraduate students pursuing a program of study in the College of Arts and Sciences and for all open option students. All students in the college are assigned to a primary academic advisor in their major field of study. Students are expected to meet with their assigned advisor on a regular basis throughout the academic year.

The advising center also oversees the Preprofessional Advising Center, which provides advising to all students on the Boulder campus who are intending to pursue law or one of the health professions (dentistry, medicine, nursing, pharmacy, physical therapy, etc.).

In addition, through the open option advising program, the advising center provides comprehensive advising services to students who are undecided about their major, or who are considering changing their major. Open option primary advisors are familiar with the courses and degree requirements for all majors offered at CU-Boulder, and assist open option students in exploring majors related to their interests, aptitudes, and goals. Open option advisors also assist students in designing programs of study that meet graduation requirements while providing students with the academic flexibility to pursue whichever degree program they ultimately choose.

Open option or preprofessional students with general advising questions should visit the Academic Advising Center website at advising.colorado.edu to schedule an appointment with their advisor.

Orientation

The CU-Boulder orientation programs are designed to facilitate a smooth transition to the university community for students and their parents. All new freshman and transfer students are required to attend orientation in order to be eligible to register.

A single orientation program for new spring semester students and their parents occurs during the week before classes begin in January.

All new fall students are expected to attend their college orientation program, the chancellor's convocation, and New Student Welcome prior to their first day of class. Detailed information regarding the steps of the orientation process is sent by e-mail or, in some cases, postal mail once students have confirmed their intent to enroll at the university. More information regarding orientation is available at www.colorado.edu/orientation.

Summer Session

Summer Session at CU-Boulder, an integral part of the university's year-round program, offers students opportunities for study, individual development, and recreational activity. Summer students can choose from more than 500 courses, allowing progress toward a degree in most areas of study.

Summer Session begins with Maymester, an intensive three-week term offered immediately after spring semester ends. Courses are also offered in one-to-four, five-, eight-, and ten-week formats. Online and on-campus courses are available.

Complementing Summer Session offerings, a rich calendar of summer events includes performances in repertory by members of the Colorado Shakespeare Festival, musical productions presented by the CU Summer Opera company, and performances by members of the Colorado Music Festival. Organized recreational activities are offered through the Student Recreation Center.

The summer catalog is usually available by mid-January. To request a catalog, call **303-492-5148** (toll free **1-800-331-2801**), go to www.colorado.edu/summer, or write Summer Session, University of Colorado Boulder, 178 UCB, Boulder, CO 80309-0178.

Student Affairs

Overview

The Division of Student Affairs focuses on creating a positive learning environment that fosters successful personal develop-

ment and learning both in and outside the classroom. Student learning and success are enhanced when the learning environment and community support students' full development as people, not isolated intellects, and when students are seen as important partners in the learning experience.

Student Learning Environment

A spectrum of uniquely designed services and support programs is available to undergraduate and graduate students as members of the university community. These programs support student development and academic achievement, and they contribute to creating a positive learning environment. Examples include housing, recreation, health care and education, personal and career counseling, and opportunities to develop leadership skills. Personal consultation regarding learning styles and academic performance is also available in many departments. Student Affairs works in a liaison relationship with the University of Colorado Student Government, the Greek system, the Alumni Association, and the CU Parents Association. The division takes an active leadership role in supporting diversity on campus and in building a supportive and respectful campus learning environment. The campus and Student Affairs staffs are proud of the high ratings that students give to many services. The division continues its commitment to improving service delivery in all areas. Approximately 900 professional and highly skilled Student Affairs staff and faculty are responsible for the many programs and services available to all students during their educational careers.

Undergraduate Admission

The Office of Admissions welcomes inquiries from prospective students regarding undergraduate admission. Through the admission process, the university seeks to identify applicants who will successfully complete a collegiate academic program. Admission is based on many criteria, including high school GPA or GED test scores, high school rank, the quality of course work, college entrance test scores, personal essays, and the extent to which the minimum academic preparation standards (MAPS) have been met.

Inquiries relating to undergraduate admission to the University of Colorado Boulder may be addressed to:

Office of Admissions
Regent Administrative Center 125
University of Colorado Boulder
552 UCB
Boulder, CO 80309-0552
303-492-6301
TTY 303-492-5998 (for hard of hearing persons)

To find admission information online, go to admissions.colorado.edu/undergraduate.

For admission requirements to graduate degree programs, see the Graduate School section and individual college and school sections.

Visiting the Campus

Prospective students and their families are welcome to visit the Office of Admissions in Regent Administrative Center 125 between 9:00 A.M. and 5:00 P.M. (summer hours are 8:30 A.M. to 4:30 P.M.), Monday through Friday, except on holidays. Daily information sessions, walking tours of the campus, and special all-day visit programs are offered. Although interviews are not used in the decision-making process, you are invited to visit the campus.

The best time to see the campus is when classes are in session (September through mid-December and mid-January to early May, with the exception of spring break). An Academic Calendar is printed on the inside front cover of this catalog. There are dates when information sessions, campus tours, and visit programs are not held due to holidays or university closures. It is important to check our website for the most current information.

Reservations

Reservations are required for all information sessions, tours, and visit programs and can be made through your MyCUBoulder (mycuboulder.colorado.edu) account. For complete visit program descriptions, dates, reservation forms, and campus maps, go to www.colorado.edu/visit, or call 303-492-6301. Visit program dates for future academic years are added to the website as they become available (usually in August each year).

Daily Information Sessions and Campus Tours

Information sessions with an admission counselor are held Monday through Friday at 9:30 A.M. and 1:30 P.M. Following the information sessions are walking tours of the campus led by student guides, beginning at 10:30 A.M. and 2:30 P.M. Combined information sessions and tours are also held at 10:30 A.M. most Saturdays.

Campus Visit Programs

An excellent way to become acquainted with the campus is to participate in one of the campus visit programs specially designed for prospective students and parents.

These programs, offered on selected Fridays and Saturdays throughout the year, provide prospective students and their families the chance to participate in information sessions, take a campus tour, learn more about residence hall life, talk with student and parent panels, and meet with campus representatives, as well as attend classes or listen to a sample lecture. To make reservations for any or all of these visit programs, go to www.colorado.edu/visit or call the Office of Admissions at 303-492-6301.

General Admission Information

CU-Boulder's Colleges and Schools

As undergraduates at CU-Boulder, students can choose from among the university's four colleges (architecture and planning, arts and sciences, engineering and applied science, and music) and three schools (business, education, and journalism and mass communication). Undergraduate majors offered at CU-Boulder are listed throughout this catalog.

Choosing a Program of Study

When applying for admission, students need to choose a major in one of CU-Boulder's colleges or schools. Applicants who have not decided on a major can select an "open option" major. This allows students to explore different options during their first and/or second year of study. After this time, they will decide on a specific major for their remaining years. Students can also change their area of study, but this can result in additional course requirements that may add to the number of semesters necessary to complete a degree.

Although applicants can apply to only one CU-Boulder college or school, after enrollment they can apply for transfer to another Boulder college or school through the Intrauniversity Transfer (IUT) process. Criteria for transferring from one college or school to another are competitive, and each college or school establishes its own standards.

Double Degrees, Double Majors, Minors, and Certificate Programs

There are several programs that allow students to include additional areas of academic concentration beyond their chosen major. Two different degrees, either from the same college or school, or degrees from different colleges or schools, may be earned, providing certain conditions are met. Students are admitted to one major and degree program initially but may pursue a second degree during their first semester of enrollment. Minor programs are offered in a number of undergraduate departments and programs in the College of Arts and Sciences, the Leeds School of Business, and the College of Engineering and Applied Science. Certificate programs in arts and sciences, business, engineering, and music fields are also available.

Preprofessional Study

Preprofessional advisors are available to help students interested in medicine, dentistry, physical therapy, veterinary medicine, nursing, pharmacy, physician assistant, other allied health sciences, or law. Students interested in these fields may apply to any of the majors open to new undergraduates, including the open option major in the College of Arts and Sciences. Students interested in one of the undergraduate or graduate health sciences programs offered at the University of Colorado Anschutz Medical Campus may complete preprofessional work on the Boulder campus. Admission is competitive, but preference to all health sciences programs is given to Colorado residents.

For more information, visit www.colorado.edu/aac or see Preprofessional Programs in the Other Academic Programs section.

Music Applicants

Prospective music majors must submit both an Undergraduate Application for Admission to the Office of Admissions, and a College of Music Admission Application.

All music applicants are initially considered for admission to the College of Arts and Sciences open option major. Admission to a College of Music degree program (bachelor of arts in music, bachelor of music education, bachelor of music) is determined after the music audition and application evaluation process has been completed. Students who are admitted to the College of Arts and Sciences but not the College of Music will be able to keep their place in the College of Arts and Sciences.

Live auditions, which are preferred unless travel distance is prohibitive, are scheduled for selected Saturdays in January and February. Other live audition times may be arranged; high quality recordings also may be submitted in lieu of a live audition.

College of Music scholarships are awarded to music majors only. High school and college transfer students are automatically considered for merit-based music scholarships upon completion of the application process, including the audition. Transfer students who are receiving a scholarship from their current institution must submit a scholarship release form before they can be awarded a music scholarship. To be assured of full consideration for scholarship awards, the audition should be completed by February 15.

The College of Music Admission Application Form, as well as more detailed information about audition requirements, faculty, and degree programs, may be found at music.colorado.edu.

Teacher Education Applicants

Through the School of Education, students interested in elementary or secondary school teaching may take programs approved for Colorado licensure in connection with Colorado Commis-

sion on Higher Education (CCHE) approved majors offered at CU-Boulder.

Elementary teacher education includes kindergarten through sixth grade licensure. Secondary teacher education includes seventh through 12th grades with licensure in English, mathematics, science, social studies, and the following foreign languages: French, German, Italian, Japanese, Latin, Russian, and Spanish. Teacher education programs are also available in music education for kindergarten through 12th grade.

Teacher education program applicants who have completed a four-year undergraduate degree program should apply directly to the School of Education. Those who have not received a bachelor's degree must apply to another CU-Boulder undergraduate degree program and submit their application and credentials to the Office of Admissions. Undergraduate students who plan to pursue teacher education should declare this intent to the school's Office of Student Services as soon as possible after enrolling at CU-Boulder.

Refer to the School of Education section for more information about teacher education. Interested students may also visit www.colorado.edu/education, e-mail EdAdvise@colorado.edu, or write to the School of Education, Office of Student Services, University of Colorado Boulder, 249 UCB, Boulder, CO 80309-0249, for application and deadline information.

College Readiness in English and Mathematics

The State of Colorado mandates that all undergraduate students entering public institutions of higher education in Colorado be screened for college readiness in reading, writing, and mathematics. To pass the screening requirements, students must present minimum test scores.

Students who have successfully completed four years each of college preparatory English and college preparatory math courses are deemed to have met the respective requirements regardless of the test score.

Students who do not meet CU-Boulder's criteria for college readiness will be required to demonstrate readiness through an additional examination or to enroll in preparatory courses prior to completing the first 30 semester hours of course work on the Boulder campus. Students who have not demonstrated reading, writing, and/or mathematics readiness will receive additional details after they confirm their intent to enroll at CU-Boulder.

Freshman Applicants

Students are freshman applicants if they are currently enrolled in high school, or if they have earned a high school diploma or its equivalent and have not enrolled in a college or university since graduation.

Admission Criteria

Many factors are considered in evaluating students' applications for admission to CU-Boulder. Although academic performance in high school (high school GPA and the quality of course work) is the most important indicator of success, other factors are also considered. These include students' college entrance test scores (either the SAT or ACT), the trend in their grades, the extent to which the minimum academic preparation standards (MAPS) are met, their personal essays, and the potential contributions they may make to the campus community. For information on MAPS, see the chart on next page.

Applicants whose records reflect nontraditional grading systems, unusual curricula, or high school equivalency through the

Minimum Academic Preparation Standards (MAPS)

One unit equals one year of high school study or one semester of college course work.

	<i>College of Architecture and Planning</i>	<i>College of Arts and Sciences / School of Journalism and Mass Communication</i>	<i>Leeds School of Business</i>	<i>College of Engineering and Applied Science</i>	<i>College of Music</i>
English	4	4 (includes 2 of composition)	4 (includes 2 of composition)	4	4
Mathematics	4 (includes at least 2 of algebra, 1 of geometry, and 1 of preparatory math such as trigonometry, analytic geometry, or elementary functions)	4 (includes at least 2 of algebra, 1 of geometry, and 1 of preparatory math such as trigonometry, analytic geometry, or elementary functions)	4 (includes at least 2 of algebra, 1 of geometry, and 1 of preparatory math such as trigonometry, analytic geometry, or elementary functions)	4 (includes at least 2 of algebra, 1 of geometry, and 1 of college preparatory math such as trigonometry, analytic geometry, or elementary functions)	4
Natural science	3 (includes physics and/or biology)	3 (includes 2 of lab science, 1 of which must be either chemistry or physics)	3 (includes 2 of lab science, 1 of which must be either chemistry or physics)	3 (includes 1 of physics AND 1 of chemistry or biology, OR 2 of chemistry and 1 of physics or biology, OR 2 of biology AND 1 of chemistry or physics)	3
Social science	3	3 (includes 1 of U.S. or world history and 1 of geography; if U.S. history is used to meet the history requirement, the geography requirement may be met with 1/2 unit of geography and 1/2 unit of world history)	3 (includes 1 of U.S. or world history and 1 of geography; if U.S. history is used to meet the history requirement, the geography requirement may be met with 1/2 unit of geography and 1/2 unit of world history)	3	3
Single foreign language	2	3	3	3 (or 2 units in each of 2 separate foreign languages)	2
Academic elective	1				2 (in the arts)
TOTAL UNITS	17	17	17	17	18

GED test will receive individual consideration and are urged to apply.

College Entrance Tests

Applicants should take a college entrance test late in their junior year or early in their senior year of high school. CU-Boulder requires either the SAT or the ACT for admission consideration. The ACT Writing Test is not required for CU-Boulder admission consideration. The highest scores are used in the admission decision. If the same test is taken more than once, the scores are combined on each subsection to give the highest overall score. SAT subject test scores are not required. For more information, see the How to Apply for Undergraduate Admission section.

Minimum Academic Preparation Standards (MAPS)

Students who graduated from high school in spring 1988 or later are expected to have completed courses that meet certain minimum academic preparation standards (MAPS) before enrolling at CU-Boulder. Any MAPS deficiency will be considered during the admission review process. The MAPS for specific CU-Boulder colleges and schools are listed in this section.

Students may be admitted to CU-Boulder even though they have not met all the MAPS requirements. If that is the case, they are required to complete the appropriate MAPS courses once enrolled, and the credits may be applied toward graduation. *All MAPS deficiencies must be completed prior to graduation from CU-Boulder.* Students may also complete missing MAPS course work in high school, at other colleges or universities, through

approved credit-by-examination programs, or by testing out through the appropriate foreign language department.

Policies Concerning MAPS Deficiencies

The policies of the Boulder campus with respect to completing MAPS course work after enrollment are as follows.

1. Appropriate missing MAPS course work is included in the hours for graduation.
2. All course work toward fulfillment of the MAPS must be taken for a letter grade.
3. It is strongly recommended that students enroll in and complete at least one MAPS course each term, beginning in the first term of enrollment, until such time as all MAPS are completed. This policy applies to new freshmen, transfer students, and students transferring from other academic units on the Boulder campus and from other campuses of the university. Some colleges or schools may impose a sanction if the student does not complete one course per semester toward meeting MAPS deficiencies.
4. All students who first enroll in one academic unit at CU-Boulder and subsequently transfer to another unit are required to meet the MAPS specified for the new unit, irrespective of their completion of MAPS units in their previous college or school.
5. Students in double-degree programs must meet MAPS requirements of both degree-granting units.

- Students must consult with a CU-Boulder academic advisor (or read their college or school's academic publications) to determine which specific courses may be used to meet a MAPS requirement.
- Students who complete 50 percent or more of their secondary schooling in a non-U.S. system are exempt from MAPS.

Please also review the chart on page 7.

Advanced Placement

CU-Boulder participates in the Advanced Placement program of the College Board. Over one-third of Boulder's entering freshmen submit Advanced Placement (AP) test scores each year. Official scores must be sent to the admissions office directly from the College Board for both first-year students and transfer students. For a guide to specific equivalencies, refer to the chart in this section. For more information, write or call:

AP Exams
P.O. Box 6671
Princeton, NJ 08541-6671
609-771-7300 or toll free 888-225-5427
www.collegeboard.com

Please also review the chart on page 9.

International Baccalaureate

The International Baccalaureate (IB) Diploma programs provide preuniversity study. IB examinations, whether leading to a full IB diploma or to an IB certificate often qualify students for advanced standing at CU-Boulder. In general, credit is granted for approved IB examinations at the higher level with a score of 4 or better.

Students admitted to the University of Colorado Boulder after June 30, 2003, who have graduated from high school having successfully completed an International Baccalaureate Diploma program shall be granted 24 semester hours of college credit. Students should check with their college or school to determine if or how the earned college credit applies toward degree requirements. No CU-Boulder tuition shall be charged for these credits. These credits shall be granted, however, only if the student receives a score of 4 or better on an examination administered as part of the IB Diploma program. If the student scores less than 4 on any IB subject test, the credit hours granted shall be reduced accordingly.

An official copy of the diploma with test scores must be sent to the admissions office directly from the IB organization. For a guide to specific equivalencies refer to the chart in this section. For more information on test administration, write or call:

International Baccalaureate Organization
475 Riverside Drive, 16th floor
New York, NY 10115
212-696-4464
www.ibo.org

For the most current information on how CU-Boulder evaluates IB credit, visit admissions.colorado.edu/undergraduate/admissions/freshman/credit. Please also review the chart on page 10.

Guaranteed Admission for Colorado Resident Freshmen

The University of Colorado Boulder guarantees admission to first-time Colorado resident freshmen who meet specific criteria. For a copy of the guaranteed admission guidelines, visit admissions.colorado.edu/undergraduate/admissions/freshman/guarantee, write to Office of Admissions, University of Colorado Boulder,

552 UCB, Boulder, CO 80309-0552, or call **303-492-6301**. Guaranteed admission information is also available in all Colorado high school guidance offices.

Freshman Applicants Not Granted Admission

Students who are not granted admission as entering freshmen may consider transferring to CU-Boulder after successful study elsewhere. Students are encouraged to complete at least one full year of transferable college or university course work, including any courses outlined in the minimum academic preparation standards (MAPS) chart that were not met in high school.

Transfer Applicants

Applicants are considered transfer students if they have attempted or enrolled in any college-level course work (at another college or university, or other campus of the University of Colorado), full time or part time, since graduating from high school. Applicants are not considered transfer students if the only college-level classes they have taken were while enrolled in high school. To be considered for admission, transfer students must report all previous college work and have a high school diploma or its equivalent.

Competitive Admission Criteria

Transfer applicants are considered for admission on the basis of transfer as well as freshman criteria, including minimum academic preparation standards (MAPS). All transfer applicants who graduated from high school in spring 1988 or later are expected to have completed MAPS requirements before enrolling at CU-Boulder.

A number of factors are considered when the transfer application is evaluated. The types of courses taken are as important as the grade point average. Only courses completed at the time the application is reviewed are considered in computing the cumulative, or overall, GPA. Complete personal essays are required.

Competitive criteria may vary from term to term depending on the overall quality of the applicant group and the number of transfer spaces available for a given college or school. Successful completion of prerequisite or recommended courses is also considered in the admission decision (see specific college and school sections below). For more information on competitive transfer admission guidelines, visit admissions.colorado.edu/undergraduate/admissions/transfer.

College of Architecture and Planning

A college GPA of 2.750 or higher is required. Admission preference is given to students who have taken college-level courses in the areas of architecture, planning, or environmental studies. Completion of courses in related fields of social science, natural science, fine arts, or humanities is also considered in the admission review.

College of Arts and Sciences

Admission preference is given to students who have taken the appropriate general education college-level courses and have a college GPA of 2.500 or better in appropriate general education courses.

Leeds School of Business

Transfer applicants must have a college GPA of 3.000 or higher. Preference is given to students who have completed finite math (or college algebra), calculus, microeconomics, and macroeconomics, with a grade of B- or better.

* There is no guarantee that all AP credit will apply to a specific degree program. The dean's office of each college and school makes the final determination on how AP credits apply toward degree requirements.

a Engineering students: check with faculty advisor in major department.

b Engineering students: CHEM 1113/1114 fulfills departmental requirements in all areas. CHEM 1133/1134 fulfills chemical engineering, chemical and biological engineering, environmental engineering, and computer science requirements.

c Engineering students: check with faculty advisor in major department. Students will need to gain experience with C or C++ before taking further computer science courses.

d Students who want to continue taking Spanish courses beyond their AP credit level must take the Spanish department placement test. If the results of this test place them below their AP level, the Spanish department strongly recommends enrolling at the lower of the two levels.

e Three lower-division credits meeting the historical context core requirement in the College of Arts and Sciences and the Leeds School of Business.

f Specific credit awarded may depend on major. Check with faculty advisor in major department.

g Students taking the Calculus BC exam automatically receive an AB subscore.

h Does not apply to students in the College of Engineering and Applied Science.

NOTE: This chart was prepared based on spring 2010 exams. Credit awarded is subject to change based on faculty review of spring 2011 exams.

School of Education

Students who have completed a bachelor's degree may apply for admission directly to the School of Education. All other undergraduate students must be admitted to another college or school before applying to a CU-Boulder teacher education program.

To be considered for admission to the teacher education program, an undergraduate must have completed a minimum of 56 semester hours of course work and have met the admission requirements outlined in the School of Education section.

College of Engineering and Applied Science

A college GPA of 2.900 or higher for four-year institutions; 3.100 or higher for community college and junior colleges is required. Transfer applicants must have taken courses relevant to an engineering curriculum, including at least two semesters of college-level calculus, along with two semesters of calculus-based physics and/or college-level chemistry. Chemical engineering and chemical and biological engineering applicants should have completed two semesters of college chemistry. Grades in math, science, and

engineering courses should be B or higher. (*Exception: Students [resident or non-resident] who apply for admission for a semester that occurs within 18 months of their high school graduation date may also be competitive without having taken the above course work, as long as the high school academic record meets the current Guaranteed Admission for Colorado Freshmen criteria. In addition, if any college-level work has been completed, the overall GPA should be 3.100 or higher.*)

School of Journalism and Mass Communication

Applicants must have a minimum of 30 semester hours of appropriate college-level course work completed or in progress, including journalism course prerequisites (Contemporary Mass Media, and either Principles of Advertising or Principles of Journalism at CU-Boulder, or their equivalents at another institution), and must have a minimum 3.000 overall and a minimum 3.000 in all journalism courses. Applicants with fewer than the required hours, lacking the minimum GPAs, or without journalism course prerequisites should apply to the College of Arts and

* There is no guarantee that all IB credit will apply to a specific degree program. The dean's office of each college and school makes the final determination on how IB credits apply toward degree requirements.

NOTE: This chart was prepared based on spring 2010 exams. Credit awarded is subject to change based on faculty review of spring 2011 exams.

College Entrance Tests

Transfer students are required to submit SAT or ACT scores, except those who have completed 24 or more semester hours of transferable college-level work at the time they apply.

Students' highest scores are used in the admission decision. If the same test is taken more than once, the scores on each subsection are combined to give the highest overall score. SAT subject test scores are not required. For more information, see the How to Apply for Undergraduate Admission section.

Minimum Academic Preparation Standards (MAPS)

Effective with students who graduated from high school in spring 1988 or later, CU expects all transfer students to have completed courses that meet certain minimum academic preparation standards (MAPS). The MAPS requirements for specific CU-Boulder colleges and schools are listed in this section.

MAPS requirements not met in high school may be met through equivalent college-level course work before or after transfer to CU-Boulder. A semester course completed at the college level substitutes for a year of work in high school.

Opportunities for Colorado Transfer Students

A list of transferable state-guaranteed general education courses has been established for students pursuing arts and sciences majors. Contact your current Colorado school, the CU-Boulder Office of Admissions, or visit our website for more information.

Course equivalency guides are available online at admissions.colorado.edu/undergraduate/admissions/transfer/courseequivalencyguides, and also in Colorado community college advising offices. These guides provide information on CU-Boulder admission requirements, graduation requirements, and course equivalencies.

Students transferring to a program outside of the College of Arts and Sciences need to work with community college advisors and use the transfer guide to assure that appropriate courses are taken prior to transfer. Students wishing to enter the College of Architecture and Planning or the College of Engineering and Applied Science should be aware that because of the structure of the curriculum, they are encouraged to transfer as early as the beginning of the sophomore year. *Academic programs vary in terms of the maximum number of hours that may be transferred from a community or junior college.*

How to Apply for Undergraduate Admission

Application Priority Dates and Admission Notification

Applications for degree candidates may be submitted beginning in August for the following spring, summer, and fall terms.

The university reserves the right to deny admission to applicants whose total credentials reflect an inability to assume those obligations of performance and behavior deemed essential by the university and relevant to any of its lawful missions, processes, and functions as an educational institution.

Spring Freshman Applicants

Spring applications are processed on a rolling basis. The Office of Admissions begins notifying applicants about admission decisions in October. Decisions are made approximately four to six weeks after an application is complete. Full consideration is given to applications that are complete (including the application fee and all required credentials) by the October 1 deadline.

Summer and Fall Freshman Applicants

There are two admission notification periods for fall and summer 2011 candidates.

Non-Binding Early Notification

Freshman applicants who complete their file by December 1, 2011, are guaranteed early notification and will receive an admission decision on or before January 15, 2012. Students meeting the non-binding, early notification deadline may be admitted, postponed, or denied admission. Postponed students will receive an additional review and are strongly encouraged to

submit additional academic information to strengthen their applications. Students who are postponed do not typically receive an admission decision until April 1, 2012. Early notification students are not required to enroll at the University of Colorado Boulder, but must, if they choose to attend, confirm their intent to enroll by May 1, 2012.

Freshman Application Deadline

The freshman application deadline is January 15, 2012. Students may begin applying and completing their files in August. All applicants with completed files by January 15, 2012, will be notified of their admission decision no later than April 1, 2012. Students must, if they choose to attend, confirm their intent to enroll by May 1, 2012.

Transfer Applicants

Transfer applications are processed on a rolling basis. Full consideration is given to transfer applications completed by the October 1 deadline for spring admission, or the April 1 deadline for summer and fall admission. From the time a transfer application is complete, it takes a minimum of four to six weeks for it to be reviewed.

Complete an Online Application

Applicants should use the online application through their MyCUBoulder account at mycuboulder.colorado.edu.

For a student to be considered for admission, the Office of Admissions must receive a completed application, the application fee, and all required credentials. Processing of an application will be delayed until all required information is received.

Application Fee

The \$50 application fee (\$70 U.S. for international students) is nonrefundable. If paying by check or money order it should be made payable to the University of Colorado. **IMPORTANT:** The applicant's name and date of birth must appear on the check or money order.

Some students may be faced with financial constraints in paying the application fee. Therefore, waivers are granted to those students with documented hardships who submit fee-waiver forms available in high schools, from the CU-Boulder Office of Admissions, or at admissions.colorado.edu/undergraduate/apply/forms.

Students currently enrolled in an undergraduate degree program at another University of Colorado campus, who are applying to an undergraduate degree program on the Boulder campus, are not required to pay the application fee.

Required Credentials

Credentials or information sent by fax cannot be accepted as official documentation. Do not submit samples or photographs of design or artwork. A portfolio is not used for admission purposes and cannot be returned.

Official Transcripts

Official transcripts must be sent directly to the Office of Admissions from the issuing institution and must have the appropriate seals and signatures. Other transcripts are not considered official. Transcripts that are marked, for example, "student copy," "issued to student," or "unofficial" are not accepted as official. Unofficial transcripts cannot be used for admission or transfer credit purposes.

High School Transcript

Students should request that their high school send an official transcript of all work completed, beginning with grade 9, directly to the Office of Admissions, regardless of the number of college hours the student has completed (if any) or the date at graduation from high school. Students who have attended more than one high school and whose most recent transcript does not include the complete high school record must submit official transcripts from each school. If any part of the high school record is missing from the transcript, the processing of the application will be delayed. Students who have not graduated and do not plan to graduate from high school must request an official certificate of high school equivalency and official GED scores, plus an official transcript of any high school work (grades 9–12) completed, to be sent to the Office of Admissions.

College Transcripts

Students should request that their official transcripts from each collegiate institution attended (except any campus of the University of Colorado) be sent directly from the issuing institution to the Office of Admissions. Be sure to include all institutions, regardless of the length of attendance, whether or not courses were completed, and whether or not the record might affect admission or transfer credit. Also include any institutions attended during summers, interim terms, and during high school. *Failure to list and submit transcripts from all institutions previously attended before enrolling at CU-Boulder is considered to be a violation of academic ethics and may result in the cancellation of admission or dismissal from the university.*

SAT or ACT Test Scores

Boulder requires SAT or ACT scores for admission. The ACT will be accepted with or without the writing test. Students should request that the testing agency submit scores directly to the Office of Admissions. CU-Boulder's code for the SAT is 4841; the code for the ACT is 0532. Scores recorded on an official high school transcript are also acceptable. *These scores must be submitted unless 24 or more semester hours of transferable college work have been completed at the time of application.* Do not delay sending in the application and other credentials because college entrance test scores are not yet available.

Results from SAT or ACT tests taken in December or later may be received too late to be considered for summer or fall admission of the same year.

For further information, consult a high school counselor, visit the SAT website at www.collegeboard.com, phone 609-771-7600, or write to the College Board (SAT), P.O. Box 6200, Princeton, NJ 08541-6200. Visit the ACT website at www.act.org, phone 319-337-1270, or write to ACT Registration, P.O. Box 414, Iowa City, IA 52243-0414.

Personal Essays

The University of Colorado Boulder requires applicants to submit two short personal essays. Applications without essays are considered incomplete and will not be reviewed. Personal essays are the best way for the Office of Admissions to learn about applicants as individuals and to evaluate a student's academic performance within the appropriate context. There are no "correct" answers to the questions—responses should reflect the unique aspects and experiences of the applicant. The specific essay questions are available on the application.

Letters of Recommendation

Students may submit letters of recommendation if they wish; however, doing so is optional.

MyCUBoulder Account

MyCUBoulder (mycuboulder.colorado.edu) is a personalized electronic tool that all undergraduates may use to explore the opportunities available at CU and keep track of what needs to be done before they arrive on campus. Applicants should use their MyCUBoulder account to apply for admission, check their status, apply for scholarships and financial aid, and take care of other pre-enrollment university business.

Where to Send the Application, Fee, and Credentials

Unless otherwise instructed, mail all application materials to:

Office of Admissions
Regent Administrative Center 125
University of Colorado Boulder
552 UCB
Boulder, CO 80309-0552

Mailing Address

Applicants must keep their mailing address current at all times. It is used for mailings until the applicant arrives on campus. Notices are also sent to this address regarding admission, registration, and orientation, as well as other information. If an address changes or is no longer valid, notify the Office of Admissions immediately at 303-492-6301.

Application Checklist

1. Online application for admission
2. \$50 *nonrefundable* (\$70 U.S. for international students) application fee, payable online (if sending a check or money order, make payable to the University of Colorado; print student's name and date of birth on check)
3. Official high school transcript
4. Official college transcripts (if applicable)
5. SAT or ACT test scores (if applicable)
6. Personal essays
7. Letters of recommendation (optional)

Confirmation Procedures

All admitted students are encouraged to confirm their intent to enroll as soon as possible after receiving their admission notification. Admission must be confirmed by official notification and the nonrefundable confirmation deposit of \$200 through your MyCUBoulder account.

Confirmations and deposits submitted by the dates listed below will be accepted. After these dates, confirmations can be accepted only if space is still available.

Confirmation Postmark Deadlines

	Fall	Summer	Spring
Freshmen	May 1	May 1	Dec. 15
Transfers	varies; see confirmation instructions		

If students register for classes and then decide not to attend, they may be assessed tuition depending upon the circumstances. Guidelines are given on the registrar's website (registrar.colorado.edu) for spring and fall and in the summer catalog for summer

terms. Close attention must be given to statements regarding policies for new, readmitted, and transfer students.

The confirmation deposits are used as registration deposits each semester as long as registration is completed by the published deadline. Once students have attended CU-Boulder, the deposit (minus any fees or other charges owed) will be returned when they graduate or officially withdraw from the university according to established deadlines.

Other Undergraduate and Graduate Applicants

International Students

The university invites applications from qualified international students. International applicants are those who already have, or will be applying for, a temporary U.S. visa such as F-1 and J-1. Applicants who are United States citizens, permanent residents, asylees, or refugees are not considered international. These students should follow application and admission procedures for undergraduates or graduates as described elsewhere in this catalog.

Over 1,000 international students from more than 100 countries study at CU-Boulder. Applications for admission are processed by the Office of Admissions. Assistance after admission is provided by International Student and Scholar Services, located in the Office of International Education. Boulder offers a full range of services to international students, including a host family program, orientation, special programs and activities for international students, and personal attention to individual needs.

Intensive English instruction is also offered by the International English Center. For information, go to www.colorado.edu/iec or write or call the International English Center, University of Colorado Boulder, 63 UCB, Boulder, CO 80309-0063, 303-492-5547.

International students who wish to pursue a full-time program of study at the undergraduate or graduate level should go to the international student website at www.colorado.edu/prospective/international for admission information and online application forms.

Prospective graduate students should go to the website at www.colorado.edu/prospective/graduate for information and application forms specific to the academic department in which they are interested. Prospective graduate students can also call the campus telephone operator at 303-492-1411 and ask to have the call transferred to the department of interest or write to the specific department, University of Colorado Boulder, Boulder, CO 80309.

International Nondegree Students

An individual who holds a temporary nonimmigrant visa or temporary immigration status may register as a nondegree student only after demonstrating English proficiency through the approval to register process administered by the International English Center, and only if the individual also meets academic prerequisites. The University of Colorado Boulder does not issue I-20 Forms or assume any immigration responsibility for nondegree students. Therefore, international nondegree students must maintain appropriate immigration status independent of the university. See the Nondegree Students section for more information. International nondegree applicants should e-mail the International English Center, ieccu@colorado.edu, to obtain instructions and approval to register.

Readmit Students

Former CU-Boulder undergraduate degree students who have not attended the Boulder campus for three semesters must submit the Application for Readmission for undergraduate degree students. No application fee is required. Students who have attended any college or university since their last attendance at CU-Boulder will need to submit official transcripts directly from the issuing institution(s) to the Office of Admissions.

If the student is changing from a previous college or school, the change should be noted on the application. Otherwise, it is assumed that the student is returning to the same field of study, if eligible to do so. If a college or school change is requested for which the student is not eligible, the student will need to request reconsideration for his or her previous program.

Former arts and sciences students wishing to return to arts and sciences must apply to their previous major. Students who wish to pursue a second undergraduate degree must apply to a major different from the one in which they received their degree. Students may not apply for a second bachelor's degree in the Leeds School of Business or the School of Journalism and Mass Communication.

Beginning fall semester 2010, undergraduate degree students who are enrolled or enroll and then withdraw for the current semester will have up to three semesters, including summer, to return to the university without having to reapply for admission. *EXCEPTION: Students who last enrolled for a spring semester (beginning spring 2011) will have up to four semesters, including summer, to return without having to reapply.*

The above policy is not applicable to graduate students but these students may be eligible for the Time Off Program if they wish to take a leave of absence. Graduate students not eligible for the Time Off Program will need to reapply for admission. This policy also is not applicable for new degree students (or transfer students) who enroll and then withdraw prior to the census date. For more information, see registrar.colorado.edu. Degree students who withdraw from CU-Boulder during summer session may not need to reapply to continue into the fall semester unless they are changing schools, colleges, or degree programs.

Nondegree Students

Students who wish to take University of Colorado Boulder courses but are not currently admitted to a degree program at the university are classified as "nondegree students." Students apply as nondegree students through the Division of Continuing Education and Professional Studies (303-492-5148 or conted.colorado.edu). Nondegree students may enroll in credit classes through the ACCESS (Available Credit Courses for Eligible Special Students) Program, the Boulder Evening Program, CAETE (Center for Advanced Engineering and Technology Education), the Independent Learning Program, Applied Music Program, and Summer Session. Continuing Education also offers a variety of noncredit classes.

If students have been denied admission to an undergraduate degree program, they may not enroll as nondegree students in the ACCESS Program for the semester for which they sought degree program admission. Nondegree student admission does not guarantee future admission to any degree program.

Nondegree students may also enroll for courses on a *pass/fail* basis. These courses are counted toward hours of *pass/fail* course work permitted according to the rules of the college or school to which students are admitted once they achieve degree status.

Nondegree students must maintain a 2.000 cumulative GPA. Failure to maintain the required GPA will result in academic suspension.

High school students interested in taking courses at CU-Boulder apply as nondegree students through the High School Concurrent Program administered by the division.

For more information, contact the Division of Continuing Education and Professional Studies at **303-492-5148** or visit **conted.colorado.edu**.

International students who want to apply to the university as nondegree students should read the International Students section above. Students interested in teacher licensure should refer to the School of Education section.

Nondegree Students Transferring to a Degree Program

Students who are currently enrolled or have been enrolled at any CU campus as nondegree students may apply for admission to an undergraduate degree program.

Students wishing to transfer to a graduate degree program should refer to the Graduate School section and individual college and school sections.

A degree-seeking applicant may transfer an unlimited number of credits taken as a nondegree student on any University of Colorado campus. However, applicability of these hours toward degree requirements is established by the colleges and schools. It is suggested that a student apply to a degree program as soon as admission requirements, including MAPS deficiencies, have been met. It is essential that former nondegree students actively seek academic advising from the appropriate dean's office once they have been accepted into a degree program.

Second Undergraduate Degree Applicants

Students may apply for a second undergraduate degree at the University of Colorado Boulder, but should explore the various options in graduate study available at the university before doing so. Students applying for a second undergraduate degree must follow transfer admission guidelines, and those students who are admitted must keep in mind that all college and major requirements must be met in order to complete degree programs satisfactorily. Restrictions mandated by general university policies, as well as specific college and school policies, include the following:

1. Applicants may not apply to the major in which they received their first undergraduate degree.
2. Applicants must apply to a specific major; applications for an open option or undetermined major cannot be considered.
3. Second undergraduate degree applicants in the College of Architecture and Planning are encouraged to investigate graduate programs.
4. The Leeds School of Business and the School of Journalism and Mass Communication do not consider students who have already completed an undergraduate degree. These students are strongly encouraged to investigate graduate study.
5. Students who already have an undergraduate degree from the College of Engineering and Applied Science and who desire a second undergraduate degree are strongly encouraged to investigate graduate study as an option.
6. The School of Education offers graduate and teacher certification programs only.
7. Credit hours earned as a nondegree student at the University of Colorado may not be used toward major degree requirements for a second degree in the College of Arts and Sciences.

Students from Other CU Campuses

Students who wish to transfer to Boulder from another University of Colorado campus (Colorado Springs or Denver), from CU Study Abroad, or from CU Continuing Education and Professional Studies should refer to the Transfer Applicants section. These students must send a high school transcript, SAT or ACT scores, and an official transcript from each college or university attended (outside the University of Colorado system) to the Office of Admissions. Currently enrolled degree students are not required to pay the application fee. Special consideration is given to applicants transferring from degree programs at other campuses of the University of Colorado. Course work completed at other campuses in the University of Colorado System will be a part of the student's cumulative university record and will not be considered as transfer credit. However, the applicability of this course work toward specific CU-Boulder degree requirements will be determined solely by CU-Boulder colleges and schools. External transfer credit presented by students to other University of Colorado campuses will be evaluated by CU-Boulder guidelines upon the student's matriculation into a degree program at CU-Boulder.

Transfer of College-Level Credit

The Office of Admissions performs an initial evaluation of transfer credit after applicants have been admitted. A complete evaluation of transfer credit cannot be made until all official credentials have been received.

The evaluation is made using the official transcripts sent directly to the university from each one of the applicant's previous colleges. Official transcripts exhibit the official seal and signature of the registrar. Transcripts that are marked "student copy," "issued to student," or "unofficial" are not accepted as official. Faxed transcripts are not accepted.

Course work of comparable content and scope to the CU-Boulder curriculum will generally be transferred if it was completed at colleges or universities accredited by the North Central Association of Colleges and Schools, or other regional associations at the time the work was completed. For international colleges or universities, the international equivalent of regional accreditation or Ministry of Education recognition will be considered. If course work was completed at a school not regionally accredited, the student may specifically request that their course work be considered for transfer. CU-Boulder will utilize the recommendations of American Association of Collegiate Registrars and Admissions Officers (AACRAO) when making its decision.

These recommendations include but are not limited to:

- Educational quality of the sending institution
- Comparability of credit to be transferred to CU-Boulder
- Applicability of the credit in relation to the programs being offered at CU-Boulder
- Additional documentation that students may be required to provide regarding the course work for transferability

Exceptions to Recognition of Regional Accreditation

Transferability is based on the practices of the leading university, as reported to AACRAO, in the state where the institution is located. CU-Boulder will make the decision on transferability based on the above criteria for institutions within the state of Colorado.

For Advanced Placement, International Baccalaureate, College Level Examination Program, or military credit, refer to the detailed criteria in the corresponding sections.

Evaluation of Credit

Only courses taken at a college or university of recognized standing with grades of C- (1.700) or better are accepted for transfer. All transferred courses are recorded on the student's academic record.

Each college and school at CU-Boulder determines:

- How transferred course semester credit hours are applied toward graduation requirements in accordance with the policies of the college or school
- The maximum number of semester credit hours that may transfer from a two-year or four-year postsecondary institution
- The minimum number of semester credit hours that must be completed on the Boulder campus in order to receive a degree
- The minimum number of semester credit hours that must be completed as a degree student in residence on the Boulder campus to receive an undergraduate degree
- The maximum number of semester credit hours earned through correspondence or in a similar format that are accepted toward a baccalaureate degree

Credit hours should have been earned no more than 10 years prior to transferring into an undergraduate degree program at the University of Colorado Boulder. Any determination of acceptance of semester credit hours toward the degree based on the content and the age of the credit is made in the college or school dean's office or by the student's major department.

College-level work taken during high school is evaluated in accordance with general guidelines for transfer credit at CU-Boulder. Official college transcripts of work taken must be received in order for transfer credit to be awarded.

Course Work Requiring Additional Review

The following course work will require additional information before a decision can be made on acceptance for transfer credit.

- Independent study courses
- Internships
- Workshops
- Graduate course work
- Military credit
- Professional programs

Course Work Not Accepted for Transfer Credit

The following course work will not be accepted for transfer credit and will not count toward a degree at Boulder:

- any courses in which the grade earned is below a C- (1.700)
- courses identified by CU-Boulder as remedial, such as remedial English, mathematics, science, and developmental reading
- vocational-technical courses that are offered at two-year and proprietary institutions (exceptions may be granted only by the CU-Boulder dean responsible for the student's curriculum—when exceptions appear to be warranted, appropriate department heads make recommendations to their respective deans regarding credit for such courses)
- courses in religion that constitute specialized religious training or that are doctrinal in nature
- credits earned for work experience or through a cooperative education program
- outdoor leadership education course work

- credits earned in physical education activity courses
- courses or programs identified as college orientation

Appeals Process

Students who wish to appeal the transferability of course work must write a letter within the first semester after the work is posted on the University of Colorado Boulder record or after receiving notice from the Office of Admissions that the course work was not accepted for transfer credit. The letter must be addressed to the Transfer Credit Department, Office of Admissions and include:

- The name(s) of the previous institution(s) attended, the course number and title of each course for which the student was denied transfer credit, and the date(s) of enrollment in each course
- A copy of the catalog description (from the appropriate year) for each course in question
- A copy of the syllabus or course outline (from the appropriate year) for each course in question. This information can be obtained from the sending institution
- A statement indicating why the credit(s) should be accepted

The Admissions Office will re-evaluate the course(s) for which the student is requesting reconsideration in consultation with the appropriate dean or chair. A written response will be delivered to the student in a timely manner once the appropriate faculties have reviewed the course materials, past practices, and the student's specific circumstances.

University of Colorado Campuses

Course work completed at other campuses in the University of Colorado system will be a part of the student's cumulative university record and will not be considered as transfer credit. However, the applicability of this course work towards specific CU-Boulder degree requirements will be determined solely by CU-Boulder colleges and schools. External transfer credit presented by students to other University of Colorado campuses will be evaluated by CU-Boulder guidelines upon the student's matriculation into a degree program at CU-Boulder.

Number of Credit Hours Required for Graduation

Transfer students are held to the same residency and degree requirements as students who begin their undergraduate degree program on the Boulder campus. This assumes that transfer credit hours are in courses comparable in level and content to those required for graduation from an undergraduate degree program at the Boulder campus. College or school residency requirements, meaning the number of hours required to be taken as a degree student once admitted on the Boulder campus, are the same for transferring and nontransferring students.

Credit for Correspondence and Online Work

Each college and school determines the maximum number of credits taken through correspondence and online programs that are accepted toward a baccalaureate degree.

College-Level Work Taken during High School

College-level work taken during high school is evaluated in accordance with general guidelines for transfer credit at CU-Boulder. College-level work taken concurrently with a high school program may be used to satisfy MAPS requirements. Official college transcripts of work taken must be received for transfer credit to be awarded.

Advanced Placement Examinations

Credit for College Board Advanced Placement examinations cannot be evaluated from college or high school transcripts; score reports from the College Board must be submitted directly to the university for evaluation. For more information, and a guide to equivalencies, refer to Freshman Applicants and the chart in this section or download the pdf at admissions.colorado.edu/undergraduate/admissions/freshman/credit.

College-Level Examination Program

Credit for College Board subject examinations of the College-Level Examination Program (CLEP) in general biology, general chemistry, general psychology, introductory macroeconomics, introductory microeconomics, introductory sociology, and calculus may be granted for a score at or above the 67th percentile. This credit is applied toward degree requirements at the discretion of the student's dean. Refer to the appropriate dean's office for the policy of that college or school.

Credit for CLEP subject examinations cannot be evaluated from college or high school transcripts; score reports must be submitted directly from the College Board. CLEP general examinations are not accepted for credit at CU-Boulder.

International Baccalaureate Examinations (IB)

In general, credit is granted for approved IB examinations at the higher level with a score of 4 or better. Credit for IB examinations cannot be evaluated from college or high school transcripts. An IB certificate or diploma must be submitted to the Office of Admissions from the IB organization for evaluation. For more information and a guide to equivalencies, refer to Freshman Applicants and the chart in this section or download the pdf at admissions.colorado.edu/undergraduate/admissions/freshman/credit.

Military Credit

Credit for military schooling is evaluated upon receipt of Form DD 214, Service Separation Certificate, or the Sailor/Marine American Council on Edwardian Registry Transcript (SMART). Only work that has received an upper-division baccalaureate recommendation by the American Council on Education (ACE) can be awarded credit. This work, however, is transferred and recorded at the lower-division level. Foreign language credit taken through the State Department, Department of Defense, or Defense Language Institute is assigned the recommended ACE credit.

Credit by Examination

This option provides limited opportunities for students to take an examination and earn credit for a course without registering for or taking the course. Specific courses must be approved for credit by examination. Students may want to exercise this option if they do not receive transfer credit for a course they have taken at a previous college. Information on participating colleges and schools, requirements, and an application for credit by examination are available at the Office of the Registrar, Regent Administrative Center 105, University of Colorado Boulder, 20 UCB, Boulder, CO 80309-0020, 303-492-6970. Permission of the instructor, the department chair, the dean of the college or school in which the course is offered, and the student's dean (if different) is required for approval. An examination fee is charged.

Transfer Credit Conversion

Many campuses operate on the quarter system, with the academic year divided into three terms. Other campuses, including CU-Boulder, operate on a two-term or semester system. Course

credits from quarter system institutions must be converted from quarter hours to semester hours or credits. One quarter credit is equivalent to two-thirds of a semester credit. To convert quarter hours to semester hours, multiply the number of quarter hours by two-thirds and round off the total to the nearest tenth. For example, 4 quarter hours $\times \frac{2}{3} = 2.67$ or 2.7 semester hours of credit, or 3 quarter hours $\times \frac{2}{3} = 2$ semester hours of credit.

Intrauniversity Transfer Students

Students wishing to change colleges or schools within the CU-Boulder campus must obtain an Intrauniversity Transfer (IUT) application from the college or school to which they wish to transfer.

For more information on recommended course work in preparation for an IUT and other criteria, students need to consult college and school sections of this catalog or talk with an academic advisor in the program to which they plan to transfer. Some colleges and schools do not accept intrauniversity transfer students during the summer. It is important to note that admission to a college through the IUT process is competitive, and not all students who apply are admitted. Decisions are based on course preparation, hours completed, grade point average, and other criteria required by the specific college or school.

Denied Admission as a Freshman

Students who were not admissible to the University of Colorado Boulder based on high school academic records are encouraged to apply for transfer admission after at least 24 semester hours of transferable college-level course work are completed or in progress. This includes any minimum academic preparation standards (MAPS) requirements not met in high school.

Graduate Admission

Graduate student admission is handled by individual academic departments. See the department or Graduate School section. For more information, go to www.colorado.edu/prospective/graduate.

Academic Records

Class Level

Class level is based on the total number of semester hours passed, as follows:

Class	Semester Hours
Freshman	0–29.9
Sophomore	30–59.9
Junior	60–89.9
Senior	90–123.9
Fifth-Year Senior	124 and above

The normal course load for most undergraduates is 15 credit hours each semester.

Course Load

The following are the most widely used general definitions of full-time course load. For further information and guidelines, students should see specific college and school sections of this catalog. *Students who receive financial aid or veterans benefits or who live in university housing should check with the appropriate office regarding course-load requirements for eligibility purposes.*

Undergraduate Course Load

For financial aid purposes, full time is 12 or more credit hours for fall, spring, and summer terms.

For enrollment verification and academic purposes (*not related to financial aid*), 12 credit hours is considered a full-time load in the fall or spring semester, and 6 credit hours is considered full time in the summer.

Graduate Course Load

A full-time graduate student in the fall or spring semester is one who is enrolled for 5 credit hours of graduate course work, 8 hours combined graduate/undergraduate course work, 12 hours of undergraduate course work, or thesis hours depending upon the student's status. These hours also apply for enrollment verification purposes. Consult the Graduate School's website at www.colorado.edu/GraduateSchool for requirements.

For financial aid or program requirements for full- or part-time status, which are different than those set by the Graduate School, consult the Office of Financial Aid.

Law students must be enrolled for a minimum of 10 credit hours to be considered full-time in the fall or spring (5 credit hours in the summer). A maximum of 15 credit hours may be applied toward a degree during the fall and spring semesters for graduate students and a maximum of 18 credit hours during the fall and spring semesters for law students. For more information, visit www.colorado.edu/law.

A full-time graduate student in the summer term is one who is enrolled for at least 3 credit hours in graduate course work, 4 hours combined graduate/undergraduate course work, 6 hours of undergraduate course work, or thesis hours depending upon the student's status. The maximum number of graduate credits that may be applied toward a degree during the summer session is 6 credit hours per five-week term and 10 credit hours per 10-week summer session, not to exceed 10 credit hours for the total summer session.

Satisfactory Academic Progress

Satisfactory academic progress in most undergraduate colleges and schools requires a 2.000 grade point average (GPA). Students should consult their dean's office regarding college or school minimum GPA requirements and special policies on probation and dismissal. Students must maintain satisfactory academic progress to receive financial aid.

Grading System

The following grading system is standardized for all colleges and schools of the university. Each instructor is responsible for determining the requirements for a class and for assigning grades on the basis of those requirements.

Standard Grade	Credit Points per Each Hour of Credit
A = superior/excellent	4.0
A- =	3.7
B+ =	3.3
B = good/better than average	3.0
B- =	2.7
C+ =	2.3
C = competent/average	2.0
C- =	1.7
D+ =	1.3
D =	1.0
D- = minimum passing	0.7
F = failing	0.0

Grade Symbols

I = incomplete; changed to *F* if not completed within one year

IP = in progress; thesis at the graduate level or specified graduate-level courses

P = passing; under the pass/fail option, grades of *D-* and above convert to a *P*. Other specified courses may also be graded on a pass/fail basis.

NC = no credit

W = withdrawal or drop without discredit

***** = class grades were not submitted when final grades were processed, or the student is currently enrolled in the course.

Explanation of an I (Incomplete) Grade

An *I* grade is an incomplete grade. If the requirements for the course are not completed within one year, the *I* grade will be converted to an *F*. Use of the *I* grade is at the discretion of the faculty and/or the academic dean's office.

Students must ask for an incomplete grade. An incomplete is only given when students, for reasons beyond their control, have been unable to complete course requirements. A substantial amount of work must have been satisfactorily completed before approval for such a grade is given.

If an instructor grants a request for an incomplete, the instructor sets the conditions under which the course work can be completed and the time limit for its completion or if the course should be retaken. If a course is retaken, it must be completed on the Boulder campus or in Boulder evening classes, and the student must re-register for the course and pay the appropriate tuition.

The final grade (earned by completing the course requirements or by retaking the course) does not result in the deletion of the *I* from the transcript.

Grade Point Average

The overall University of Colorado grade point average (GPA) is computed as follows: the credit hours and credit points are totaled for all courses; then the total credit points are divided by the total credit hours. Courses with grade symbols of *P*, *NC*, ***** (*grade not yet entered*), *W*, *I*, and *IP* are excluded when totaling the hours, however, grades of *F* earned for courses graded on a *pass/fail* option are included in the GPA. *Is* that are not completed within one year are calculated as *Fs* in the GPA at the end of the one-year grade period.

Grades Earned	Credit Points per Hour	Credit Hours	Credit Points in Course
A	4.0	x	4.0 = 16.0
A-	3.7		4.0 = 14.8
B+	3.3		4.0 = 13.2
P	—	3.0	(exclude) —
F	0.0	3.0	0.0
		15 credit hours	44 points
TOTAL = 44/15 = 2.93 GPA			

Students should refer to their academic dean's office for individual GPA calculations as they relate to academic progress and graduation from their college or school.

Class Rank

Beginning in the summer of 2007, undergraduate students can get a document that indicates their rank in class compared to those students graduating within the last year. Students in the College of Arts and Sciences and the College of Engineering and Applied Science will have a ranking within their major degree program. Students at the Leeds School of Business, College of Music, College of Architecture and Planning, and School of Journalism and Mass Communication will have a ranking within students in their college. These forms are available via the Web.

Official Transcripts

Official transcripts include the complete undergraduate and graduate academic record of courses taken at all campus locations or divisions of the University of Colorado. It contains the signature of the registrar and the official seal of the university. Official transcripts are primarily used to support applications for transfer to other academic institutions and for employment purposes. Transcripts sent to students are labeled “issued to student.”

Official transcripts may be ordered in a variety of ways. Visit www.colorado.edu/transcripts for detailed ordering information. There is no charge for official transcripts, which are prepared at the student’s request. However, rush services are available for a fee. Typically, non-rush transcript requests are processed within seven to ten business days and placed in first-class mail. Transcripts can be withheld for both financial obligations to the university or disciplinary actions that are in progress.

Official transcripts that include end-of-term grades are available approximately two weeks after final examinations. Degrees are recorded approximately six weeks after graduation.

Unofficial Transcripts

Unofficial transcripts are also a complete academic record of courses taken at the University of Colorado. They are primarily used for advising and counseling within offices on campus and within offices at other University of Colorado campuses. Unofficial transcripts do not carry the registrar signature or seal of the university. Currently enrolled students may access their unofficial transcripts via MyCUInfo.colorado.edu. Students may print this unofficial transcript on any printer.

Credit by Examination

In limited instances, students enrolled in a degree program may earn additional credit without otherwise registering for and taking certain courses if they pass a written examination. Information on participating colleges and schools and an application for credit by examination may be obtained from the Office of the Registrar in Regent Administrative Center 105. The application specifies procedures to be followed. The following signatures are required for approval: the instructor, the department chair, the dean of the college or school in which the course is offered, and the student’s dean, if different. The fee for each examination is not included in the regular tuition, but it is assessed separately at a fixed rate equivalent to the minimum resident tuition rate charged for 0–3 credit hours for the current semester. Fees are payable in advance and are nonrefundable.

Holds

A scholastic, dean’s, financial, health, or advising hold may be placed on a student’s record for a number of reasons. A hold prevents a student from registering, returning to school, obtaining an official transcript, or receiving a diploma. The student should resolve each hold as quickly as possible by contacting the campus office that placed it. General inquiries may be addressed to the Office of the Registrar.

Confidentiality of Student Records

Annual Notice to Students: The University of Colorado complies fully with the provisions of the Family Educational Rights and Privacy Act (FERPA) of 1974. The act was designed to protect the privacy of education records, to establish the right of students to inspect and review their education records in all offices, and to provide guidelines for the correction of inaccurate or misleading data through informal and formal hearings. Students also have

the right to file complaints with the FERPA office concerning alleged failures by the institution to comply with the act.

University guidelines explain in detail the procedures to be used by the institution for compliance with the provisions of the act. Copies of the guidelines may be obtained from the Office of the Registrar and at registrar.colorado.edu/regulations/ferpa_guide.html.

Students wishing to review their education records must come to the Office of the Registrar and present proper identification. All other records inquiries must be directed to the proper office, i.e., financial aid, bursar, etc.

Students may not inspect the following, as outlined by the act: financial information submitted by their parents, confidential letters that they have waived their rights to review, or education records containing information about more than one student, in which case the institution will permit access only to that part of the record that pertains to the inquiring student. Records that may be inspected include admissions, academic, and financial aid files, and cooperative education and placement records.

The Family Educational Rights and Privacy Act affords students certain rights with respect to their education records. They are:

1. The right to inspect and review education records within 45 days of the day the university receives their request for access.

Students should submit to the registrar, dean, head of the academic department, or other appropriate official, written requests that identify the educational record(s) they wish to inspect. The university official will make arrangements for access and notify them of the time and place where the records may be inspected. If the records are not maintained by the university official to whom the request was submitted, that official shall advise them of the correct official to whom the request should be addressed.
2. The right to request the amendment of students’ education records that they believe are inaccurate or misleading.

They may ask the university to amend a record that they believe is inaccurate or misleading. They should write the university official responsible for the record, clearly identify the part of the record they want changed, and specify why it is inaccurate or misleading.

If the university decides not to amend the record as requested by the student, the university will notify the student of their right to a hearing regarding the request for amendment. Additional information regarding the hearing procedures will be provided to them when notified of the right to a hearing.
3. The right to consent for disclosures of personally identifiable information contained in their education records, except to the extent that FERPA authorizes disclosure without consent.

One exception that permits disclosure without consent is disclosure to school officials with legitimate educational interests. A school official is a person employed by the university in an administrative, supervisory, academic, research, or support staff position (including law enforcement unit personnel and health staff); a person or company with whom the university has contracted (such as an attorney, auditor, collection agent, University of Colorado Foundation, or employment or degree verification agency such as the National Student Clearinghouse); a person serving on the Board of Regents; a student employee; or a student serving on an official committee; or one assisting another school official in performing his or her task. In addition, a student’s records may

be disclosed to their parent(s) upon request if their parent(s) claim them as a dependent for income tax purposes.

A school official has a legitimate educational interest if the official needs to review an education record in order to fulfill his or her professional responsibility.

Upon request, the university discloses education records without consent to officials of another school in which a student seeks or intends to enroll.

4. The right to file a complaint with the U.S. Department of Education concerning alleged failures by the university to comply with the requirements of FERPA. The name and address of the office that administers FERPA is:

The Family Compliance Office
U.S. Department of Education
600 Independence Avenue, SW
Washington, DC 20202-4605
202-260-3887

The following items of student information have been designated by the University of Colorado Boulder as public or “directory” information: names; student address (including designated local mailing and permanent); telephone number listed with mailing address; student e-mail address; dates of attendance; registration status; class; college or school; previous educational institutions attended; major/minor fields of study; awards, honors, degree(s) applied for or conferred (including certificates, thesis, and dissertation titles) and dates received; past and present participation in officially recognized sports and activities; physical factors (height and weight) of athletes; prior schools attended; employment related to student status (e.g., teaching assistant, resident assistant, or tutor); class seat assignment; College Opportunity Fund application and authorization status; expected date of completion in enrolled course of study; and student photo (including Buff OneCard photo in certain circumstances). Such information may be disclosed by the institution at its discretion.

Withholding Directory Information

Students have the right to withhold directory information from inquirers. To restrict the release of directory information, go to the Office of the Registrar to complete a “Privacy Form.”

Student Consent for Release of Confidential Information

Students may complete a “Student Permission” form that gives parents, spouses, or third parties access to educational records. Students must bring a photo ID to the Office of the Registrar, Regent Hall room 105, between 9:00 A.M. and 5:00 P.M. to complete this form.

Release of Disciplinary Information

Provisions of the Family Educational Rights and Privacy Act of 1974, as amended by the Higher Education Amendments of 1998, govern access to a student’s academic transcript or conduct file. The student and/or those university officials who demonstrate a legitimate educational need for disciplinary information may have access to the student’s conduct file. Parent(s), who provide proof that a student is a dependent as defined in Section 152 of the Internal Revenue Code of 1954 (i.e., a copy of the last federal income tax return listing the student as a dependent), can have access to the student’s conduct file without written consent of the student. In this case, parents may also have access to a conduct file, even if the student has requested otherwise.

In addition, parent(s) may be notified if a student under 21 is found responsible for a violation involving use or possession of alcohol and controlled substances. All other inquiries, including but not limited to inquiries from employers, government agencies, news media, family, friends, or police agencies, require a written release from the student before access to university conduct files is granted. Exception: Information may be released pursuant to a lawfully issued subpoena and as provided by the Campus Security Act as amended by the Higher Education Amendments of 1992.

The Campus Security Act permits higher education institutions to disclose to alleged victims of any crime of violence (e.g., murder, robbery, aggravated assault, burglary, motor vehicle theft, arson) the results of the conduct proceedings conducted by the institution against an alleged perpetrator with respect to such crime. The Campus Security Act also requires that both the accused and the accuser be informed of campus conduct proceedings involving a sexual assault.

In-State and Out-of-State Tuition Classification

Tuition classification is governed by Colorado statutes and by judicial decisions that apply to all state-funded institutions in Colorado and is subject to change without notice.

New students are classified as in-state or out-of-state residents for tuition purposes on the basis of information provided on their application for admission and other relevant information. Applicants may be required to submit evidence substantiating their claim of in-state eligibility.

Applicants and students who feel their classification is incorrect or who have become eligible for a change to in-state status must submit a petition with documentation in order to have their status changed. The necessary petition forms, deadlines for submission, and an explanation of the Colorado tuition classification statute are available from the Tuition Classification Officer, Regent Administrative Center 105, University of Colorado Boulder, 68 UCB, Boulder, CO 80309-0068, 303-492-0907, fax: 303-492-8748, e-mail: tuitclass@registrar.colorado.edu, website: registrar.colorado.edu/students/tuition_classification.html.

Basic Requirements for Establishing Colorado Residency

Colorado in-state tuition classification requires domicile (legal residence) in Colorado for 12 consecutive months. Domicile is defined as a person’s true, fixed, and permanent home and place of habitation. To establish domicile, a person must reside in Colorado and demonstrate that Colorado is his or her permanent home.

In addition to establishing domicile in Colorado, a person must be either 22 years of age or older, married, a graduate student, or an emancipated minor to begin the 12-month period. Unemancipated minors qualify for in-state status if their parents have been domiciled in Colorado for one year.

Emancipation

To be emancipated, students cannot be supported by their parents in any way. College savings funds and other income-producing assets established by the parents prior to the 12-month period are considered to be parental support.

Evidence of Domicile

Evidence of Colorado domicile includes actions that would normally be expected of any permanent resident. Factors that constitute evidence of domicile are:

- Payment of Colorado state income tax
- Colorado driver's license
- Colorado vehicle registration
- Voter registration in Colorado
- Ownership and permanent occupancy of residential real property in Colorado
- Permanent employment or acceptance of future permanent employment in Colorado (Note: employment offered by the university to students is not considered permanent)
- Graduation from a Colorado high school
- Continued residence in Colorado while not enrolled as a student

No single factor constitutes conclusive proof of domicile. All factors, positive and negative, are considered. All of the listed factors are not necessary, but individuals should take action on those factors that are appropriate in their circumstances.

Unemancipated Minors

Students as old as 22 may qualify for in-state tuition if either of their parents, regardless of custody, has been domiciled in Colorado for 12 consecutive months preceding the first day of class in a given semester, even if the students reside elsewhere. In certain circumstances, students may qualify through their parents up to age 23.

Students lose eligibility for in-state tuition if they (or their parents, if the students are unemancipated minors) maintain domicile outside Colorado for one year or more, unless the parents have lived in Colorado at least four years and meet other requirements.

In-state classification becomes effective at the beginning of the first term after one year of legal residence in Colorado. Changes of classification never take effect midterm.

Students who give false information to evade payment of out-of-state tuition or who fail to provide timely notice of their loss of in-state eligibility are subject to retroactive assessment of out-of-state tuition, as well as disciplinary and legal action.

In-State Status: Other Circumstances

Exceptions to the one-year residence requirement exist for the following:

- Colorado National Guard members
- Active-duty military stationed in Colorado
- Honorably-discharged members of the U.S. armed forces
- Returning active-duty military members
- Canadian military stationed in Colorado
- Employees of companies moving to Colorado receiving government economic incentives
- Children of new faculty members at Colorado state colleges and universities
- Western Regional Graduate program enrollees
- U.S. citizens who are Colorado high school graduates and who attend a Colorado high school for three years immediately preceding enrollment, or Colorado G.E.D. holders who reside in Colorado the three years immediately preceding enrollment

For detailed explanations of the requirements for these exceptions, including spouse and child eligibility, go to registrar.colorado.edu/students/tuition_classification.html.

Expenses

College Opportunity Fund

In May 2004, an act of the Colorado state legislature established a new way for the State of Colorado to provide state tax-dollar support for higher education at the undergraduate level. The state is no longer appropriating monies to institutions for undergraduate education, but providing direct funding to undergraduate students through the College Opportunity Fund (COF).

This program, also known as “vouchers” or “stipends,” requires resident undergraduate students to request that COF vouchers be applied to their university bills.

Details of the COF program are determined by the Colorado Commission on Higher Education (CCHE) and the College Assist Program. Updated details are available at www.cu.edu/ums/cof/faq.html and cof.college-assist.org. Students need to *apply* and *authorize* (two separate steps) the COF stipend in order to receive it. For instructions, see COF information at registrar.colorado.edu.

Confirmation Deposit

All new students (both resident and nonresident) must confirm their enrollment at the university by official notification and deposit of \$200. The deposit is nontransferable and must be paid by all students, regardless of financial aid awards. Students who have paid the deposit and who decide not to attend CU-Boulder forfeit their deposit. Students who submit deposits after enrollment levels have been reached will not be accepted, and their deposits will be returned.

The confirmation deposit is not credited toward tuition and fees. It is refunded when a student graduates or officially withdraws from CU-Boulder within established dates and guidelines after paying any outstanding university obligations. Students should update their direct deposit bank account information before they graduate or withdraw to be sure they receive their refund.

Estimated Expenses

Expenses for students attending the University of Colorado Boulder vary, depending on housing (on or off campus), program of study, state residency (tuition classification), personal needs, and individual interests.

It is difficult, therefore, to provide exact statements of total expenses. The following estimated costs per academic year were calculated for the range of full-time undergraduate students living on the Boulder campus during the 2010–11 academic year.

Tuition and fees for 2011–12 were not set when this catalog went to press. Check the Bursar's Office website for current tuition and fee rates: www.colorado.edu/bursar/now/tuitfeebill.html.

Costs for 2010–11 Year at CU-Boulder

The figures below are estimates based on a single undergraduate student enrolled full time for an academic year of two semesters.

Expenses	Resident	Nonresident
Tuition and Fees	\$8,510–\$12,712	\$29,492–\$32,992
On-campus Room and Board (based on double occupancy)	10,792	10,792
Books and Supplies	1,748	1,748
On-campus Est. Total	\$21,050–\$25,252	\$42,032–\$45,532

Notes

1. Residency classification is determined by Colorado state law. The resident tuition amount assumes eligibility for, and authorization for the use of, the College Opportunity Fund (COF) stipend, which was \$62 per credit hour in 2010–11.

Tuition per Semester, fall 2010 through spring 2011

(For planning purposes only. Rates for 2011–12 were not available at time of printing. Tuition charged is affected by residency status, degree, and number of credit hours. Dual degrees are charged at the higher of the two rates.)

10	(3,810) 3,190	(5,720) 5,100	(5,050) 4,430	(3,930) 3,310
11	(4,191) 3,509	(6,292) 5,610	(5,555) 4,873	(4,323) 3,641
12	(4,253) 3,509	(6,354) 5,610	(5,617) 4,873	(4,385) 3,641
13	(4,315) 3,509	(6,416) 5,610	(5,679) 4,873	(4,447) 3,641
14	(4,377) 3,509	(6,478) 5,610	(5,741) 4,873	(4,509) 3,641
15	(4,439) 3,509	(6,540) 5,610	(5,803) 4,873	(4,571) 3,641
16	(4,501) 3,509	(6,602) 5,610	(5,865) 4,873	(4,633) 3,641
17	(4,563) 3,509	(6,664) 5,610	(5,927) 4,873	(4,695) 3,641
18	(4,625) 3,509	(6,726) 5,610	(5,989) 4,873	(4,757) 3,641

For credit hours over 18, add \$62 per credit hour. COF remains the same.

* The state of Colorado provides direct funding to in-state undergraduate students through the **College Opportunity Fund (COF)**. In the Undergraduate Tuition table above, the amount shown in **boldface** was the in-state tuition for those receiving the COF voucher (\$62 per credit hour for academic year 2010–11). The amount in parentheses was the tuition for those who did not apply for the COF stipend. The COF stipend amount is subject to legislative change every year. See Colorado Opportunity Fund in this section.

NONRESIDENT Tuition

Group/First Enrolled	A&S/Other	Business	Engineering	Journ./Music
A/B/C: spring 2008 or earlier	\$11,790	\$13,280	\$12,645	\$11,915

Graduate Fees

See page 22–23.

2. *Special residential academic fees, program fees, course fees, and transportation, medical, and personal cost estimates are not included in the estimated total because costs can vary depending upon individual circumstances and spending habits.*

Students planning to attend summer session should take into account estimated expenses indicated in the *Summer Session Catalog*, available online and from the Office of the Registrar in mid-February.

Resident tuition is charged per credit hour. Nonresident tuition is a flat rate, regardless of the number of credit hours.

Resident undergraduate students must apply and authorize for the College Opportunity Fund tuition voucher program to help offset part of their tuition. See www.cu.edu/ums/cof/faq.html and cof.college-assist.org for additional information.

Nonresident students are guaranteed the same tuition rate for four years. Students first registering summer 2011 through spring 2012 are guaranteed the same tuition rate through summer 2015. See www.colorado.edu/pba/budget/tuitionfees/guarantee.html for more information.

Zero or fractional credit is treated as one hour in assessing tuition and fees. Tuition for no-credit (NC) courses is the same as for courses taken for credit.

Students simultaneously enrolled in programs leading to two different degrees will be assessed tuition for the college or school with the higher tuition rate.

Housing Security Deposit

All students who live in the residence halls are required to pay a one-time security deposit of \$300 (deposit is subject to change). This security deposit is held by Housing & Dining Services and is released to the tuition and fee account within 60 days after the expiration of the housing contract.

The security deposit required for housing is in addition to the confirmation deposit required for admission to the university.

Fees

New Student Fee

The new student fee is a one-time nonrefundable fee assessed at the time of initial registration for students entering a degree program. Nondegree students who are admitted to degree status are charged the new student fee at the time they first register. It covers expenses for registration and transcripts, undergraduate orientation, Buff OneCard, immunization management, Forever Buffs alumni membership, and orientation for international students. The fee varies depending upon degree and international status.

Undergraduate students	\$182
Graduate students	\$62
International undergraduate students	\$225
International graduate students	\$105

Program and Course Fees

Instructional fees are charged on an individual basis to help offset the higher costs of specialized supplies and equipment unique to these programs and courses. Program and course fees for 2010–11 ranged from \$5–\$70 per credit hour, \$5–\$390 per course, and \$275–\$297 per semester. Visit www.colorado.edu/bursar for a list of specific program and course fees. Lab courses not linked to a lecture course may also require payment of a course fee. In addition, certain colleges charge a fee for enrollment in that college, even if the student is not currently taking courses that apply to their major.

Late Registration Fee

A late registration fee may be charged to students who are authorized to register for a fall or spring semester (but who are not registered in any classes by the third Friday of the semester). The late registration fee is \$100. This fee should not be confused with late and service charges assessed for late payments.

Student Health Insurance Plans

CU-Boulder has a policy requiring all CU students taking one or more credit hours to have health insurance coverage. To help students comply with this policy, all students are automatically enrolled in the university-sponsored Student Gold Health Insurance Plan.

Enrollment is not automatic for spouses/domestic partners and dependents; or for students in continuing education, study abroad programs including Semester at Sea, and the evening MBA program.

Students enrolled in a health insurance plan other than the university's (i.e., from their employer, through an individual insurance plan, or their parent's insurance) must waive the university health insurance coverage by the semester deadline. The deadline to waive insurance is August 31, 2011, for fall 2011 and January 25, 2012, for spring 2012. The student health plan selection automatically extends through the spring/summer 2012 unless another plan is selected. Students enrolled in a university health plan will be billed each semester.

The university is not responsible for a student's health care costs. If a student participates in one of the university health plans, Wardenburg Health Center will provide covered services as set forth in the plan selected.

For more information about CU health insurance visit www.colorado.edu/studenthealthplans, call 303-492-5107, or stop by the Student Health Plans Office located in Wardenburg Health Center.

2010–11 Mandatory Fees per Semester

Activity Fee (assessed by CUSG)¹

Undergraduate Students

One class of 5 or fewer credit hours, without health insurance	\$63.40
One class of 5 or fewer credit hours, with health insurance	\$128.17
One class of more than 5 credit hours or any credits	\$353.61
More than one class (any amount of credit hours)	\$353.61

Graduate Students²

Prior to completion of 30 total credit hours	\$353.61
After completion of 30 total credit hours, without health insurance	\$63.40
After completion of 30 total credit hours, with health insurance	\$128.17

Arts and Cultural Enrichment Fee

All students	\$10.00
--------------	---------

Athletic Fee³

Credit hours of 3 or fewer	\$0.00
Credit hours of 4 or more	\$28.50

Capital Construction Fee

Credit hours of 6 or fewer	\$100.00
Credit hours of 7 or more	\$200.00

Career Services Fee

All students except law and doctoral candidates	\$9.00
-------------------------------------------------	--------

Computing Fee

Credit hours of 6 or fewer	\$33.62
Credit hours of 7 or more	\$67.24

Health Insurance

Student Gold health plan is mandatory (but may be waived if proof of other insurance is shown). Plans are Student Gold (\$1,105) or Wardenburg Campus Care (\$165, supplemental to other insurance).

International Student Processing Fee (SEVIS)

International students only	\$22
-----------------------------	------

Student Bus and Bike Programs Fee⁴

All students \$71.00

Student Information System (SIS) Fee

Mandatory for all students \$7.00

1 Undergraduate students: Payment of full CUSG student fees in the amount of \$353.61 is mandatory for undergraduate students unless enrolled in only one class of five or fewer credit hours in which case base fees in the amount of \$63.40 are charged. If the student is eligible for base fees and is covered by Student Gold Health Insurance plan, they must also pay the Wardenburg portion of student fees in the amount of \$64.77.

Graduate students: Payment of full CUSG student fees in the amount of \$353.61 is mandatory for graduate students prior to completion of 30 credit hours. After completion of 30 hours, graduate students are eligible for base fees. If covered by Student Gold Health Insurance plan, they must also pay the Wardenburg portion of student fees in the amount of \$64.77. For additional information please call the Bursar's Office at 303-492-5381 or e-mail bursar@colorado.edu.

Law students: Payment of full CUSG student fees in the amount of \$353.61 is mandatory for law students.

2 Additional Graduate Student Fees: Law Students are assessed two additional fees: Graduation Fee (\$30) and Law Student Services Fee (\$150). The UGGS Graduate Fee is \$4.50.

3 Not assessed to doctoral candidate or doctoral thesis.

4 The student bus and bike program fee entitles students to unlimited free rides on local, regional, and express bus routes.

For detailed student fee information, visit www.colorado.edu/bursar.

Tuition and Fee Regulations**Drop/Add Tuition Adjustment**

Adjustment of tuition and fees is made on drop/add changes as published at registrar.colorado.edu.

Tuition Classification

Students are classified as residents or nonresidents for tuition purposes on the basis of answers provided on their application for admission and other relevant information. For more information, go to the tuition classification link at registrar.colorado.edu/students/tuition_classification.html.

Students Registered on More Than One Campus

Students registering for courses on more than one campus of the university during a single term pay tuition and fees to each campus at the rate appropriate to the number of credits for which they are registered on that campus. Students may be eligible to use the concurrent registration option, in which case they pay the tuition rate of their home campus rates for the total hours enrolled at all campuses.

Nondegree Students

Nondegree students enrolled in undergraduate courses are assessed tuition at the undergraduate student rate. Nondegree students enrolled in graduate courses are assessed tuition at the graduate student rate. Nondegree students enrolled in both graduate and undergraduate courses are assessed tuition at the undergraduate student rate.

University Employees

Any permanent employee may enroll for no more than 9 free semester hours of credit (and some permanent part-time employees for a proportionate number of credit hours) in any academic year (summer, fall, spring) on a space-available basis beginning the day before classes begin. Courses need to be job related or career enhancing. (Courses offered through Continuing Education are not eligible. It is the employee's responsibility to determine if a course is a Continuing Education class.) Time taken to attend classes during normal working hours shall be made up and may be limited to one course during any term. Persons appointed for less than full time are not eligible for release time during assigned hours. For details, visit the tuition benefit link at www.colorado.edu/bursar.

Concurrent Bachelor's/Master's Degree Programs

The Graduate School, in cooperation with the other colleges and schools, has instituted a concurrent bachelor's/master's degree option.

Students need to talk with specific departments regarding programs offered and verification of the following statements:

1. Students who complete the requirements for the concurrent bachelor's/master's degree receive both degrees simultaneously.
2. Students admitted to concurrent programs may register for graduate courses before they receive a bachelor's degree.
3. Students admitted to bachelor's/master's programs will pay tuition according to their graduate/undergraduate status throughout the five to six years required to complete the concurrent bachelor's/master's degrees.
4. Students admitted to concurrent degree programs will be regarded as undergraduate students for the purposes of receiving financial aid throughout the five years of their program, unless they are advanced to graduate status. Students may advance to graduate status upon the recommendation of their department, only after the completion of all their undergraduate requirements.

Approved Doctoral Candidates

A student who has passed the comprehensive exam and is admitted as an approved doctoral candidate is registered for five dissertation hours. Students not making use of campus facilities may choose to register for three dissertation hours and will be considered part-time students. Continuous registration for appropriate dissertation hours during fall and spring semesters is required until completion of the dissertation defense. During the semester of the dissertation defense, a student must be a full-time student, registered for five dissertation hours. A DMA student who has passed the comprehensive exam must maintain continuous registration by registering for DMA dissertation credits (courses 8200-8399) or TMUS 8029 through the semester in which the final dissertation exam or final exam is completed.

Payment of Tuition and Fees**University Bills**

Any student who completes registration agrees to pay CU-Boulder according to the payment terms documented at www.colorado.edu/bursar under the tuition and fees section. The bill includes tuition, fees, university residence hall charges, financial aid awards, student loan proceeds, research and teaching assistant tuition waivers, and other credits to tuition and fees. An e-mail notification is sent to the student's CU e-mail address when the bill is available online. A student may also authorize parents and others (up to five people) to view and pay the bill online at CUBill&Pay.

Payment methods include:

- Online payment from checking or savings account: see MyCUInfo.colorado.edu or www.colorado.edu/bursar.
- Cash
- Check (personal, certified, cashier's, traveler's, credit card checks, or money orders). Include student's identification number on the check.

Credit and debit cards are not accepted, due to the high cost of merchant fees.

Payment can be delivered via the Internet, wire, overnight express, standard U.S. Postal Service, or dropped in one of two payment drop boxes located outside the north and south entrances of Regent Administrative Center. (See detailed information for all payment options at www.colorado.edu/bursar.)

Failure to receive the official e-mail notification of the bill does not relieve any student of responsibility for payment by the published deadline. To avoid assessment of service charges (1 percent per month on the unpaid balance), a late fee (up to \$50 per semester), and possible loss of future semester classes, tuition and fees must be paid by the deadline published at www.colorado.edu/bursar. Subsequent bills will reflect adjustments and additional charges made throughout the semester. Tuition and fee billing information is available at www.colorado.edu/bursar.

Two-Payment Plan

Students may select a two-payment plan online by the first tuition payment deadline each semester. For more information about the two-payment plan, visit www.colorado.edu/bursar.

Failure to Make Payment

Failure to make the required payment by the stated deadline will result in any or all of the following actions:

1. Registration for future terms will not be allowed. If the student is already registered for courses for a future term, those courses may be dropped.
2. No transcripts, diplomas, or certification materials are issued for the student until the bill is paid in full.
3. The student will still be responsible for full tuition and fees, as well as a service charge (1 percent per month on the unpaid balance) and a late charge per semester according to the following schedule:

<i>Balance Due</i>	<i>Late Charge</i>
\$1.00–99.99	\$5.00
\$100.00–299.99	\$10.00
\$300.00–499.99	\$20.00
\$500.00–699.99	\$30.00
\$700.00–899.99	\$40.00
\$900.00 and over	\$50.00

4. All past due accounts are referred to the university's Student Debt Management department for collection, where collection costs may be assessed.
5. If an account is referred to a third-party collection agency, the delinquency may be reported to national credit bureaus and the student must pay collection costs and attorney fees allowed by the Uniform Consumer Credit Code. For more information, see www.colorado.edu/bursar.

Returned Payment Policy

A \$20 fee is assessed for all payments returned (regardless of the amount). Late and service charges may be assessed and certified funds may be required when payment is made. A stop will be placed on the student's record and students may also be liable for the collection costs, attorney fees, and prosecution under the Colorado Criminal Statutes. Specific inquiries regarding returned payments should be directed to the Student Debt Management department in the Bursar's Office.

Dispute Rights

To dispute tuition and mandatory fee charges, you must make a formal appeal to the Tuition Dispute Committee by the end

of the semester (last day of finals). Disputes will only be considered under extenuating circumstances, such as university error, recent medical condition, immediate family emergency, recent unanticipated financial problems, and verified non-attendance. Official documentation must be provided to substantiate the circumstances. You may obtain a dispute form at www.colorado.edu/bursar/info/dispute.html or by contacting the Bursar's Office Student Billing Department, Regent Administrative Center, 43 UCB, Boulder, CO 80309-0043, 303-492-5381, or bursar@colorado.edu. If you disagree with the charges and fail to avail yourself of the dispute process by the end of the semester, you will have been deemed to have waived your right to dispute the charges. For additional information on the dispute process, go to www.colorado.edu/bursar.

Withdrawal Policy Regarding Tuition and Fees

Students who pay the \$200 confirmation deposit and register for classes for any given semester are obligated to pay full tuition and fees for that semester, unless they officially withdraw from the university.

Tuition and fee obligations for withdrawing students are as follows (for fall and spring semesters):

1. **Continuing students:** If withdrawal is by the "deadline to withdraw and not be assessed a financial penalty," continuing students and students returning from the Time Off Program receive a refund of the confirmation deposit less any outstanding charges.

New and readmitted students: New, readmitted, and transfer students are not eligible for a refund of the confirmation deposit.

Deadlines to withdraw with no financial penalty vary by semester but occur some time before the first day of instruction. Visit registrar.colorado.edu for specific dates.

If students withdraw after the "deadline to withdraw and not be assessed a financial penalty" but before 11:59 P.M. on the third Wednesday of instruction, they are assessed a \$200 withdrawal processing fee. (The confirmation deposit is applied to this charge.)

2. No refunds will be made for students who withdraw after the third Wednesday of instruction. However, students who feel they have circumstances that may warrant a tuition adjustment and who withdraw after the third Wednesday of instruction through the fifth Wednesday of instruction, may petition the Registrar's office to be assessed 40 percent of total tuition (not including the portion of tuition paid by COF for in-state undergraduate students) and mandatory fees (CUSG student fees, athletic fee, and capital construction fee). Students who withdraw after the fifth Wednesday of instruction through the seventh Wednesday of instruction may petition to be assessed 60 percent of total tuition (not including the portion of tuition paid by COF for in-state undergraduate students) and mandatory fees (CUSG student fees, athletic fee, and capital construction fee). After the seventh Wednesday of instruction students may not petition the Office of the Registrar for any tuition adjustment. If there are extenuating circumstances (university error, recent medical condition, immediate family emergency, recent unanticipated financial problems, verification of non-attendance), students may dispute tuition and mandatory fee charges through the Bursar's office. College Opportunity

Fund hours are expended and not refunded with withdrawals after the published deadline.

To comply with federal financial aid regulations, financial aid recipients' loan and scholarship awards may be adjusted.

Students should visit registrar.colorado.edu for any changes, as the Board of Regents reserves the right to revise this schedule at any time. Refer to the *Summer Session Catalog* for information on the withdrawal policy and refund schedule for summer terms.

It is the responsibility of students to have all special services fees removed at the time of withdrawal. Otherwise, these fees become a financial obligation.

Students who do not pay the full amount due the university at the time of withdrawal must make arrangements for payment with the Student Debt Management department in the Bursar's Office. All withdrawals are handled through the Office of the Registrar, Regent Administrative Center 105.

Auditing

Individuals who wish to attend regularly scheduled classes and who are not registered students must obtain auditor's status. Auditors, resident or nonresident, pay resident arts and sciences undergraduate tuition for 3 credit hours per term and receive class instruction and library privileges only. An auditor's card must be presented to the instructor on the first day of class. An auditor must get permission from the instructor to audit the class prior to purchasing the audit card. Audit cards are not refundable and expire at the end of the semester in which classes are taken. Cards may be obtained from the Bursar's Office in Regent Administrative Center no earlier than one week before classes start and no later than the deadline to drop/add. Spanish and Portuguese language classes are not eligible for audit.

To qualify as an auditor, an individual must be 18 years of age or older and not a registered student. Anyone under suspension from the university may not audit courses. Auditors may attend as many courses as they wish (except those courses with laboratories or where equipment is used), with instructor permission.

If a regular degree student wishes to participate in a class without receiving credit, the student must register for the course for no credit. Tuition for courses taken for no credit is the same as for courses taken for credit. Auditors should note that the Office of the Registrar does not keep any record of courses audited; therefore, credit for these courses cannot be established.

Those 55 and older qualify for the Senior Audit Program's much reduced audit rates and should contact the CU Alumni Association at 303-492-8484, cualum.org/services/senior-auditors.

Financial Aid

The Office of Financial Aid's primary goal is to ensure that students who have been admitted to the university will have access to the resources necessary to complete their education. CU-Boulder students receive financial aid each year from federal, state, university, and private sources. Total aid for graduates and undergraduates is approximately \$315 million and is a combination of loans, work-study, grants, and scholarships.

Applying for Financial Aid

Students apply for financial aid by completing the Free Application for Federal Student Aid (FAFSA) at www.fafsa.gov. Based on a federal formula, the FAFSA determines a student's eligibility for need-based and non-need-based financial aid, as well as some scholarships. Students must reapply for financial aid every year.

For financial aid for fall 2011, spring 2012, and summer 2012, the 2011-12 FAFSA must be submitted. Students should apply as soon as possible after January 1, 2011.

After submitting the FAFSA, applicants receive a Student Aid Report (SAR) from the federal processor. The Office of Financial Aid receives the SAR results electronically if CU-Boulder is listed on the application.

Students must be admitted to the university before their financial aid application can be considered. However, prospective students do not need to wait for formal acceptance to CU-Boulder before applying for financial aid or scholarships.

Eligibility

Eligibility for financial aid is based on the cost of attending CU-Boulder and the amount students and their families are expected to contribute toward the cost of attendance. Each year the financial aid office calculates the cost of attendance using local and national cost-of-living data.

The expected family contribution (EFC) is determined by an analysis of the student's FAFSA. A student's financial need is calculated by subtracting the EFC from the cost of attendance.

The financial aid award is funded from a combination of need-based and non-need-based financial aid sources in an effort to meet each applicant's total financial eligibility. Students may need to borrow educational loans and work part-time while they are in school.

Financial Aid Awards

Most financial aid is awarded in April, but aid is offered as long as funds are available. Freshman and transfer students applying for aid for the 2011-12 academic year are encouraged to submit their FAFSA applications by April 1, 2011, in order to receive aid information in time to make an informed decision. Awards available to CU-Boulder students are listed below.

Loans

Students submit the FAFSA to be considered for the following loan programs.

Federal Direct Stafford Loan. Funds are awarded and disbursed by CU-Boulder. Students sign a promissory note for the loans, which have two fixed interest rates of 4.5 percent (subsidized) and 6.8 (unsubsidized). Annual limits depend on the year in school: freshmen can be awarded up to \$3,500; sophomores, \$4,500; juniors and seniors, \$5,500; and graduate students, up to \$8,500. The loan may be need-based and subsidized (interest does not accrue while borrowers are in school) or non-need-based, which are unsubsidized. Dependent students may borrow an additional \$2,000 unsubsidized loan on top of their yearly limit as noted above. The interest on non-need-based loans may be paid while in school or borrowers can choose to have it deferred. Repayment begins six months after the student graduates or ceases to be enrolled at least half time (6 credit hours).

Federal PLUS Loan. This federal loan is available to graduate students and parents of dependent undergraduate students. The interest rate is fixed at 7.9 percent for loans disbursed on or after July 1, 2006. Repayment begins within 60 days of full disbursement of the loan. Typically, repayment begins in March for an academic year loan; however borrowers may now request a deferral on payments until their student has finished with school. Borrowers must complete a credit check. NOTE: Borrowing a PLUS loan will be regarded as parental support on in-state residency petitions for dependent students.

Federal Direct Stafford Loan—Additional Unsubsidized. This federal loan program is for independent students as defined by federal guidelines. The interest on this loan may be paid while in school or borrowers can choose to have it deferred. The deferred interest is capitalized at the time repayment begins. Repayment begins six months after the student graduates or ceases to be enrolled at least half time (6 credit hours). Loan limits are determined by year in school: freshmen and sophomores, up to \$4,000 per year; juniors and seniors, up to \$5,000 per year; graduate students, up to \$12,000 per year.

Work-Study

Students submit the FAFSA to be considered for need-based work-study. Work-study students earn their award by working for on-campus or approved off-campus agencies. Students may apply for a variety of jobs at competitive rates. Jobs can be found online through the portal for students. Students who are not awarded work-study may call **303-492-7349** to have their name added to the work-study waitlist.

Grants

Grants are awards that do not have to be repaid. Students submit the FAFSA to be considered for federal, state, and institutional need-based grants (including Pell, SEOG, Colorado Responsibility Grant, etc.).

CU-Boulder Scholarships

Students may apply for scholarships offered by the Office of Financial Aid online through the student portal beginning November 1 each year. To apply for scholarships that have a financial need requirement, results of your FAFSA must be on file in the financial aid office no later than the first business day in March. *Note: This is earlier than the financial aid priority deadline of April 1.*

Scholarships are highly competitive at CU-Boulder. The selection committee considers academic achievement, honors, leadership, school activities, and service to the community. Students should also search for scholarship opportunities within their academic program, college, club, or campus organization.

Private External Scholarships

Students who receive a private scholarship from an organization outside the university must report the scholarship via the student portal. In addition, students are encouraged to write to their donors and express their gratitude.

When a scholarship donor does not specify how to disburse the funds, the financial aid office equally divides awards of \$1,000 or more between the fall and spring semesters. Private scholarships less than \$1,000 are applied in full to the current semester bill.

Donors should mail their checks, payable to the University of Colorado, with a cover letter to:

University of Colorado Boulder
Office of Financial Aid
ATTN: Scholarship Services
77 UCB
Boulder, CO 80309-0077

If a student's scholarship check is not received by the bill payment deadline, he or she should make other arrangements to pay the bill.

Drug Conviction

In accordance with the Higher Education Reconciliation Act of 2005, students who have been convicted under federal or state law for possession or sale of a controlled substance will be suspended from Title IV aid eligibility if the offense occurred while the student was receiving Title IV aid.

If a student is convicted for possession, the ineligibility period begins as of the date of the conviction and is:

- first offense = one year
- second offense = two years
- third offense = indefinite

If a student is convicted for sale of an illegal substance, the ineligibility period begins as of the date of the conviction and is:

- first offense = two years
- second offense = indefinite

A student may regain eligibility by successfully completing a drug rehabilitation program that complies with criteria established by the Department of Education. More information is available by calling the U.S. Department of Education at **1-800-433-3243**.

Financial Aid Policies

Satisfactory Academic Progress

Students who apply for financial aid at CU-Boulder are responsible for knowing and complying with the satisfactory academic progress policy. Briefly, the policy requires students to maintain a 2.000 grade point average (GPA) and complete at least 67 percent of the hours they attempt. Students are also limited to a maximum number of credit hours (generally 180 hours for a bachelor's degree) they can attempt.

Study Abroad

Students must be enrolled in a CU-Boulder study abroad program to be eligible for financial aid through CU-Boulder's financial aid office. Students participating in a study abroad program through another university are not eligible for financial aid from CU-Boulder.

Withdrawing

If a student enrolls at CU-Boulder, receives financial aid, then withdraws, his or her financial aid is adjusted according to federal regulations. The student may owe a refund to the university after the financial aid is adjusted. Visit www.colorado.edu/finaid/finaidpolicies.html for more information regarding these policies and others.

Other Resources

Student Employment

Jobs provide students with income, work experience, and the opportunity to explore career options. Research studies indicate that students who work are as successful academically as those who do not. Freshmen usually work 8–15 hours per week. The Student Employment Office posts an average of 800 part-time on-campus and off-campus jobs for students. In addition, an on-call temporary employment service allows students to register for occasional work including one-time child care, yard-work, and clerical jobs.

Visit the Student Employment Office in Regent Administrative Center 205 or call **303-492-7349** for more information.

Student Work Assistance Program (SWAP)

This program gives students who are living in the residence halls a credit against their housing bill in exchange for hours worked in one of the dining centers. More information is available at 303-492-6325 or SWAP@housing.colorado.edu.

Housing

Residence Halls

Living on campus in a university residence hall is considered an important part of student life. Almost 7,000 students are accommodated in single rooms, double rooms, multiple occupancy rooms, and apartments in 22 residence halls. All halls are coeducational, but in the majority of cases, specific wings and floors house occupants of the same gender.

Each fall the residence halls provide a new home for over 5,100 entering freshmen. Subject to the availability of space, all freshmen are required to live in a residence hall for two academic semesters (a summer term does not count as an academic semester), unless they are married or live with parents and have permission to commute. Requests for permission to reside off campus for other reasons are considered on their merits, taking into account individual circumstances.

The residence halls provide a range of services and programs designed to support the intellectual, social, and personal growth of single student residents. All residence halls, for example, offer tutoring services to residents at no cost. Some halls offer special facilities, such as an academic skills lab, or a music room. A variety of academic and social programs are sponsored by residence hall and other university staff.

The residence hall dining service hours are planned to be convenient for most students' schedules, and self-serve salad bars are available at noon and evening meals. Steak nights, ice cream socials, and late-night coffee and cookie breaks during exam week are among the special activities planned during the semester. The dining program permits students (regardless of hall assignment) to eat in any residence hall dining room.

For more information about university housing options and/or permission to reside off campus, prospective students may contact Occupancy Management via e-mail at reservations@colorado.edu or by mail at Occupancy Management, Center for Community, Room 5300, 159 UCB, Boulder, CO 80309-0159.

Residential Academic Programs

A number of the residence halls are home to residential academic programs (RAPs), whereby students live in and take special classes in their hall that meet core curriculum and/or other course requirements. These special academic programs are described in the College of Arts and Sciences and Other Academic Programs sections. Most of these programs charge additional fees. They include:

- **The Baker Residential Academic Program** is designed for freshmen and sophomores in the College of Arts and Sciences interested in the natural sciences and environmental studies.
- **The Communication and Society Residential Academic Program** in Buckingham Hall offers 200 first- and second-year students a program to explore the complex social problems and challenges of communication in contemporary society.
- **The Engineering Honors Program** in Andrews Hall includes enhanced course work, access to industry leaders, mentoring relationships, and participation in a community of engineering honors students.

- **The Farrand Residential Academic Program** offers 380 first- and second-year students in the College of Arts and Sciences the opportunity to enjoy the benefits of a small liberal arts college while taking advantage of the resources of a large university.
- **The Global Studies Residential Academic Program** at Smith Hall was created to promote international understanding and the recognition of global interdependencies.
- **The Honors Residential Academic Program** (or HRAP; formerly known as the Kittredge Honors Program, or KHP) is the residential component of the Honors Program of the College of Arts and Sciences. It is open to approximately 200 Honors-qualified first- and second-year students. Participants live in Arnett Hall.
- **The Leadership Program** at Williams Village, is dedicated to the development of community and professional leaders among students from all schools and colleges on the Boulder campus. The Leadership RAP offers two academic tracks: the Ethnic Living and Learning Community Leadership Studies Program (ELLC) and the Chancellor's Leadership Studies Program (CLSP). Some scholarships to cover the program fee are available for those in need.
- **The Libby Arts Residential Academic Program** (LRAP) is designed primarily for first- and second-year College of Arts and Sciences students interested in the arts. LRAP offers a curriculum in the arts, including visual arts, theatre and dance, film studies, and music. In addition to small class sizes in a living and learning environment, co-curricular activities provide a sense of community and a unique opportunity to interact with faculty and LRAP advisors across art disciplines.
- **The Sewall Residential Program** is limited to approximately 330 first-year students in the College of Arts and Sciences who are interested in the study of history and culture.

Living and Learning Communities

Living and Learning Communities also enhance the learning environment. Several communities offer themed housing without the formal connection to faculty found with the RAPs.

- **The B³ Business Living and Learning Community** is limited to approximately 90 first-year students enrolled in the Leeds School of Business. The community participants work together on their areas of expertise within the business curriculum and enjoy close access to advisors and faculty.
- **The Hallett Diversity Program** was created to encourage students to learn about differences and to celebrate them. It provides leadership opportunities and an environment for acquiring awareness of one's own and others' culture and values.
- **The Quadrangle Engineering and Sciences Living and Learning Community** is comprised of students studying engineering, applied science, or mathematics who live in Aden, Brackett, Cockerell, or Crosman halls. This program offers residents on-site tutoring, access to a computer lab configured to match that in engineering computer labs, enhanced academic support services, wireless computer access, and calculus work groups in residence. An additional fee of \$130 per academic year was charged in 2010-11 to cover support activities (fee is subject to change).

- **Spectrum**, part of the Hallett Diversity Program, offers a variety of social and educational activities including leadership opportunities. Spectrum is designed to provide a supportive place for individuals of all sexual identities including gay, lesbian, bisexual, transgender, and queer people and their allies. The Spectrum living area has gender neutral bathrooms.

Other Academic Programs in the Residence Halls

The Community on Academic Programs in the Residence Halls (CAPRH) develops academic programs in CU-Boulder's residence halls. Funded projects include a faculty luncheon program in the halls, informal activities that promote out-of-the-classroom interaction between faculty and students, and special arts and sciences core curriculum courses presented directly in the halls. All programs facilitate greater interaction between faculty and students, and foster the integration of students' academic life with their campus residence hall life. Interested students, faculty, and staff are encouraged to participate in the planning and submission of projects to the council.

Room and Board Rates per Semester

Residence hall room and board rates per person, per semester, for the 2010–11 academic year were as follows:

19 meals/week and double room	\$5,397
19 meals/week and single room	\$6,219

Different meal plans are available. A modest rate increase should be expected for the 2011–12 year.

Application for Residence Hall Housing

New freshman and transfer students receive information from Housing & Dining Services about applying for accommodations after they have confirmed their intent to attend the university. Housing assignments are made on a first-come, first-served basis. The earlier applications are submitted, the better chance students have of being assigned to the residence hall of their choice. (Please note that Housing & Dining Services does not guarantee assignment to a particular building or program, type of accommodation, or a specific roommate.)

Note: Application for admission to the university and application for housing are two separate transactions. Application for housing does not guarantee admission to the university, nor does admission to the university guarantee that housing will be available. For information regarding admission notification and confirmation procedures, see the Undergraduate Admission section.

A security deposit (\$300 for 2010–11) is required to apply for residence hall accommodations. (Deposit is subject to change.)

All housing contracts are for the full two-semester academic year or remainder thereof. An early termination of contract is subject to financial penalties as stated in the residence halls contract.

Family Housing

The university offers studio, one-, two-, and three-bedroom furnished and unfurnished apartments for student, staff, and faculty families. The university's Children's Center provides day care for the children of family housing residents, staff, and faculty. For information on applying to family housing, write the Family Housing Office, 1350 20th Street, University of Colorado at Boulder, Boulder, CO 80302, call **303-492-6384**, or e-mail familyhousing@housing.colorado.edu. The housing website is housing.colorado.edu.

Off-Campus Student Services

Off-Campus Student Services (a service of CUSG) maintains listings of apartments, houses, and rooms for rent in the Boulder area. Currently enrolled students may view these listings online at www.colorado.edu/ocss. The office also maintains a detailed list of apartments available for pickup in the office.

The department has a staff attorney available to advise students about leases, security deposits, and ways to avoid landlord/tenant problems. Office assistants will help students locate properties and answer questions about the surrounding neighborhoods. During the spring semester, the office sponsors two off-campus housing fairs where landlords, property managers, and related businesses offer their services to students in a trade-show fashion.

For additional information, call **303-492-7053** or visit www.colorado.edu/OCSS. Office hours are 9:00 A.M.–5:00 P.M., Monday–Friday. Summer hours are 7:30 A.M.–4:30 P.M.

Registration

Students should refer to the academic calendar on the registrar's website (registrar.colorado.edu) for specific dates and deadlines that apply to the registration process. Students should also consult individual college and school sections of this catalog and their dean's office for additional information on special requirements and procedures. The following registration policies are intended to serve as general guidelines.

Registration generally involves three steps: registering for courses, obtaining a bill before classes begin, and dropping and adding classes during drop/add periods, if needed.

Students who require accommodations because of a disability should notify the Office of the Registrar, University of Colorado Boulder, 20 UCB, Boulder, CO, 80309-0020, or call **303-492-6970**.

Confirmation Deposit

All degree students pay a one-time-only \$200 confirmation deposit that allows them to enroll without paying a registration deposit each term.

Confirmation deposits are refunded to students upon graduation or official withdrawal from CU-Boulder within established dates and guidelines. All refunds are reduced by any outstanding financial obligations. Interest earned from confirmation deposits is used for student financial aid.

The \$200 deposit is required of all degree students. New students are required to pay the deposit when they first confirm their intent to enroll at CU-Boulder and are not permitted to register until the confirmation deposit is paid.

All questions regarding the confirmation deposit policy should be directed to the Office of Admissions, Regent Administrative Center 125, **303-492-6301**.

Registering for Courses

All CU-Boulder students register for courses via the student portal, MyCUInfo.colorado.edu.

Registration information is sent to new freshmen as well as new transfer, new graduate, and readmitted students when they have confirmed their intent to enroll, with the exception of new freshmen and transfer students in arts and sciences, who receive their registration information at orientation. Continuing students are notified each semester of times, places, and requirements for registration.

Bill Distribution

Bills are online on CUBill&Pay before each semester begins, depending on when students have registered. Bill distribution information is at www.colorado.edu/bursar and in the *Summer Session Catalog*. Students access their online bill on MyCUInfo.colorado.edu.

Drop/Add

Students can adjust their schedules by dropping and adding classes via the student portal, MyCUInfo.colorado.edu. For fall and spring semesters, drop/add activity takes place by time assignment during the Friday prior to the first day of the semester. After that, the system is available to all students through the drop and add deadlines.

For more information, visit the registrar's website at registrar.colorado.edu.

Drop/Add Deadlines

Specific drop and add deadlines for each fall and spring semester are listed on the registrar's website at registrar.colorado.edu. Summer deadlines appear in the *Summer Session Catalog*.

1. Students are allowed to add courses through the add deadline with no authorization signatures required (second Wednesday of instruction in the fall or spring semester; the deadline varies in the summer). After the add deadline in fall and spring semesters, the instructor's approval is required to add a course through the "deadline to add a course without petitioning the dean" (third Friday of instruction), unless enrollment levels are reached earlier. Courses cannot be added after this deadline. In summer, courses cannot be added after the add deadline.
2. Students can drop courses through the drop deadline with no authorization signatures required (third Wednesday of instruction in the fall or spring semester; the deadline varies in the summer). Tuition and fees are not assessed for courses dropped by this deadline. After the drop deadline, the instructor's signature is required to drop a course through the "deadline to drop a course without petitioning the dean." The signature indicates that the student is passing the course; students who are failing their courses are not permitted to drop. Courses dropped after the drop deadline appear on the transcript with a *W* grade and no tuition adjustment is made.
3. After the "deadline to drop a course without petitioning the dean" (six weeks after classes begin in the fall or spring semester; the deadline varies in the summer), courses may not be dropped unless there are documented circumstances clearly beyond the student's control (e.g., accident or illness). In addition to obtaining the instructor's signature, students must petition their dean's office for approval to drop the course. Petitions normally are not approved after this date.
4. Students dropping all of their courses should refer to the Withdrawal Procedures section for more information.

Credit/No Credit

Students who wish to take course work for no credit should indicate this at the time they register for courses or during the final drop/add period; changes in credit registration are not permitted after the drop/add deadline in the summer or after the third Friday of the semester in the fall and spring. Tuition is the same whether or not credit is received in a course.

Pass/Fail (P/F)

Students should refer to the college and school sections of this catalog to determine the number of *pass/fail* credit hours that may be taken in a given semester or credited toward a bachelor's degree. Exceptions to the *pass/fail* regulations are permitted for certain courses that are offered only on a *pass/fail* basis. Procedures for requesting *pass/fail* enrollment can be found on the registrar's website at registrar.colorado.edu or in the *Summer Session Catalog*.

Students who wish to register for a course on a *pass/fail* basis should do so when they register or before the deadline by applying online at MyCUInfo.colorado.edu under the Academics and Research tab in the Registrar Forms channel. Changes to or from a *pass/fail* basis are not permitted after the third Friday of the semester in the fall and spring or after the drop/add deadline in the summer.

All students who register on a *pass/fail* basis appear on the class roster, and a letter grade is assigned by the instructor. When grades are received in the Office of the Registrar, those courses that have a *P/F* designation are automatically converted from letter grades to *P* or *F*. Grades of *D-* and above are considered passing grades.

Variable Credit

All independent study courses, and occasionally regular courses, are offered on a variable-credit basis. Students must designate the number of credit hours they wish to receive for the course at the time of registration. Consult the registrar's website at registrar.colorado.edu or the *Summer Session Catalog* for variable-credit hour ranges for particular courses.

Time Off Program (TOP) (for Graduate Students Only)

The Time Off Program (TOP) is a planned-leave program for degree-seeking CU-Boulder graduate students who wish to take a leave of absence from the university. Students must be in good ethical and academic standing with the university. Students on TOP will be allowed three inactive semesters, including summer, to pursue academic or nonacademic interests, and they do not need to reapply to the university to return.

TOP guarantees participating students a place in their current college or school and in their current major when they return to the university.

Additional information and a TOP application can be obtained from the Office of the Registrar, Regent Administrative Center 105, or at the registrar's website at registrar.colorado.edu. A nonrefundable \$50 program fee is required at the time of application to TOP.

NOTE: Graduate students registered for the semester they plan to begin TOP must formally withdraw. See the withdrawal section below. Call **303-492-6970** for more information, or visit the registrar's website at registrar.colorado.edu, or e-mail timeoff@colorado.edu.

StayConnected (Optional for Undergraduate Students Only)

The optional StayConnected program is a benefits-only program that allows degree-seeking undergraduate students who leave the university access to certain benefits while eligible during the 3–4 semesters they are not registered for courses.

Some of the benefits offered through the program are only available for an additional fee. A StayConnected application

and a nonrefundable \$50 administrative fee is required. For an application and more information, visit the Office of the Registrar, Regent Administrative Center 105, call **303-492-6970**, visit the registrar's website at registrar.colorado.edu, or e-mail stayconnected@colorado.edu.

Withdrawal Procedures

Students may officially withdraw from the university by filling out a withdrawal form in the Office of the Registrar, Regent Administrative Center 105, by sending a letter of withdrawal to Office of the Registrar, University of Colorado Boulder, 20 UCB, Boulder, CO 80309-0020, by faxing a letter or withdrawal form to **303-492-8748**, or by e-mailing withdraw@colorado.edu from the student's CU e-mail account.

In all terms, students are not permitted to withdraw after the last day of classes.

Failure to withdraw will result in a failing grade being recorded for every course taken in a term and makes a student liable for the full amount of tuition and fees for that term. For refund stipulations, see the withdrawal policy in this catalog regarding tuition and fees.

Rules for withdrawing may vary with each college and school. Students anticipating a withdrawal should consult with their dean's office and read the withdrawal information on the registrar's website at registrar.colorado.edu/students/withdraw.html or in the *Summer Session Catalog* for specific withdrawal procedures. More information is available in the Office of the Registrar, Regent Administrative Center 105, **303-492-6970**, on the Web at registrar.colorado.edu, or by e-mailing withdraw@colorado.edu.

Withdrawing students (including students applying for the Time Off Program) with Federal Perkins/NDSL loans must complete a loan exit interview before leaving the university. Failure to do so will result in a "hold" on the student's record. This hold will prevent the student from receiving a diploma or an academic transcript from the university and from registering for future terms. In order to complete a loan exit interview, contact the university Student Loans department in the Bursar's Office at **303-492-5571**, or **1-800-925-9844**.

Beginning fall semester 2010, students who withdraw and then wish to return to the university will have three semesters, including summer, to return to the university without having to reapply for admission. See information and exclusions under "Readmit Students" or visit registrar.colorado.edu.

Other Registrations

Concurrent Registration

Boulder-campus students who are unable to obtain courses required for their degree program on the Boulder campus may be allowed to register for up to two courses or 6 credit hours, whichever is greater, on another University of Colorado campus. (NOTE: Application forms and registration are done by the "home" campus.) Participating students must be enrolled for at least one course on the Boulder campus.

NOTE: Graduate students should check with the Office of the Registrar for exceptions to the home-campus registration requirement and limitation on credit hours at the host campus.

Students taking required courses in the Leeds School of Business or in the Graduate School of Business Administration may only exercise the concurrent registration option if they are in their graduating semester; business students who are two semesters from graduating and who cannot obtain courses necessary to complete a prerequisite sequence may also be allowed to use this option. The courses must either be required for graduation or

unavailable on the Boulder campus, or the courses must conflict with another required course in which the student is enrolled.

Boulder students exercising this option will pay tuition for their total credit hours at Boulder-campus rates. Concurrent registration forms and instructions are available at the Office of the Registrar, Regent Administrative Center 105, 9:00 A.M.–5:00 P.M. Registration takes place only during the designated schedule-adjustment period of the host campus.

Registration on Another CU Campus

Boulder-campus students who wish to take course work on another campus of the University of Colorado and not through the concurrent registration program may be able to register on that campus independent of Boulder-campus registration. However, students must apply for admission to and follow the registration procedures established by the other campus. Students should check with their dean's office for approval.

Late Registration

Students in certain categories may be allowed to register late for a fall or spring semester if not registered in any classes as of the third Friday of the semester. These students are assessed a \$100 late registration fee, if eligible for late registration.

Graduate students registering as candidates for degree or for thesis hours must register by the third Friday of classes in a fall or spring semester or be subject to the \$100 late registration fee, if late registration is held for their category. For more information, call **303-492-6970**.

Registration for Faculty and Staff

All permanent faculty and staff are eligible to take 1–9 free credit hours each fiscal year, depending on their percentage of employment. All participants of this program must be admitted to the university as nondegree or degree-seeking students. Faculty and staff who wish to enroll in the free courses must submit a faculty/staff tuition waiver form to the Bursar's Office, Regent Administrative Center 150, 43 UCB, Boulder, CO 80309-0043. Faculty and staff who are not continuing students (i.e., enrolled in the prior semester) must also submit the appropriate application as well as the tuition waiver form. Applications and the tuition waiver forms are available at the Bursar's Office or at www.colorado.edu/bursar. After the forms are processed, the Office of the Registrar will issue registration materials.

The tuition waiver form must be submitted by the deadline published on the bursar's website (www.colorado.edu/bursar) or in the *Summer Session Catalog*. To take advantage of the free credit hours, faculty and staff must wait until the day before classes start to register for fall and spring semesters. For summer semester, registration starts the first day of classes for the summer term in which you plan to enroll. Additional classes that will be paid by the student may be registered for prior to the first day of class. Detailed information is available under the faculty/staff link at www.colorado.edu/bursar.

Commencement

Students must apply to their dean's office for graduation at least one semester before they intend to graduate. Graduation ceremonies are held in May and December and are open to the public. No tickets are required. The May commencement is held at Folsom Stadium and the December ceremony is held in the Coors Events/Conference Center. Students receiving their degrees in August should check with their dean's office if they wish to attend the May or December ceremony. Details concerning the ceremony are

e-mailed to graduating students approximately one month before each ceremony. Students may also access the current semester's ceremony information at www.colorado.edu/commencement.

Only doctoral and law graduates receive their diplomas at commencement. Diplomas are mailed to all other students approximately two months after the ceremony. Standard diploma size is 8 x 10 inches.

Graduating students with Federal Perkins/NDSL loans must complete a loan exit interview and clear all outstanding financial balances before leaving the university. Failure to do so will result in a "stop" on the student's record. This stop prevents receipt of a diploma or an academic transcript of work at the university and registration for future terms. Students can complete a loan exit interview by contacting the university Student Loans department in the Bursar's Office at **303-492-5571**, TTY **303-492-3528**.

Campus Facilities

Anderson Language and Technology Center

The Anderson Language and Technology Center (ALTEC) is a state-of-the-art facility supporting the study of foreign languages and cultures at the university. ALTEC offers the Foreign Language Technology Program (FLTP), which trains graduate students to use cutting-edge digital technology in their teaching. ALTEC also offers noncredit foreign language classes for faculty, staff, and graduate students on the Boulder campus.

ALTEC's facilities consist of a Macintosh laptop/collaboration station lab open to all students; a PC classroom for reservation by foreign language faculty; a sound recording studio for faculty/student project development; and a multimedia library. The library includes thousands of foreign films on DVD and VHS, textbooks, journals, and foreign language magazines. Computers, videocameras, and other hardware are available for checkout.

The center also broadcasts satellite programs from the International Channel and SCOLA. Located in Hellems, ALTEC is open to all students, faculty, staff, and alumni with an interest in foreign language study.

Coors Events/Conference Center

The Coors Events/Conference Center is a multipurpose facility used for events such as educational conferences, seminars and meetings, convocations, and commencement ceremonies, as well as cultural, entertainment, and athletic activities that enhance and further the objectives of the university.

The main arena of the center seats between 8,500 and 12,000, depending on event configuration.

Fiske Planetarium and Science Center

Fiske is considered one of the finest planetarium facilities in the world. Seating 212 people in its star theatre, it is the largest such facility between Chicago and Los Angeles. The planetarium is equipped with a Zeiss Model VI star projector and an automated projection control system that operates hundreds of projectors and has the capacity to present over a dozen prerecorded star shows at any given time. Fiske recently acquired "Science on a Sphere," an exciting new way to visualize science. In addition to its use as a teaching facility for astronomy and other classes, the planetarium is used for star talks, star shows, laser shows, and space science presentations to school children and the general public in the Boulder-Denver area.

Heritage Center

The CU Heritage Center explores the history of the University of Colorado through exhibits that highlight student achievements, notable alumni, and prize-winning professors. Each room features a different CU story from the Tuscan-inspired campus architecture to CU astronauts, Nobel prize winners, and athletics traditions. Visitors can also find answers to some of the most commonly asked questions about campus history, such as how Ralphie got her name or why we call the University of Colorado "CU" instead of "UC."

The CU Heritage Center is open to anyone who loves CU and wants to find out more about its unique history and traditions. The Heritage Center is also a great resource for finding historic photos and information for papers and class projects. Open Monday-Friday, 10:00 A.M.-5:00 P.M. For more information, call **303-492-6329** or visit www.cuheritage.org.

Libraries

The university libraries system includes Norlin Library and five branch libraries. Norlin houses book stacks, periodicals, and research and instructional services for the general humanities and social sciences, art and architecture, East Asian materials, and the life sciences; as well as archives, government publications, special collections, media, circulation, reserve, and interlibrary loan. Norlin also features a learning commons in partnership with campus Information Technology Services that includes 24-hour Buff OneCard access, a café, team technology rooms, and a variety of technology services.

The William M. White Business Library is in the Business Building, the Jerry Crail Johnson Earth Sciences and Map Library is in the Earth Sciences Building, the Leonard H. Gemmill Engineering Library is in the Mathematics Building, the Oliver C. Lester Library of Mathematics and Physics is in Duane Physics, and the Howard B. Waltz Music Library is in the Imig Music Building. The Law Library is located in and administered by the Law School.

This system provides:

- dedicated librarians and staff who provide reference and research assistance, extended consultations, and instruction
- the largest library collection in the Rocky Mountain region—more than 12 million books, periodicals, computer-based resources, government publications, microforms, audiovisual materials, maps, manuscripts, papers, and artifacts
- an online system, Chinook (libraries.colorado.edu), that provides access to the libraries holdings and thousands of electronic journals and indexes; national, state, and local services; and many other significant research and reference tools
- a website at ucblibraries.colorado.edu that includes a wealth of information about the libraries, services, and research resources with links to each department and branch in the libraries system, and a Libraries News and Events page
- special collections and archives including English, American, and children's literature; mountaineering; photography; the book arts; medieval manuscript leaves; peace and justice; history of Colorado and the West; environmentalism; women's history; politics; and labor
- a regional depository of Colorado, U.S. government, United Nations, European communities, and World Trade Organization documents, with extensive holdings for World Bank, International Monetary Fund, OECD, UNESCO, and other U.N.-affiliated organizations, as well as British documents.

For more information, call **303-492-8705** or visit **ucblibraries.colorado.edu**.

Macky Auditorium Concert Hall

Celebrating 100 years hosting the best performing arts, lectures, and entertainment events, Macky Auditorium is one of the most valuable and recognizable historical spaces in the CU-Boulder campus and a premier venue in the Front Range.

With capacity for over 2,000 patrons, Macky is home to CU's College of Music, CU Presents, and the Boulder Philharmonic Orchestra. More than 100 events were presented at Macky with over 120,000 patrons attending throughout the 2009–10 season. The auditorium also houses the Andrew J. Macky Gallery, showcasing artwork by local and national artists.

For a calendar of events and more information, visit **macky.colorado.edu**.

Museum

The University of Colorado Museum houses extensive collections in anthropology, botany, geology, and zoology. The museum is nationally recognized for its holdings of specimens from the Rocky Mountain Region and beyond, making it a primary resource for faculty and student research. A program of foreign and domestic exchange of specimens and information has given the museum an international reputation.

The museum administers an interdisciplinary master's degree in museum and field studies. A collections/field track is provided for students interested in the curatorial and research aspects of museum work, as well as an administrative/public track for students interested in the public aspects of this work. A graduate professional certificate in museum and field studies is offered to graduate students in other disciplines, museums, and other professionals.

Through internships and assistantships, the museum provides professional experience to students in the field and in the laboratory. Museum faculty members teach courses in their areas of specialty, which include Southwestern archaeology and ethnology, plant systematics, invertebrate zoology, entomology, and paleontology. Participation in museum-related research is encouraged by financial support to selected, qualified students through the Walker Van Riper and William Henry Burt Funds.

The exhibit halls in the Henderson building are open daily to the public. The Paleontology Hall exhibits fossils and focuses on local paleontology. The Biology Hall shows animals of Colorado and the Rocky Mountain region. The Anthropology Hall emphasizes the fieldwork of CU-Boulder researchers. Temporary exhibits are presented each year. In addition, the museum offers extensive outreach programs to the schools and presents a number of special events, lectures, and activities for the community.

The CU Museum is accredited by the American Association of Museums.

Recreation Center

The Student Recreation Center is one of the best facilities of its type in the country with plenty of amenities. The center includes a 25-yard swimming pool and a 14-foot diving well in front of giant windows overlooking the breathtaking view of the Rocky Mountains. The Rec Center is also home to the only ice arena in the city of Boulder with ice skating and hockey available every day. The building has a variety of courts for handball/racquetball, squash, and tennis. Two gymnasiums are also inside—a multi-use gym and another that has three regulation-sized basketball courts with a one-tenth mile running track above it. Other amenities include an indoor climbing wall, dry-heat saunas, a free-weight room,

a dance/aerobics room, a spinning studio, and a fitness systems room with Cybex and cardiovascular equipment.

Current fee-paying students, their guests, and other members may take advantage of the facilities with their student Buff OneCard or membership card. A variety of sports equipment, including volleyball sets, snowshoes, cross-country skis, and camping equipment such as tents and sleeping bags can be checked out overnight for a nominal fee.

Members may also participate in a wide range of team sports including ice hockey, Ultimate Frisbee, rugby, swimming, diving, lacrosse, soccer, baseball, and many others through the club sports program.

The Rec Center offers many other programs geared toward specific interests and instructions. With the campus nestled at the base of the Rockies it only seems fitting to have an outdoor program with special trips featuring rock climbing, backpacking, rafting, hiking, cross-country skiing, snowshoeing, and scuba diving, in addition to educational presentations. Students and members may also participate in noncredit classes at various levels of instruction in aquatics, aerobics, tennis, fitness, CPR and first aid, martial arts, lifeguard training, yoga, and dance through the instruction program.

The intramural program is one of the Rec Center's most popular features, offering leagues, tournaments, and special events in basketball, soccer, broomball, dodgeball, hockey, flag football, and many other sports.

For more information, visit **www.colorado.edu/rec-center**.

Sommers-Bausch Observatory

Located on the Boulder campus, the Sommers-Bausch Observatory has 16-, 18- and 24-inch aperture Cassegrain telescopes for undergraduate and graduate astronomy classes and research. Ancillary instrumentation is available for digital CCD imaging and spectroscopy. During daylight hours a heliostat is used to view the solar photosphere and chromosphere. The observatory is also open to the public on Friday evenings for viewing of the planets, stars, and nebulae, as weather permits. Call **303-492-5002** for reservations.

University Memorial Center

This is the place where students spend out-of-the-classroom time to grab a bite to eat, meet friends, enjoy free entertainment, shop, study, do some banking, or just hang out! More than 14,000 people visit every day. Throughout its five floors, the UMC can simultaneously be an exciting, lively center and a comfortable haven.

There's live music in the atrium; concerts and lectures in the Glenn Miller Ballroom; local bands in Club 156 (an alcohol-free night club); bowling, pool, and games in the Connection; works by national and international artists in the Art Gallery, programs for enhancing cultural awareness in Dennis Small Cultural Center, quiet lounges, and delicious food from a wide variety of restaurants.

In addition, 90 student group offices, student government, Radio 1190, CU NightRide, Off-Campus Student Services, Student Legal Services, Women's Resource Center, Volunteer Resource Center, and many other services make the UMC an exciting center for involvement and interaction. All UMC programs, facilities and services support student development within a welcoming, community-building environment.

The University Memorial Center (UMC) gets its name from its designation as the state of Colorado's official memorial to

Veterans of War. For additional information, visit umc.colorado.edu, or call 303-492-6161.

Campus Programs

Alumni Association

Undergraduates are Forever Buffs! The CU-Boulder Alumni Association launched its Forever Buffs initiative in November 2008 that welcomes all undergraduate students and alumni as lifelong members of the association. A one-time freshman and new transfer student fee of \$70, effective fall 2009, guarantees every Buff a lifetime of programming and services.

By being inclusive, the association aims to foster lifelong CU relationships through programs and services that engage, contribute, and celebrate being a Buff. Throughout their undergraduate experience, students can network online with alums around the world on the free Forever Buffs Network at www.cualum.org. The Ask a Buff tab, in particular, enables students to contact alums to get advice regarding relocating to a new city, applying to graduate school, or getting a job in a particular field. During the summers and post-graduation, students can become involved in the regional alumni chapters where they live.

Students also can join the Herd, one of the largest student alumni groups in the country. The Herd provides a community for students interested in celebrating CU pride and participating in a range of activities including ski trips, hikes, memorable traditions like CU Idol and Mr. CU, and events like St. Baldricks Day, which raises money for children with cancer. The Herd also provides leadership opportunities through university events like Homecoming and Teacher Recognition Awards. Student membership is \$20 annually or \$49 until graduation. Members can take advantage of free meals prior to home football games, \$5 rides on the CU ski bus (\$15 for non-Herd members), and other discounts around Boulder.

For additional information, call 303-492-8484 or 800-492-7743 or visit www.cualum.org or www.cuherd.com.

Alliance for Technology, Learning, and Society

The Alliance for Technology, Learning, and Society (ATLAS) Institute at CU-Boulder promotes excellence throughout the total learning environment by integrating information and communication technology into curricula, teaching and learning, research, and outreach activities. ATLAS is changing the campus learning culture by enabling all students, even those in traditionally nontechnical fields, to experience firsthand the role that information technology can play in their disciplines.

Through ATLAS, CU-Boulder is examining the integration of technology into its curricula, conducting research that critically assesses the impacts of technology on education and on society, and interacting with the K-12 system to help effect many of the same transformations at that level. In conjunction, CU-Boulder is providing an excellent technological infrastructure for all of its students, faculty, and staff.

The ATLAS Building, located in the heart of the CU-Boulder campus, is a 66,000-square-foot facility that includes the Byyny Teaching and Learning Center, the Faculty Teaching Excellence Program and Graduate Teacher Program, and technology-enhanced classrooms and auditoriums for use by the entire campus. A two-story Black Box performance theater and a production studio are venues for transdisciplinary collaboration among the performing arts and production departments on cam-

pus. An exhibition lobby with video wall, a second-floor wireless lounge, and a coffee shop provide gathering spaces. More information on the various initiatives of ATLAS, including the minor in Technology, Arts, and Media or the Certificate in Digital Media, can be obtained at the Alliance for Technology, Learning, and Society or the Certificate in Digital Media, University of Colorado Boulder, 320 UCB, Boulder, CO 80309-0320, 303-735-4577, or atlas.colorado.edu.

CU Art Museum

Founded in 1939, the CU Art Museum is a cultural gateway to the University of Colorado Boulder, facilitating engagement with larger societal issues through a greater understanding of the arts in a global context. The CU Art Museum is committed to enhancing understanding and appreciation of the visual arts within the academic community and among regional, national, and international audiences. It provides access to art of the highest quality through exhibitions, publications, and related educational events that reflect diversity, critical thinking, and creative research. The museum also facilitates student training in museum practices. As a collecting institution, the CU Art Museum promotes the excellence, preservation, scholarly interpretation, exhibition, and growth of its comprehensive permanent collection, which includes artworks from numerous time periods, artistic traditions, and cultures. The new 25,000-square-foot CU Art Museum contains five galleries including permanent collection galleries, changing exhibition galleries, and a video gallery. The CU Art Museum also includes a collections study center, allowing students, faculty, and researchers the opportunity to schedule appointments to view, research, and study works in its Permanent Collection.

The Permanent Collection of the CU Art Museum contains over 6,000 works of art. The collection includes works from numerous time periods and cultures including ancient Greek pottery, Roman glass, ancient Iranian pottery, Southwestern and South American *santos*, Southeast Asian pottery, African sculpture, Old Master works on paper, British 18th century prints, 19th and 20th century American prints and paintings, Japanese *ukiyo-e* prints, 19th century photography, Pop art, Minimalist works on paper, and modern and contemporary ceramics, sculpture, works on paper, paintings, photography, video, and new media art.

The CU Art Museum is currently closed during construction of a new “state-of-the-art” museum facility. The museum will open its inaugural exhibitions in the fall of 2010. Visit the CU Art Museum’s website at www.colorado.edu/cuartmuseum for updates on exhibitions and programs at various campus and community locations during construction of the new facility.

Clubs and Organizations

Clubs and organizations of almost every description are available on the CU-Boulder campus including nearly 1,000 academic, political, social, religious, and recreational groups. The Ski and Snowboard Club, Amnesty International, CU Wild, Campus Ambassadors, Black Student Alliance, Program Council, College Republicans, and the Fashion Design Student Association are examples of student organizations that offer a variety of opportunities for students to become involved with others on campus.

All clubs and organizations provide an excellent way for students to become involved in current events, student activities, and community service. For more information, consult the University of Colorado Student Union’s Club Guide online at castle.colorado.edu/guide/guide_Frames.htm or stop by a student organiza-

tion's office in the UMC. Students interested in forming clubs and organizations on campus can contact the Student Organizations Finance Office in UMC 231 or call **303-492-6366**.

Colorado Space Grant Consortium

The Colorado Space Grant Consortium is a NASA-funded program that uses the excitement of the nation's aeronautics and space program to inspire, educate, and develop America's future technological workforce by enabling a diverse community of students to participate in space-based, hands-on projects and courses. Space Grant students receive research experience in space science and engineering as they apply their classroom learning to real-world space hardware projects. Space Grant students work on BalloonSat payloads, sounding rocket payloads, low earth orbiting satellites, and other space hardware projects, mentored by CU faculty and engineers from Colorado aerospace companies. Students earn hourly wages, research assistantships, and/or independent research credit. Courses include Gateway to Space and Independent Research Studies. Space Grant students gain valuable hands-on experience in space science and engineering projects by participating in one of several missions and are highly recruited by industry.

For information, visit spacegrant.colorado.edu or contact the Colorado Space Grant Consortium, University of Colorado Boulder, 520 UCB, Boulder, CO 80309-0520, **303-492-3141**.

Concerts

CU Presents includes the Artist Series, CU Opera, Encore Series, and the Holiday Festival.

The Artist Series in Macky Auditorium features a wide array of internationally renowned performing artists in classical music, jazz, dance, and world music. Pink Martini and the Kronos Quartet are a few of the outstanding performers who have appeared recently as part of the Artist Series.

CU Opera presents the best in opera and musical performance in Macky Auditorium and the Music Theatre. Recent performances have included *La Traviata*, *Don Giovanni*, and Ned Rorem's *Our Town*.

The Takács Encore Series features concerts by CU's Grammy Award winning Takács Quartet in Grusin Music Hall; and the annual Holiday Festival in Macky Auditorium features students and faculty in a celebration of seasonal music.

Students may purchase Concert Cards that entitle them to a 50 percent savings on tickets for Artist Series and CU Opera performances. A free brochure and concert calendar may be obtained by calling **303-492-8008** or visiting www.cupresents.org.

Faculty Teaching Excellence

For information on either of the programs described below, call **303-492-4985**. The FTEP website is located at www.colorado.edu/ftep, and the PTSP website is at www.colorado.edu/ptsp.

Faculty Teaching Excellence Program

The CU-Boulder campus focuses on students in the learning process through peer collaboration, active engagement, and reciprocity between faculty and students. The Faculty Teaching Excellence Program (FTEP) is built on the research literature of learning and teaching and the principle that faculty learn about teaching best from one another.

The goals of the FTEP are to improve undergraduate and graduate education and to assist faculty in reflecting on their teaching in order to improve students' learning. Within this overall mission are more specific objectives: to work with fac-

ulty to create an environment that encourages learning for both faculty and students; to foster a professional dialogue among all faculty concerning effective learning; to bring pedagogical research and useful teaching tips to the attention of faculty; to assist in writing goals and assessing learning; and to engage in research on learning and teaching.

Since 1986 the FTEP has provided an array of programs designed primarily to improve teaching and to innovate in learning. While this aim clearly stands out as a first priority and must continue to be a central focus, the current stage in FTEP's development emphasizes the obverse of teaching, namely, learning. Focusing on how students learn follows naturally and logically from our well-established emphases on teaching behaviors, faculty expectations, and critical reflection about pedagogy.

President's Teaching Scholars Program

The President's Teaching Scholars Program (PTSP) has produced a sustaining group of teacher scholars who are advocates of and consultants for the integration of teaching and research at the university. The designation is the highest honor for teaching and research in the CU system. Faculty designated for the program design and develop projects aimed at strengthening confidence and at teaching well and proudly and thereby establish a faculty learning community. The scholars share their teaching acumen outside the university community and exemplify the skills, talents, and characteristics of education researchers and scholars. The guild numbers 72 teaching scholars.

The President's Teaching Scholars are chosen not only for their capacities in their own classrooms, but also for their promise of improving education and enlarging its possibilities across the university. Now 20 years in existence, this program has established the Colorado Learning Assessment Studies (CLAS) to assist faculty in understanding student cultures and the President's Teaching and Learning Collaborative (PTLC) to assist faculty on all campuses to establish scholarship in teaching and learning (SoTL) and thereby influence learning in their disciplines locally, nationally and internationally.

The President's Teaching Scholars Program sponsors system wide participation in the Carnegie Foundation for the Scholarship of Teaching and Learning Academy (CASTL).

Greek Social Organizations

More than 1,100 students currently participate in CU-Boulder's approximately 20 Greek social organizations, emphasizing service, leadership, scholarship, and involvement in campus life. Many of these organizations have houses off campus where members can live after their first year. The university works through the Greek Life Office to establish an educational, growth-oriented environment for Panhellenic sorority and multicultural Greek organization students that integrates them fully into the campus community.

The Greek system is autonomous from the university. The university has established expectations of fraternal organizations that can be viewed at www.colorado.edu/greeks/office/community.html. As of fall 2005, all Panhellenic sorority chapters and multicultural Greek organizations have agreed to abide by all requirements.

National Interfraternity Council fraternity chapters have chosen not to meet the expectations and are not recognized by the university.

A hazing tips line has been established at the university. Anyone who witnesses or experiences hazing in any form should report it to **303-492-0140**.

Additional information on the Panhellenic sororities and multicultural Greek organizations may be obtained by calling the Greek Life Office at **303-492-6359**.

Honor Societies

Outstanding student scholarship is recognized at the University of Colorado Boulder through national and local honor societies. The national honor society, Phi Beta Kappa, founded in 1776 at the College of William and Mary in Virginia, was established at CU-Boulder in 1904. Phi Beta Kappa recognizes outstanding scholastic achievement in the liberal arts and sciences. The campus also has a chapter of Sigma Xi, an honor society for scientists. Sigma Xi's goals are to advance scientific research, to encourage communication among scientists, and to promote the understanding of science.

Other national honor societies with local chapters at Boulder are Beta Gamma Sigma (business), Phi Delta Kappa (education), Tau Beta Pi (engineering), Kappa Tau Alpha (journalism), Order of the Coif (law), and Pi Kappa Lambda (music). The criteria for membership in honor societies and their activities vary.

For more information on both national and local societies, consult the individual college and school sections.

Intercollegiate Athletics

The University of Colorado is currently a member of the Big 12 Conference and sponsors teams in 16 intercollegiate sports. But a new and exciting future lies just ahead, when the Buffaloes join the Pacific-12 Conference in July 2011. The Pac-12 is recognized as the “conference of champions,” with its member schools winning over twice as many national championships as any other conference.

Colorado has won 23 national championships in its history, 17 in the sport of skiing: 11 men's, five coed and one women's. The Buffs also own five in cross country (three men's, two women's) and one in football (1990).

Most programs are regular participants in the NCAA post-season, and track teams often send multiple individuals, especially distance runners, into the postseason as well.

In its 120-year athletics history, over 500 student-athletes have been named All-American, with thousands earning academic honors.

There are over 320 student-athletes involved in intercollegiate athletics annually (roughly 53 percent men and 47 percent women). The average GPA for student-athletes was 2.850 in 2009–10.

Men's varsity sports include football, basketball, cross-country, golf, skiing, and track and field. Women's varsity sports include basketball, cross-country, golf, skiing, soccer, tennis, track and field, and volleyball.

Folsom Field, a 53,613-seat stadium, serves as the home of the Colorado Buffaloes football team. The basketball teams practice and compete in the Coors Events Center, which seats 11,064. The golf teams call Colorado National Golf Club in nearby Erie their home, one of the finest facilities in the nation. The women's tennis team uses local clubs as well as CU's South Campus for its headquarters. The ski team's home mountain is Eldora, just up the road in Nederland, but also takes advantage of Colorado's numerous ski resorts, most notably Steamboat Springs and Winter Park. The women's volleyball team plays its matches at the Coors Events Center, and practice there and in Carlson Gymnasium. The soccer team uses Prentup Field on CU's East Campus. All teams also have the option of practicing inside a “bubble” when the weather turns inclement.

Boulder's diverse terrain and a running-conscious community combine to create a vigorous atmosphere for track and cross-country training. The track teams practice and compete at Balch Fieldhouse on the Main Campus and at Potts Field on the East Campus. Cross-country has a world-class course on the grounds of CU's future South Campus.

International Education

The Office of International Education (OIE) houses the International Student and Scholar Services and Study Abroad Programs. OIE serves as a liaison for international activities among academic departments, administrative units, international universities and governments, and U.S. governmental agencies and foundations. OIE provides support for students and faculty who desire to study or conduct research overseas; for international students, faculty members, and visitors who come to CU-Boulder; and for all members of the campus community who wish to develop an international dimension in their teaching, research, or study.

Specific functions include expediting the exchange of students and faculty, sponsoring undergraduate study abroad programs, assisting international visitors, promoting special relationships with overseas universities, and advising on international scholarships.

Study Abroad Programs

The information below applies to approved CU-Boulder study abroad programs. The policies and procedures for participation on independent study abroad programs vary according to the student's school/college within CU.

CU-Boulder offers over 300 study abroad programs in over 65 countries, and programs vary by academic subject and duration. Students may study abroad for a summer, a semester, or a year. Many types of programs are available, including direct enrollment in an overseas university; programs at study centers with courses offered in English; and Global Seminars, which are courses offered abroad by CU faculty during summer or winter break.

Students must be enrolled in at least the equivalent of 12 CU-Boulder credit hours each semester or at least 24 hours per academic year while on a study abroad program. Some programs have higher required credit minimums, and summer course load minimums vary by program.

Credit earned on a CU-Boulder study abroad program is considered “in residence” credit. This means that the credits taken abroad will appear on students' transcripts, and will count toward their overall degree requirements unless they are above the limit of 45 hours of credit allowed in one department, or are in a subject for which CU-Boulder does not give credit (i.e., cooking, physical education, scuba, etc.). If appropriate courses are available and approved by students' major and college academic advisors, the courses can be used to fulfill major and/or college requirements. It is also possible to obtain approval to fulfill arts and sciences core requirements on study abroad programs.

For some study abroad programs, letter grades earned abroad appear on students' CU transcripts and count toward students' cumulative GPAs. Because it is difficult to “translate” grades from another system of higher education, grades earned on some programs are converted to *pass/fail* using established criteria. Credits earned on programs that convert grades to *pass/fail* are exempt from limitations placed on *pass/fail* credit in Boulder. In the College of Engineering and Applied Science, all study abroad credit appears on the transcript as *pass/fail* credit (which is still exempt from limitations placed on *pass/fail* credit in Boulder).

Concurrent enrollment in a CU-Boulder study abroad program and CU-Boulder courses taught on campus is not allowed. This includes independent study and ROTC courses. Each course taken abroad is listed on the CU transcript under the department that would most likely offer the course in Boulder. Students are not allowed to take early exams, make-up exams, or incompletes on study abroad programs. Most internships are done for no credit; in order to receive credit, students must obtain written approval from the appropriate academic department using the study abroad internship approval form. Courses designated as service learning usually count for credit toward the degree. The course repetition program does not apply in any way to study abroad, nor does the Colorado Opportunity Fund.

All programs have GPA and class-standing prerequisites, and some programs also have language requirements. Planning ahead is essential and students are encouraged to consult with their academic advisors and with study abroad advisors to select a program that fits their needs. More information about study abroad is available at the Office of International Education, 2249 Willard Loop Drive, Suite S355, Center for Community, University of Colorado Boulder, 123 UCB, Boulder, CO 80309-0123, **303-492-7741**, e-mail studyabr@colorado.edu, or visit studyabroad.colorado.edu. More information about CU-Boulder's academic policies on study abroad programs can be found in the Essential Guide to Study Abroad available on the study abroad website.

International Student and Scholar Services

CU-Boulder has welcomed international students and scholars for many years. Currently more than 1,300 international students and over 670 scholars and visiting faculty members from more than 80 countries are on campus. International Student and Scholar Services (ISSS), a part of the Office of International Education, provides information and assistance to international students and visiting scholars regarding university procedures, immigration requirements, liaison with sponsors and home governments, and other matters of special concern to students and scholars from other countries. All international students and visiting international faculty and scholars are required to check in at ISSS upon arrival at the university and to maintain contact with the staff during their stay at the university. Federal regulations governing the stays of international visitors to the United States have changed recently, making these services even more important to students and scholars.

In addition to the services described above, International Student and Scholar Services provides a number of opportunities for students and scholars to learn more about the community around them. The office works with Boulder Friends of International Students (BFIS) in matching students with local community members to provide social and cultural activities to help new arrivals in adjusting to the CU and Boulder environment. A number of annual events are planned by the office in order to provide a cross-cultural learning environment. Social/cultural activities for international students include an annual spring International Festival that celebrates the diversity of international students on the campus. The CU international student group sponsors an international coffee hour that encourages student and faculty interaction over refreshment every Friday afternoon that helps newly arriving international students learn about campus and community life. For more information about international students and scholars, call **303-492-8057** or visit www.colorado.edu/oie/iss.

International English Center

The International English Center (IEC), as a unit of CU-Boulder's Division of Continuing Education and Professional Studies, provides intensive English-language instruction to students from all parts of the world. Classes are offered in eight-week sessions (with a four-week option in summer) at six levels of English-language proficiency and in all language skills. The program is designed to prepare international students for academic study at colleges and universities in Colorado and elsewhere in the United States. At advanced proficiency levels, IEC students are permitted to enroll concurrently in selected academic courses as additional preparation for a degree program.

The IEC's curriculum is particularly appropriate for University of Colorado applicants who have been informed by the Office of Admissions that they are academically qualified but cannot be granted admission because of inadequate English-language proficiency. Such students are automatically eligible for study at the IEC. For IEC students who have not applied to CU-Boulder or any college or university in the United States, the IEC provides academic placement advice.

Through its English as a Second Language for Degree Students (ESLG) program, the IEC offers non-intensive credit and noncredit courses for graduate and undergraduate degree students who need further work in ESL. A recommendation is required to register for ESLG courses based on an English Placement Test administered at the beginning of the fall and spring semesters. Registration for ESLG courses is through the Division of Continuing Education and Professional Studies.

Full information may be obtained from the International English Center, University of Colorado Boulder, 63 UCB, Boulder, CO 80309-0063; in person at the IEC offices at 1030 13th Street; by phone, **303-492-5547**; by fax, **303-492-5515**; or visit www.colorado.edu/iec.

Music

With over 400 public concerts annually, the College of Music is a major musical resource in the Boulder-Denver metropolitan area. In addition to faculty and student recitals, the college features its own symphony orchestra, bands, choirs, and world music ensembles in regular concerts. Music for many tastes is also provided through other College of Music ensembles such as the Jazz Ensembles and the Early Music Ensembles.

Guest artists, speakers, and special events provide a vibrant and diverse musical atmosphere at the university. Acclaimed artists including Thomas Hampson, the Kronos Quartet, Martin Isepp, Wynton Marsalis, James Galway, George Crumb, and alumnus David Grusin have recently appeared on campus. Many have recently presented free master classes open to students and to the public.

Senior Auditor Program

During the fall and spring semesters, CU-Boulder offers state residents, who are 55 years of age or older, the opportunity to attend classes on a tuition-free, space-available basis. The only costs to senior auditors are books, if they wish to buy them, and a small processing fee due at registration. No record is kept of attendance; no examinations are taken for credit; and class participation is at the discretion of the instructor. Senior auditor privileges include the use of the university's libraries. For information, call **303-492-8484**.

Service Learning Program

Service learning courses integrate academic course work with community service in a way that benefits students and faculty as well as communities. Service learning courses offer students an interesting way to apply and enhance their growing knowledge and skills, to gain work experience, to meet people in professions of interest, and to learn more about community dynamics.

Currently, over 50 faculty, 30 departments, and an average of 1,700 students at CU-Boulder annually participate in service learning courses. Linguistics students gain insights by teaching adults in literacy programs; engineering students design devices that provide greater functionality for people with disabilities; sociology students learn about community needs by working for homeless shelters; and students in scientific writing courses gain proficiency by writing proposals that bring in needed funds for K–12 science classes and scientific nonprofit organizations. Participating students gain confidence and expertise in their subject areas as they gain understanding about people and community needs.

The Service Learning Program Office works with faculty, students, community organizations, and other campus programs. To learn more about service learning opportunities at CU-Boulder, contact the Service Learning Program Office at 303-492-7718, at service1@colorado.edu, or servicelearning.colorado.edu.

Theatre and Dance

Facilities for theatrical and dance presentations include the University Theatre, the beautiful outdoor Mary Rippon Theatre, the Loft Theatre, and the Charlotte York Irey Dance Studio/Theatre.

The Department of Theatre and Dance presents six to eight major theatre productions each academic year, as well as three to four student produced and directed theatre workshops. The 2010–11 season included the world premiere of *From Then Till Now*, *The Ingenious Chambemaid*, *Tamburlaine*, *Rent*, *Pillowman*, *Strictly Academic*, *'Tis Pity She's a Whore*, *You Can't Take It With You*, and *Orphans*. The dance division presents six to eight concerts featuring student, faculty, and guest artist work.

The Colorado Shakespeare Festival (CSF) is presented each summer in the outdoor Mary Rippon Theatre. One of the few repertory groups in the nation to have completed the entire Shakespearean canon, the festival has had 50 years of distinguished history, and features the most advanced students in the CU-Boulder Theatre and Dance program as well as professional actors, directors, designers, and outstanding performers and technicians from MFA training programs throughout the country. CSF “alums” include Jimmy Smits, Annette Bening, Joe Spano, Tony Church, and Val Kilmer. Also in the summer, the department hosts the Boulder Jazz Dance Workshop and Frequent Flyers Productions’ Aerial Dance Festival.

Undergraduate Research

CU-Boulder offers several ways for undergraduate students to participate directly in research and creative work. Through such involvement, students acquire knowledge and skills seldom attained through classroom experience alone. Project results sometimes are presented at national professional meetings or published in scholarly journals.

College of Arts and Sciences Honors Program

The Honors Program at the University of Colorado-Boulder is designed to provide special educational opportunities for highly motivated students. Honors is open to well-prepared freshmen, as well as sophomores and upper-division students from all col-

leges on campus. Through the Honors Program, students may ultimately graduate from the university with honors: summa cum laude, magna cum laude, or cum laude. Our requirements for graduating with honors are among the most rigorous—and we think the most rewarding—in the country. See Honors Program in the College of Arts and Sciences section for detailed information.

Independent Study

Independent study course work provides students the opportunity to become involved in projects of their own choice. Projects could include writing a play, doing laboratory research, or designing a space-shuttle experiment. The number of credit hours earned depends upon the scope of the project. In all cases, work is done under the supervision of a faculty member and should be arranged as early in the semester as possible. Departmental and faculty approval is required, and all deadlines must be met. Students should consult with their associate/assistant dean’s office about any special provisions.

Undergraduate Research Opportunities Program

The Undergraduate Research Opportunities Program (UROP) sponsors undergraduate students who work in partnership with a faculty member on a research or creative project. UROP involves students in all areas of research—from writing proposals, to conducting research or pursuing creative work, to analyzing data and presenting results.

Interested students must identify a project and a faculty sponsor and then submit a proposal. Projects are designed around an aspect of the faculty sponsor’s research or involve research or creative work of the student’s own design. Proposals are evaluated on a competitive basis. Students are awarded up to \$1,200 in stipends/or expense allowances to support their projects. A limited number of \$2,400 summer research fellowships are offered to enable students to spend the entire summer engaged in research.

Students seeking an introduction to research, scholarly, or creative work conducted by faculty should consider applying for a research assistantship. Students can earn up to \$800 for this type of student/faculty collaboration. For information concerning opportunities for undergraduate research, contact the UROP office in Norlin 5434, 303-492-2596, or visit www.colorado.edu/Research/UROP.

United Government of Graduate Students

The United Government of Graduate Students (UGGS) represents more than 5,100 graduate and professional students on the Boulder campus. UGGS serves as the primary advocacy group for graduate and professional students on campus and actively pursues goals intended to enrich the quality of life on campus and the quality of graduate work at the university. UGGS is committed to improving the quality of health care and child-care benefits for graduate students, advocating for lower student fees and higher TA/RA stipends, and increasing the diversity of the graduate student population. UGGS serves as a link between the graduate student body and the CU administration, including the Graduate School, the dean of students, the Boulder Faculty Assembly, and various other administrative bodies.

UGGS consists of an assembly, with a representative from each department on campus, and an executive board, consisting of seven officers elected from the assembly. The assembly holds bimonthly meetings during the academic year to exchange information between the executive board and representatives and

to provide a forum for discussion of graduate student concerns. All are welcome to the assembly meetings.

For more information on the United Government of Graduate Students, call **303-492-5068**, e-mail uggsinfo@colorado.edu, or visit the UGGS website at uggs.colorado.edu.

University of Colorado Student Government

Through the University of Colorado Student Government (CUSG), students make policies and control many Boulder campus facilities and programs. Based on its budget of more than \$37 million, half of which comes from student fees and the other half from self-generated revenues, CUSG is the nation's largest student government. CUSG operates facilities such as the Wardenburg Health Center, the University Memorial Center (UMC), the Student Recreation Center, and the campus radio station, KVCU. CUSG also offers students off-campus housing assistance, legal counseling, and many other services.

CUSG is divided into executive, legislative, and judicial branches. The CUSG executives, elected each spring by fee-paying students, head the executive branch. In representing the students, the executives work with the Board of Regents and the CU-Boulder administration on university policies and decisions. Support staff includes student administrators who work in key administrative offices and serve as liaisons between the students and the administration.

The legislative branch of CUSG is composed of an 18-member Legislative Council. Nine seats are occupied by representatives of the colleges and schools; the remaining nine seats are occupied by elected representatives-at-large. The joint boards on which council members and any interested student may serve include those in the environmental, recreation, health, finance, cultural events, and UMC areas.

The Appellate Court is CUSG's judicial branch. The seven students appointed by the executives as justices to the court are responsible for interpreting the CUSG constitution and ruling on specific appeals brought before them.

For more information regarding CUSG and getting involved, call **303-492-7473** or stop by UMC 125 between 8:00 A.M. and 5:00 P.M.

Campus Services

Career Services

Career development is an integral part of a student's higher education. Career Services empowers students and alumni to take control of their professional development through programs that help them plan careers, find internships, secure post-graduate employment, and prepare for graduate school. Students are encouraged to use these services throughout their university experience. Located in the Center for Community, N352, Career Services is open during the academic year Monday–Thursday 8 A.M.–7 P.M., Fridays 8 A.M.–5 P.M., and during the summer 7:30 A.M.–4:30 P.M. Call **303-492-6541** or visit careerservices.colorado.edu for more information.

Career Counseling

Professional counselors are available to help students:

- choose an academic major
- explore potential careers and make decisions about career opportunities
- develop skills in job seeking and résumé preparation

- refine interviewing skills through coaching and video practice interviews

Special Programs

Career Services offers several special programs throughout the year to help students prepare for their careers. These include the Annual Networking Night, Dining for Success Etiquette Dinner, and Suit Yourself. For a current schedule, visit careerservices.colorado.edu.

Academic Department Liaisons

Each Career Services counselor works closely with academic departments to gather and disseminate career information specific to each academic field. Call **303-492-6541** to learn which counselor is the designated liaison to your academic department.

Graduate Student Career Programs

In partnership with the Graduate School, Career Services has a career counselor and program coordinator who focuses specifically on graduate students' career development needs and concerns. For details, see careerservices.colorado.edu.

Career Program for Students with Disabilities

CPSD assists students and recent graduates in obtaining internships. Students participate in a series of career planning and disability meetings. A limited number of internship stipends are provided.

Recommendation Letters (Credentials)

Undergraduates planning to attend graduate school or graduate students planning to teach in higher education should open a professional credentials file to maintain and mail out letters of recommendation. Career Services is partnered with Interfolio, an online credentials service, to assist students with managing application materials and confidential documents. K–12 teacher candidates may self-manage their credentials file or use Interfolio. For more information about Interfolio and self-managed files, visit careerservices.colorado.edu/students/interfolio.aspx, or contact the credentials manager at **303-492-4128**, credent@colorado.edu.

Employer-Student Interaction

Career Services provides several ways for students to interact with employers offering internships and/or post-graduate career opportunities:

- **Career Services Online (CSO).** CSO is the online job listing service managed by Career Services. On CSO, students and alumni may access current internship, part-time seasonal, and full-time career vacancies; apply directly to employers; and even sign up for on-campus interviews. Students who have signed up on CSO also receive weekly e-mails from Career Services informing them of upcoming events.
- **Internships.** Internships help integrate students' academic studies and career interests with related work experiences. Many internship positions offer salaries and some earn academic credit; all provide valuable experiences and the opportunity to explore career directions. Students who complete internships are significantly more attractive to employers when they graduate.
- **On-Campus Interviewing.** Employers from all over the nation use our facilities to interview students and alumni for both internships and full-time positions. Applicants may sign up for interviews online, through the CSO system.

- **Employer Presentations.** Students may attend informal meetings hosted by employer representatives who present information about their organizations. Over 100 meetings are scheduled annually.
- **Employer Host.** Students have the opportunity to get acquainted with potential employers as they assist with employer presentations. Call **303-492-4133** if interested.
- **Résumé Referral.** Students actively seeking positions may choose to have their résumés automatically referred to employers who call daily seeking candidates for internships and career opportunities.
- **Career Fairs.** Career Services coordinates three fairs each year, with over 500 employers attending:
Fall Career and Internship Fair (September/October)
Spring Career and Internship Fair (January)
Just-in-Time Hiring and Internship Fair (April)
- **Welcome Desk.** Students who have questions about or need help with CSO or any other employer-student interactions may contact the Welcome Desk at **303-492-4100** or e-mail career@colorado.edu.

Testing Services (National and Institutional Testing)

Testing Services offers a variety of academic tests for admission and exemption purposes. It also provides selected IT certification tests and private test proctoring. Many tests are in computer-based format and offered year-round (such as GRE-General), while others are paper-based and delivered on preset dates (including Arts and Sciences exemptions, LSAT, SAT, and PRAXIS Series). Testing Services is an authorized center for ETS-Prometric tests. All testing is by appointment. The main office is open weekdays throughout the year. Computer-Based Testing (for ETS tests) keeps variable hours that include Saturdays. The office is in Center for Community N352 within Career Services. The main office phone number is **303-492-5854**; computer-based testing may be reached directly at **303-735-2044**. For test dates, descriptions and registration information, see careerservices.colorado.edu.

Child Care

The University of Colorado Children's Center offers toddler and preschool programs for children 15 months to five years of age. The center is located at Newton Court, 2202 Arapahoe Avenue. The Children's Center is licensed by the state of Colorado and accredited by the National Association for the Education of Young Children (NAEYC). The center serves children of university students, staff, faculty, and alumni. It is open from 7:30 A.M. to 5:30 P.M., five days a week. Two, three, four, and five days per week schedules are available. For further information, call **303-492-6185** or visit childcare.colorado.edu.

Computing and Media Resources

Information Technology Services

Information technology plays an integral role in the mission of the campus and the University of Colorado Boulder has a rich and diverse information technology (IT) environment. Information Technology Services (ITS) provides coordinated, centralized IT support in core IT services areas such as academic technologies, communication technologies, enterprise IT services and infrastructure, and IT security.

CU-Boulder students are able to take advantage of educational technology tools, fast network speeds, wireless network

access around campus, residence halls with 100-megabit-per-second (Mbps) Ethernet jacks and/or wireless networking in every room, an extensive array of modern computing laboratories, online services, and innovative technology resources available in many classrooms. Personal computing accounts, issued to all computer-fee-paying students, provide access to a variety of technology services including e-mail, disk space on university servers, and secure access to Internet-based services.

A personal computer is strongly recommended for incoming students. Many students bring laptop computers and take advantage of the wireless service available across most of the campus. However, if bringing your own computer is not possible, there are dozens of computer labs available across campus equipped with a variety of personal computers and scientific workstations that are available for student use.

ITS's home page (www.colorado.edu/its) contains a wealth of information about campus technology offerings and services including Getting Started With Campus Technology, security topics, IT policies and guidelines, computer lab information, and help documentation.

Support Services

ITS offers a wide variety of support services including a walk-in help center, free computing advising, seminars, workshops, and online help documents. The IT Service Center offers walk-in service Monday through Friday, 8:00 A.M.–5:00 P.M., and call-in and e-mail help Monday through Friday, 8:00 A.M.–7:00 P.M. The IT Service Center is located in the Telecommunications Center (on 18th Street, two buildings east of the University Memorial Center) and can be reached at **303-735-HELP** or help@colorado.edu.

ITS provides a no-cost, walk-in desktop support service for university and personally owned computers for all faculty, staff and students. The BugBusters have two walk-in locations: the Telecommunications Center and Norlin Information Commons. For additional information and hours, go to www.colorado.edu/its/support/helpcenters.html. Free lunchtime seminars and other hands-on computer workshops are provided for faculty, staff, and students to facilitate the incorporation of technology into academic life. Information about IT-related training opportunities is available at www.colorado.edu/its/training.

Educational Technologies and Facilities

The campus supports and encourages the use of educational technologies, including CULearn, CU-Boulder's online course tool, used by faculty and students, and available through MyCUInfo.colorado.edu.

Many CU-Boulder courses utilize “clickers”—devices similar to a TV remote control—to send information that is tabulated and displayed to the entire class on a projection screen. The system allows for active participation by all students and provides immediate feedback to the instructor and students about any misunderstandings in the material covered.

Staff members, assisted by student employees, work closely with faculty in over 100 technology-equipped classrooms. Each technology classroom and lecture hall contains, at minimum, a VCR, overhead projector, video projection unit (TV or data projector), and Internet connection.

The ATLAS Building (www.colorado.edu/atlas) provides all faculty and instructors with the opportunity to use the latest instructional technologies in their teaching. Criteria for teaching in the ATLAS building include effective use of technology and distance collaboration.

The ITS Digital Media Services Center is a facility for producing digital media modules for instructional use. The center's staff provides both consultation and instructional support for scanning and processing images, editing digital video, authoring DVDs, and producing animations and illustrations. Both faculty and students are served by the center's high-tech facilities on the third floor of the ATLAS building. Details are available at www.colorado.edu/its/graphics.

Websites and Services

The campus provides information services through an extensive set of websites. The CU-Boulder website (www.colorado.edu) provides information on campus news and events, campus map, a to z department listing, parking and transportation, admission requirements and application, academic and research programs, job listings, and more.

Computing Labs

ITS maintains more than 50 student computing labs, which house more than 1,400 systems and their peripherals. Facilities include instructional and general-use labs equipped with Windows-, Mac-, and Linux-based workstations. All are connected to the campus network. Some of the labs are focused on specific disciplines or applications, such as foreign language instruction, statistics, or graphics, but most are available for general-purpose use. In addition to the resources that ITS provides, a large number of departments support their own computing facilities for administration, special research, and instruction. Learn more at www.colorado.edu/its/labs.

Personal Computer Maintenance

Warranty and non-warranty service for Apple computers is available through PC Maintenance, located in The Buffalo Chip in the CU Book Store. Some services for other models, like data backup and hard drive repair, are also available. Customers requiring warranty service for models other than Apple should contact the manufacturer. The CU Book Store is located in the University Memorial Center and is open Monday–Thursday 8:00 A.M.–6:00 P.M., Friday 8:00 A.M.–5:00 P.M., and Saturday 11:00 A.M.–3:00 P.M. Call **303-492-6411** for more information.

Networks

The campus provides major data communications networks, which provide communications within the campus as well as gateways to national computing networks via the Internet. All students automatically receive computing accounts that provide access to campus networks, e-mail, and computing services. CU-Boulder offers wireless Internet coverage augmenting its wired network and offering mobile connectivity and network accessibility from varied locations throughout campus. Wireless access can be found in almost all buildings on campus, in popular campus life locations, and in most residence halls. Learn more at www.colorado.edu/its/networking.

Student E-mail Policy

E-mail is an official means of communication from CU-Boulder administrators and faculty to students. All CU students receive an official CU-Boulder e-mail address from the university. Students are responsible for checking their CU-Boulder e-mail on a frequent and consistent basis in order to stay current with university-related communications. The official e-mail address can be used by professors to contact students and provide course-related information. Administrative offices, such as the Office of the

Registrar, use the official CU-Boulder e-mail addresses to contact students and provide important information. The Bursar's Office sends tuition e-bill notifications to the official CU e-mail address. For more information on the student e-mail policy, visit www.colorado.edu/policies/email.html. For general questions about CU-Boulder e-mail contact the IT Service Center (**303-735-HELP** or HELP@colorado.edu).

Fair Use and Copyright

The University of Colorado Boulder community respects the intellectual property of others, regardless of the medium by which it is transmitted. This is a cornerstone of academic integrity. We prohibit the use of unauthorized distribution of copyrighted material, which is subject to both civil and criminal penalties as well as university procedures.

Distributing copyrighted materials using peer-to-peer or file-sharing programs is illegal and the university uses technological solutions to deter this activity. Still, the university regularly receives notices of copyright violations and is required by law to take action. Common consequences include loss of network access and referral to the Office of Judicial Affairs. Guidance on campus fair use and copyright issues is provided at ucblibraries.colorado.edu/copyright.

Counseling and Psychological Services

Services at the center are free and available to all CU-Boulder students. The center is a safe place to talk confidentially with a licensed counselor, psychologist, or social worker who understands and respects individual differences and needs. Therapists provide counseling, presentations, consultation, and outreach services to promote student academic success and healthy student development.

Counseling Services

- **Individual counseling and therapy.** The center offers free counseling to individuals, couples, and families in order to meet personal, professional, cultural, academic, and career needs. Some concerns brought to the center include relationships, stress management, conflicts, trauma, sexual harassment, workplace issues, cultural identity, depression, anxiety, racism, suicidal thoughts, eating disorders, coming-out issues, and substance abuse.
- **Counseling in several residence halls** is provided on a part-time basis as well. Currently these include housing at Kittredge and Williams Village.
- **Free groups and workshops** are offered on subjects such as performance anxiety, stress, surviving trauma, grief and loss, dissertation support, new to CU, relationships, and substance abuse. See website for current topics.
- **The Strong-Campbell Inventory** is offered to individuals for a small fee.
- **Self-help resources** are available through referral links, podcasts, and online screenings on the website.

Consultations and Presentations

Faculty, staff, and students are welcome to call in or walk in to talk to a counselor regarding students of concern Monday through Friday, from 10:00 A.M. to 4:00 P.M. Presentations about handling distressed or distressing students, CAPS services, or other mental health issues are available to faculty and staff groups and classes.

Walk-in or phone-in consultations are available Monday through Friday from 10:00 A.M. to 4:00 P.M. without appointment. The office is located in Center for Community 5440, 303-492-6766. Information is also available at www.colorado.edu/sacs/counseling.

Center for Multicultural Affairs

The Center for Multicultural Affairs (CMA) is a resource and referral advocacy center that provides support through services and programming that address the intersections of our multiple identities with special focus given to underrepresented populations on the CU-Boulder campus. We provide individual advocacy, mentoring, and support along with group programming to promote retention and well-being. CMA complements existing campus services by striving to increase opportunities for the university community to enhance understanding of the contributions made by diverse communities.

Programs offered at the Center for Multicultural Affairs include:

- multiculturally responsive advocacy and programming to promote community building and mentorship opportunities across university affiliate groupings (student/staff/faculty);
- Peer Mentoring Program that strengthens alliances with underrepresented student populations and specifically with student groups and the multicultural Greek organizations;
- diversity consultations, workshops, and trainings; and
- multiculturally responsive community celebrations.

For more information, contact the Center for Multicultural Affairs in Center for Community N320; 303-492-5667; or www.colorado.edu/studentaffairs/cma.

Disability Services

Disability Services' (DS) mission is to provide students with disabilities the tools, reasonable accommodations, and support services to participate fully in the academic environment. Furthermore, their mission is to promote an accessible and culturally sensitive campus through outreach and by building partnerships within the university community and beyond.

DS serves a diverse group of students with disabilities, i.e., learning disabilities, ADD/ADHD, psychiatric/psychological, traumatic brain injury, physical/systemic, blind/low vision, and Deaf/hard of hearing. All students requesting services and/or accommodations must submit documentation of a disability to DS. Documentation should meet the DS requirements found at the website below.

Support services are provided on an individual basis and include assistance with advocacy, academic advising, strategy development, study skills, campus and community referral, as well as an Assistive Technology Lab and Career Program for Students with Disabilities.

Reasonable accommodations are based upon a disabling condition that significantly impacts a major life function. Students may qualify for services even if documentation does not support the need for accommodations. Accommodations may include extended time on exams, interpreters, real-time captioning, note takers, materials in alternate format, and assistive technology.

The Assistive Technology Lab allows students with disabilities access to computer systems, information resources, and on-line services. The AT lab also provides alternate writing tools, access to print materials, and technological support to students, as needed.

NOTE: For any student struggling academically or questioning the presence of a disability, DS provides screeners at no fee.

Contact Disability Services at University of Colorado Boulder, 107 UCB, Boulder, CO 80309, 303-492-8671, fax 303-492-5601, dsinfo@colorado.edu, or visit www.colorado.edu/disabilityservices.

Environmental Health and Safety

Environmental Health and Safety (EH&S) provides professional leadership and technical services in environmental stewardship, campus health issues, workplace safety, and regulatory compliance to the campus community through the following programs:

- **Environmental Compliance** helps ensure that the Boulder campus is in compliance with applicable environmental regulations through on-site inspections, training, and program review. EH&S staff investigate incidents and respond to issues involving air quality, water quality, health exposures, and protection of the environment.
- **Radiation Safety (Health Physics)** oversees the safe and responsible use of radioactive materials and radiation producing machines. Its staff investigates incidents, monitors research activity using radioisotopes, and initiates policy via the Radiation Safety Committee.
- **Hazardous Materials Management** manages the recycling, minimization, treatment, and appropriate disposal of hazardous materials, as well as educating the campus community in the handling of hazardous materials and promoting safety practices.
- **Asbestos and Lead Management** specializes in the inventorying, maintenance, and abatement of asbestos and lead building materials. Its staff works closely with building maintenance activities and campus projects to ensure the safe removal of asbestos and lead building materials.
- **Environmental Management System (EMS)** is a pilot program within EH&S that guides the evaluation, prioritization, and coordination of EH&S programs. EMS works to maintain ongoing cycles of reviewing, planning, implementation, and continual improvement of CU-Boulder's environmental stewardship.
- **Biological Safety** facilitates compliance with applicable federal, state, and local environmental and occupational health and safety regulations through industrial hygiene practices, on-site inspections/surveys, technical evaluations, training, and program and activity reviews.

Ombuds Office

The Ombuds Office offers all members of the university community a confidential and safe place to talk about their campus-related problems. Students, faculty, or staff may visit the Ombuds Office when they are experiencing interpersonal conflict or when they have concerns about university related academic or administrative matters. Examples of assistance include conflict-related coaching, mediating between two or more people, providing information about campus policies and procedures, and referrals. The office does not give legal advice, conduct formal investigations, make or change administrative decisions, keep written records, or participate in formal proceedings. Visitors wishing to formally notify the university about a concern are referred to the appropriate office or department.

For more information, call 303-492-5077, or visit ombuds.colorado.edu.

Parking and Transportation Services (PTS)

All students are able to buy parking permits if they wish. Main Campus parking is available for a limited number of Main Campus residents. Many Main Campus residents are permitted in Williams Village lots. They use the Buff Bus shuttle for transportation between the Main Campus and Williams Village. Students who live off campus and commute are assigned to parking lots at the periphery of campus. Visit the website at www.colorado.edu/pts and click on Parking Permits/Student Permits for specifics about where you'll park relative to your housing assignment. Life at CU without a vehicle is good too: the CU-Boulder campus and the city of Boulder are accessible on foot, by bus (free with the Buff OneCard), and by bike.

Parking Permits. Those who park on campus frequently should buy a permit. All permits are sold online at www.colorado.edu/pts.

Permit Rates and Payment. Semester rates range from \$114 to \$175; academic year rates (August–May) are double. Permits may be charged to student bills or credit cards. For information concerning summer permits, check the website. Fees are subject to change without notice.

Visitor Parking. The Euclid AutoPark, located just east of the UMC, provides visitor parking at an hourly rate. Visitors may also park at meters and pay stations on campus. Some lots that are permit-controlled during business hours become visitor lots weeknights and on Saturdays and Sundays for a small fee. Meters and pay stations require payment seven days a week between 7:30 A.M. and 5:00 P.M. Temporary permits are available at the customer service window at 1050 Regent Drive during business hours. An online map (www.colorado.edu/pts) shows all campus parking areas, and printed maps are available at 1050 Regent Drive and at the UMC reception desk.

Bicycle Program. Bicycles parked on campus must be registered with Parking and Transportation (\$10 fee, good as long as one owns the bike). Register bicycles at the bike station near the UMC and Euclid AutoPark the week before fall semester and throughout each semester. Registration entitles a bike owner to services provided by the bike station including repair assistance, use of tools, and loaner bikes. Call **303-735-2705** for more information. Registration is also the link between the owner and the bike, making it possible to contact an owner whose stolen bike was recovered.

Photo ID/Campus Card Program

The Buff OneCard is the official CU-Boulder student ID to be used during a student's career at CU-Boulder. The card is required as verification of eligibility for many student privileges, including access to the Student Recreation Center, all campus libraries, printing, Wardenburg Health Center, housing dining centers, athletics events, and local and regional RTD buses.

The Buff OneCard also offers a number of convenient, optional programs such as the Buff One banking program that turns the card into an ATM/debit card that accesses accounts set up with the Elevations Credit Union, and the Campus Cash program that allows students to make purchases at a number of housing dining areas. For more information about these and other programs, call the Campus Card office at **303-492-0355** or visit www.buffonecard.com.

Lost or stolen cards must be reported immediately by calling **303-492-1212** to have the card deactivated, or via the Web at www.buffonecard.com. Both methods are available 24 hours a day. A replacement Buff OneCard may be purchased for \$25 at the Campus Card office.

The Campus Card office is located in Center for Community N180 and is open 8:00 A.M.–5:00 P.M., Monday–Friday. Office hours and card fees and prices are subject to change.

Planning, Budget, and Analysis

The Office of Planning, Budget, and Analysis is responsible for directing and supporting campus budgeting, planning, and management through oversight of budget services, institutional research, and planning processes; providing institutional analyses, assessments, and information for decision support; supporting the development of operating budget requests; maintaining a balanced and fiscally healthy annual budget; providing assistance to campus units on the use or development of management information and technology; and serving as the liaison with the system office and the Colorado Commission on Higher Education (CCHE) on planning issues and requirements. The office also administers the faculty course questionnaires (FCQs), which give students the opportunity to evaluate their courses and instructors. For more information, call **303-492-8631**.

Speech, Language, and Hearing Center

The Speech, Language, and Hearing Center provides a complete range of speech, language, and learning services to students, faculty, staff, and members of the community. Services include assessment and intervention programs for articulation, voice, stuttering, and language and learning problems. Programs for children and adults with communication challenges related to deafness or hearing loss, learning disabilities, developmental delays, strokes, head injury, and progressive neurological problems are available on a group and/or individual basis.

The center also houses the Child Learning Center with an inclusive (typically developing children and children with communication challenges associated with medical or developmental conditions) preschool program for children ages 18 months to five years, parent education and support programs in Spanish and English, and educational outreach services to the Boulder community to enhance quality of child care and preschool experiences for young children. The summer camp programs at the center for children with autism, developmental delays, and reading challenges are intensive ranging 2–3 weeks in length. For more information about programs and services at the center, view the SLHS website at slhs.colorado.edu or contact the center at **303-492-5375**. Scholarship funding is available for children with language and learning problems through the Scottish Rite Care Partnership program. Contact the center scheduler (**303-492-5375**) for application for funding. Contact Anne Whitney (anne.whitney@colorado.edu) for any questions about their services.

The Marion Downs Hearing Center, formerly housed at the Speech, Language, and Hearing Center, is now housed at 350 Broadway in Boulder and provides audiology services and procedures including routine and advanced assessments of hearing, comprehensive hearing aids and assistive listening device services, and cochlear implantation consultation and support. Children are then referred to the Speech, Language, and Hearing Center for rehabilitative services. Contact the Marion Downs Hearing Center at **720-848-2800** for scheduling of appointments.

Student Academic Services Center

The Student Academic Services Center (SASC) offers academic support services to help students improve their learning potential.

Academic Excellence Program

The Academic Excellence Program offers academic, logistic, and counseling assistance to qualified students wishing to improve their academic success. Program activities include group and individual workshops, tutor-supervised study halls, and assistance with topics including note taking, reading strategies, test preparation, career exploration, and time management. Undergraduate students who are the first generation in their family to receive a four-year college degree, are low income, and/or have a physical or learning disability may be eligible to participate.

Ronald E. McNair Postbaccalaureate Achievement Program

The McNair Scholars Program prepares CU students for doctoral study. Students who are U.S. citizens or legal residents and qualify by federal guidelines as low income and first generation, or as members of populations underrepresented in graduate school may apply. Twenty students are selected each year to participate in both academic year and summer activities. Benefits include: a stipend up to \$2,800 for completing a nine-month research project; summer expense support; faculty and graduate student mentoring; journal publication and national conference research presentation; intensive GRE prep sessions; academic skills training; credit-bearing seminars; positioning for graduation with honors; graduate school application assistance; and preferred status to obtain McNair-specific application fee waivers and fellowships from more than 150 graduate schools nationwide.

Visit the office located in Willard 400 or call **303-492-3482** for program information. An online application is available at www.colorado.edu/sasc/mcnair.html.

McNeill Academic Program

The McNeill Academic Program offers small classes, workshops, extracurricular activities, personal contact with university staff and faculty, and membership in a community of motivated students. Participation continues throughout a student's enrollment at CU-Boulder. The program accepts students who participated in the University of Colorado's Pre-Collegiate Development Programs, as well as other students identified by the admissions office, participating in various scholarship programs, referred by university staff and faculty, or self-referred, who would benefit from participation in an academic program with high expectations and a supportive professional staff.

Support Services

SASC provides a range of services tailored to meet the specific academic and personal needs of eligible students. These include alternative core curriculum courses in math and writing, tutorial support and academic skills development in key subject areas, and tutorial referral in a wide range of subjects. Academic specialists provide guidance and assistance in meeting students' academic goals.

Students interested in these services can come to Willard 386 or call **303-492-1416**. The e-mail address is SASC@colorado.edu and the website is www.colorado.edu/sasc.

Veterans Educational Benefits

The Veterans Educational Benefits Office is part of the Office of Financial Aid and helps eligible students apply to the Department of Veterans Affairs for education benefits. As a condition of receiving benefits, prospective students must be accepted to a degree program at CU-Boulder or acceptance must be imminent.

CU-Boulder students receive VA education benefits under the following programs:

- **Veterans Educational Assistance Program (VEAP), Chapter 32.** Students must have entered active duty on or after January 1, 1977, and before July 1, 1985, and have participated in this program while in the service.
- **Chapter 30, Montgomery GI Bill, Active Duty.** Students must have entered active duty on or after July 1, 1985, and participated in the program while in the service by contributing \$1,200. Also eligible are those veterans who entered active duty before January 1, 1977, and who served continuously on active duty through June 30, 1988 (or June 30, 1987, with at least a four-year obligation to the Selected Reserve).
- **Dependents' Educational Assistance Act, Chapter 35.** Children and spouses of 100-percent-disabled or deceased veterans may qualify for this benefit. Applicants must provide the veteran's VA file number and a copy of their birth certificate or marriage license to the Veterans Educational Benefits Office in order to apply for these education benefits. Those students eligible for social security benefits under the Restored Entitlement Program for Survivors (REPS) should contact the local Department of Veterans Affairs regional office.
- **Chapter 1606, Montgomery GI Bill, Selected Reserve.** Students may be eligible if they enlisted, reenlisted, or extended an enlistment in the Selected Reserve or National Guard for a period of six years beginning on or after July 1, 1985. Each student must provide the Veterans Educational Benefits Office with a Notice of Basic Eligibility, DD-2384, from the reserve or guard unit.
- **Chapter 1607, Reserve Educational Assistance Program (REAP).** Students may be eligible if they are members of the National Guard or Reserves of the Armed Forces and were called to active duty for a period of 90 days or more after September 11, 2001. Eligibility for this program is determined by the Department of Defense and the Department of Homeland Security, but payment of benefits will be administered by the Department of Veterans Affairs.
- **Disabled Veterans, Chapter 31.** Veterans may be entitled to vocational rehabilitation benefits of tuition, fees, books, and a monthly stipend if they meet the following conditions: they were discharged from the service under other-than-dishonorable conditions; they have a service-connected disability for which they are receiving or could elect to receive VA compensation; and the Department of Veterans Affairs determines they need rehabilitation services and assistance to overcome an employment handicap or to improve their capacity for independent living in their family and community. Interested persons should contact the Department of Veterans Affairs Vocational Rehabilitation at **303-914-5550**.
- **Chapter 33, Post 9/11 Veterans Education Assistance.** The Post-9/11 GI Bill is a new benefit providing educational assistance to individuals who served on active duty on or after September 11, 2001. Payment for this new benefit will be applicable beginning August 1, 2009. No payments can be made under this program for training pursued before that date. To be eligible, students must have served at least 30 days of continuous active duty service after September 10, 2001, and have been discharged due to a service-connected disability, or served an aggregate of 90 days of active duty service after September 10, 2001, and in general, have been honorably discharged from the Armed Forces or continue to

be on active duty. Additional discharge classifications may be eligible as well. Please see Veterans Educational Benefits or www.gibill.va.gov for additional information.

Payment. Students may request advance payment by completing the proper forms at the Veterans Educational Benefits Office at least 56 days before the start of a term (they must not have received benefits in the 30 days preceding the term). It is recommended, however, that requests for advance pay be submitted at least 60 days prior to the start of the term to allow for processing at the VA Regional Office and to ensure timely payment. The advance paycheck for the first month (or partial month) and the succeeding month is delivered to the Veterans Educational Benefits Office. The next educational benefit check and subsequent checks are sent to the student's address or bank account via direct deposit.

The office has staff to assist students with applying for VA education benefits. Financial aid counseling is also available. The office is located in the Office of the Registrar. For information, visit registrar.colorado.edu/vs.

Wardenburg Health Center

Wardenburg Health Center provides a wide range of services including medical, women's health, mental health, sports medicine, and health education. Charges and fees are associated with most services. Many health education and outreach programs are provided free of charge. The physicians at the health center are board-certified, and Wardenburg Health Center is accredited by the Accreditation Association for Ambulatory Health Care (AAAHC).

Wardenburg Health Center is located on campus at the corner of 18th Street and Broadway. The mailing address is Wardenburg Health Center, University of Colorado Boulder, 119 UCB, Boulder, CO 80309-0119.

For more information, go to healthcenter.colorado.edu or call 303-492-5101. Wardenburg Health Center is a service of CUSG.

Fees for Services

Charges and fees are associated with most services including medical, women's health, mental health, and sports medicine. For services rendered that are not covered by one of the university health plans, the student is expected to pay at the time of the service with cash, check, or credit card (VISA, MasterCard, or American Express).

Services Offered for Free

Student fees support the Community Health Resource Center in UMC 411, which offers cold care kits, HIV testing, chair massages, one-on-one counseling, and resources and education on healthy relationships, general wellness, sexual health, and more.

Wardenburg's Sports Medicine department offers the Musculoskeletal Injury Clinic (MSK) which provides screenings for minor injuries involving muscles and joints by a physical therapist.

How to Access Wardenburg Health Center

Most services at Wardenburg require an appointment; however, urgent medical or mental health services are available for those who cannot wait for an appointment due to the nature of the illness, injury, or personal crisis.

The Community Health Resource Center, HIV testing, and the Musculoskeletal Injury Clinic (MSK) are available on a walk-in basis during designated hours. For more information, call 303-492-5101.

Hours of Operation

(subject to change; hours change during holidays and breaks)

Fall and Spring Semesters

Monday–Thursday	8:00 a.m.–6:00 p.m.
Friday*	8:00 a.m.–5:00 p.m.
Saturday	9:00 a.m.–2:00 p.m. (Medical Triage and Psychological Health only)
Sunday	Closed

* Fridays—Medical Clinic opens at 9:00 a.m.

Summer Session

Monday–Friday 8:00 a.m.–5:00 p.m.

Emergencies

When Wardenburg is closed, the nearest 24-hour emergency service is Boulder Community Hospital Emergency Room (303-440-2273), on the corner of North Broadway and Balsam. Payment for such services is the student's responsibility.

Health Records

A confidential health record is created for students after their first visit to the health center. This health information cannot be released without written consent unless mandated by law. (For students under 18 years of age, parents(s) or legal guardian(s) must sign a "Consent for Treatment" form which is kept in the health record file.) Medical and mental health records are not included in the general university record system. Health records are maintained in compliance with federal and Colorado laws and are destroyed in a confidential manner after 10 years. For more information, call 303-492-2068.

State/CU-Boulder Requirements for Immunizations

Measles, Mumps, and Rubella Immunization Requirements. All degree-seeking students (including transfer and graduate students) born on or after January 1, 1957, must provide immunization documentation for two rubeola (measles), two rubella (German measles), and two mumps immunizations. The completed state of Colorado Certificate of Immunization for College Students form must be turned in to the Immunization Office at Wardenburg Health Center by August 31, 2011, for fall 2011 and February 17, 2012, for spring 2012. If the form is not turned in by then, the university will place a "hold" on the following semester's registration, and a fee of \$25 will be assessed. A signed/stamped copy of the student's immunizations may be obtained from the student's physician, high school, previous university records, or military records and attached to the form. Immunizations are available at cost through Wardenburg on a walk-in basis. Medical, religious, and personal exemptions are allowed by law. The immunization form may be faxed to 303-492-1014, mailed, or delivered in person to the Immunization Office, located in Wardenburg Health Center. To download the Certificate of Immunization for College Students form or for more information, visit healthcenter.colorado.edu or call 303-492-2005 or 303-492-8217.

Tuberculosis (TB) Testing for New International Students. The university requires incoming (new) international students from countries where the incidence of TB is high to be tested for TB. The University of Colorado Tuberculosis Information and Screening form must be completed and provided to the Immunization Office at Wardenburg Health Center by August 31, 2011, for fall 2011 and February 17, 2012, for spring 2012. The health center provides TB testing at minimal cost. If your test results are positive and treatment is needed, care is available through

the Colorado Department of Health. The immunization form may be faxed to **303-492-1014**, mailed, or delivered in person to the Immunization Office, located in Wardenburg Health Center. To download the screening form or for more information, visit healthcenter.colorado.edu or call **303-492-2005** or **303-492-8217**.

Campus Policies

Academic Integrity

A university's intellectual reputation depends on maintaining the highest standards of intellectual honesty. Commitment to those standards is a responsibility of every student, faculty member, and staff member on the University of Colorado Boulder campus.

Honor Code

A student-run Honor Code was instituted on the Boulder Campus in 2002. The intent of the Honor Code is to establish a community of trust in which students do not plagiarize, cheat, or obtain unauthorized academic materials. An Honor Code Council collaborates with the colleges and schools in addressing allegations and instances of academic dishonesty and in assisting to educate all members of the university community on academic integrity issues.

Breaches of academic honesty include but are not limited to cheating, plagiarism, and the unauthorized possession of examinations, papers, and computer programs.

A student accused of academic dishonesty may either accept the accusation made by a faculty member or request a hearing before a student panel, which will make a decision on the accusation of academic dishonesty. In addition to academic sanctions imposed by the faculty, students found responsible for academic dishonesty also face consequences from the Honor Code Council including but not limited to Honor Code probation, education seminars concerning academic writing and ethics, suspension, and expulsion from the university. More information about CU-Boulder's Honor Code may be found at www.colorado.edu/academics/honorcode.

The following terms are defined here for the benefit of all members of the university community.

Cheating

Cheating is defined as using unauthorized materials or receiving unauthorized assistance during an examination or other academic exercise. Examples of cheating include: copying the work of another student during an examination or other academic exercise or permitting another student to copy one's work; taking an examination for another student or allowing another student to take one's examination; possessing unauthorized notes, study sheets, examinations, or other materials during an examination or other academic exercise; collaborating with another student during an academic exercise without the instructor's consent; and/or falsifying examination results.

Plagiarism

Plagiarism is defined as the use of another's ideas or words without appropriate acknowledgment. Examples of plagiarism include: failing to use quotation marks when directly quoting from a source; failing to document distinctive ideas from a source; fabricating or inventing sources; and copying information from computer-based sources, i.e., the Internet.

Unauthorized Possession or Disposition of Academic Materials

Unauthorized possession or disposition of academic materials may include: selling or purchasing examinations, papers, reports or other academic work; possessing unauthorized solutions, instruction manuals, or texts; taking another student's academic work without permission; possessing examinations, papers, reports, or other assignments not released by an instructor; and/or submitting the same paper for multiple classes without advance instructor authorization and approval.

Academic Program Discontinuance

In the event a degree program is discontinued, students currently enrolled in the program have a four-year period in which to complete their degree requirements. This four-year period starts at the end of the academic year in which the Colorado Department of Higher Education (CDHE) takes action to discontinue the program. No new or returning students will be admitted into a discontinued degree program. Students not completing the degree requirements in the four-year period are not permitted to receive the discontinued degree. In such cases, credits accumulated may be applied to the overall number of credits required toward graduation, but the student must seek the advice of their college or school to determine how these credits might apply to a new degree program.

Alcohol and Other Drugs Program

In order to create the best possible environment for teaching and learning, the University of Colorado Boulder affirms its support for a responsible campus policy that addresses the inappropriate use of alcohol and other drugs.

The university complies with all federal, state, and local laws concerning alcohol and illegal drugs. CU-Boulder students are responsible for acquainting themselves with the laws and university policies regarding alcohol and illegal drugs. University policies regarding alcohol consumption and illegal drug use are described in several publications: *Students' Rights and Responsibilities Regarding Standards of Conduct and Alcohol and Drug Policy*, available in the Office of Student Conduct; *A Guide to Residence Hall Living*, available at the Department of Housing; and *Ralphie's Guide to Student Life*, distributed online to new and continuing students.

For more information on the CU-Boulder Alcohol and Other Drugs Program, call **303-492-5703** or visit www.colorado.edu/alcohol. Wardenburg Health Center provides individual and group counseling for students with substance abuse problems. They can be reached at **303-492-5654**. For information regarding policies within campus housing, contact Residence Life, **303-492-7260**. For information regarding the Student Conduct Code, contact the Office of Student Conduct, **303-492-5550**. For information on alcohol and drug enforcement, including municipal and state laws, call the University Police, **303.492.8168**.

Colorado Creed

The Colorado Creed, developed by students in 2003, is a code of conduct, a lifestyle, by which students at CU-Boulder live. The text of the Creed is:

As a member of the Boulder community and the University of Colorado, I agree to:

- Act with honor, integrity, and accountability in my interactions with students, faculty, staff, and neighbors.
- Respect the rights of others and accept our differences.

- Contribute to the greater good of this community.

I will strive to uphold these principles in all aspects of my collegiate experience and beyond.

For further information, go to coloradocreed.org or call 303-492-8476.

Copyright and File Sharing

Unauthorized distribution of copyrighted materials, regardless of the medium, is illegal. In order to deter unauthorized use, the university utilizes technological solutions to curb this activity. Still, the university regularly receives notices of copyright violations and is required by law to take action. Initial action taken by the university includes a three-strike rule, which includes a mandatory educational component as well as the possibility of suspension of network privileges. The copyright website (ucblibraries.colorado.edu/copyright) provides additional resources about the legitimate use of copyrighted materials in academic and other work. Be informed and understand copyright and fair use guidelines and apply them appropriately!

Discrimination and Harassment, Office of

The University of Colorado Boulder is committed to fostering a collegial academic community whose mission requires a positive learning, working, and living environment. As a place of work and study, CU-Boulder should be free of sexual harassment as well as discrimination and harassment based upon race, color, national origin, sex, age, disability, creed, religion, sexual orientation, or veteran status and related retaliation. Discrimination, harassment, and related retaliation are prohibited on campus and in university programs. The university is committed to taking appropriate action against those who violate the university's policies prohibiting discrimination and harassment.

No retaliation of any kind shall be taken against an individual for complaining about or participating in any procedure to address a complaint of discrimination or harassment. It is a violation of the policies if an individual intentionally alleges false complaints of discrimination, harassment, or retaliation or provides false information during the course of an investigation.

For information or copies of the University of Colorado Policy on Sexual Harassment, the University of Colorado Policy on Conflict of Interest in Cases of Amorous Relationships, or the University of Colorado Boulder Policy on Discrimination and Harassment, please call 303-492-2127 or visit the Office of Discrimination and Harassment website at www.colorado.edu/odh.

Final Examination Policy

It is the policy of the University of Colorado Boulder to adhere to the final examination schedule as published in the online at the registrar's website (registrar.colorado.edu) each semester. While it may be appropriate not to give a final in some cases, such as laboratory courses, seminars, and colloquia, final examinations are integral parts of the instructional program and should be given in all other undergraduate courses. Unless notified otherwise in writing during the first week of classes, students should assume that an examination will be given.

In addition to the principles stated above, the following guidelines should be followed by all faculty members and administrators in order to assure fairness and the best possible educational experience for students.

1. The final examination in a course must be given as scheduled and not at other times, even if the faculty member and all students in a course agree to such a change.

2. The week of classes preceding the scheduled final examination period should be used primarily for continued instruction and may include the introduction of new material. No hourly examinations are to be given during the seven days preceding the start of the final examination period. However, lab practicums and seminar presentations may be scheduled during this week.
3. Individual students may be granted a variance from these policies, provided the instructor is satisfied that the exception is based on good and sufficient reasons, and that such an exception for an early or late examination will not prejudice the interests of other students in the course.
4. When students have three or more final examinations on the same day, they are entitled to arrange an alternative examination time for the last exam scheduled on that day. Such arrangements must be made no later than the end of the sixth week of the semester. Students are expected to provide evidence that they have three or more examinations to qualify for exceptions.
5. This policy applies to all undergraduate students, including seniors. Graduating seniors are not exempted from final examinations. Such exemptions are inappropriate on both procedural and academic grounds.

Personal Safety on Campus

While the University of Colorado Boulder is a relatively safe place to be, the campus is not a haven from community problems. Through the joint effort of various organizations on campus, CU is committed to providing ample safety resources for faculty, staff, and students.

Specific efforts to promote safety on campus include the provision of adequate lighting, police protection, educational programs, and special prevention programs, such as the CU Night Ride escort services and laptop and bicycle registration programs. Emergency telephones are located on campus to provide direct access to the police dispatcher. See the university's parking and traffic map in the Parking Services Office or *Ralphie's Guide to Student Life* for exact locations of these phones.

In compliance with the Federal Crime Awareness and Campus Security Act of 1990 and the Higher Education Amendments of 1992, 1998, 2000, and 2008, students and employees receive (at the start of the fall semester) information on campus security policies and programs, including crime rate information. In any emergency or life-threatening situation, always call 9-1-1.

Members of the university community are encouraged to report any incident of threatening or harmful behavior to the administrator closest to the situation and/or the University Police at 303-492-6666. Other resources include the Office of Student Conduct at 303-492-5550, the Ombuds Office at 303-492-5077, and the CU-Boulder Alcohol and Other Drugs Program at 303-492-5703.

Additional safety information can be found at www.colorado.edu/police and www.colorado.edu/safety.

Smoking Policies

Campuswide smoking regulations are not intended to deny smokers their prerogatives, but rather to limit the potential adverse effects of smoking on others.

The Boulder campus smoking policy states:

- There will be no smoking or sale of tobacco products in any Boulder campus-owned or leased building, except as provided below. This includes hallways, classrooms, offices,

restrooms, meeting rooms, lobbies, elevators, shops, cafeterias, snack bars, waiting rooms, indoor or open-air athletics facilities, and performance halls. There also will be no smoking in campus-owned or leased vehicles.

- Smoking may be permitted in accordance with the policies of Boulder Campus Housing Administration in buildings providing overnight accommodations. Boulder Campus Housing Administration will provide information regarding its policies to all housing residents and guests.
- Smoking is not permitted in the seating areas of Folsom Stadium and the Mary Rippon Theatre and their contiguous buildings. Designated smoking zones have been created in well-ventilated areas outside the seating areas.
- Smoking and the sale of tobacco products may be permitted in designated food service areas and lounges in accordance with the policies of that facility. Designated smoking areas must be well posted and have adequate ventilation and separation for nonsmokers. Designated smoking areas must be reviewed and approved by the Department of Environmental Health and Safety (EH&S). Any disputes regarding the recommendations of EH&S will be referred to the vice chancellor for administration for resolution.
- Smoking may be permitted in laboratories conducting sponsored research on the effects of smoking. Designated laboratories must be well posted and have adequate ventilation and separation for nonsmokers. These labs must be reviewed and approved by EH&S. Any disputes regarding the recommendations of EH&S will be referred to the vice chancellor for administration for resolution.
- Smoking areas are permitted outside of university facilities provided that these areas are located far enough away from doorways, windows, and ventilation systems to prevent smoke from entering enclosed buildings and facilities. Check with EH&S for details.
- Signs posted at all building entrances shall state that smoking is prohibited in the building.
- Smokers and nonsmokers need to remain courteous to each other. Since smokers cannot smoke while working, they may want to take “smoke breaks.” As long as their absences fall within applicable work-break policies, accommodations should be made by supervisors and colleagues. Smokers are reminded that a wish to smoke is not a sufficient reason to be gone in excess of the standard work-break.
- All members of the university community are responsible for compliance with this policy. Violations of this policy by university employees will be referred first to the violator then, if agreement cannot be reached, the violation should be reported to the appropriate appointing or supervisory authority for resolution.

Those employees who wish to stop smoking may call the Employee Assistance Program (303-492-6766) for information on available programs. For more information on the campus smoking policy, contact the office of the vice chancellor for administration.

Student E-mail Policy

All CU students receive an e-mail account from the university, which is an official means of sending information to students. Students are responsible for maintaining this CU e-mail address. The official e-mail address can be used by professors to contact students and provide course-related information.

Administrative offices, such as the Office of the Registrar, use official e-mail addresses to contact students and provide important information. Students are responsible for frequently checking their official CU e-mail address. Using MyCUinfo (mycuinfo.colorado.edu), students can activate their e-mail accounts, change their passwords, and redirect their mail. For more information on the student e-mail policy, visit www.colorado.edu/its/email/index.html or call the IT Service Center at 303-735-HELP or e-mail them at HELP@colorado.edu.

Student Conduct Policies and Procedures

Student Conduct Code

The purpose of the Student Conduct Code is to maintain the general welfare of the university community. The university strives to make the campus community a place of study, work, and residence where people are treated, and treat one another, with respect and courtesy. The university views the student conduct process as a learning experience that can result in growth and personal understanding of one’s responsibilities and privileges within both the university community and the greater community. All students must follow these standards. Students who violate these standards will be subject to the actions described below. These procedures are designed to provide fairness to all who are involved in the conduct process.

Authority

Article 7, Part B, of the Laws of the Regents requires each campus to develop a student code of conduct. The Office of Judicial Affairs is authorized to establish and administer this policy.

Any questions regarding interpretation of this code or any of its provisions should be directed to the vice chancellor for student affairs or his/her designee for final determination. Questions regarding behavioral problems should be directed to the Office of Student Conduct, University of Colorado Boulder, 10 UCB, Boulder, CO 80309; phone 303-492-5550.

Jurisdiction

This policy governs:

- Student conduct that occurs on or as it relates to university property, or at official functions and university-sponsored programs conducted away from the campus. University property is defined as land, buildings, and facilities in possession of or owned, used, or controlled by the university or funded by university budgets.
- Student conduct that occurs off university property is subject to this policy if it: (1) adversely affects the health, safety, or security of any member of the university community or the mission of the university; or (2) involves any records or documents of the university. For purposes of this policy, the university’s mission is broadly defined to include both its academic goals and the importance of developing civic responsibility in its students.

All students residing in Housing & Dining Services facilities are subject to the applicable Housing & Dining Services procedures, except:

- Cases in which the potential sanction is suspension or expulsion.
- Cases which are referred to Student Conduct by Housing & Dining Services.

Proceedings initiated under this policy are separate from civil or criminal proceedings that may relate to the same incident.

Investigations or conduct proceedings by the university are not postponed while criminal or civil proceedings are pending, unless otherwise determined by the conduct officer.

The unexcused failure of a student to appear and/or respond to the conduct process does not prevent the university from proceeding with the conduct process.

The Office of Student Conduct

The mission of the Office of Student Conduct is to establish an ethic of care at the University of Colorado Boulder, through its preventive, behavioral, and accountability practices. Establishment of an ethic of care will assist in providing a safe, respectful, and supportive community where students, parents, faculty, and staff will be challenged to develop their critical thinking, values, connectedness to the community, sense of identity, understanding of independence and interdependence, and multi-cultural awareness.

An “ethic of care” model is a holistic approach to engage community members regarding their behaviors and responsibilities, recognizing that concern for self and others in a community of individuals can have a powerful impact. The Office of Student Conduct supports this holistic model in an effort to aid in student development and contribute to a positive, successful and respectful, living and learning environment throughout the university community.

The values of the Office of Student Conduct are:

- Civic responsibility and student involvement
- Education and development of all students
- Respect, dignity and equity
- A socially just community
- Responsibility, accountability and critical thinking
- Fairness, honesty, and integrity

Duties and Expectations of Students

It is the duty of all students involved in the conduct process to participate conscientiously. Students have a duty to discuss the incident with an investigator and a conduct officer over the telephone or in person, adhere to stated deadlines, attend scheduled meetings, and participate in all proceedings. Failure to meet these duties may result in a decision being made without the benefit of the student’s participation or may result in a student being charged with failing to comply with the directions of a university official. It is the responsibility of a charged student to seek modification of any criminal or civil restraining orders to allow for the completion of any conduct process defined in the Student Conduct Code.

The Office of Student Conduct views the conduct process as a learning experience that helps students to understand their responsibility to both themselves and their living and learning community. Individuals strive to learn from one another in an educational community that holds both mutual respect for individuals and community and self-responsibility for behaviors in high regard. Behavior that conflicts with established standards, policies, and guidelines of the University of Colorado will be referred for campus conduct proceedings.

Every member of the living and learning community must assume responsibility for becoming educated about the various university standards, policies, and guidelines. Each individual community member who works, lives, studies, teaches, does research, conducts business, or is involved in the living and learning community is a part of that community by choice. By making that choice, each community member agrees to contribute to an educationally purposeful community. It is against the basic nature of this community for anyone to demean or discriminate against another human being. A caring, educational community does not tolerate physical or psychological threats, harassment, intimidation, or violence directed against a person. Such behavior is subject to the university’s conduct processes.

Students must accept responsibility for maintaining an atmosphere conducive to education and scholarship by respecting the personal safety and individual rights of all in the university community, by conducting himself/herself in accordance with accepted standards of social behavior, and by abiding by the regulations of the university and the laws of the city, state, and nation.

Appendices

Students should pay special attention to the appendices of the Student Conduct Policies and Procedures at www.colorado.edu/studentaffairs/studentconduct, in which specific definitions and procedures for sexual misconduct, intimate partner violence, and stalking are outlined. Excerpts from the Colorado Revised Statutes regarding hazing, ethnic intimidation, and riots are also presented. Colorado law prohibits persons convicted of rioting from enrolling in state-supported universities/colleges for 12 months following the date of a conviction.

College of Architecture & Planning

Mark Gelernter, dean

314 UCB • phone: 303-492-8010 • fax: 303-492-6163
college website: www.cudenver.edu/academics/colleges/architectureplanning

THE COLLEGE OF ARCHITECTURE AND PLANNING at the the University of Colorado Boulder prepares students for careers in architecture, urban and regional planning, landscape design, and urban design. The college offers undergraduate education in these fields in an environment ideally suited to the needs of undergraduate students. With a diverse faculty committed to excellence in teaching, research, scholarship, and creative and professional work, the college provides students with a varied range of learning opportunities.

Individual classes are delivered jointly by three departments: architecture studies, landscape studies, and planning studies. These courses of study prepare students for careers in one of the professions responsible for shaping the designed environment. In addition to these pre-professional emphases, the college also offers an interdisciplinary option: design studies. This program prepares students for other careers that value the special qualities that an education emphasizing design thinking and design practice offers.

Many students intending to enter the design and planning professions complete the college's undergraduate degree at CU-Boulder as preparation for entry into the college's graduate-level professional programs at the University of Colorado Denver Downtown Campus, where they may receive advanced standing in those graduate programs as an outcome of the work they have done in the ENVD program. Graduate-level professional programs are offered by a wide range of schools and programs nationally, and students graduating from the college's undergraduate program often receive advanced standing in those graduate programs as a result of the courses they will have completed as undergraduates in Boulder.

The College's Vision

The faculty has adopted a vision for the college that focuses on the concept of Integrative Design. This vision asserts that the creation of meaningful and beautiful environments involves:

- focusing on real world relevance, stressing technical, environmental, economic, social, cultural, aesthetic, and ethical concerns;
- creating and using a knowledge base for design and planning decisions;
- fostering a multidisciplinary culture of individuals who are each expert in one of the core designing and planning disciplines; and
- seeking and supporting a rich diversity of ideas and people to support the diverse communities served.

In seeking a match between the college's core competencies and the design and planning challenges in the fast-growing Denver metro area and Western region, the college faculty are focusing on three themes:

- **sustainable urbanism:** extending studies of the forces that shape the contemporary urban environment; studying the design parameters and processes that can be used to develop sustainable infrastructures for urban, suburban, and rural life (Those infrastructures also support effective social, community, and intrapersonal interactions in the larger and more complex environments of the city and the country.); applying the emerging concepts of critical regionalism, eco-design, landscape urbanism, and ecological planning to the complex task of designing and planning environments that will accommodate rapid growth in the towns of the intermountain West.
- **healthy restorative environments:** extending understanding of the different factors, forces, and concerns that shape environments that are healthy, appropriate, beneficial, and sustainable. (Healthy environments are environments designed to restore the important balance between people and their natural, cultural, social, and designed settings.) They are designed collaboratively by clients, users, and designers using processes that are participatory, inclusive, and transparent.
- **preservation, conservation, and adaptive reuse:** extending the life and use of buildings and designed environments through methods and technologies that preserve the built environment and conserve unique natural and cultural landscapes.

This vision and these signature themes position the college to confront the significant challenges that will affect the design professions in the next few decades. A common concern shared by the departments is that digital technology has dramatically transformed the way we represent and model design projects and solutions. Consequently, students receive training in the most innovative computer-aided-design programs and are exposed to the technologies of 3-dimensional visualization, rapid prototyping, and computer-guided fabrication.

The Design Professions

Students thinking about studying design in an undergraduate setting as a way to prepare for a career in one of the design professions should have a strong overall high school academic background, including four years of English and math and at least three years of natural science (including physics and/or biology) and social science. Extra course work in math, social studies, and the arts and humanities is recommended.

The discipline of design and its fields of architecture, planning, and landscape architecture deal with formulating solu-

tions to many of the problems people face in their homes and cities, as well as suburban and natural environments. Architecture focuses on the design of buildings, while planning is concerned with the formulations of policies guiding the development of neighborhoods, cities, and regions. Landscape architecture focuses on both of these scales.

The college's undergraduate program, located on the Boulder campus, offers the only pre-professional education in the fields of architecture and planning in the state of Colorado. Graduate professional degrees in architecture, landscape architecture, urban and regional planning, and urban design are offered by the college on the university's Denver Campus.

To prepare for graduate professional study in architecture, landscape design, or planning/urban design, students may choose an undergraduate emphasis in one of these disciplinary areas. An individually structured emphasis in design studies is also available. All four of these emphases—architecture, landscape design, planning/urban design, and design studies—lead to the award of the bachelor of environmental design degree (BEnvd) as preparation for entry into graduate professional degree programs and the workplace.

Undergraduate Program

The college has taken a broad and integrated view of the design professions in developing its undergraduate curriculum and emphases. In recent years the problems and opportunities facing the design professions have changed dramatically, and demand a broader educational experience than the individual professions traditionally have supplied.

To prepare students for the constantly evolving nature of the design professions, the college asks them to enroll in a wide range of courses in the humanities, the arts, and the natural and social sciences so that they can view the world and contemporary culture from a variety of viewpoints.

Unlike undergraduate education in many other fields, students in architecture, planning, and design learn by doing. They experience design under the guidance of the college's exceptional faculty, and from practicing designers in the Denver/Boulder metropolitan area. From the first day of the freshman year, students actively integrate and synthesize the knowledge gained in lectures and related course activities in their hands-on design classes.

The college's required core classes throughout the entire curriculum are taught communally so that students from all design disciplines study shared problems together. Architects, landscape architects, urban and regional planners, urban designers, technologists, and environmental designers need to understand each other's perspectives, and increasingly work together to find solutions to the complex issues involved in the design of the built environment.

The undergraduate program in environmental design promotes the development of a body of knowledge that allows each student to understand and appreciate:

- the major theoretical perspectives used to inform the way we design our physical environments and the significance of the designed environment in the evolution of human culture;
- the different methodologies and processes used to give shape to our spaces, buildings, gardens, neighborhoods, towns, cities, and landscapes;
- the complex interactions that take place between the physical, ecological, social, cultural, behavioral, and historical factors that influence the form and quality of designed environments;

- the ethical perspectives that inform the way we work to design environments and settings that are healthy, sustainable, appropriate, and beneficial; and
- the social, cultural, historical, and professional contexts within which environmental design is learned, practiced, and perfected.

In addition, the program supports the development of a range of methods and practices that encourages students to:

- explore and use the design process as the unique way of thinking used to give shape and form to the designed environment, and to realize its value as the common process that architects, planners, and designers use to effect appropriate change in the designed environment;
- effectively and creatively design environments and settings—spaces, buildings, gardens, neighborhoods, towns, cities, and landscapes—using appropriate theories, precedents, methods, tools, and technologies;
- use verbal, visual, and written materials to communicate design intentions and environmental outcomes so that students can work effectively as interns and professionals in the different fields that make up that group recognized as the design professions.

For information on the college's undergraduate program see www.colorado.edu/catalog/catalog11-12/architecture.

Facilities

Facilities for the college's programs in Boulder are provided in the Environmental Design building. The administrative and faculty offices, conference rooms, lecture rooms, and exhibit spaces are located on the first floor of the building.

The Visual Resource Center with its photo and portfolio labs and image collections supplement the design studios, which are located on the second and third floors of the building. Studio space is provided for all students during the academic semesters, and is accessible on a 24/7 basis. Students in the lower-division studios and recitations typically use shared desks in the second floor studio, while upper-division studios are given access to individual desks and partitioned studio spaces in the third floor of the ENVD building and at the Center for Innovation and Creativity (CINC) facility.

Beginning and advanced computer facilities, including scanning, plotting, and printing labs, are available to students in the building. A specialized digital simulation lab on the third floor allows students to explore the cutting-edge field of digital visualization/production.

The college also offers its students access to specialized workshop, computer, and studio facilities that focus on the use of advanced technologies for design visualization, production, and simulation in the CINC facility on the CU-Boulder East Campus.

Careers in the Design Professions

The college offers its undergraduate students access to unique professional opportunities through its combination of undergraduate and graduate curricula. The Boulder BEnvd degree, when combined with the Denver MArch, MURP, or MLA degrees, offers students access to an accredited professional education in architecture, urban, and regional planning, or landscape architecture. ENVD graduates receive advanced standing in those graduate programs as an outcome of the work they have

done in the ENVD program, and this allows them to complete the graduate degree in a shorter time—normally three to four semesters in graduate planning programs, and four to five in graduate architecture and landscape architecture programs.

Architecture

The National Architectural Accrediting Board, which is responsible for the accreditation of all professional architecture programs in the United States, requires that accredited architecture programs publish the following statement:

“In the United States, most state registration boards require a degree from an accredited professional degree program as a prerequisite for licensure. The National Architectural Accrediting Board (NAAB), which is the sole agency authorized to accredit U.S. professional degree programs in architecture, recognizes three types of degrees: the Bachelor of Architecture, the Master of Architecture, and the Doctor of Architecture. A program may be granted a 6-year, 3-year, or 2-year term of accreditation, depending on the extent of its conformance with established educational standards. Master’s degree programs may consist of a pre-professional undergraduate degree and a professional graduate degree that, when earned sequentially, constitute an accredited professional education. However, the pre-professional degree is not, by itself, recognized as an accredited degree.”

The BEnvd degree awarded by the college at the end of four years of study is not accredited by the NAAB as a professional degree. However, the BEnvd degree may be combined sequentially with a NAAB accredited master of architecture degree program to become an accredited professional education in architecture as defined by the NAAB. In this sequential program of study, students completing the BEnvd will normally be asked to complete a minimum of four semesters of additional course work (60 hours of credit) after admission into an accredited MArch program, either on the college’s Downtown Denver Campus, or in one of the other NAAB accredited graduate programs nationally.

Planning

The practice of planning is currently not licensed in most states. Professional membership and certification is overseen by the American Planning Association (APA) and the American Institute of Certified Planners (AICP). Degrees in the field are accredited by the Planning Accreditation Board (PAB) of the Association of Collegiate Schools of Planning.

Although students interested in entry-level positions in planning may find the BEnvd degree adequate, an advanced degree (master’s or PhD) is highly desirable and advisable. Students primarily interested in professional practice should obtain a master’s degree in urban planning, in urban and regional planning, in urban planning and community development, or in urban design. Students interested in teaching or research in planning should complete a PhD.

Students from the undergraduate program who continue their studies in the graduate professional planning program in Denver are given advanced standing when accepted into the program. Copies of the policies relating to advanced standing are available in the college office. Though the amount of advanced standing received is directly related to the specific course work completed in the undergraduate program, undergraduate planning emphasis students who continue in the graduate planning program typically receive between 9 and 15 semester hours of credit, and complete master’s-level graduate studies in two or three semesters.

Landscape Design

To obtain a license, landscape architects should have an advanced education and work experience, as well as pass the national examination. In the United States, licensing is overseen both at the state level and nationally by the Council of Landscape Architectural Registration Boards (CLARB). Accreditation is voluntary. The Landscape Architectural Accreditation Board (LAAB) accreditation process evaluates each program and provides an assessment. The landscape architecture program offers a graduate professional degree (the Master of Landscape Architecture or MLA) on the downtown campus of UC Denver. Advanced Standing status is evaluated on a case-by-case basis and will be determined in accordance with prior academic accomplishments as demonstrated in the application portfolio and transcript.

Design Studies

There is an increasing demand in the design, construction, and development industries for people who combine an understanding of design with a specialized understanding of related fields like computing, management, finance, or marketing. Some students may use the design studies major as general preparation for graduate study in any number of academic fields that are also concerned with the design and planning of the built environment, including anthropology, geography, sociology, psychology, historic preservation, and architectural, urban, and environmental history. Other students may use this emphasis to prepare for further graduate study in a professional field related to architecture, landscape architecture and planning, including business, law, journalism, public administration, product design, and digital design. Design thinking is increasingly recognized in the business world as a valuable expertise in the analysis of the design of corporate structures and business plans.

As the design studies curriculum is individually tailored to each student, students in this emphasis must outline and receive approval of their individual course plan by a faculty sponsor and the college dean’s office before entering the design studies emphasis. Participants in this emphasis are expected to attain a competent level of understanding and skill in architecture, landscape design, or planning. They are expected to demonstrate proficiency in design thinking and design practice as these relate to architecture, landscape design, or planning/urban design by completing the requirements of the five-semester, 75-credit core. Once admitted to the design studies emphasis, students are expected to develop and demonstrate a high level of understanding and proficiency in one specialized aspect of these fields, or in one of the cognate fields. A minimum of 30 hours of course work must be completed after approval of entry into the design studies emphasis.

Study Abroad

The College of Architecture and Planning and the Office of International Education urge design students to participate in one of the various study abroad programs offered for university credit. Study abroad opportunities are coordinated by and offered through the Office of International Education. These immersion semesters are offered to upper-division undergraduate students and are facilitated during the sixth semester of the curriculum. The study abroad program provides an academically challenging academic and cultural experience with extensive local support.

The University of Colorado Boulder is a coordinating institution for DIS, Denmark’s international study program at the

University of Copenhagen. DIS offers semester- and year-long programs in architecture and design. Taught in English, the DIS program offers advanced design studio and related courses in addition to guided travel and study opportunities in other European nations, including the former Soviet Union. Specific architectural programs are offered in Sydney, London, Florence, and Barcelona. For more information about the study abroad programs, contact the Office of International Education, University of Colorado at Boulder, 123 UCB, Boulder, CO, 80309-0123, 303-492-6016, or at www.colorado.edu/oie.

Each summer, faculty of the college offer course work abroad through the University of Colorado Denver. In recent years, sites have included Rome and Beijing. In addition to these sites, for the past seven summers the college has been offering an integrated urban design studio in Turkey. These courses offer students an opportunity to study the process of design in another culture and to examine their own perceptions and attitudes toward design.

College Lecture Series

The college's lecture series enables students and faculty to meet people whose work significantly contributes to the different fields that make up the design professions in America. All students registered in the College of Architecture and Planning attend convocations and special lectures throughout the year. In addition, the college sponsors an annual lecture series, with lectures at both the Boulder and Denver sites. Other professional organizations and design-related institutions in the metro area also sponsor lectures and events that are open to the college's students.

Academic Excellence

Recognition of Scholarship

As a professionally oriented school, the College of Architecture and Planning provides an atmosphere for study and creative investigation in which the attainment of quality is held in the highest esteem. In recognition of high scholarship and professional attainment, the college grants honors at graduation in two categories: honors and special honors. Scholarships, prizes, and awards are given to outstanding students and faculty on an annual basis.

Honors at Graduation

Students achieving a grade point average of 3.500 to 3.749 (honors) and 3.750 to 4.000 (special honors) are recognized at commencement. Honors are based on course work completed at the University of Colorado.

Scholarships, Loans, Awards, and Prizes

A wide range of scholarships, prizes, and other awards are available to the college's BENVd undergraduate students. They are sponsored by the college, the campus, the professions, and other foundations and donors. A list of available scholarships and awards, together with application information and the application schedule for all scholarships and awards, is published at the beginning of the spring semester each year, and is posted on bulletin boards in the ENVD Building and on the college website.

In addition to these scholarships, interested students may participate in faculty-student research projects funded by the Summer Undergraduate Research Experience (SURE) and by the Undergraduate Research Opportunities Program (UROP) programs, or in other research projects funded by one of the col-

lege's four research centers. The college does offer a substantial recruitment scholarship for incoming freshmen.

Academic Standards

Student Rights and Responsibilities

The College of Architecture and Planning is part of an academic community whose mission requires an open learning and working environment for students, faculty, staff, and administrators. An open learning and working environment values and protects individual dignity and the integrity of human relationships, and is based upon mutual trust, freedom of inquiry, freedom of expression, and the absence of intimidation and exploitation. Any infringement upon these freedoms and rights may be cause for review by the college or by other university offices. Undergraduates in the College of Architecture and Planning are subject to the policies and procedures governing student rights and responsibilities published in this catalog. Please refer to the relevant sections outlining explicit policies governing issues of sexual harassment and discrimination, and review the full code of student conduct.

Ethics and Academic Dishonesty

Students in the College of Architecture and Planning are subject to the Boulder campus Honor Code and are expected to conduct themselves in accordance with the highest standards of honesty and integrity. Any act of academic dishonesty may receive sanctions from individual faculty and also be reported to the Honor Code Office. For a full description of Honor Code expectations and policies please refer to the Honor Code section of this catalog or to www.colorado.edu/academics/honorcode.

GPA Requirements, Probation, and Scholastic Suspension

A student must achieve a grade of C- or better in all courses applied toward graduation requirements, excluding general electives. General electives that receive a minimum grade of D- may be credited toward the degree if the student has maintained a minimum cumulative grade point average of 2.000.

As a general rule, students who fail to meet the minimum cumulative grade point requirement (2.000) are permitted to continue their studies on a probationary basis during the following semester. Scholastic records of students are reviewed as soon as possible after the close of the probationary semester, and students are informed in writing if they are to be suspended.

When a student is suspended, the reasons for the suspension are recorded and placed in the student's file. The student is asked to define the problems and draft a plan for dealing with them in consultation with the college academic advisor. It is the responsibility of the academic advisor to monitor the student's progress.

Students on suspension are not allowed to register on any campus of the University of Colorado while on suspension, except continuing education or regular campus summer sessions. A suspended student must raise his or her CU cumulative grade point to a 2.000 or higher to be eligible for readmittance into the college. Suspended students are readmitted on a case-by-case basis by review of the college.

Students in the College of Architecture and Planning who withdraw two semesters in a row will have a dean's stop placed on their registration. Summer Session is not counted as a regular semester. They will not be readmitted to return to CU-Boulder before one full academic year has elapsed (not including the semester of withdrawal).

Students suspended a second time are reinstated only under special circumstances. Students who believe that their situations warrant a departure from these normal stipulations may petition for reinstatement. The college looks with favor on such petitions only if the student has shown marked improvement in academic work or if there are unusual circumstances that have contributed to the student's academic difficulties.

Attendance

Students are expected to attend classes regularly and to comply with the attendance regulations specified by their instructors. At the beginning of each semester, instructors inform students of policies governing grading policies and attendance in each class. Students who miss a final examination for illness or other good reason must notify the instructor or the college office no later than the end of the day on which the examination is given.

Admission and Enrollment Policies

The College of Architecture and Planning currently offers emphases leading to specialized majors in architecture, landscape architecture, design studies, and planning/urban design within its environmental design degree program. All new students initially enter the college as environmental design majors. Completion of the 75 credit lower-division core leads to entry into one of four specialized upper-division emphases—architecture, landscape architecture, planning/urban design, and design studies. Policy questions may be directed to **303-492-7711** or **askAP@colorado.edu**.

Requirements for Admission

Candidates for admission to the College of Architecture and Planning are expected to meet the general requirements for admission to the university. See Undergraduate Admission in the General Information section for specific requirements.

Transfer Students

Transfer students entering the college are admitted through the University of Colorado Boulder's admission process directly into the ENVD degree program. Since the College of Architecture and Planning has a limited enrollment, all qualified students are not guaranteed admission. A college GPA of 2.750 or higher is required. Preference is given to students who have taken college-level courses in the areas of architecture, planning, or environmental studies. Completion of courses in related fields of social science, natural science, fine arts, or humanities is also considered in admission review. All course work except the last term, if in progress, must be completed and must be listed on the official transcript sent for admission consideration.

Students are encouraged to transfer as early as possible in their undergraduate career due to the large amount of design- and planning-related course work required by the different ENVD curricula. All transfer students, like freshmen, enter the college as environmental design (ENVD) students into the five semester sequence of work, and then apply for admission to one of the four emphasis majors—architecture, landscape design, planning/urban design, or design studies—in the final semester of their junior year. While transfer students are admitted for the fall and spring terms each year, it is important to note that the core curriculum is a fall semester start. All transfer students are required to take a minimum of 30 semester hours in the College of Architecture and Planning.

A maximum of 60 semester hours taken at a two-year college may be applied toward the baccalaureate degree. In gen-

eral, credits in vocational-technical courses are not accepted for transfer by the college. Transfer agreements between the University of Colorado and all Colorado community colleges outline approximately one year of prescribed general education courses that may be completed as preparation for transfer into the College of Architecture and Planning. As noted above, students should plan to transfer to the University of Colorado as soon as possible to start the sequential curriculum. See Undergraduate Admission under General Information in this catalog for admission standards for transfer.

Transfer students from other universities offering pre-professional or accredited professional degree programs in one of the college's areas of emphasis who enter CU-Boulder may be admitted to the ENVD degree program with advanced standing. A portfolio review will be required for these students. Please contact the ENVD Advising Office for information. In order for transfer credit to meet core degree requirements, a grade of B or better is required in the transferring class.

Intrauniversity Transfer (IUT)

University of Colorado students in good standing who are interested in pursuing a design education may apply for transfer into the college. IUT applications are distributed at meetings held for interested students several times each semester. Students should contact the college offices for the dates of meetings and deadlines for application review for specific semesters. Completion of specified introductory courses may be required before an IUT application for transfer into the college can be considered. Due to the curriculum requiring a fall semester start, prospective IUT students must complete specified courses in the fall semester. Students who apply for IUT into the college will be notified in early January, following the posting of fall semester grades. Because of the limited number of spaces available in the program, admission is competitive and grade point average plays a significant role in the application process. It may also serve as a basis for entry to introductory courses required for IUT application. All IUT students are admitted as ENVD open option students, and must select an upper-division emphasis following the processes described in the ENVD curriculum section that follows.

Credit Policies

Advanced Placement

Advanced Placement and college credit may be granted on the basis of the College Board's Advanced Placement tests. For students who have taken Advanced Placement course work in high school and receive scores meeting university standards in the Advanced Placement examination, Advanced Placement as well as college credit is granted. Granted college credit is treated as transfer credit without a grade, but counts toward graduation and meets other specific requirements for which it is appropriate.

Incomplete Grades

The college's faculty set their own policies for grading and for granting incompletes. Special conditions may be noted on class syllabi. In all cases, students must present evidence of circumstances beyond their control that prevent them from completing the class. The student and faculty member must complete a written agreement (form available in college offices) outlining the terms of course completion and submit this agreement to the dean's office.

Independent Study

Ordinarily, only students at the 3000- or 4000-level of studio are permitted to obtain independent study credit. Independent

study credit may not be used to substitute for any required core or design studio course.

A complete description of the scope of the independent work, a summary of how it will be carried out, and a definition of the intended outcomes must be submitted to the supervising faculty member no later than five days after the official beginning of a semester. Approval of the description must be by the faculty member and the faculty member appointed by college administration before permission is granted for enrollment in the independent study course. Students should make arrangements for the independent study course details during registration or well before the semester begins.

Typically, only students who have at least a 3.000 GPA are permitted to register for independent study. Additional requirements might be established depending on the proposed topic. Not more than 3 hours of independent study credit during one semester and not more than a total of 6 are given for the entire time the student is enrolled, unless an exception is granted by the dean.

Other Credits

Credits for teaching assistantships, research assistantships, internships, and for independent study are all guided by the same standards. Credits earned as a teaching assistant, research assistant, or intern are subject to a 3 credit-hour limitation. Teaching assistantships and internships are offered on a *pass/fail* basis.

Pass/Fail Credits

A student may elect to take up to 6 semester hours toward the BEnvd degree on a *pass/fail* basis, but these credits must fall in the category of general electives and may not include course work taught within the College of Architecture and Planning.

Students should confer with the college's academic advisor regarding specific academic standards for repeating laboratory, studio, and other undergraduate courses. Credits for repeated courses are not counted toward the 120 semester hours needed for graduation.

ROTC Credit

Students matriculating in the College of Architecture and Planning are eligible to participate in the ROTC programs on the Boulder campus.

Students interested in such programs should contact the professor in charge of the ROTC program of their choice (Army, Navy, Air Force) and also the academic advisor for the college for information on residence and curriculum requirements for graduation. Credit for ROTC courses may be given upon faculty recommendation to a maximum of 8 hours.

Transfer Credit

Credits transferred from other institutions are limited to the number of credit hours given for similar work in regular offerings at the University of Colorado. Exceptions to this regulation may be made by the dean upon written petition.

In general, the college does not accept vocational/technical course work in design, graphics, or construction as meeting specific course requirements of the program; nor does it consider such course work as acceptable in fulfilling the college's elective requirements. Only in exceptional circumstances may a student petition the dean of the college to request a transfer of such credits. A student may, however, ask that vocational/technical course work be considered as a basis for waiving a specific course in a required sequence.

A grade of C- or better is required in any course for which credit is granted in transfer from another institution to the university. In order for transfer credit to meet core degree requirements, a grade of B or better is required in the transferring class. Grades earned in other institutions (excluding other campuses of the University of Colorado) are not computed with the student's CU grade point average.

For more information on transfer credit policies, see Transfer of College-Level Credit in the Admissions section.

Residence Requirement

A student must complete a minimum of 30 course credits within the College of Architecture and Planning. Students also must complete their last semester in residence as full-time students.

Advising

Academic advising for students presently enrolled or anticipating enrollment in the college's undergraduate program is provided in a variety of forms. High school students or prospective transfer students from other universities are encouraged to participate in "Be a CU Student for a Day" or other visitation programs co-sponsored by the college and the CU-Boulder Office of Admissions. Information on campus visitation programs may be obtained by contacting the Office of Admissions at **303-492-6301**, or admissions.colorado.edu/undergraduate/visit.

Students already enrolled in Boulder campus programs who are interested in intrauniversity transfer (IUT) into the College of Architecture and Planning should contact the college office at **303-492-7711** for group meeting times focusing on the IUT transfer process.

Students enrolled in the college's undergraduate programs receive academic advising from faculty or professional staff in the college. Information on appointments and open office hours for advising is available at the college office, ENVD 168, or by calling **303-492-7711**.

Orientation

In order to receive an overview of educational opportunities and the philosophy of the college, and to meet other new students and the faculty of the college, incoming freshman and transfer students are required to attend an orientation approximately one week prior to the beginning of each semester.

Retention of Student Work

The College of Architecture and Planning may, with the student's written consent, retain student work submitted in fulfillment of class requirements for a period of time. This retained work is normally used to provide accrediting agencies with tangible evidence of performance, to serve as additional visual aid material in presentations to other students, and to contribute to possible educational exhibits and publications requested by the university community and the general public.

Computing in the College

The College of Architecture and Planning now requires that all incoming undergraduate students have and use their own computers and software applications in their studies. ITS on the Boulder campus has suggested hardware and software configurations for both desktop and notebook computers on their website at www.colorado.edu/its/recommendations/index.html. Neither the Boulder campus nor the College of Architecture and Planning endorses or requires students to buy a computer from a particular manufacturer. The configurations suggested by ITS

establish basic performance requirements that can be found in many different computers. Specialized software requirements for different classes in the ENVD program appear on the syllabi for those classes, and that software is generally available through the bookstore at discounted student rates.

BEnvd Curriculum: The Core and the Disciplinary Emphases

All students entering the college, whether as freshmen, external transfer, or intrauniversity transfer students, initially enter as environmental design majors and are enrolled in the bachelor of environmental design degree program. All students admitted into the college's undergraduate degree program graduate with the bachelor of environmental design degree with an emphasis major in architecture, landscape design, planning/urban design, or design studies.

In the core, entering ENVD students take a coordinated sequence of interdisciplinary courses that emphasize the knowledge, methods, and practices common to the fields of architecture, planning, urban design, landscape design, and design studies. As the established design professions are increasingly collaborating on complex design issues related to the designed environment, the mix of core courses reflects these interdisciplinary and integrative trends. The interdisciplinary core sequence is delivered in the first five semesters of the program.

Moving into the Emphasis Majors

Completion of the five-semester core leads to entry into one of four specialized upper-division emphasis majors: architecture, environmental design, landscape design, planning/urban design, or design studies. All students in the lower division initially indicate their choice of disciplinary emphasis by the particular classes they elect to complete in the seventh and eighth semesters of the program.

There are 30 required and elective credits in each emphasis major. Each emphasis has been carefully designed to prepare students for graduate studies, for entry into the workplace, or for both. The emphases in architecture, landscape design, and planning/urban design are specifically designed to lead to accelerated programs of study in the college's graduate professional programs on the Denver Campus. This is also true in the case of the environmental design and design studies majors and their options. Students who elect the architecture emphasis must complete 45 credits of elective courses in the arts, humanities, or sciences, in order to ensure a normal transition into a graduate program in architecture. Completing an environmental design or design studies major can also, depending on the particular requirements of graduate professional programs at other institutions, lead to advanced standing in those programs that can shorten the number of credits required to complete those programs. Students continuing in the upper-division ENVD emphases are subject to the academic standards defined in this catalog.

The BEnvd Curriculum: Thematic Structure

The undergraduate environmental design program offered by the college has been designed to encourage interdisciplinary study and collaborative work. The program is administered collaboratively by three disciplinary undergraduate studies units: architecture studies, landscape studies, and planning/urban studies.

The first year of the core introduces students to the thematic settings, and to design thinking and design practice. The follow-

ing three semesters focus on analysis and design in one of the disciplinary emphases. The first semester deals with the issues, ideas, and the design of urban spaces and settings. The second semester centers on the issues, ideas, and the design of landscape spaces and settings. The third semester explores architectural spaces and settings with a secondary focus on the issues surrounding the preservation and/or reuse (recycling) of buildings. The final three semesters of the curriculum, offer students the opportunity to specialize in one of the disciplines of environmental design—architecture, landscape architecture, and planning/urban design. Students wishing to pursue interdisciplinary study that crosses disciplines can choose the design studies emphasis. The sixth semester expands students' experiences into the real world with a wide range of service learning, civic engagement, participatory design, and study travel opportunities.

General Degree Requirements

Students must complete a minimum of 120 semester hours, subject to the maximum outlined in this catalog, and maintain a GPA of 2.000 or better. Students must complete one course from each subject area.

<i>Required Courses</i>	<i>Semester Hours</i>	
Writing		
WRWG 1150 or ARSC 1150	3	
Students also must demonstrate advanced-level writing skills. If they cannot, they may be required to complete additional course work.		
Math		
One course from the following: BCOR 2010; ECON 3818; GEOG 3023; MATH 1130, 1150 , 1300 , 2380, 2510 ; PSYC 2101; SOCY 2061 (Note: courses in bold are suggested as particularly appropriate for disciplinary majors in ENVD.)		3
Science		
One course from the following: CLAS 2020; CHEM 1111; ENVS 3070; EBIO 1030 and 1050, 1210 and 1230; PHYS 1230, 1240, 1300, 1700, 1010, 1020, 2010		3
Social Science		
One course from the following: ANTH 1030, 1040, 2100, 2200; BLST 2437; CHST 2537; ECON 1000, 2010, 2020; GEOG 1982, 1992; HIST 1010, 1015, 1020, 1025, 1035, 1038, 1040, 1045, 1051, 1061, 2103, 2117, 2123, 2180, 2437, 2537, 2717; IAFS 1000; PSCI 1101, 2012, 2101; PSYC 1001; SOCY 1001, 1002, 1031, 2011, 2041; WMST 2000		3
Humanities		
One course from the following: ARTH 1300, 1400, 2409; CHST 1031; ENGL 1200, 1260, 1300, 1400, 1500, 1600, 2602, 2612; HUMN 1010, 1020; PHIL 1000, 1100, 1200, 1400, 1440, 1600, 1700, 1750; WMST 1260		3

ENVD Curriculum and Course Sequence

Year One: Introduction

Semester I. The first semester of the core introduces students to the broad range of issues and forces that interact to affect the shape and form of the designed environment.

Semester II. The second semester of year one continues the exploration of the potential of critical design theories and practices to effect change in our environments at different scales and levels of complexity.

Years Two and Three: Exploration

Semester III. The first semester of the three-semester sequence explores the disciplines in greater depth and focuses on issues surrounding sustainability in the contemporary urban environment.

Semester IV. The second semester of the exploratory sequence addresses issues related to the appropriate design of the landscape at the scale of the house, the neighborhood, the city, and the region.

Semester V. In the fifth semester students focus on construction and building technology, and how they affect design thinking and design practice at the scale of the building.

Semester VI—Praxis. In this semester students select course clusters focusing on environmental design praxis—design/build or internship, study abroad or study away, community outreach, civic engagement, or service learning.

Year Four

During their last year, students decide on their major emphasis: architecture, landscape architecture, planning/urban design, or design studies, and undertake concentrated study in one of these.

Required Courses Semester Hours

First Year: Core Classes

Fall Semester

*ENVD 1004 Introduction to Environmental Design Theory	3
*ENVD 1052 Design and Communication 1	3
*ENVD 2001 Social Factors and Design	3
Writing Requirement	3
Humanities (see list of options above)	3

Spring Semester

*ENVD 1102 Design and Communication 2	3
*ENVD 1104 Introduction to Environmental Design Methods	3
*ENVD 2003 Ecology and Design	3
Science requirement (see list of options above) (Note 1)	3
Social science (see list of options above)	3

Second Year: Core Classes

Fall Semester

*ENVD 2120 Environmental Design Studio: Planning/Urban Design	6
*ENVD 3122 Research Issues and Methods in Planning and Design	3
*ENVD 3124 Issues in Planning History	3
Math requirement (see list of options below) (Note 2)	3

Spring Semester

*ENVD 2130 Intermediate Design Studio: Landscape Design	6
*ENVD 3003 Site Planning	3
*ENVD 3004 History of Landscape Architecture	3
Non-ENVD elective (Note 3)	3

Third Year: Core Classes

Fall Semester

ARCH 3114 History and Theories of Architecture 1 or ARCH 3214 History and Theories of Architecture 2	3
ENVD 3115 Introduction to Building Materials and Systems	3
ENVD 3300 Environmental Design Studio: Architectural Design	6
Non-ENVD elective	3

Spring Semester

Elective ENVD Design Studio or Practicum	6
ENVD elective	3
Non-ENVD electives	6
Required credits for core	90

Fourth Year: Emphasis Majors

Fall Semester

ARCH, PLNG, LARC, ENVD 45XX Studio	6
ENVD elective	3
ENVD elective	3
Non-ENVD elective	3

Spring Semester

ARCH, PLNG, LARC, ENVD 47XX Studio	6
ENVD elective	3
ENVD elective	3
Non-ENVD elective	3
Required credits for emphasis major	30

Total Credits, BENVD Degree Program 120

Course Notes

- * These are linked core courses that are corequisites and are designed to be taken together.
- 1 Students intending to enroll in the architecture emphasis are strongly encouraged to take a physics class.
 - 2 Students intending to enroll in the architecture emphasis are strongly encouraged to take a pre-calculus math class.

3 Students intending to enroll in the architecture emphasis are strongly encouraged to take a total of 45 credits of general study.

Dual-Degree Programs

In addition to the BENVD degree, students may pursue a degree in another college at CU-Boulder. Past students have received the BENVD degree concurrently with undergraduate degrees in business, engineering, and various programs offered by the College of Arts and Sciences. Typically, specific course requirements do not change in either program of a double degree; however, additional hours (varying by college) may be required. All undergraduate students must complete the general education requirements and the requirements for their specific emphasis area within the College of Architecture and Planning in addition to the other college's requirements. Students considering a double-degree program are encouraged to speak with advisors in both colleges to determine requirements and procedures for application.

Faculty—College of Architecture and Planning

MARK GELERTNER, dean of the College of Architecture and Planning; professor of architecture. BArch, Montana State University; PhD, Bartlett School of Architecture and Planning, University College, London.

AMIR ALRUBAIY, instructor. BA, Kent State University; MLA/MArch University of Colorado Denver.

BARBARA AMBACH, associate professor of architecture, clinical teaching track. BArch, BFA, Rhode Island School of Design; MArch, Southern California Institute of Architecture.

AMIR AMERI, associate professor of architecture. BArch, University of California, Berkeley; MArch, PhD, Cornell University.

KEN ANDREWS, instructor in architecture, BENVD, University of Colorado; MArch, Rice University.

ERNESTO G. ARIAS, professor of planning and design emeritus.

OSMAN ATTMANN, associate professor of architecture, BArch, Mimir Sinan University; MArch, State University of New York at Buffalo; PhD, Georgia Institute of Technology.

MEREDITH BANASIAK, instructor of architecture. HAB, Xavier University; MArch, Arizona State University.

JOHN BARBOUR, instructor in planning and design, BENVD, MURP, ABD, University of New South Wales.

MARIANNE BELLINO, instructor. BFA, College of the Holy Cross; MArch, Washington University, St. Louis.

LOIS A. BRINK, professor of landscape architecture. BA, MLA, University of Pennsylvania.

CHARLES CHASE, director, landscape studies; instructor in landscape architecture. BSC, Colorado State University; MSC, University of Colorado; ABD, Florida State University.

LOUISE CHAWLA, professor of planning and design. BA, Hunter College; MA, Bryn Mawr College; PhD, City University of New York.

THOMAS A. CLARK, chair, department of planning and design; professor of planning and design. AB, Brown University; MA, PhD, University of Iowa.

LORI COCKERHAM, senior instructor in landscape architecture. BLA, Iowa State University; MLA, University of Pennsylvania.

JOE COLISTRA, senior instructor in architecture. BED, Miami Ohio; MArch, University of Colorado.

BRIAN COOK, instructor. BS, University of Colorado Boulder; MLA, University of Colorado Denver.

MARCEL DELANGE, instructor in architecture. MArch, Delft Institute of Technology.

RONALD FALEIDE, senior instructor. BA, BArch, University of North Dakota; MArch, Virginia Polytechnic Institute; MDes, Harvard University.

MARCUS FARR, instructor. BA, BArch, Drury University; MArch, Rice University.

ROBERT H. FLANAGAN, associate professor of architecture. BS, Southeastern Massachusetts University; MArch, University of Colorado. Registered architect: Colorado.

ALLEN HARLOW, associate dean for academic affairs; senior instructor in architecture. BArch, MArch, University of Colorado. Registered architect: Colorado.

JULEE HERDT, professor of architecture. BS, Western Kentucky University; BArch, University of Tennessee; MArch, Southern California Institute of Architecture. Registered architect: Tennessee, Colorado.

GEORGE HOOVER, professor of architecture. BArch, Cornell University. Registered architect: Colorado, California, and Texas.

MARTHA HUTCHINSON, senior instructor. BArch, University of Kentucky; MArch, Cornell University.

MATTHEW JELACIC, assistant professor of architecture. BArch, Pratt Institute; MArch, Harvard.

MICHAEL JENSON, director, architectural studies; associate professor of architecture. BS, University of Texas; MArch, Columbia University; PhD, University of Edinburgh.

JOSEPH JUHASZ, professor of architecture emeritus.

DAVID KAHN, senior instructor. BA, University of California, Santa Cruz; MArch, MLA, University of California, Berkeley.

KATHLEEN KAMBIC, instructor. BSArch, MLA, MArch, University of Virginia.

ANN KOMARA, chair, department of landscape architecture; assistant professor of landscape architecture. BA, Pennsylvania State University; MA, MLA, University of Virginia.

CHRISTOPHER KOZIOL, associate professor of architecture. BA, University of Chicago; MArch, MURP, University of Illinois; PhD, University of Colorado Denver. Registered Architect: Colorado.

KEVIN KRIZECK, director, PhD program; associate professor of planning and design. BSE, Northwestern University; MRP, UNC Chapel Hill; MSCE, PhD, University of Washington.

JOERN LANGHORST, assistant professor of landscape architecture. BLA, MLA, ABD, University of Hannover.

JOHN LANTERMAN, instructor in landscape architecture. BSC, Colorado State University; MLA, University of Colorado.

YUK LEE, associate dean, academic affairs, Denver; professor of planning and design. Diploma, Chung Chi College, Chinese University of Hong Kong; BA, Eastern Kentucky University; MA, University of Cincinnati; PhD, Ohio State University.

LAURENCE K. LOFTIN, III, associate professor of architecture. BA, Princeton University; MArch, University of Virginia. Registered architect: Colorado.

TAMARAH LONG, instructor in architecture. BED, University of Pennsylvania; MArch, University of Florida.

TAISTO MAKELA, chair, department of architecture; associate professor of architecture. BArch, University of Oregon; MA, PhD, Princeton University.

RAYMOND McCALL JR., associate professor of planning and design. BS, University of Wisconsin–Milwaukee; MS, Illinois Institute of Technology; PhD, University of California, Berkeley.

HANS R. MORGENTHALER, associate dean of academic affairs; associate professor of architecture. BA, University of Zurich; MA, PhD, Stanford University.

ERIC MORRIS, senior instructor of architecture. BFA, Colorado State University; MArch, University of Houston. Registered architect: Colorado.

BRIAN MULLER, director, planning and design studies; associate professor of planning and design. BA, Yale University; PhD, University of California, Berkeley.

JEREMY NEMETH, director, urban design program; assistant professor of planning and design. BA, University of California, Berkeley; MS, Bartlett School of Architecture; PhD, Rutgers University.

PATRICIA O'LEARY, professor of architecture. BArch, MArch, Arizona State University. Registered architect: Arizona and Arkansas.

PETER PARK, associate professor of planning and design. BSAS, Arizona State University; MArch, MUP, University of Wisconsin.

STEVEN PERCE, instructor. BEnvd, University of Colorado Boulder; MArch, University of Colorado Denver.

JOHN M. PROSSER, professor of architecture emeritus.

JADE POLIZZI, instructor. BEnvd, University of Colorado Boulder; MArch, University of Colorado Denver.

GEORGE POND, senior instructor in landscape architecture. BA, Kenyon College; MArch, MLA, University of Colorado.

KEN RENAUD, instructor. BA, New York University; MArch, University of Colorado Denver.

RANCO RUZIK, senior instructor in architecture. BArchEng, University of Croatia; MArch, University of Colorado.

FAHRIYE HAZER SANCAR, professor of planning and design. BArch, Middle East Technical University, Turkey; MS, PhD, Pennsylvania State University.

MATTHEW SHEA, instructor. BA, University of Colorado Colorado Springs; MA, New School for Social Research, New York; MArch, University of Colorado Denver.

MELANIE SHELLENBARGER, senior instructor in architecture. BA, St. Mary's College; BID, Interior Design Institute, Denver; ABD, University of Colorado.

PETER SCHNEIDER, professor of architecture. BArch, University of Cape Town.

ERIK SOMMERFELD, associate chair, department of architecture; senior instructor in architecture. BEnvd, MArch, University of Colorado.

MICHAEL TAVEL, senior instructor. BA, BS, University of Toledo; MArch, University of California, Berkeley.

WILLEM K. T. VAN VLIET, director of undergraduate studies; professor of planning and design. Doctorandus, Free University of Amsterdam; PhD, University of Toronto.

EKATERINI VLAHOS, associate professor of architecture. BEnvd, MArch, University of Colorado. Registered architect: Maryland and Colorado.

PING XU, professor of architecture. BA, MArch, Tsinghua University (PRC); MLA, University of Pennsylvania; DDesign, Harvard University.

College of Arts & Sciences

Todd Gleeson, dean

275 UCB • phone: 303-492-7294 • fax: 303-492-4944
college website: www.colorado.edu/artssciences

THE COLLEGE OF ARTS AND SCIENCES is the liberal arts college at CU-Boulder. Its mission is to provide an outstanding liberal arts education for its undergraduates, cutting-edge graduate education, and world-class research, scholarship, and creative work. In addition to gaining the knowledge and skills of their areas of study, students learn how new information is acquired, and they can participate in original research and creative work with individual faculty members.

The college offers a wide variety of fields of study, with nearly 50 undergraduate majors. The environment and advantages of a small liberal arts college are created through “academic neighborhoods” in which students can meet and interact with other students and faculty in small group settings. In addition, more than 60 percent of undergraduate classes are small, with 25 or fewer students.

As the liberal arts college of CU-Boulder, the College of Arts and Sciences has several goals in the education of its students:

- Educate students for careers and a productive life. Arts and sciences students gain the most current knowledge and skills in their major fields of study. In addition, they learn how to acquire new skills to contend with—and lead—the changes that will occur in the decades to come. Education for a productive life also requires that students learn how to analyze situations, solve problems, and speak and write effectively.
- Provide students with a well-rounded education. Arts and sciences students acquire a broad knowledge and an integrated understanding of art and music, great literary works, philosophy, history and politics, the social world, science, and technology. They learn how to critically evaluate and think about morals, ethics, and values. The core curriculum and breadth requirements give students a broad, liberal-arts education that develops the whole person, not just the specialist.
- Educate citizens who can think for themselves, understand the rapidly changing world, and make wise choices within a democratic system.
- Impart a love of learning so that students can continue to grow throughout life.
- Teach ways of thinking about and approaching new problems. For some students, this will enable them to further advance knowledge and scholarship in the academy. For all students, this is important for enriching their lives.
- Prepare students to help enrich the lives of others. Arts and sciences graduates become lifelong resources for their families, neighbors, friends, and co-workers.

The college also is dedicated to outstanding graduate education. Advanced degrees are offered by nearly every academic department in the college, and the PhD is offered in approxi-

mately 30 different disciplines. In addition, an increasing number of departments offer combined bachelor’s/master’s degrees that can be earned in five years. Graduate training focuses on teaching and research careers as well as on professional careers in the public and private sector.

The strength of the College of Arts and Sciences comes from its outstanding faculty. In addition to being dedicated teachers, they are active scholars in disciplines throughout the arts and humanities, social and behavioral sciences, biological sciences, and physical and mathematical sciences. They are the recipients of numerous national awards and honors for their research, scholarship, and creative work. Faculty and staff of the College of Arts and Sciences join together to create an intellectual community of students and scholars to discover, critically examine, integrate, preserve, and transmit knowledge, wisdom, and values.

Programs of Special Interest

Honors Program

The Honors Program is designed to provide special educational opportunities for highly motivated students. It is open to well-prepared freshmen, as well as to sophomores and upper-division students in all schools and colleges. The Honors Program offers thoughtful advising, close contact with faculty and with other honors students, and an opportunity to write an honors thesis. Honors offers over 70 courses per year in a wide variety of areas. In any academic year about one-fourth of all Honors courses are offered under the HONR designation; the remainder are offered as seminars under departmental designations (CHEM, ENGL, HIST, IPHY, and so on). Course offerings for each semester are listed, with detailed descriptions, on the Honors Program web page at www.colorado.edu/honors/courses. Honor courses are limited to an enrollment of approximately 15 students.

Faculty members teaching honors seminars are carefully selected for special interests and enthusiasm, for teaching excellence in small discussion classes, and for insistence on high academic standards. Honors seminars are designed for the student who welcomes challenge, knows that the mind expands only with effort, and actively seeks academic and intellectual challenges. Honors courses encourage students to think creatively. Many honors courses are interdisciplinary; all encourage students to read widely and critically.

The Honors Council, consisting of faculty from all participating academic departments, is responsible for deciding which students merit the award of the bachelor’s degree with honors: cum laude, magna cum laude, and summa cum laude. These awards are made on the basis of special honors work and not simply on the basis of grades earned in courses.

Students may graduate with departmental honors or general honors, or both. Departmental honors may require a junior or

senior honors seminar, an independent research project, and/or directed readings. All departments require an honors thesis. Each department has information pertaining to its own particular program. General honors, supervised and administered directly by the Honors Program and its core faculty, permits students to pursue interests and ultimately to write theses that cross disciplinary and departmental boundaries. To graduate with general honors, students must have a cumulative GPA of 3.50 or higher, have completed 12 credit hours of required honors courses, and have written a thesis on an interdisciplinary topic.

The Honors Residential Academic Program (HRAP) is the optional residential component of the program. HRAP, open to a limited number of qualified freshmen and sophomores, consists of small classes offered in the Arnett residence hall as well as opportunities to participate in extracurricular activities. There is an additional charge for the Honors Residential Academic Program. See below for more information.

Detailed information concerning the Honors Program may be obtained in the honors office in Norlin Library. Qualified students may register for courses. Course offerings and call numbers can be found on the Honors Program website.

Freshmen are invited to join the Honors Program based on their high school GPA and test scores. Transfer students must have a 3.300 GPA from their previous school. Students currently enrolled are accepted on the basis of academic achievement at CU-Boulder. While honors students are expected to have a GPA of at least 3.300, it should be emphasized that no student who shows ability and promise is excluded from consideration. This is a program of excellence and commitment in which the best teaching faculty is committed to serve the most highly motivated students for the benefit of those students and the larger society.

Miramontes Arts and Sciences Program

The Miramontes Arts and Sciences Program (formerly the Minority Arts and Sciences Program) is a community of diverse scholars dedicated to academic excellence. MASP provides assistance to members in their successful matriculation, retention, and graduation from the College of Arts and Sciences at CU-Boulder. For students interested in science and mathematics, MASP emphasizes study leading to the BA degree in selected fields including biology, chemistry/biochemistry, integrative physiology, mathematics, physics, and applied mathematics. MASP also supports underrepresented students interested in pursuing humanities and social sciences degrees, including history, theatre, fine arts, and other disciplines within the College of Arts and Sciences.

MASP facilitates the often-difficult transition from achieving excellence in high school to achieving excellence in the college learning environment. It provides a personally supportive community and intense academic instruction, and helps develop a strong sense of group cohesiveness and spirit.

MASP provides scholarships to its promising students. Grade point average (GPA), financial need, and other academic indicators assist in determining scholarship eligibility and amounts. MASP also provides mentoring, academic advising and clustering, academic co-seminars and seminars, the Summer Program for Excellence in Academics and Community (PEAC) for incoming CU freshmen, self-management and leadership workshops, and a MASP networking and study center.

For more information, call the MASP office at **303-492-8229**.

Norlin Scholars Program

The Norlin Scholars Program is a special academic and scholarship program designed for students with a strong love of learning.

It is open to students in all majors and all colleges and schools. Special courses have been created exclusively for Norlin Scholars; they are broadly synthetic to be appropriate for any student in any major. Special mentoring and opportunities for original research receive emphasis. The program is highly competitive and carries a \$3,000/year scholarship. Students may enter as first-year students or as rising juniors. More information and application forms are available at enrichment.colorado.edu/norlin_scholars, or Norlin Scholars Program, University of Colorado Boulder, 365 UCB, Boulder, CO 80309-0365, or at **303-735-6802**.

Residential Academic Programs

Baker Residential Academic Program

The Baker Hall Residential Academic Program (RAP) is designed primarily for freshman and sophomore students who are interested in the natural sciences and environmental studies. The program provides courses that satisfy various core curriculum requirements in the College of Arts and Sciences and in majors such as ecology and evolutionary biology, integrative physiology, geography, geology, chemistry, and the interdisciplinary major in environmental studies. Courses are typically limited to 25 students and are taught in classrooms located in Baker Hall. Baker RAP offers access to academic advising, career counseling, student internships, guest speakers, field trips, and close faculty contact. The combination of small classes, a group of students who take many of the same classes together, and frequent field trips and special lectures creates a small-college atmosphere while offering the advantages of studying at a major research university.

Baker RAP offers courses in biology, geology, chemistry, geography, mathematics, economics, history, political science, philosophy, anthropology, and expository writing. The curriculum is designed to maximize the opportunities for students to satisfy core curriculum requirements in the College of Arts and Sciences. Upper-division courses are presented in biology and environmental studies. Upper-division credit also is available through independent study and research. Students usually take one or two of the above courses each semester. Baker RAP also reserves seats for its students in certain high-demand courses taught outside the program, including introductory biology and chemistry laboratories.

The Baker RAP curriculum is augmented through experiential learning outside of the classroom. Undergraduate research plays an important role in these experiences. Interested students are encouraged to participate in research projects as early as their first year. Baker RAP instructors work closely with the Undergraduate Research Opportunities Program (UROP) to facilitate matching Baker RAP students with faculty members with similar research interests.

Baker RAP cocurricular activities offer social and educational opportunities for students in the program. These activities include a kick-off barbeque at the beginning of the school year, local hikes, a day of cross-country skiing, and a spring-time service-oriented activity emphasizing environmental conservation. Guest lecturers are invited to speak about scientific or environmental themes.

There is a fee for participation in Baker RAP in addition to regular tuition, fees, and room and board. Students eligible for financial aid may request that their budget be adjusted to include the program fee. Their eligibility for aid will then be increased by an amount equal to the Baker RAP fee. Students interested in the program should write to the Baker Hall Residential Aca-

dem Program, University of Colorado Boulder, 176 UCB, Boulder, CO 80309-0176, or call **303-492-3188**.

Communication and Society Residential Academic Program

Buckingham Hall's Communication and Society Residential Academic Program (COMM RAP) offers a living-learning environment for 200 students designed around the theme of Communication and Society. It offers students an opportunity to engage with faculty and other students in a small college atmosphere within a major research university. Students explore the complex social problems and challenges of communication in contemporary society in seminar-sized courses. They also have opportunities to participate in co-curricular activities that stress civic engagement. The many opportunities for outreach and collaboration with the Boulder community provide an excellent venue for learning by doing.

A unique feature of the program is its integration of courses from its three supporting units, the Department of Communication, School of Journalism and Mass Communication, and the Program for Writing and Rhetoric. These courses emphasize the role of participation, deliberation, and collaboration in shaping and resolving public problems and problems in daily life. Its offerings also include opportunities for upper-division courses on topics germane to communication and society.

In addition to communication offerings, the curriculum includes courses that satisfy the writing and core requirements in Arts and Sciences. Across the year, guest lectures and seminars provide opportunities to interact on civic engagement and societal participation with leading experts on the CU faculty and distinguished visitors to the university.

The COMM RAP is open to students with an interest in communication and society, regardless of major. A fee is charged for participation in the program. For more information, contact Gerard Hauser at **303-492-1708**.

Farrand Residential Academic Program

Farrand's small seminar courses in the liberal arts are taught by award-winning faculty especially selected to help create a close intellectual and social community. As the Humanities and Cultural Studies Residential Academic Program, Farrand focuses on the study of the humanities within the larger frame of culture and society. Farrand also offers high-demand courses from all areas of the curriculum. These include service-learning classes, which provide a deeper cultural understanding by applying classroom learning to service to the community.

Each semester, every Farrand student takes a Farrand course that provides a shared academic experience. For many students, this course will be a humanities course, such as Greek Mythology, Introduction to Ethics, or the interdisciplinary Introduction to the Humanities, reflecting a commitment to the humanities that is central to Farrand's identity. Because helping others contributes to the learning experience as well as to the whole community, Farrand offers several service-learning classes each semester. Service learning gives students the chance to apply what they study in their classes to real-life situations, such as a homeless shelter, a humane society, or a tutoring program. These classes include Gandhian Philosophy; Nutrition, Health, and Performance; and Global Women Writers. The Farrand curriculum also offers a wide range of popular core curriculum classes taught by faculty known for their teaching skills. Deviance, Calculus, and Introduction to Environmental Studies are just a few examples.

Farrand's many cocurricular opportunities include a wide variety of events and performances, active and well-supported student governance (Farrand Community Council), and group projects benefiting the community and the environment.

The program is designed primarily for students in the College of Arts and Sciences. Interested students in other colleges should contact the Farrand program for special admission procedures. It is administered by academic directors selected from the faculty and a hall director experienced in the operation of a large residence hall. There is a charge for the program in addition to regular tuition, fees, and room and board.

Inquiries concerning any aspect of the academic program may be directed to the Farrand Academic Program, University of Colorado Boulder, 180 UCB, Boulder, CO 80309-0180, **303-492-8848**.

Global Studies Residential Academic Program

The Global Studies Residential Academic Program (G-RAP) promotes the recognition of global interdependence, introduces 240 first-year students to the many cultures of the world, encourages the study of foreign languages and international affairs, and emphasizes the value of international education. Like all the other Residential Academic Programs, G-RAP provides its students with a small community of similarly interested students, which eases the transition to the university. A diverse group of students who have similar interests and goals participate in programs designed to promote understanding of the global community. All G-RAP students are required to take at least one designated course in the fall and spring semesters with an international focus. The G-RAP Dinner Lecture Series introduces students to faculty who work internationally and bring that experience back to their teaching on campus. Additionally, participating students attend many internationally focused events on and off campus, such as the Conference on World Affairs. Throughout the year, students receive guidance on academic and career options and study abroad opportunities. The Global Studies Residential Academic Program is open to all entering first-year students. Participants live together in the newly renovated Smith residence hall, where they enjoy a number of special facilities, programs, and amenities. In addition to benefiting students interested in studying abroad or those whose majors have an international component, G-RAP enhances many of the majors offered at CU-Boulder. A fee is charged for participation in G-RAP. For more information, call **303-786-3189**.

Honors Residential Academic Program

The Honors Residential Academic Program (or HRAP; formerly known as the Kittredge Honors Program, or KHP) is the residential component of the Honors Program of the College of Arts and Sciences. It is open to approximately 200 honors-qualified first- and second-year students. Participants live in Arnett Hall.

The Honors Residential Academic Program promotes and sustains academic excellence within a lively community setting. Each semester the program offers a variety of honors courses in Arnett's state-of-the-art seminar rooms. The great majority of these courses satisfy arts and sciences core curriculum requirements. Each seminar is taught by an experienced faculty member, emphasizes discussion and writing, and ordinarily enrolls no more than 15 students. Beyond the classroom, HRAP fosters a variety of student-led activities, including evening events each week and a monthly lecture series that brings students into

contact with leading teachers and researchers from the university community.

Members of the Honors Residential Program draw on a rich variety of academic, advising, and informational resources made available by the program's joint sponsors, the College of Arts and Sciences, the Honors Program, and the Department of Housing. The Honors Program associate director who supervises HRAP's daily functioning maintains an office in Arnett Hall for academic advising and acts as liaison to the rest of campus.

Eligibility: Beginning each December, the Honors Program of the College of Arts and Sciences invites approximately 10 percent of all admitted students to participate in honors courses during their first year on campus; these invitations are issued on the basis of high school grade averages and scores on the Scholastic Aptitude Test (SAT) or American College Test (ACT). All students receiving an honors invitation are eligible to become members of the Honors Residential Academic Program on a first-come, first-served basis. Students who wish to participate in HRAP beyond the first year must maintain a University of Colorado GPA of 3.300 or above. Like participants in all other residential academic programs, HRAP members pay a participation fee in addition to the standard charges for tuition, fees, and room and board.

Students interested in the program should visit www.colorado.edu/khp for further information. Inquiries can be addressed by e-mail to khp@colorado.edu; by telephone to the program office at 303-492-3695; and by postal mail to the Honors Residential Academic Program, University of Colorado Boulder, 33 UCB, Boulder, CO 80309-0033.

Leadership Residential Academic Program at Williams Village

This Leadership RAP is located at Williams Village and is dedicated to developing community, civic, and business leaders for a culturally diverse and democratic society. When a student enrolls in the Leadership RAP they select one of two academic programs.

The Ethnic Living and Learning Community (ELLC) Leadership Studies Program provides students with a multicultural living and learning experience while studying leadership from a cultural and multi-disciplinary perspective.

The Chancellor's Leadership Studies Program (CLSP) offers leadership development and an understanding of how institutions and communities solve problems. Students learn different leadership styles needed to work effectively in those settings.

Students in both of these programs take leadership courses offered each semester that meet core requirements in the College of Arts and Sciences and may be applied toward graduation as well as a Certificate in the Study and Practice of Leadership. Students from all schools and colleges on the Boulder campus are eligible to participate.

There is a program participation fee of \$725. Scholarships are available to cover the cost of the fee for those with financial need. Contact the Leadership RAP at Williams Village, University of Colorado Boulder, 452 UCB, Boulder, CO 80309-0452, phone 303-735-1987, e-mail CLR@colorado.edu, or visit www.colorado.edu/chancellorsrap.

For additional information on this program, see the Other Academic Programs section.

Libby Residential Academic Program

The Libby Arts Residential Academic Program (LRAP) is the first program on campus to unite the arts under one umbrella.

LRAP is designed for first-year and second-year students residing in Libby Hall who have an interest in the arts as a major, or who see arts courses as a corollary to a major in architecture, arts and sciences, business, or engineering. Classes satisfy core and major requirements or offer elective credit.

LRAP provides a unique living and learning experience with classes that are offered in specially equipped classrooms and studios in the Libby Residence Hall, taught by regular faculty from various departments as well as faculty with demonstrated excellence in teaching. (Past courses include Painting 2, World Art History, Introduction to World Dance and Culture, Introduction to Theatre, Introduction to Film Studies, Appreciation of Music.) In addition, a range of popular core curriculum classes are offered each year. Students need not have a previous background in any of the disciplines offered. During 2010-11 the program is limited to approximately 300 students, and class sizes are usually limited to 20-25 students. Thus, with students taking several classes together and living in the same residence hall, there is the opportunity to foster a small community within the larger university setting. Students enrolling in the program are required to take at least one course in the hall each semester. The director of the program and the office staff, located in Libby Hall, provide academic assistance to students throughout the year in planning their CU careers.

Residents are introduced to the diversity of the arts through community events and other co-curricular activities. Regular meetings are held during each semester to expose students to the breadth of the performing and visual arts, with opportunities to meet artists of both regional and national stature, as well as to view films of historical and contemporary significance. Other activities that meet students' interests and needs may also be organized.

The LRAP is jointly sponsored by the College of Arts and Sciences and the Department of Housing. Any arts and sciences major may enter the program. There is an annual nonrefundable charge for participation. Some university courses also charge course fees. There are a limited number of scholarships available. Students eligible for financial aid may request their budget be adjusted to include the program fee.

Students interested in the program may contact the program by writing to LRAP, University of Colorado, 175 UCB, Boulder, CO 80309-0175; by e-mailing LibbyRAP@colorado.edu; by telephoning 303-735-4211; or by visiting www.colorado.edu/lrap.

Sewall Residential Academic Program

The Sewall Residential Academic Program (SRAP) is a program for first-year students enrolled in the College of Arts and Sciences who have an interest in the study of history and culture. Citizenship in the 21st century requires the ability to engage complex connections between the present and past, between local places and our global society, and between the arts and sciences. SRAP combines classes ranging from history and biology to economics and English, with co-curricular activities (such as lectures, films, and field trips) and local community outreach to help students recognize and think about these connections.

Limited to 330 students, SRAP provides the opportunity to enjoy the advantages of a small liberal arts college within the broader context of a large research university. The program offers a selection of small seminar-style classes (limited to approximately 18 students) that meet in the Sewall residence hall. Classes encourage active student participation and emphasize analytical thought through intensive reading, discussion, and writing. Most SRAP courses also fulfill College of Arts and Sciences core requirements.

Each semester all SRAP students must take a 3-credit course at Sewall. All students are further required to take SEWL 2020 either fall or spring semester. In addition, students have the opportunity to take the lower-division writing course (WRTG 1150) at Sewall in either fall or spring semester.

SRAP facilitates a successful transition from high school to the university. Sewall courses are taught by faculty with a demonstrated excellence in teaching and a commitment to working closely with first-year students. Faculty members have offices conveniently located in Sewall Hall, which helps foster communication between students and faculty. Participants in the Sewall program are also fully involved in regular campus life, take the majority of their classes with the rest of the university, and are encouraged to join in all university activities.

The SRAP director, associate director, and program assistant are readily available to help students with planning schedules, making sense of the rules of the University and the College of Arts and Sciences, and choosing majors. They can refer students to other university resources for specialized counseling when necessary, and the housing department office offers free tutoring in many subject areas.

Interested first- and second-year students who are admitted into the College of Arts and Sciences should indicate Sewall Hall as their first choice on the housing application form and return it to the Housing Reservation Center as early as possible. Students are admitted on a first-come, first-served basis, determined by date of receipt of the housing application form. There is an extra charge for participating in the program in addition to regular tuition, fees, and room and board. Some scholarships are available; please contact the academic program office for details.

Students who have questions about the program should address them to the Director, Sewall Residential Academic Program, University of Colorado Boulder, 353 UCB, Boulder, CO 80309-0353, visit the program online at srap.colorado.edu, or call the SRAP office at 303-492-6004.

Academic Excellence

Dean's List

Students in the College of Arts and Sciences who have completed at least 12 credit hours of CU-Boulder course work for a letter grade in any single semester with a term GPA of 3.750 or better are included on the dean's list and receive a notation on their transcript and a letter from the dean.

Graduation with Honors

The award of honors at graduation—cum laude, magna cum laude, or summa cum laude—is determined by the Honors Program of the college and is based on several criteria, including the quality of original scholarly work. Honors are not conferred on a graduate simply by virtue of high grades. Students pursuing multiple majors or multiple degrees must complete their honors program and defend their thesis by the published deadline for the term/year in which their first major or first degree is conferred. Students intending to pursue honors must register with the Honors Program by the deadlines published on the Honors Program website. Honors requirements must be complete prior to graduation. Students “walking” in May but graduating in August must complete honors requirements, including defending the thesis, by the Honors Program deadline for May graduation. Interested students should consult the Honors Program listing in this catalog or contact the Honors Program in Norlin Library.

Graduation with Distinction

Students will graduate “With Distinction” if they have at least 30 credit hours completed at the University of Colorado Boulder, have a grade point average of 3.750 or higher for all course work completed at the University of Colorado, and have a cumulative grade point average of 3.750 or higher for all collegiate course work completed at all institutions attended. The average includes all grades except P.

Phi Beta Kappa

Phi Beta Kappa is the nation's oldest and most prestigious honor society. The CU-Boulder chapter was established in 1904. Upper-division students whose undergraduate academic records fulfill certain requirements are eligible for election to membership in recognition of outstanding scholastic achievement in the liberal arts and sciences. Students are notified by mail of their nomination; students do not apply for Phi Beta Kappa membership.

Academic Standards

Good Academic Standing

Good academic standing in the college requires a cumulative grade point average of 2.000 (C) or above in all University of Colorado work. Grades earned at another institution are not used in calculating the grade point average at the University of Colorado (this includes courses taken at Metropolitan State College on the Denver campus). However, grades earned in another school or college within the University of Colorado system are used in determining a student's scholastic standing and progress toward the degree in the College of Arts and Sciences.

Probation

Students whose cumulative grade point average falls below 2.000 are placed on probation. Those students who enroll in any term in the calendar year, excluding summers, after being placed on probation are expected to raise their grade point to a 2.000 or above overall by the end of that term. Neither CU-Boulder's summer session (including Maymester) nor enrollment through Boulder evening courses counts as a probationary semester. Students are not dismissed at the end of the summer term.

Students placed on academic probation who elect to remain out of school for a full calendar year can return to the university with a two-semester window to achieve the required cumulative GPA of 2.000 or above. Students on probation who return after a hiatus of one year are placed on a second probation at the end of the semester in which they return if their cumulative grade-point average remains below 2.000 and are dismissed from the university if they do not achieve a minimum 2.000 cumulative grade-point average by the end of the semester following the imposition of the second probation.

Scholastic Dismissal

Students who still have a cumulative average below 2.000 after their semester of probation will be dismissed and will not be able to register for University of Colorado daytime courses on any campus during any academic year, August to May. Students dismissed from the college are eligible for readmission when they have achieved a cumulative 2.000 average by virtue of work done during the University of Colorado's summer term (any of the three campuses) and/or through the Division of Continuing Education and Professional Studies (Boulder evening or correspondence courses). Students who choose to enroll

in continuing education courses to restore their good standing must maintain a 2.500 GPA or above in each term in continuing education or be dismissed from both day classes and continuing education classes. They also may return as transfer students when they have overcome their deficiencies by enrolling at another institution (i.e., by achieving an overall 2.000 average in the University of Colorado work plus all work taken elsewhere since dismissal). These transfer grades are used only for the purpose of readmission and do not remain in the University of Colorado cumulative grade-point average. Dismissed students pursuing this latter option have two semesters after readmission to bring their University of Colorado grade point average up to 2.000 or they are dismissed again.

Academic Ethics

A university's intellectual reputation depends on the maintenance of the highest standards of intellectual honesty. Commitment to those standards is a responsibility of every student and faculty member at the University of Colorado. Cheating; plagiarism; illegal possession and distribution of examinations or answers to specific questions; alterations, forgery, or falsification of official records; presenting someone else's work as one's own; or performing work or taking an examination for another student are examples of acts that may lead to suspension or expulsion. Reported acts of academic dishonesty must be referred to the Honor Council. The policies and procedures governing acts of academic dishonesty can be found on the Web at www.colorado.edu/academics/honorcode.

Appeals and Petitions

The College of Arts and Sciences does not waive degree requirements or excuse students from completing degree requirements. Petitions for exceptions to the academic policies stated here may be submitted to the Appeals Committee on Academic Rules and Policies. Such petitions will be considered only if they meet all three of the following conditions:

1. The student must document that she/he has made every effort to fulfill the policy or requirement as defined and must demonstrate that no other options exist for fulfilling the requirement as defined in this catalog.
2. The student must document that she/he is prevented from fulfilling the policy or meeting the requirement as defined here for compelling reasons beyond the student's control.
3. The student must demonstrate to the satisfaction of the faculty committee that she/he has fulfilled or will fulfill the intent of the policy or the requirement through an appropriate alternative.

Students who believe that their circumstances meet the conditions to submit a petition must first consult with their academic advisor. If the advisor offers options for meeting the requirement or policy as defined here, the student must pursue those options and should not submit a petition.

The Appeals Committee on Academic Rules and Policies is located in the Academic Advising Center.

General Credit and Enrollment Policies

Students are required to follow the graduation requirements listed in the catalog at the time of their initial entry onto the Boulder campus.

Attendance

Successful work in the College of Arts and Sciences is dependent upon regular attendance in all classes. Students who are unavoidably absent should make arrangements with instructors to make up the work missed. Failure to attend regularly may result in receipt of an *F* in a course. Students who, for illness or other legitimate reason, miss a final examination must notify the instructor or the Academic Advising Center no later than the end of the day on which the examination is given. Failure to do so may result in receipt of an *F* in the course.

Credit Policies

Advanced Placement Program

See Undergraduate Admission in the General Information section.

International Baccalaureate

Any student admitted to a University of Colorado campus after June 30, 2003, who has graduated from high school having successfully completed an International Baccalaureate (IB) diploma, program will be granted 24 semester hours of college credit. No tuition will be charged for these credits. These credits will be granted, however, only if the student receives a score of 4 or better on an examination administered as part of the IB diploma program.

In addition, college credit is granted for International Baccalaureate examinations at the higher level with a score of 4 or better. For specific equivalencies, contact the Office of Admissions at 303-492-2458 or visit www.ibo.org.

College-Level Examination Program (CLEP)

The College of Arts and Sciences accepts a limited number of hours of CLEP credit from subject (not general) examinations toward its bachelor's degree programs (see Undergraduate Admission for subjects accepted). In addition, certain CLEP examinations may be used to meet the minimum academic preparation standards (MAPS) for admission to the university. No more than 30 total credit hours of CLEP will apply, nor may CLEP credit be used in the final 30 credit hours presented for a degree.

CLEP tests are administered through Career Services, 303-492-5854.

Cooperative Education/Internships

Students in the College of Arts and Sciences may receive up to 9 credit hours for a department-sponsored cooperative education program or internship. A maximum of 6 of the 9 internship credits can be taken in the same department. Each internship project must be approved by the chair or associate chair of the department awarding the credit before the student enrolls in the course in order for the student to receive credit. Students are encouraged to contact their major department office or Career Services for information regarding the possibility of enrolling in a cooperative education program in their major. Many internships are graded on a *pass/fail* basis only. Participation in an internship with mandatory *pass/fail* grading does not affect the total credit hours of *pass/fail* a student may apply toward a degree. Some departments further restrict the use of internship credit toward meeting major requirements.

For further information on internship credit, visit www.colorado.edu/artssciences/aacforstudents/internapp.htm.

Credit/No Credit

Credit/no credit changes must occur during the schedule adjustment periods.

Credit Taken as a Nondegree Student

Once a student has been admitted to a degree program, credits from the Division of Continuing Education such as ACCESS, Boulder evening credit courses, and CU-Boulder correspondence classes may be eligible to be applied toward the degree. Students will receive initial advising during orientation once they have been accepted to a degree program in the College of Arts and Sciences.

Credit Taken Outside the College of Arts and Sciences

Students may apply a total of 30 credit hours from the other colleges and schools at CU-Boulder as well as specified ROTC and President's Leadership Class courses toward the fulfillment of requirements for the BA and BFA degrees. Within these 30 total hours, up to 8 credit hours in activities courses (applied music and ensembles) may be used. Transferred courses that were taught by departments considered to be outside the College of Arts and Sciences are counted as part of the allowed 30 hours. If a course has been approved to meet a core curriculum requirement and the course is taught outside the College of Arts and Sciences, the credit for this course will not be included as part of the 30 semester hour limitation.

Cross-Listed Courses

Courses that are cross-listed in two or more departments are credited in the department in which the student has the most semester hours, irrespective of the department in which the student formally enrolled for the course.

Foreign Language Courses

Students must receive a grade of C or better to enroll in the next level of a language sequence in Arabic, Chinese, Farsi, Hindi, Indonesian, Japanese, and Korean. Students must receive a grade of C- or better to enroll in the next level of a language sequence in American Sign Language, French, German, Greek, Hebrew, Italian, Latin, Norwegian, Polish, Portuguese, Russian, Spanish, and Swedish. Students will not receive credit for a lower level course after credit has been given for a higher level course in the same sequence. For example, students who have passed a 2000-level class will not receive credit for a 1000-level class in the same sequence. This rule applies to the following languages: American Sign Language, Arabic, Chinese, Farsi, French, German, Greek, Hebrew, Hindi, Indonesian, Italian, Japanese, Korean, Latin, Norwegian, Polish, Portuguese, Russian, Spanish, and Swedish. Consult each department for specific restrictions, requirements, and prerequisites.

Some classes offered by foreign language departments are taught in English and require no knowledge of foreign language. Read specific course descriptions and check with the departments.

Incomplete Grades

An *I* grade is given at the discretion of the course instructor only when a student has satisfactorily completed a substantial portion of a course and, for reasons beyond the student's control, is prevented from completing all work for the course within the term. Incomplete grades must be requested by the student and should not be awarded by the instructor for non-attendance. (In the case of non-attendance, the instructor should award the student the grade(s) earned.) If an incomplete grade is given, the instructor is required to document the reasons/grounds for the awarding of the incomplete grade, the specific work and conditions for completion of the course, and the time frame within

which the course work must be completed. The maximum time the instructor can allow for the completion of the course work and subsequent award of a course grade is one year from the end of the term the course was taken. After one year, if no final grade is awarded, the *I* will change to the grade of *F*. A copy of the Incomplete Agreement (forms are available from the dean's office) signed by the student and instructor and accompanied by documentation of the extenuating circumstances that resulted in the awarding of an incomplete should be filed with the Assistant Dean's Office and with the instructor's department office, and a copy should be given to the student.

Independent Learning

A maximum of 30 credit hours of correspondence/online learning work may count toward the degree. Arts and sciences courses offered by the CU-Boulder Division of Continuing Education carry resident credit.

Independent Study

With departmental approval, students may register for independent study during the normal registration periods for each semester. Students may not register for more than 6 credit hours of independent study credit during any term. No more than 8 credit hours of independent study taken in a single department or program can be applied toward the total hours needed for graduation. A maximum of 16 hours of independent study may count toward the degree. The minimum expectation for each semester hour of credit is 25 hours of work.

A student may not use independent study projects to fulfill the college's general education requirements. Some departments further restrict the use of independent study hours toward meeting major requirements.

Required Hours Outside the Major

To complete the BA degree, students are required to complete a minimum of 75 credit hours outside their major department. Exceptions are:

- Students who complete designated departmental honors courses in their major and/or in honors thesis credit can reduce the 75 credit hours required outside the major department by a corresponding number of credits, up to a maximum of 6.
- Students completing the bachelor of fine arts degree must complete a minimum of 53 credit hours outside of their major department.

Pass/Fail

Students in the College of Arts and Sciences may not use the *pass/fail* option for courses taken to fulfill general education (core) requirements, courses used to satisfy the foreign language requirement, courses used to fulfill the Minimum Academic Preparation Standards (MAPS), courses used to complete minor requirements, or courses used to complete the minimum requirements for the major. A grade of *F* when earned in a course taken *pass/fail* will calculate into the GPA as a failing grade.

Students may take elective courses *pass/fail*, to a maximum of 6 credit hours. Courses offered only on a mandatory *pass/fail* basis are excluded from the maximum allowed. **The *pass/fail* option may be used only for elective credit.**

Repetition of Courses

If a student takes a course for credit more than once, all grades are calculated into the grade point average. However, the course is only counted toward graduation once, unless a course description specifically states that it can be taken more than once for credit.

ROTC Credit

The ROTC courses listed below have been certified as acceptable college-level course work by the faculty of the College of Arts and Sciences or by other colleges and schools on the Boulder campus. These courses are counted as elective credit toward the degree, subject to the 30-semester-hour limitation on course work taken outside the college for students in the BA and BFA programs. Courses not included on this list do not count toward any degree requirements. Transfer ROTC course work must be evaluated as equivalent to course work on this list to count toward degree requirements.

AIRR 3010 and 3020
 AIRR 4010 and 4020
 MILR 1011 and 1021
 MILR 2031 and 2041 (students may not receive credit for either course if they have credit in OPMG 3000)
 MILR 4072 and 4082
 NAVR 2020
 NAVR 3030
 NAVR 3040
 NAVR 3101
 NAVR 4010 and 4020
 NAVR 4030
 NAVR 4101

Transfer Credit

Work from another accredited institution of higher education that has been completed with a grade of C- (1.70) or better may be transferred to the University of Colorado. Categories of transfer course work not accepted by the university are outlined in the Transfer Course Work Not Accepted by the University section under General Information.

All courses transferred from junior and community colleges carry lower-division credit. Courses transferred from four-year institutions carry credits at the level at which they were taught at the previous institution.

Statewide Guaranteed Transfer of General Education Courses

Beginning in fall 2003, the two-year and four-year transfer articulation agreements among Colorado institutions of higher education were replaced by a statewide guaranteed transfer of approved general education courses taken at any Colorado public institution of higher education. Under the statewide guaranteed transfer program, up to 31–33 credits of successfully (C- or better) completed course work will automatically transfer and apply towards graduation requirements at the receiving institution. The course work must be drawn from the list of approved guaranteed transfer courses and must meet the distribution requirements of the guaranteed transfer program. Further information about the statewide transfer program, including the list of approved courses and distribution requirements, can be found at the website of the Colorado Department of Higher Education, higher.ed.colorado.gov/Academics/Transfers/gtPathways/default.html.

Students who began their collegiate course work in fall 2003 or later at any Colorado public institution of higher education

are subject to the statewide guaranteed transfer of approved general education courses. Students who began their collegiate course work prior to fall 2003 have the option of following the two-year and four-year articulation agreements in effect at the time of the student's initial matriculation at a Colorado public institution of higher education or following the conditions of the statewide guaranteed transfer program. Students who began their collegiate course work prior to fall 2003 must complete all lower-division core requirements by summer 2005 in order to remain eligible for the two-year and four-year core completion agreement.

Beginning in fall 2006, a student who graduates with an associate of arts or an associate of science degree from a Colorado community college and enters the College of Arts and Sciences will be exempt from the written communication requirement and the lower-division component of the core curriculum. Please note that students are still subject to the MAPS requirement.

Additional information on the evaluation of transfer credit of Colorado community college course work and its application in select arts and sciences major programs can also be found at www.colorado.edu/artssciences/prospective/transfer.html.

Withdrawal

See the General Information section for specific withdrawal procedures and universitywide policies.

Students in the College of Arts and Sciences who withdraw two semesters in a row will have a dean's stop placed on their registration. Summer session is not counted as a regular semester. They will not be permitted to return to CU-Boulder before one full academic year has elapsed (not including their semester of withdrawal). Arts and sciences students may withdraw from all classes for a term until the last day that classes are taught by requesting withdrawal in the Office of the Registrar. Students cannot withdraw after classes have ended for a term.

These policies also apply to arts and sciences students who are enrolled in continuing education courses.

Readmission

Arts and sciences students who request readmission to the college are always readmitted to their major of record at the time they last attended the university. Readmitted students who desire to pursue a major different from their major of record must follow the college's process for declaring a new major (explained on the Academic Advising Center website, www.colorado.edu/artssciences/aacforstudents) after they have been readmitted.

Undergraduate Degree Requirements

Students are subject to the general degree requirements in effect at the time they first enter the Boulder campus of the University of Colorado and are subject to the major requirements in force at the time they declare the major. Arts and sciences students have 10 years to complete the requirements for a declared major. If the 10-year limit is exceeded, the student may be required to satisfy current major requirements. Students pursuing a major degree program identified for discontinuation by decision of the Board of Regents and the Colorado Commission on Higher Education have four years from the formal announcement of discontinuation to complete the degree program and graduate. The requirements, rules, and policies stated here apply to all students first entering the Boulder campus during the 2008–09 academic year.

Students must complete a degree within 10 years. If it has been more than 10 years since matriculation into the College of Arts and Sciences and no degree has been completed, students may be subject to new curricula in place at the time of reenrollment. Please see the Minimum Major Requirements section for additional information on major requirements. Students may contact the Academic Advising Center for further assistance.

Academic Advising and Orientation

Students in the college are expected to assume responsibility for planning their academic program in conjunction with their academic advisor in accordance with college rules and policies and with departmental major requirements. Any questions concerning these provisions are to be directed to the student's academic advisor or to the Academic Advising Center.

The college cannot assume responsibility for problems resulting from students failing to follow the policies stated in the catalog or from incorrect advice given by someone other than an appropriate staff member of the college.

All new students are required to attend a special orientation, advising, and registration program on campus before enrolling.

Advising

Academic advising is an integral part of undergraduate education. The goal of all academic advising is to help students make responsible decisions as they develop educational plans compatible with their potential and with their career and life goals. Advising is more than the sharing of information about academic courses and programs; it includes encouraging students to formulate important questions about the nature and direction of their education and working with them to find answers to those questions. Advisors confer with students about alternative course schedules and other educational experiences, but students themselves are responsible for selecting the content of their academic program and making progress toward an academic degree.

As students progress through their academic program, their questions and concerns change. CU-Boulder offers a system of faculty and professional academic advisors to address these ongoing and multifaceted concerns.

Students are ultimately responsible for choosing appropriate courses, for registering accurately, and for meeting all degree requirements. Academic advisors assist students in clarifying their interests, values, and goals and help students relate these to academic programs and educational opportunities. As students work with their advisors, the advisors help students develop a coherent and balanced program of study that fulfills graduation requirements and assist students in identifying and integrating into their programs educational experiences outside the classroom that enhance their personal, intellectual, and professional development. Academic advisors also assist students in understanding academic policies, requirements, procedures, and deadlines.

Through the Open Option program, the Academic Advising Center provides comprehensive advising services to students who are undecided about their major or who are thinking of changing their major to another CU-Boulder college or school. Open option majors are assigned primary advisors in the advising center who are familiar with the courses and degree requirements for all majors offered at CU-Boulder and who assist students in exploring the degree programs related to the students' interests. While students are exploring majors, open option advisors assist students in designing programs of study that meet graduation requirements while providing them with the academic flexibility to pursue whichever degree program they ultimately choose.

The advising center also provides preprofessional advising for all students who are preparing to pursue the study of law, medicine, or other professional health fields.

Students should refer to college, school, and departmental advising materials for specific details on their advising programs.

Responsibilities of Students and Advisors

Within the advising system on the Boulder campus, both students and advisors have responsibilities.

Students are responsible for:

- knowing the requirements of their particular academic program, selecting courses that meet those requirements in an appropriate time frame, registering accurately, and monitoring their progress toward graduation;
- consulting with their academic advisor several times every term;
- scheduling and keeping academic advising appointments in a timely manner throughout their academic career, so as to avoid seeking advising only during busy registration periods; and
- being prepared for advising sessions (for example, by bringing in a list of questions or concerns, having a tentative schedule in mind, and/or being prepared to discuss interests and goals with their advisor);
- knowing and adhering to published academic deadlines;
- monitoring their position on registration waitlists;
- reading their CU e-mail on a weekly basis.

Advisors are responsible for:

- helping students clarify their values, goals, and abilities;
- helping students understand the nature and purpose of a college education;
- providing accurate information about educational options, requirements, policies, and procedures;
- helping students plan educational programs consistent with the requirements of their degree program and with their goals, interests, and abilities;
- assisting students in the continual monitoring and evaluation of their educational progress; and
- helping students locate and integrate the many resources of the university to meet their unique educational needs and aspirations.

Four-Year Graduation

The College of Arts and Sciences has adopted a set of guidelines to define the conditions under which a student should expect to graduate in four years. More information is available through the Academic Advising Center and major program and departmental offices.

The University of Colorado Boulder guarantees that if the scheduling of essential courses is found to have prevented a student in the College of Arts and Sciences from completing all course work necessary for a BA or BFA degree from the university by the end of the student's eighth consecutive fall and spring semester, the college will provide tuition plus any course fees for all courses required for completion of the degree requirements. Students must satisfy all the conditions described below to be eligible for this guarantee.

This guarantee extends to all students who enrolled the summer of 1994 or after into the College of Arts and Sciences as

first-semester freshmen without MAPS deficiencies and who satisfy all the requirements described below. This guarantee cannot be extended to include completion of a second major, a double degree, a minor, a teaching certificate, or other certificate program. Some CU-Boulder study abroad programs may not provide a sufficient range of courses to allow students to meet the requirements and thus students who participate in study abroad are not included in this guarantee.

Four-Year Guarantee Requirements

1. Students should enroll in University of Colorado Boulder course work for eight consecutive fall and spring semesters.
2. No fewer than 60 credit hours of applicable course work should be completed with passing grades by the end of the second year (24 calendar months), 90 hours by the end of the third year (36 calendar months), and 120 hours by the end of the fourth year. Students should enroll in and pass an average of 15 credit hours each semester.
3. A minimum of 30 credit hours of college core-curriculum courses should be completed by the end of the second year, including college core-curriculum courses that also meet major requirements. All remaining college core-curriculum requirements must be fulfilled by the end of the eighth semester.
4. Students should complete 45 upper-division hours by the end of the eighth semester of study.
5. A GPA of at least 2.000 must be earned each semester.
6. Grades of C- or better in all course work required for the major should be earned, and students should have a cumulative GPA of 2.000 in all major course work attempted.
7. A recommended plan of study must be started toward the major no later than the start of the second semester of study (see note below for exceptions) and thereafter students must make adequate progress toward completing the major (defined by each major). A statement of adequate progress is available from the major or departmental office at the time the major is declared.
8. The major must be declared no later than the start of the second semester of study (see note below for exceptions), and students must remain in that major until graduation.
9. Students should meet with their assigned primary advisor for the major each semester.
10. Students must register each semester within one week of the assigned registration time.
11. Students should avoid taking courses that are in conflict with the written advice of their assigned primary advisor.
12. Students should adhere to the General Credit and Enrollment Policies and Minimum Major Requirements listed in the Arts and Sciences section.
13. Courses in conflict with major or college core curriculum requirements should be avoided.
14. The college should be notified in writing of the student's intent to graduate no later than the beginning of the seventh semester of study, and a graduation packet should be filed no later than the deadline for the appropriate graduation date (see Graduation Deadlines section).
15. Documentation should be kept proving that these requirements were satisfied (e.g., records of advising meetings attended, advising records and instructions, etc.).

The recommended plan of study for the following majors must be started in the first semester of study to be eligible for this guarantee: BA in biochemistry; chemistry; ecology and evolutionary biology; Japanese; integrative physiology; molecular, cellular, and developmental biology; geology; physics; and all majors that require foreign language course work when student proficiency falls below the entry-level language course of that major. Students seeking a BFA in dance or theatre must start the recommended plan of study for the corresponding BA program in the first semester of study and qualify for admission into the BFA program by the end of the third semester. Students seeking a BFA in film studies or fine arts must start the recommended plan of study for the corresponding BA program in the first semester of study and qualify for admission into the BFA program by the end of the fourth semester. If a student changes majors, the primary major advisor, in consultation with the College of Arts and Sciences assistant dean's office, will review the courses taken to date to determine whether the college will continue to extend the four-year guarantee.

General Graduation Requirements

Arts and sciences students must fulfill the following requirements for graduation:

1. Pass a total of 120 hours.
2. Maintain a 2.000 (C) grade point average in all University of Colorado work and a 2.000 (C) in all major course work attempted. (Some majors may require a higher minimum grade point average.)
3. Pass 45 credit hours of upper-division work (courses numbered in the 3000s and 4000s).
4. Arts and sciences students must complete a minimum of 45 credit hours in University of Colorado courses on the Boulder campus. Of these 45 credits, a minimum of 30 credits must be in arts and sciences upper-division credit hours completed as a matriculated student in the College of Arts and Sciences at the University of Colorado Boulder and at least 12 of these upper-division hours must be in the major. A maximum of 6 credit hours taken at other University of Colorado campuses (UC Denver and CU-Colorado Springs) can be counted toward the minimum 45 credits required on the Boulder campus. Courses taken while on CU-Boulder study abroad programs, through CU-Boulder continuing education, or CU-Boulder correspondence courses are considered to be in residence.
5. For the bachelor of arts degree, students must complete a minimum of 75 hours outside their major department. Students who complete designated departmental honors courses in their major department and/or in honors thesis credit can reduce the 75 hours required outside the major department by a corresponding number of credits, up to a maximum of 6.
6. For the bachelor of fine arts degree, students must complete a minimum of 53 credit hours outside of their major.
7. Complete a major. Students are subject to the major requirements in force when they declare the major. See the sections Majors and Other Areas of Interest and Minimum Major Requirements in this section.
8. Complete the general education (college core curriculum) and MAPS requirements with the following limitations:
 - a. Although a single course may be listed in more than one core area, a student may use it to meet only one area requirement.

b. Neither independent study nor pass/fail courses may be used to meet MAPS deficiencies, core requirements, minor requirements, or the minimum major requirements.

c. A single course may be used to meet both MAPS and core requirements as long as the course is applicable to both requirements. For example, a student admitted with a MAPS deficiency in English composition may take WRTG 1150, First-Year Writing and Rhetoric, to satisfy both the MAPS requirement and the core curriculum lower-division written communication requirement.

This policy only applies to college level course work (CU or accepted transfer credit). If a student is exempt from a given core area, this does not exempt the student from fulfilling a MAPS deficiency in that area. A description of the College of Arts and Sciences MAPS requirements can be found in the General Information section.

Beginning in fall 2010, the Minimum Academic Preparation Standards for mathematics for the College of Arts and Sciences will be 4 units including 2 of algebra, 1 of geometry, and 1 of college preparatory math such as trigonometry, analytic geometry, or elementary functions. This will apply to students graduating from high school in spring 2010 and after.

If it has been more than 10 years since matriculation into the College of Arts and Sciences and no degree has been completed, students may be subject to new curricula in place at time of re-enrollment. See the Minimum Major Requirements section for additional information on major requirements. Students may contact the Academic Advising Center for further assistance.

Core Curriculum

The mainstay of the general education requirements is the College of Arts and Sciences core curriculum. The core curriculum requirements are divided into two parts: skills acquisition and content areas of study. The following sections provide descriptions of the individual requirement areas, their underlying educational philosophies and goals, and the list of approved courses. The updated list of approved core courses is located on the college's website at www.colorado.edu/artssciences/students/undergraduate/core.html.

Exemptions

Selected majors and the ecology and evolutionary biology minor are exempt from portions of the core curriculum, as core course work is considered equivalent to course work in the major. Students who graduate with more than one exempt major may apply their exemptions cumulatively.

Skills Acquisition

These requirements are designed to assure that each student has attained a minimum level of competency in each of the areas listed: foreign language, quantitative reasoning and mathematical skills, and written communication.

Although a single course may appear in several areas, students may use it to meet only one core requirement.

1. Foreign Language. All students are required to demonstrate, while in high school, third-level proficiency in a single modern or classical foreign language. Students who have not met this requirement at the time of matriculation will have a MAPS deficiency. They may make up the deficiency only by passing an appropriate third-semester college course or by passing a CU-Boulder approved proficiency examination. Students who take approved CU-Boulder course work to fulfill this requirement

must take the course for a letter grade and receive a passing grade of D- or higher.

Students who are under the core curriculum, but not subject to MAPS, must complete the foreign language requirement to meet degree requirements.

Questions about placement should be referred to the appropriate foreign language department.

The goal of the language requirement is to encourage students to confront the structure, formal and semantic, of another language, significant and difficult works in that language, and one or more aspects of the culture lived in that language. This enables students to understand their own language and culture better, analyze texts more clearly and effectively, and appreciate more vividly the dangers and limitations of using a translated document. The language requirement is a general education requirement and so concentrates on reading. In some languages other abilities may be emphasized as well. Understanding what it means to read a significant text in its original language is essential for general education according to the standards of this university.

CU-Boulder courses that satisfy this requirement include the following:

- *ARAB 2110-3 Second Year Arabic 1
- CHIN 2110-5 Intermediate Chinese 1
- *CLAS 2114-4 Intermediate Latin 1
- CLAS 3113-3 Intermediate Classical Greek 1
- *FREN 2110-3 Second-Year French Grammar Review and Reading 1
- FRSI 2010-4 Intermediate Farsi 1
- *GRMN 2010-4 Intermediate German 1
- GRMN 2030-5 Intensive Intermediate German
- *HEBR 2110 (3-4) Intermediate Hebrew I
- HIND 2010-5 Intermediate Hindi 1
- INDO 2010-4 Intermediate Indonesian 1
- *ITAL 2110-3 Intermediate Italian Reading, Grammar, and Composition 1
- JPNS 2110-5 Intermediate Japanese 1
- KREN 2110-5 Second-Year Intermediate Korean 1
- *NORW 2110-4 Second-Year Norwegian Reading and Conversation 1
- *PORT 2110-3 Second-Year Portuguese 1
- *RUSS 2010-4 Second-Year Russian 1
- SLHS 2325-4 American Sign Language 3
- *SPAN 2110-3 Second-Year Spanish 1
- *SPAN 2150-5 Intensive Second-Year Spanish
- *SWED 2110-4 Second-Year Swedish Reading and Conversation 1

**NOTE: This course is approved for the Colorado statewide guaranteed transfer program. Further information about the statewide guaranteed transfer program can be found at the website of the Colorado Commission on Higher Education, higher.ed.colorado.gov/Academics/Transfers/gtPathways/curriculum.html.*

2. Quantitative Reasoning and Mathematical Skills (QRMS) (3-6 semester hours). Liberally educated people should be able to think at a certain level of abstraction and to manipulate symbols. This requirement has two principal objectives. The first is to provide students with the analytical tools used in core curriculum courses and in their major areas of study. The second is to help students acquire the reasoning skills necessary to assess adequately the data which will confront them in their daily lives. Students completing this requirement should be able to: construct a logical argument based on the rules of inference; analyze, present, and interpret numerical data; estimate orders of magnitude as well as obtain exact results when appropriate; and apply mathematical methods to solve problems in their university work and in their daily lives.

Students can fulfill the requirement by passing one of the courses or sequences of courses listed below or by passing the CU-Boulder QRMS proficiency exam. Students who take approved CU-Boulder course work to fulfill this requirement must

take the course for a letter grade and receive a passing grade of D- or higher.

ECEN 1500-3. Sustainable Energy

ECON 1078-3 Mathematical Tools for Economists 1

*MATH 1012-3 Quantitative Reasoning and Mathematical Skills (same as QRMS 1010)

MATH 1110-3 and 1120-3 The Spirit and Uses of Mathematics 1 and 2

MATH 1130-3 Mathematics From the Visual Arts (same as QRMS 1130)

*MATH 1150-4 Precalculus Mathematics

*MATH 1410-3 Mathematics for Secondary Educators

*MATH 2380-3 Mathematics for the Environment (same as QRMS 2380)

PHYS 1010-3 Physics of Everyday Life 1

PHYS 1020-4 Physics of Everyday Life 2

PHYS 1220-3 Physics for Future Presidents

PSCI 2075-3 Quantitative Research Methods

PSCI 3105-3 Designing Social Inquiry

Any 3-credit math module: MATH 1011-3, MATH 1071-3, or MATH 1081-3.

Any 3 credits of mathematics courses numbered *MATH 1300 and above or applied mathematics courses numbered *APPM 1350 and above.

**NOTE: This course is approved for the Colorado statewide guaranteed transfer program. Further information about the statewide guaranteed transfer program can be found at the website of the Colorado Commission on Higher Education, higher.ed.colorado.gov/Academics/Transfers/gtPathways/curriculum.html.*

3. Written Communication (3 lower-division and 3 upper-division semester hours). Writing is a skill fundamental to all intellectual endeavors. While some college courses require more writing than others, good writing is recognized as a necessary means of communication in every scholarly discipline. The core curriculum promotes the principle that ideas do not exist apart from language, and thus content cannot be isolated from style. For ideas to flourish, they must be expressed clearly and gracefully, so that readers take pleasure while taking instruction. Students may meet the lower-division component of this requirement by first passing one of the approved lower-division courses or by receiving a score of 4 or 5 on the English Language and Composition Advanced Placement exam. Students may then complete the upper-division component of this requirement by passing one of the approved upper-division courses or by passing the written communication proficiency exam. Students who take approved CU-Boulder course work to fulfill this requirement must take the course for a letter grade and receive a passing grade of D- or higher.

Lower-division Courses

ARSC 1080-4 College Writing and Research

ARSC 1150-3 Writing in Arts and Sciences

ENGL 1001-3 Freshman Writing Seminar

IPHY 1950-3 Introduction to Scientific Writing in Integrative Physiology

*WRTG 1100-4 Extended First-Year Writing and Rhetoric

*WRTG 1150-3 First-Year Writing and Rhetoric

WRTG 1250-3 Advanced First-Year Writing and Rhetoric

**NOTE: This course is approved for the Colorado statewide guaranteed transfer program. Further information about the statewide guaranteed transfer program can be found at the website of the Colorado Commission on Higher Education, higher.ed.colorado.gov/Academics/Transfers/gtPathways/curriculum.html.*

Upper-division Courses

ARSC 3100-3 Multicultural Perspective and Academic Discourse

EBIO 3940-3 Argument in Scientific Writing

ENVS 3020-3 Advanced Writing in Environmental Studies

*HONR 3220-3 Advanced Honors Writing Workshop

IPHY 3700-3 Scientific Writing in Integrative Physiology

PHIL 3480-3 Critical Thinking and Writing in Philosophy

*PHYS 3050-3 Writing in Physics: Problem Solving and Rhetoric

RLST 3020-3 Advanced Writing in Religious Studies

WMST 3800-3 Advanced Writing in Feminist Studies

*WRTG 3007-3 Writing in the Visual Arts

WRTG/NRLN 3020-3 Topics in Writing

*WRTG 3030-3 Writing on Science and Society

*WRTG 3035-3 Technical Communication and Design

WRTG 3040-3 Writing on Business and Society

**NOTE: This course is approved for the Colorado statewide guaranteed transfer program. Further information about the statewide guaranteed transfer program can be found at the website of the Colorado Commission on Higher Education, higher.ed.colorado.gov/Academics/Transfers/gtPathways/curriculum.html.*

Content Areas of Study

4. Historical Context (3 semester hours). Courses that fulfill this requirement enable students to study historical problems or issues and to develop an understanding of earlier ideas, institutions, and cultures.

Courses explore the times and circumstances in which social, intellectual, artistic or other developments occurred. The purpose of this exploration is to analyze subjects in their context, that is, to investigate both the processes and the meanings of change. Among the educational aims of these courses are the following: to contribute to historical perspectives that may help to clarify issues that arise today or will arise tomorrow, to arouse the curiosity of students concerning historical conditions that may be relevant to subjects studied in other courses, and to expand the imagination by generating an awareness of the diverse ways in which our common humanity has expressed itself.

Students may choose to meet this 3-hour requirement by passing any course listed below. Students who take approved CU-Boulder course work to fulfill this requirement must take the course for a letter grade and receive a passing grade of D- or higher.

ANTH 1180-3 Maritime People: Fishers and Seafarers

ANTH 1190-3 Origins of Ancient Civilizations

ANTH/CLAS 2009-3 Modern Issues, Ancient Times

ARAB 3230-3 Islamic Culture and Iberian Peninsula

ARTH/CLAS 1509-4 Trash and Treasure, Temples and Tombs: Art and

Archaeology of the Ancient World

ARTH/CLAS 2019-3 Pompeii and the Cities of Vesuvius

ASIA 1000-3 Introduction to South and Southeast Asian Civilizations

*CEES /HIST 2002-3 Introduction to Central and East European Studies

CLAS 1030/*PHIL 1010-3 Introduction to Western Philosophy: Ancient

CLAS/*HIST 1051-3 The World of Ancient Greeks

CLAS/*HIST 1061-3 The Rise and Fall of Ancient Rome

*CLAS 1140-3 Bread and Circuses: Society and Culture in the Roman World

ECON 4514-3 Economic History of Europe

ENGL 3164-3 History and Literature of Georgian England

ENGL 4113-3 History and Culture of Medieval England

GRMN 2301-3 Inside Nazi Germany: Politics, Culture, and Everyday Life in the Third Reich

*HIST 1010-3 Western Civilization 1: Antiquity to the 16th Century

*HIST 1020-3 Western Civilization 2: 16th Century to the Present

*HIST 1038-3 Introduction to Latin American History

*HIST/JWST/GSLL 1108-3 Introduction to Jewish History

HIST 1113-3 Introduction to British History to 1660 (formerly HIST 2103)

HIST 1123-3 Introduction to British History since 1660 (formerly HIST 2123)

*HIST 1208-3 Sub-Saharan Africa to 1800

HIST 1308-3 Introduction to Middle Eastern History

*HIST 1408-3 Introduction to South Asian History

*HIST 1608-3 Introduction to Chinese History

*HIST 1708-3 Introduction to Japanese History

HIST 2100-3 Revolution in History

HIST 2112-3 Early Modern Societies (1450–1700)

HIST 2220-3 History of War and Society (formerly HIST 2222)

HIST 2629-3 China in World History

HONR 2251-3 Introduction to the Bible

HUMN 1010-6 Introduction to Humanities 1

HUMN 1020-6 Introduction to Humanities 2

JWST/RLST 3100-3 Judaism
 LIBB 1700-3 The History of Communication from Caves to Cyberspace
 *PHIL 1020-3 Introduction to Western Philosophy: Modern
 PHIL 3000-3 History of Ancient Philosophy
 PHIL 3010-3 History of Modern Philosophy
 PHIL 3410-3 History of Science: Ancients to Newton
 PHIL 3430-3 History of Science: Newton to Einstein
 RLST 3000-3 The Christian Tradition
 RUSS 2211-3 Introduction to Russian Culture
 RUSS 2221-3 Introduction to Modern Russian Culture
 *RUSS 2471-3 Women in Russian Culture: From Folklore to the 19th Century
 RUSS 3601-3 Russian Culture Past and Present
 RUSS 4301-3 American-Russian Cultural Relations
 SCAN 2202-3 The Vikings

**NOTE: This course is approved for the Colorado statewide guaranteed transfer program. Further information about the statewide guaranteed transfer program can be found at the website of the Colorado Commission on Higher Education, higher.ed.colorado.gov/Academics/Transfers/gtPathways/curriculum.html.*

5. Human Diversity (3 semester hours). Courses fulfilling this requirement increase the student's understanding of the world's diversity and pluralism through the study of two broad and interrelated areas: (1) the nature and meaning of diversity and the experience of marginalized groups; and (2) cultures other than those of Europe and the United States. This requirement explicitly identifies an awareness and understanding of pluralism as essential to a liberal education.

(1) Gender, Ethnic, and Social Diversity. Courses in this area are designed to expand the range of each student's understanding of the experience of individuals and groups who, because of such fundamental components of identity as race, ethnicity, gender, or other characteristics, have been historically marginalized by society and placed outside of the mainstream. Generally courses will explore the ways in which marginalization has occurred and the reasons for this marginalization. The intent is to expand understanding of these social groups with the goal of identifying the way social categories shape human thought and experience.

(2) Non-Western Cultures. These courses are designed to expand the range of the student's understanding of cultures that are not derived principally from the western experience. A comparative perspective introduces students to the commonality and diversity of cultural responses to universal human problems. Each course seeks to cultivate insight into and respect for diversity by requiring students to explore a cultural world quite different from their own.

Courses satisfying this requirement are intended to portray culture in the most integrated sense, including aspects of material adaptation, social pattern, ideas and values, and aesthetic achievement.

Students are required to pass 3 hours of course work from any course listed below. Students who take approved CU-Boulder course work to fulfill this requirement must take the course for a letter grade and receive a passing grade of *D-* or higher. Students who graduate with a major in ethnic studies are exempt from completing the human diversity requirement.

*ANTH 1100-3 Exploring a Non-Western Culture: The Tamils
 ANTH 1105-3 Exploring a Non-Western Culture: Tibet
 ANTH 1110-3 Exploring a Non-Western Culture: Japan
 ANTH 1115-3 The Caribbean in Post-Colonial Perspective
 ANTH 1120/ETHN 1123-3 Exploring a Non-Western Culture: Hopi and Navajo, Cultures in Conflict (formerly AIST 1125/ANTH 1120)
 ANTH 1135-3 Exploring a Non-Western Culture: TBA
 ANTH 1140-3 Exploring a Non-Western Culture: The Maya
 ANTH 1145-3 Exploring a Non-Western Culture: The Aztecs
 ANTH 1150-3 Exploring a Non-Western Culture: Regional Cultures of Africa

ANTH 1160-3 The Ancient Egyptian Civilization
 ANTH 1170-3 Exploring Culture and Gender through Film
 ANTH 4560/ETHN 4563-3 North American Indian Acculturation (formerly AIST 4565/ANTH 4560)
 ARSC 3001-3 Reconciliation and Diversity in the 21st Century: The South Africa Model
 ARTH 3209-3 Art, Culture, and Gender Diversity, 1400–1600: Renaissance Art Out of the Canon

 WMST 3670-3 Immigrant Women in the Global Economy

**NOTE: This course is approved for the Colorado statewide guaranteed transfer program. Further information about the statewide guaranteed transfer program can be found at the website of the Colorado Commission on Higher Education, higher.ed.colorado.gov/Academics/Transfers/gtPathways/curriculum.html.*

6. United States Context (3 semester hours). Courses fulfilling the United States Context requirement explore important aspects of culture and society in the United States. They stimulate critical thinking and an awareness of the place of the United States in the world by promoting an understanding of the world views that the environment, culture, history, and values of the United States have fostered. They are required to include some discussion of the realities and issues related to matters of ethnic and racial diversity that characterize the nation's ongoing experience. These courses familiarize students with the United States and enable them to evaluate it critically.

These courses teach an appreciation of United States culture while inviting students to ask probing questions about values and ideals that are understood to be an integral part of the United States. Some of the questions that might be addressed in these courses are: How have citizens and other residents of the United States derived a sense of identity from geography, language, politics, and the arts? How do people in the United States view and influence the world beyond the nation's borders? How have the rights and responsibilities of citizenship changed over time? How have U.S. citizens and residents in the United States dealt with opposing values? Completing this requirement, students will develop both a better understanding of the United States, present and past, and a considerable interest in the nation's future.

This 3-hour requirement may be fulfilled by passing any course listed below. Students who take approved CU-Boulder course work to fulfill this requirement must take the course for a letter grade and receive a passing grade of D- or higher.

ANTH 3170-3 America: An Anthropological Perspective
 ARTH 3509-3 American Art (formerly AMST 3509)

BAKR 1500-3 Colorado: History, Ecology, and Environment
 *CAMW 2001-3 The American West

 SOCY/WMST 3016-3 Marriage and the Family in U.S. Society
 SOCY 3151-3 Self in Modern Society

**NOTE: This course is approved for the Colorado statewide guaranteed transfer program. Further information about the statewide guaranteed transfer program can be found at the website of the Colorado Commission on Higher Education, higher.ed.colorado.gov/Academics/Transfers/gtPathways/curriculum.html.*

7. Literature and the Arts (6 semester hours, 3 of which must be upper division). These courses promote a better understanding of fundamental aesthetic and cultural issues. They sharpen critical and analytical abilities so that students may develop a deeper appreciation of works of art. The goal of this requirement is to enhance the student's ability to read critically, to understand the elements of art, and to grasp something of the complex relations between artist and public, and between art work and cultural matrix. The emphasis in courses which fulfill this requirement is on works that are generally recognized as central to and significant for one's cultural literacy and thereby enhance the student's understanding of our literary and artistic heritage.

Courses stress literary works as well as the history and criticism of literature and the arts. They may utilize creative projects as a means of arriving at a better understanding of the art form, but students may not use studio or performance classes to satisfy this requirement.

Students are required to pass 6 hours of course work in literature and the arts, of which at least 3 hours must be upper

division, unless either HUMN 1010 or 1020 is completed. Students who take approved CU-Boulder course work to fulfill this requirement must take the course for a letter grade and receive a passing grade of D- or higher.

If students graduate with a major dealing in depth with literature and the arts (Chinese, classics, dance, English, fine arts, French, Germanic studies, humanities, Italian, Japanese, Portuguese, Russian, Spanish, or theatre), they are exempt from this requirement.

Courses offered at CU-Boulder that satisfy this requirement include the following:

Lower-division Courses

- *ARTH 1300-3 History of World Art 1
- *ARTH 1400-3 History of World Art 2
- ARTH/CLAS 1509-4 Trash and Treasure, Temples and Tombs: Art and Archaeology of the Ancient World
- *ARTH 2409-3 Introduction to Asian Arts
- CHIN 1051-3 Masterpieces of Chinese Literature in Translation
- *CHIN 2441-3 Film and the Dynamics of Chinese Culture
- CLAS 1100-3 Greek Mythology
- CLAS 1110-3 Masterpieces of Greek Literature in Translation
- CLAS 1115-3 Honors: Masterpieces of Greek Literature in Translation
- *CLAS 1120-3 Masterpieces of Roman Literature in Translation
- COMR 1800-3 Visual Literacy: Images and Ideologies
- *DNCE 1027-3 Introduction to Dance and Culture (formerly DNCE 1029)
- ENGL 1500-3 Masterpieces of British Literature
- ENGL 1600-3 Masterpieces of American Literature
- FARR 2002-3 Literature of Lifewriting
- FREN 1200-3 Medieval Epic and Romance
- FREN 1610-3 How to Be French 1: The Ancien Regime
- FREN 1620-3 How to Be French 2: Modernity
- FREN 1900-3 Modern Paris in Literature, Photographs, Paintings, and Movies
- GRMN 1602-3 Metropolis and Modernity
- GRMN 2501-3 20th Century German Short Story
- *GRMN 2503-3 Fairy Tales of Germany
- *GRMN/HUMN 2601-3 Kafka and the Kafkaesque
- HEBR/JWST 2551-3 Secular Jewish Literature, Modern to Contemporary Jews Coming of Age
- HONR 2860-3 The Figure of Socrates
- HUMN 1010-6 Introduction to Humanities 1
- HUMN 1020-6 Introduction to Humanities 2
- HUMN 2100-3 Arts, Culture, and Media
- ITAL 1600-3 Strategies of Fear: Introduction to Italian Fantastic Literature
- JPNS 1051-3 Masterpieces of Japanese Literature in Translation
- MUEL 1832-3 Appreciation of Music
- MUEL 2852-3 Music in the Rock Era
- MUEL 2862-3 American Film Musical, 1926–1954
- *RUSS 2231-3 Fairy Tales of Russia
- SCAN 1202-3 Tolkien's Nordic Sources and *The Lord of the Rings*
- *SPAN 1000-3 Cultural Difference through Hispanic Literature
- *THTR 1009-3 Introduction to Theatre
- *THTR 1011-3 Development of Theatre 1: Classical Theatre and Drama
- WMST 2200-3 Women, Literature, and the Arts

*NOTE: This course is approved for the Colorado statewide guaranteed transfer program. Further information about the statewide guaranteed transfer program can be found at the website of the Colorado Commission on Higher Education, higher.ed.colorado.gov/Academics/Transfers/gtPathways/curriculum.html.

Upper-division Courses

- ARTH/CLAS 3039-3 Greek Art and Archaeology
- ARTH/CLAS 3049-3 Roman Art and Architecture
- ARTH 4329-3 Modern Art 1
- ARTH 4759-3 17th Century Art and the Concept of the Baroque
- CHIN/HUMN 3341-3 Literature and Popular Culture in Modern China
- CHIN 3351-3 Reality and Dream in Traditional Chinese Literature
- CLAS/HUMN 4110-3 Greek and Roman Epic
- CLAS/HUMN 4120-3 Greek and Roman Tragedy

- CLAS/HUMN 4130-3 Greek and Roman Comedy
- DNCE 4017-3 History and Philosophy of Dance
- DNCE 4037-3 Looking at Dance (formerly DNCE 3027)
- ENGL 3000-3 Shakespeare for Nonmajors
- ENGL 3060-3 Modern and Contemporary Literature
- FILM/RUSS 3211-3 History of Russian Cinema
- FILM 3402-3 European Film and Culture
- FILM/HUMN 3660-3 The Postmodern
- FILM/HUMN 4135-3 Art and Psychoanalysis
- FREN 3200-3 Introduction to Literary Theory and Advanced Critical Analysis
- FREN 4300-3 Theatre and Modernity in 17th Century France
- GRMN 3502-3 Literature in the Age of Goethe
- GRMN/HUMN 3702-3 Dada and Surrealist Literature
- GRMN/HUMN 3802-3 Politics and Culture in Berlin, 1900–1933
- GRMN/HUMN 4504-3 Goethe's *Faust*
- HEBR/JWST 4301-3 Venice: The Cradle of European Jewish Culture
- HUMN/ITAL 4140-3 The Age of Dante: Readings from *The Divine Comedy*
- HUMN/ITAL 4150-3 *The Decameron* and the Age of Realism
- HUMN/RUSS 4811-3 19th Century Russian Literature in Translation
- HUMN/RUSS 4821-3 20th Century Russian Literature and Art
- ITAL 4145-3 The Age of Dante in Italian
- ITAL 4147-3 Visualizing Dante's *Inferno*: A Global Seminar in Florence, Italy
- ITAL 4600-3 Once Upon a Time in Italy
- MUEL 3822-3 Words and Music
- MUEL 3832-3 Music in Literature
- RUSS 4831-3 Contemporary Russian Literature
- SCAN 3202-3 Old Norse Mythology
- SCAN 3203-3 19th and 20th Century Nordic Literature
- SCAN 3204-3 Medieval Icelandic Sagas
- SCAN 3205-3 Scandinavian Folk Narrative
- SCAN 3506-3 Scandinavian Drama
- THTR 3011-3 Development of American Musical Theatre

8. Natural Science (13 semester hours, including a two-course sequence and a laboratory or field experience). These courses study the nature of matter, life, and the universe. They enhance literacy and knowledge of one or more scientific disciplines, and enhance those reasoning and observing skills that are necessary to evaluate issues with scientific content. Courses are designed to demonstrate that science is not a static list of facts, but a dynamic process that leads to knowledge. This process is one of subtle interplay between observation, experimentation, and theory, enabling students to develop a critical view toward the conclusions and interpretations obtained through the scientific process.

Through a combination of lecture courses and laboratory or field experiences, students gain hands-on experience with scientific research. They develop observational skills of measurement and data interpretation and learn the relevance of these skills to the formation and testing of scientific hypotheses.

The goal of this requirement is to enable students to understand the current state of knowledge in at least one scientific discipline, with specific reference to important past discoveries and the directions of current development; to gain experience in scientific observation and measurement, in organizing and quantifying results, in drawing conclusions from data, and in understanding the uncertainties and limitations of the results; and to acquire sufficient general scientific vocabulary and methodology to find additional information about scientific issues, to evaluate it critically, and to make informed decisions.

The natural science requirement, which consists of passing 13 hours of approved natural science course work, includes one two-semester sequence of courses and at least 1 credit hour of an associated lab or field experience. No more than two lower-division courses may be taken from any single department (1-credit-hour lab/field experience courses are excepted). Students who take approved CU-Boulder course work to fulfill this

requirement must take the course for a letter grade and receive a passing grade of *D-* or higher.

Students who graduate with a major in the natural sciences (biochemistry, chemistry, ecology and evolutionary biology, geology, integrative physiology, molecular, cellular and developmental biology, or physics) or students who graduate with a minor in ecology and evolutionary biology are exempt from completing the natural science requirement.

Courses offered at CU-Boulder that satisfy this requirement include the following:

Two-semester Sequences

(Note: Although not recommended, the first semester of a sequence may be taken as a single course. Also, some sequences have included, corequisite, or optional laboratories.)

- *ANTH 2010-3 and *2020-3 Introduction to Physical Anthropology 1 and 2 (optional labs *ANTH 2030, *2040)
- ASTR 1000-3 and 1020-4 The Solar System and Introductory Astronomy 2 (ASTR 1000 formerly ASTR 1110)
- ASTR 1010-4 and 1020-3 Introductory Astronomy 1 and 2 (lab included in ASTR 1010)
- ASTR 1030-4 and 1040-4 Accelerated Introductory Astronomy 1 and 2 (lab included in ASTR 1030)
- *ATOC 1050-3 and 1060-3 Weather and the Atmosphere and Our Changing Environment: El Niño, Ozone, and Climate (optional lab ATOC 1070)
- *CHEM 1011-3 and 1031-4 Environmental Chemistry 1 and 2 (lab included in CHEM 1031)
- *CHEM 1113-4 and *1133-4 General Chemistry 1 and 2 (corequisite labs CHEM 1114 and 1134)
- CHEM 1251-5 and 1271-5 General Chemistry 1 and 2 for Chemistry and Biochemistry Majors (lab included)
- CHEM 1351-5 and 1371-5 Honors General Chemistry 1 and 2 (lab included) (formerly CHEM 1151 and 1171)
- EBIO 1030-3 and 1040-3 Biology: A Human Approach 1 and 2 (optional lab EBIO 1050)
- *EBIO 1210-3 and *1220-3 General Biology 1 and 2 (optional labs *EBIO 1230, *1240)
- *GEOG 1001-4 and *1011-4 Environmental Systems 1 and 2: Climate and Vegetation, Landscapes and Water (lab included)
- *GEOL 1010-3 and *1020-3 Introduction to Geology and Introduction to Earth History (optional lab *GEOL 1030)
- *GEOL 1010-3 and 1040-3 Introduction to Geology and Geology of Colorado (optional lab *GEOL 1030)
- *GEOL 1010-3 and 1060-3 Introduction to Geology and Global Change—An Earth Science Perspective (optional lab *GEOL 1030)
- MCDB 1111-4 and 2150-3 Biofundamentals: The Evolutionary, Molecular, and Cellular Basis of Life and Principles of Genetics (lab included in MCDB 1111)
- *MCDB 1150-3 and *2150-3 Introduction to Cell and Molecular Biology and Principles of Genetics (optional labs MCDB *1151, *2151)
- *PHYS 1010-3 and 1020-4 Physics of Everyday Life 1 and 2 (lab included in PHYS 1020)
- *PHYS 1110-4 and *1120-4 General Physics 1 and 2 (optional lab *PHYS 1140)
- *PHYS 2010-5 and *2020-5 General Physics 1 and 2 (lab included)

*NOTE: This course is approved for the Colorado statewide guaranteed transfer program. Further information about the statewide guaranteed transfer program can be found at the website of the Colorado Commission on Higher Education, higher.ed.colorado.gov/Academics/Transfers/gtPathways/curriculum.html.

Nonsequence Courses

- ANTH 3000-3 Primate Behavior
- ANTH 3010-3 The Human Animal
- ARSC/GEOL 2110-4 Physical Science of the Earth System (lab included)
- ASTR 1200-3 Stars and Galaxies (formerly ASTR 1120)
- ASTR 2000-3 Ancient Astronomies of the World
- ASTR 2010-3 Modern Cosmology: Origin and Structure of the Universe
- ASTR 2020-3 Introduction to Space Astronomy
- ASTR 2030-3 Black Holes

- ATOC/GEOL 3070-3 Introduction to Oceanography
- ATOC 3180-3 Aviation Meteorology
- ATOC 3300/GEOG 3301-3 Analysis of Climate and Weather Observations
- ATOC 3500/CHEM 3151-3 Air Chemistry and Pollution (formerly ATOC/CHEM 3500)
- ATOC/ENVS 3600/GEOG 3601-3 Principles of Climate
- ATOC 4750-3 Desert Meteorology and Climate
- *CHEM 1021-4 Introductory Chemistry (lab included)
- CHEN 1000-3 Creative Technology
- *CLAS 2020-3 Science in the Ancient World
- EBIO 3180-3 Global Ecology
- EBIO 3190-3 Tropical Marine Ecology
- ENVS 1000-4 Introduction to Environmental Studies
- ENVS/PHYS 3070-3 Energy and the Environment
- ENVS/GEOL 3520-3 Environmental Issues in Geosciences
- GEOG 3511-4 Introduction to Hydrology
- GEOG/GEOL 4241-4 Principles of Geomorphology (lab included)
- GEOL 2100-3 Environmental Geology
- GEOL 3040-3 Global Change: The Recent Geological Record
- GEOL 3500-3 Earth Resources and the Environment
- GEOL 3720-3 Evolution of Life: The Geological Record
- GEOL 3950-3 Natural Catastrophes and Geologic Hazards
- IPHY 2420-3 Nutrition for Health and Performance
- IPHY 3660-3 The Dynamics of Motor Learning
- IPHY 3730-3 Brain and Behavior
- *MCDB 1030-3 Plagues, People, and Microorganisms
- *MCDB 1041-3 Fundamentals of Human Genetics
- MCDB 3150-3 Biology of the Cancer Cell
- MCDB 3330-3 Evolution and Creationism
- PHIL 1400-3 Philosophy and the Sciences
- PHIL 3410-3 History of Science: Ancients to Newton
- PHIL 3430-3 History of Science: Newton to Einstein
- PHYS 1230-3 Light and Color for Non-Scientists
- *PHYS 1240-3 Sound and Music
- PHYS 1300-3 Experiment in Physics
- *PSYC 2012-3 Biological Psychology 1
- SLHS 2010-3 Science of Human Communication

One-credit-hour Lab/Field Courses

(NOTE: Each course below has a prerequisite or corequisite.)

- *ANTH 2030-1 Lab in Physical Anthropology 1
- *ANTH 2040-1 Lab in Physical Anthropology 2
- *ATOC 1070-1 Weather and the Atmosphere Laboratory
- CHEM 1114-1 Lab in General Chemistry 1
- CHEM 1134-1 Lab in General Chemistry 2
- EBIO 1050-1 Biology: A Human Approach Lab
- EBIO 1230-1 General Biology Lab 1
- EBIO 1240-1 General Biology Lab 2
- *GEOL 1030-1 Introduction to Geology Lab 1
- *MCDB 1151-1 Introduction to Cell and Molecular Biology Lab
- *MCDB 2151-1 Principles of Genetics Lab
- *PHYS 1140-1 Experimental Physics 1

*NOTE: This course is approved for the Colorado statewide guaranteed transfer program. Further information about the statewide guaranteed transfer program can be found at the website of the Colorado Commission on Higher Education, higher.ed.colorado.gov/Academics/Transfers/gtPathways/curriculum.html.

9. Contemporary Societies (3 semester hours). All individuals function within social frameworks. Courses in contemporary societies introduce students to the study of social groups, including social institutions and processes, the values and beliefs shared by their members, and the forces that mold and shape social groups. They prepare students to approach social phenomena of all kinds in an informed and critical way, and to describe, analyze, compare, and contrast them. Such study also provides students with new vantage points from which to view their own socio-cultural assumptions and traditions.

These courses, which treat contemporary societies, study an individual society or compare several societies. All explicitly

attempt to deepen the students' understanding of the cultural, political, economic, or social contexts that shape people's lives. Their scope may be global or specific, but all courses that fulfill this requirement address social processes, institutions, values, forces, and beliefs.

Students who graduate with a major in anthropology, economics, international affairs, political science, psychology, or sociology are exempt from the contemporary societies requirement. Students may satisfy this 3-hour requirement by passing any course listed below. Students who take approved CU-Boulder course work to fulfill this requirement must take the course for a letter grade and receive a passing grade of *D-* or higher.

ANTH 1200-3 Culture and Power

ANTH 4560/ETHN 4563-3 North American Indian Acculturation (formerly AIST 4565/ANTH 4560)

BAKR 1600-3 Creating a Sustainable Future

COMM 1210-3 Perspectives on Human Communication

ECON 1000-4 Introduction to Economics

ECON 2010-4 Principles of Microeconomics

ECON 2020-4 Principles of Macroeconomics

ECON 3403-3 International Economics and Policy

ECON 3535-3 Natural Resource Economics

ECON 3545-3 Environmental Economics

EDUC 3013 (3-4) School and Society

ETHN 1025-3 Introduction to Asian American Studies (formerly AAST 1015)

ETHN 2232-3 Contemporary African American Social Movements (formerly BLST 2200)

ETHN 2242-3 African American Social and Political Thought (formerly BLST 2210)

ETHN 3015-3 Asian Pacific American Communities (formerly AAST 3013)

*FARR/LDSP 2400-3 Understanding Privilege and Oppression in Contemporary Society

GEOG 3742-3 Place, Power, and Contemporary Culture

GRMN 1601-3 Germany Today

HIST 2126-3 Modern U.S. Politics and Diplomacy

HIST 2166-3 The Vietnam Wars

HUMN 4835-3 Literature and Social Violence

*IAFS 1000-4 Global Issues and International Affairs

INVS 3000 (3-4) Innovative Approaches to Contemporary Issues through Service Learning

INVS 3304-3 Human Rights: Promotion and Protection, an NGO Perspective

INVS 4302/PSCI 4732-3 Critical Thinking in Development

*ITAL 1500-3 "That's Amoré": Introduction to Italian Culture

ITAL 4290-3 Italian Culture through Cinema

LING 1000-3 Language in U.S. Society

*PRLC 1820-3 Community Issues in Leadership

*PSCI 1101-3 American Political System

*PSCI 2012-3 Introduction to Comparative Politics

*PSCI 2223-3 Introduction to International Relations

PSCI 3032-3 Latin American Political Systems

PSCI 3074-3 Dimensions of Citizenship in the U.S. and the EU

PSCI 3082-3 Political Systems of Sub-Saharan Africa

PSCI 3101-3 Black Politics (formerly PSCI 3101/ETHN 3012)

PSCI 3143-3 Problems in International Relations

PSCI 4002-3 Western European Politics

PSCI 4012-3 Global Development

PSCI 4062-3 Emerging Democracies of Central and East Europe

PSCI 4272-3 The Political Economy of Advanced Industrial Democracies

*PSYC 2606-3 Social Psychology

RLST 1850-3 Ritual and Media

RLST 2400-3 Religion and Contemporary Society

RUSS 2221-3 Introduction to Modern Russian Culture

RUSS 2501-3 Russia Today

RUSS 4831-3 Contemporary Russian Literature

SCAN 2201-3 Introduction to Modern Scandinavian Culture and Society

SCAN 3201-3 Contemporary Nordic Society and Culture

SLHS 1010-3 Disabilities in Contemporary American Society

*SOCY 1001-3 Introduction to Sociology

SOCY 4024-3 Juvenile Delinquency

*WMST 2600-3 Gender, Race, and Class in a Global Context

**NOTE: This course is approved for the Colorado statewide guaranteed transfer program. Further information about the statewide guaranteed transfer program can be found at the website of the Colorado Commission on Higher Education, higher.ed.colorado.gov/Academics/Transfers/gtPathways/curriculum.html.*

10. Ideals and Values (3 semester hours). Ideals and values have usually been determined by long-standing traditions and fixed social practices. In our modern world, the interaction of different cultures, movement from place to place, electronic media, and the rapidity of change, even within a given society, have combined to generate new constellations of ideals and hard choices among values.

Courses meeting the ideals and values requirement inquire into some specific sphere of human value (e.g. moral, religious, intellectual, aesthetic, environmental, etc.). In these courses students are encouraged to reflect upon fundamental ideals and values, their own and others, and the sources from which those value orientations derive. Such inquiry demands the development of the critical skills which help students identifying the assumptions and ramifications of value structures. It also requires consideration of approaches by which value systems are constructed, justified, and applied, especially in regard to the personal, societal, and in some cases cross-cultural contexts.

Students may complete this 3-hour requirement by passing any course listed below. Students who take approved CU-Boulder course work to fulfill this requirement must take the course for a letter grade and receive a passing grade of *D-* or higher.

ARSC/NRLN 2000-3 Constructions of Knowledge in the Academy and Beyond

CLAS/PHIL 2610-3 Paganism to Christianity

CWCV 2000-3 The Western Tradition

ENVS/PHIL 3140-3 Environmental Ethics

*ETHN 2703/RLST 2700-3 American Indian Religious Traditions (formerly AIST/RLST 2700)

FARR 2510/FILM 2613-3 Exploring Good and Evil Through Film (formerly FARR/FILM 2510)

FARR 2660/HONR 2250-3 The Ethics of Ambition

FARR 2820-3 The Future of Spaceship Earth

FREN 4860-3 War, Trauma, and Memory (formerly FREN 4000)

GRMN/HUMN 1701-3 Nature and Environment in German Literature and Thought

GRMN/JWST 2502-3 Representing the Holocaust

GRMN 2603-3 Moral Dilemmas in Philosophy and Literature (formerly GRMN 1603)

GRMN/HUMN 3505-3 The Enlightenment: Tolerance and Emancipation

GRMN/HUMN 4502-3 Nietzsche: Literature and Values

HUMN 3590-3 Modern Literature and the Bible: A Case Study in Intertextuality

HUMN 4155-3 Philosophy, Art, and the Sublime

*INVS 1000-4 Responding to Social and Environmental Problems through Service Learning

JWST/*RLST 2600-3 Judaism, Christianity, and Islam

LDSP 1000-3 The Foundations of 21st Century Leadership

LIBB 1500-3 The Dialogue of Art and Religion

LIBB 2013-3 Film and the Quest for Truth (formerly FILM 2013)

*PHIL 1000-3 Introduction to Philosophy

*PHIL 1100-3 Ethics

Majors and Other Areas of Interest

To be eligible for the four-year guarantee, a student must begin the program of study and declare the major by the start of the second semester or earlier for some select majors. For complete information, see the Four-Year Graduation Requirements in this section.

All arts and sciences students pursuing a bachelor's degree must enter a degree-granting major by the end of their sophomore year (i.e., the semester in which they will complete 60 semester hours of work, including transfer work).

Department academic advisors are responsible for advising their majors and also for certifying the completion of those students' programs for graduation. The college can assume no responsibility for difficulties arising out of a student's failure to establish and maintain contact with the major department or program advisor.

Minimum Major Requirements

The following minimum requirements are specified by the college. In many cases departmental requirements may be higher than the minimums listed here.

1. A minimum of 30 credit hours in the major area (for the BFA, a minimum of 50 hours).
2. Thirty semester hours in the major area, all with grades of C- (1.700) or higher (no *pass/fail* credits can be applied to the major).
3. Eighteen credit hours of upper-division courses in the major, all with grades of C- (1.700) or higher.
4. Twelve hours of upper-division course work in the major on the CU-Boulder campus.
5. A 2.000 (C) overall grade point average in all major work attempted.
6. Special requirements as stipulated by the major department.
7. No more than 8 credit hours of independent study.

Students are subject to those major requirements in effect at the time they formally declare the major. All College of Arts and Sciences students have 10 years to complete the requirements for a declared major. If this 10-year limit is exceeded, stu-

dents may be required to satisfy the current major requirements. Students with further questions should consult a major advisor.

Open Option

"Open option" (OPNO) is a major, but it is not a degree program. Open option offers a structured advising program that provides students with the necessary support and strategies to investigate and compare academic disciplines so they can make informed decisions about the degree programs they will pursue. Students can explore any major available in the college while completing course requirements toward a baccalaureate degree. To ensure that students graduate in a timely manner, open option majors are required to enter a specific degree program by the time they have completed 60 credit hours (approximately the end of the sophomore year). Students must declare and enter a degree-granting major by the start of the second semester (or earlier for certain majors) to maintain eligibility for the four-year guarantee.

Every open option student is assigned to a specific open option advisor with whom the student works until she or he declares and enters a degree-granting major.

Double Majors

Students pursuing either the BA or BFA degree may graduate with more than one major within the degree (e.g., economics and French) by completing all requirements for both majors. A minimum of 120 total credit hours is required for double majors.

Minors

A number of departments and programs in the College of Arts and Sciences offer minor programs. Participation in a minor program is optional for students pursuing a bachelor's degree. Course work applied to a minor also may be applied toward general education (core curriculum or college list) and major requirements. Students may not earn a major and a minor in the same program of study. All requirements for the minor must be completed by the time the BA or BFA is conferred.

Departments and programs with approved minor programs currently include applied mathematics; astrophysical and planetary sciences; atmospheric and oceanic sciences; chemistry and biochemistry; Chinese; classics; dance; ecology and evolutionary biology; economics; English—creative writing; ethnic studies; French; geography; geological sciences; Germanic studies; history; Italian; Japanese; linguistics; mathematics; Nordic studies; philosophy; physics; political science; religious studies; Russian studies; Spanish and Portuguese—Portuguese; theatre; and women's studies. Minors are also available in business offered by the Leeds School of Business and in computer science offered by the College of Engineering and Applied Science. Interested students can find further information at www.colorado.edu/arts_sciences/students/undergraduate/academics/minors.html.

Although the structure of specific minor programs may differ, all minors offered in the College of Arts of Sciences must have the following restrictions or minimum requirements:

1. A minimum of 18 credit hours must be taken in the minor area, including a minimum of 9 upper-division hours.
2. All course work applied to the minor must be completed with a grade of C- or better (no *pass/fail* work may be applied). The grade point average for all minor degree course work must be equal to 2.000 (C) or higher.
3. Students pursuing a major in distributed studies or an individually structured major are not eligible to earn a minor.

- Students are allowed to apply no more than 9 credit hours, including 6 upper-division credit hours, of transfer work toward a minor.
- Students may earn no more than two minors.
- Students must complete all requirements for a minor by the time they graduate.

Areas of Interest

The college sponsors programs—but not undergraduate majors—in the areas of interest below. Course work in these areas is open to all interested students. Contact the Office of the Dean for more information.

African American Studies
 American Indian Studies
 Asian American Studies
 Bibliography
 Chicano Studies
 Honors
 International and National Voluntary Service Training
 Museum

Certificate Programs

The college also sponsors undergraduate certificate programs in a number of fields of study. Completion of specified course work in the certificate programs below entitles students to a certificate issued by the dean of the college. Students interested in these programs should contact the director of the appropriate program.

Actuarial Studies and Quantitative Finance
 British and Irish Studies
 Central and Eastern European Studies
 Cognitive Sciences
 Foundations of Western Civilization
 International Media
 Jewish Studies
 Lesbian, Gay, Bisexual, and Transgender Studies
 Medieval and Early Modern Studies
 Neurosciences and Behavior
 Peace and Conflict Studies
 Western American Studies

Multiple Degrees

Double Degrees

Two different degrees (i.e., a BA and BFA from the College of Arts and Sciences, or two degrees from different schools or colleges) may be earned from CU-Boulder if the following conditions are fulfilled:

- The student meets the residency requirements of, and is enrolled in, both the College of Arts and Sciences and the college or school granting the second degree.
- The student presents a total of at least 145 credit hours passed. If the second college sets a higher number of minimum credits for a double degree, then the higher minimum must be met.
- For the BA and BFA degrees, 90 credit hours of arts and sciences course work are required (courses from outside arts and sciences that have been approved for the arts and sciences core curriculum will apply toward the 90 credit hours).
- The student has completed all general education and major requirements of the College of Arts and Sciences.
- Both degrees must be awarded at the same time.

Second Baccalaureate Degrees

A student who has been awarded a baccalaureate degree, either from this college or elsewhere, may be granted a second baccalaureate degree provided the following conditions have been fulfilled:

- All general requirements for the degree to be awarded by the College of Arts and Sciences have been met. (Students are subject to the general degree requirements in effect the semester they enter the second baccalaureate degree program.)
- The major in the BA or BFA is different from the major in the first degree earned.
- Arts and sciences students must complete a minimum of 45 credit hours in University of Colorado courses on the Boulder campus toward the second degree after admission to the second degree program. Of these 45 credits, a minimum of 30 credits must be in arts and sciences upper-division credit hours completed as a matriculated student in the second degree in the College of Arts and Sciences at the University of Colorado Boulder and at least 12 of these upper-division hours must be in the major. Courses taken as a nondegree student do not count in these minimum requirements.

Graduation Deadlines

Arts and sciences seniors must meet appropriate application deadlines in order to graduate. To apply for graduation, students must consult with their primary advisor and complete a graduation packet. Students must submit the complete graduation packet to the main office of the Academic Advising Center by one of the deadlines listed below.

Dates are subject to change. Students should verify current deadlines on the Academic Advising Center website (www.colorado.edu/artssciences/aacforstudents).

Students who intend to complete their degree in August and who want their names to appear in the May commencement program should request that their degree be conferred in August, but must submit their August graduation application by the deadline for May commencement.

Students who apply to graduate but who fail to fulfill all degree requirements by the deadline for that term/year must submit a written request to the college to change their graduation date to a future term/year in order for the college to confer the degree once all remaining requirements are completed. Directions for submitting a request to change graduation dates appear on the Academic Advising Center website (www.colorado.edu/artssciences/aacforstudents).

<i>Commencement</i>	<i>Date Due</i>
May	November 1
August	March 1
December	May 1

In order for arts and sciences students to be certified as having completed all degree requirements, all credits and grades (including transfer credits and Continuing Education credits and grades) must be posted to the student records system by the college deadline. The deadline varies from term to term. Visit the Academic Advising Center website for specific dates.

Graduate Study

Curricula leading to advanced degrees are offered by most of the departments in the College of Arts and Sciences. Students should consult the Graduate School section for admission and

degree requirements of the Graduate School. Curricula for graduate programs are listed alphabetically in this section.

For information about enrollment in graduate course work while still an undergraduate, see Seniors at the University of Colorado in the Graduate School section.

Actuarial Studies and Quantitative Finance Certificate Program

The Actuarial Studies and Quantitative Finance Certificate Program is an interdisciplinary program provided by the Departments of Mathematics, Applied Mathematics, and Economics; and the Leeds School of Business. The program trains students in two tracks. The Actuarial track prepares students for the actuarial profession while the Quantitative Finance track trains students for financial and economics analyst positions. The admission policies and contact information are given for each track.

The **Actuarial Studies Certificate Program** offered by the College of Arts and Sciences is designed to help students obtain the expertise in mathematics, economics, and finance necessary to become actuaries—the mathematical planners of the insurance and pension industries.

Students in the program can be of any major or college, or can be nondegree candidates. The entrance requirements are three semesters of calculus completed with grades of B+ or better. There are a number of courses in mathematics, economics, and business required to earn the certificate. The certificate is awarded by the dean of the College of Arts and Sciences.

Besides taking courses, students are encouraged to take the professional exams offered by the various actuarial societies. The entrance requirements can be waived for students who receive a score of eight out of 10 on the first actuarial examination.

Interested students should contact one of the co-directors, Kent Goodrich at 303-492-6687, Karl Gustafson at 303-492-7752, or Anne Dougherty at 303-492-4011, who will also provide advice on actuarial studies to students who are not in the program. For more information, see www.colorado.edu/asqf.

The **Quantitative Finance Certificate Program**, offered jointly by the College of Arts and Sciences and the Leeds School of Business, was initiated in the fall of 2004 and is designed to prepare students for financial and economics analyst positions that require outstanding quantitative skills. Often employers hire graduate students for such positions due to a shortage of undergraduates with the required combination of skills and training. This program is designed to meet this need.

The required curriculum is extensive and rigorous. Potential participants are encouraged to begin work early in their studies, preferably during the first year. Course work draws from the Departments of Mathematics, Applied Mathematics, and Economics; and the Leeds School of Business. Qualified students enrolled in any college are invited to participate. For admittance to the program, a student must earn a grade of B or better in each of Calculus I through III. However, students may be provisionally admitted after completion of Calculus I (MATH 1300 or APPM 1350) with a grade of B or better or through advanced placement. Participants may be given preference when enrolling in certain courses in the Leeds School of Business.

Interested students should contact Gerald Madigan, Leeds School of Business, at Madigan@colorado.edu. Additional information can be found at www.colorado.edu/asqf.

American Studies

See *Ethnic Studies*.

Anthropology

Degrees..... BA, MA, PhD

Anthropology is the study of people, both ancient and modern, in their cultural context. The field involves a global look at human cultures from prehistoric times to the present, integrating findings from the social sciences, natural sciences, and humanities. Students of anthropology learn to appreciate the variety of cultures throughout human history and to understand the meaning of human biological and cultural development as well as diversity.

The undergraduate degree in anthropology emphasizes knowledge and awareness of:

- basic methods, concepts, alternative theories and approaches, and modes of explanation appropriate to each of the three main subfields of the discipline (archaeology, biological anthropology, and cultural anthropology);
- basic archaeological techniques, including stratigraphy, dating, and inference of human behavior from archaeological data, as well as human history from its beginning through the emergence of complex societies;
- variation, patterning, and creativity in human communities and symbolic systems, including ecological, social structural, and cultural factors exemplified in a diverse array of the world's societies, including those undergoing change as a result of globalization and the impact of contemporary social and political movements; and
- theories of primate and human evolution and the basic data of the hominid fossil record, as well as biological variation in contemporary human populations.

In addition, students completing the degree in anthropology are expected to acquire the ability and skills to:

- identify trends or patterns in anthropological data from different cultures or periods, identify an appropriate context of explanation or interpretation, and formulate a testable explanation or reasonable interpretation, including the ability to identify data that constitute credible evidence for an explanation or interpretation; and
- identify and define a significant problem or topic in anthropology and analyze and interpret data in a systematic manner.

Bachelor's Degree Program

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below. (A minimum of 30 credit hours in anthropology, 18 of which must be upper division, is required for the degree.)

<i>Required Courses</i>	<i>Semester Hours</i>
ANTH 2010 Introduction to Physical Anthropology 1	3
ANTH 2100 Frontiers of Cultural Anthropology	3
ANTH 2200 Introduction to Archaeology	3
One upper-division topical course in cultural anthropology	3
One upper-division ethnographic area course in cultural anthropology	3
One upper-division course in archaeology	3
One upper-division course in physical anthropology	3
Electives in anthropology (6 credits must be at the upper-division level; students planning to pursue graduate work in anthropology are advised to take ANTH 4000 and ANTH 4530)	9

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for more information on eligibility. The concept of "adequate progress" as it is used here only refers to maintaining eligibility for the four-year

guarantee; it is not a requirement for the major. To maintain adequate progress in anthropology, students should meet the following requirements:

- Declare a major in anthropology by the beginning of the second semester.
- Complete ANTH 2010, 2100, and 2200 by the end of the fourth semester.
- Complete 12 credits of upper-division anthropology courses by the end of the sixth semester, including fulfilling at least two of the four upper-division requirements.
- Complete 6 additional anthropology credits by the end of the seventh semester, including the two remaining upper-division requirements.
- Complete one 3-credit anthropology course during the eighth semester.

Graduate Degree Programs

Prerequisites. To be considered for admission as a regular degree student, applicants should have a minimum undergraduate grade point average of 3.00 (4.00 = A) or a master of arts degree in anthropology. Graduate Record Examination scores for verbal and quantitative aptitude tests are required. Letters of recommendation and evidence of previous anthropologically oriented experience and work are carefully considered. Students with fewer than 18 credit hours of previous course work in anthropology are considered deficient and may be asked to present a greater number of hours for a degree.

Application. Inquiries concerning applications should be directed to the main departmental office. Completed applications are reviewed once each year and are due by January 15. Students with no previous graduate work should apply for entrance into the MA program which, if successfully completed, will prepare them for the PhD program. Students who have or will have completed an MA degree in anthropology by the time of their admission may apply for direct admission into the PhD program, but they may be required to complete specific remedial requirements in some cases.

Course Requirements. Students may have a primary specialization in any of the major subfields of anthropology: archaeology, cultural, or biological anthropology. The department expects graduate students to maintain a breadth of competence in general anthropology through the master's degree with specialization intensifying with progress toward the PhD degree.

All entering graduate students must have had the equivalent of ANTH 4000 or 5000 (Quantitative Methods in Anthropology) or take the course, or in the case of cultural anthropology students an appropriate "tool course," during their first year in residence.

As partial fulfillment towards a graduate degree, all students must complete the graduate proseminar that covers the three subdisciplines of anthropology (cultural, biological, and archaeology). The proseminar should be taken during the first semester in residence, if possible. In addition, students are required to take one graduate seminar focusing on one of the two subdisciplines outside of their primary specialization.

Other specific course requirements are established through a consultation with an academic advisor. MA students in archaeology and biological anthropology are normally expected to write a thesis (plan I). In consultation with their advisor, students in cultural anthropology have the option of writing a thesis or completing their MA degree by examination only (plan II).

Additional information about other specific areas of specialization and other requirements for the degree may be obtained by writing directly to the Department of Anthropology, and by referencing the Graduate School section. Information is also available at the departmental website (www.colorado.edu/anthropology).

Applied Mathematics

Degrees.....MS, PhD

The Department of Applied Mathematics in the College of Arts and Sciences offers courses and degree programs for undergraduate and graduate students. Course offerings at the undergraduate level focus on providing students with the mathematical tools and problem-solving strategies that are useful in science and engineering. The undergraduate bachelor of science degree is offered through the College of Engineering and Applied Science.

The department offers a range of courses and research opportunities in many areas, including computational mathematics, mathematical biology, nonlinear phenomena, physical applied mathematics, and probability and statistics. Each of these areas is described below.

Computational Mathematics

The study of computational mathematics has grown rapidly in recent years and has allowed mathematicians to answer questions and to develop insights not possible just a decade or two ago. Modern computational methods require in-depth knowledge of a variety of mathematical subjects including linear algebra, analysis, ordinary and partial differential equations, asymptotic analysis, elements of harmonic analysis, and nonlinear equations. Since computers are invaluable tools for an applied mathematician, students are expected to attain a highly professional level of computer literacy and to gain a substantial knowledge of operating systems and hardware. Computational mathematics courses include the study of computational linear algebra, optimization, numerical solution of ordinary and partial differential equations, solution of nonlinear equations, and advanced seminars in wavelet and multiresolution analysis and in multigrid methods, radial basis functions, and algorithm design and development, more generally.

Mathematical Biology

Recent advances in our ability to quantitatively study biological phenomena have provided a tremendous number of exciting opportunities for applied mathematicians. The careful modeling, analysis, and simulation of these systems using the standard and state-of-the-art tools of applied mathematics has led to novel and non-intuitive insights into biology. Furthermore, deeper understanding of the inherently complex and multiscale nature of biological systems, in many cases, requires the development of new mathematical tools, techniques, and methodologies (a challenge to which applied mathematics is particularly well suited). For students interested in pursuing research in mathematical biology, good preparatory classes would include differential equations, advanced calculus, numerical analysis, and probability and statistics, as well as supplemental courses in the appropriate biological, biomedical, or bioengineering fields. Research areas at CU encompass immunology, virology, bacteriology, population genetics, and cardiac nonlinear dynamics. Specifically, current topics of interest include model selection and control of in vivo HIV pathogenesis dynamics, modeling of intracellular calcium dynamics, the analysis of heart rhythm instabilities, the role of aggregation and fragmentation in bacteremia and bacterial pneumonia, inverse problems arising in the use of population genetics and bioinformatics to identify geographic features, and the analysis of patterns in biological sequences such as DNA and RNA.

Nonlinear Phenomena

In recent years, there has been an explosion of interest in the study of nonlinear waves and dynamical systems with analytical results, often motivated by the use of computers. The faculty in the Department of Applied Mathematics are actively and intensively involved in this growing field. Research areas include qualitative analysis and computational dynamics, conservative and dissipative systems, bifurcation theory, the onset and development of chaos, wavelets and multiresolution analysis, integrable systems, solitons, cellular automata, analytic dynamics, pattern formation and symmetry, synchronization, dynamics on networks, fluid dynamics, and transport and mixing. Department courses in this field include dynamical systems, nonlinear wave motion, and many advanced seminars. Suitable background courses are analysis, computation, and methods in applied mathematics. Valuable supplemental courses include mechanics and fluid dynamics.

Physical Applied Mathematics

Physical applied mathematics is a term that generally refers to the study of mathematical problems with direct physical application. This area of research is intrinsically interdisciplinary. In addition to mathematical analysis, it requires an in-depth understanding of the underlying applications area, and usually requires knowledge and experience in numerical computation. The department has approximately 40 affiliated faculty who can direct thesis research in areas such as atmospheric and fluid dynamics, theoretical physics, plasma physics, genetic structure, parallel computation, etc. The department's course requirements are designed to provide students with a foundation for their study (analysis and computation). The department also requires supplemental courses in one of the sciences or engineering fields necessary for thesis research in physical applied mathematics.

Probability and Statistics

Almost all natural phenomena in the technological, biological, physical, and social sciences have random components with complex levels of interactions, part stochastic, part deterministic. Applied probability is the application of probabilistic and analytic methods to model, understand, and predict the behavior of real-life problems that involve random elements. Statistics is the science of using data that typically arise from the randomness inherent in nature to gain new knowledge. Areas of current interest by applied math and their affiliated faculty include optimization of stochastic networks; the study of stochastic processes, and stochastic differential equations in hydrology and telecommunications; probabilistic models, nonparametric regression methods, shrinkage estimation, gene expression microarray data analysis, false discovery rate control, classification methods, and statistical tests based on these models, in genetics and RNA sequencing; and extreme value theory in estimation of maximal wind speeds. Appropriate course work includes analysis, stochastic processes, simulation techniques, mathematical statistics, as well as background courses in one of the sciences or engineering fields in which one intends to do research.

For details on the range of courses and research opportunities available through the Department of Applied Mathematics, visit amath.colorado.edu.

Bachelor's Degree Programs

A bachelor of science degree in applied mathematics is offered by the College of Engineering and Applied Science.

The undergraduate curriculum in applied mathematics trains students in the applications of mathematics in engineering and science. The use of computational methods and implementation of algorithms on computers is central. Technical electives may be selected from mathematics, engineering, physics, chemistry, computer science, biology, astrophysics, geology, economics, finance, and accounting.

In general, nontechnical electives should be broadening and have multicultural value. Students interested in research also are encouraged to take a foreign language as early as possible. French, German, or Russian are recommended.

Interested students should contact the applied mathematics office in the College of Arts and Sciences for information on specific major and degree requirements.

Minor Program

A minor is offered in applied mathematics. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information, see www.colorado.edu/artssciences/students/undergraduate/academics/minors.html.

A minor in applied mathematics indicates that a student has received in-depth training in mathematical techniques and computational methods well beyond the training usually received by science and engineering majors.

Concurrent BS/MS Degree Program

The concurrent BS/MS program in applied mathematics enables well-qualified and motivated students to experience graduate-level course work earlier in their education and to obtain an MS degree in a reduced time period. Applied math majors may apply for this program during their junior year. Minimum requirements for admission include completion of at least two APPM courses numbered 3000 or higher, an overall GPA of 3.400 or higher, an APPM and MATH GPA of 3.400 or higher, and two letters of recommendation from APPM faculty. Students interested in this program are encouraged to consult with an applied mathematics faculty advisor early in their undergraduate career.

Graduate Studies

Prerequisites for graduate study in applied mathematics include three semesters of calculus and a course in differential equations and linear algebra. Other strongly recommended courses are Methods in Applied Mathematics (APPM 4350 and 4360); Intermediate Numerical Analysis (APPM or MATH 4650 and 4660); either Matrix Methods (APPM 3310) or Linear Algebra (MATH 3130); and Analysis (APPM 4440). The overall grade point average for mathematics and applied mathematics must be *B* or better.

Students should carefully read the Requirements for Advanced Degrees in the Graduate School section. What follows is an abbreviated summary of specific requirements for the department. A precise description of the degree requirements is available from the *Applied Mathematics Supplement to the Catalog* available from the applied mathematics office or at amath.colorado.edu.

MS Degree

The department requires a candidate to complete an approved program of study consisting of at least 30 semester hours. At least 18 of these 30 hours must be in applied mathematics courses at the 5000 level or above (neither 4350/5350, 4360/5360, nor 4720/5720 generally count toward this requirement). All students must complete two yearlong sequences in applied mathematics. (Approved sequences are APPM 5440/5450, 5470/[5430, 5460, or 5480], 5520/[5540 or 5560], and 5600/5610.

Other sequences require faculty advisor approval.) If APPM 5600/5610 is not taken, then the numerics preliminary exam becomes compulsory. All students are required to take a year-long sequence in an area where mathematics has significant applications or from the math department (faculty advisor approval required).

The master's degree requirements may be fulfilled by following the requirements for either the thesis (Plan I) or the non-thesis (Plan II) option. Students who elect Plan II must have approval of the chair of the Graduate Committee.

Combined MS and MA Program with MCD Biology

This three-year interdisciplinary program offers two master's degrees: an MS in applied mathematics and an MA in MCD biology. The goal of the program is to produce well-trained applied mathematics students who are capable of making serious contributions leading to advancements in molecular biology. Such students will be well educated in computational sciences, statistics, probability, and molecular biology.

Students are expected to meet all requirements for admission to the graduate program in the Department of Applied Mathematics and to possess a basic science background suitable for pursuit of this dual degree. Students also are expected to meet minimum requirements for admission to the graduate program in MCD Biology. Adequate undergraduate preparation consists of successful completion of basic courses on cell and molecular biology. Any student deemed deficient in either area will be required to take Cell Biology (MCDB 3120) and Molecular Biology (MCDB 3500) after enrollment. Students will be required to apply to both programs, with APPM the primary one. Subject to joint recommendation and approval by APPM and MCDB, incoming students will be admitted to this dual degree program as a regular part of the applied mathematics recruitment process.

MS with Computational Science and Engineering Track

The purpose of this program is to meet the needs of students who want to learn the basic concepts and skills of Computational Science and Engineering, and then to continue toward a PhD in a discipline outside applied mathematics. A student who completes this program successfully will obtain a master's degree in applied mathematics, in the Computational Science and Engineering Track. The program is designed to provide interested students with a foundation in computational mathematics and, at the same time, to allow sufficient latitude for the student to become proficient in an outside discipline. Approximately half of the credits for the master's degree will be taken from a department other than applied mathematics.

A student in the Computational Science and Engineering Track will be enrolled simultaneously in two graduate programs, one in applied mathematics and one in the department from which the student wishes to receive a PhD. An interested student may apply for admission to this track either when applying for graduate study at CU, or at any time in the student's first two years of graduate study. First-year and second-year graduate students in any of the participating departments may apply for admission to this program.

PhD Degree

The Department of Applied Mathematics offers course work and research leading to the PhD degree in applied mathematics.

A minimum of 60 credit hours is required for the degree, including 30 hours in courses numbered 5000 or above (4350/5350,

4360/5360 and 4720/5720 generally do not count toward this requirement) and 30 hours of applied math dissertation credit. A grade of B- or higher must be attained in each course. No specific courses are mandatory (apart from two semesters of seminars—APPM 8000, 8100, 8300, and 8600), but the selection ought to include some of the department's core sequences, such as applied analysis (APPM 5440/5450) and numerical analysis (APPM 5600/5610). Other recommended sequences are methods (APPM 5470/[5430, 5460, or 5480]) and statistics (APPM 5520/[5540 or 5560]). Finally, each student must take a yearlong graduate sequence outside of applied mathematics in an area where mathematics has significant application. Faculty advisor approval of the sequence is required. Preliminary exams are offered in four areas: analysis, numerics, partial differential equations, and probability/statistics. Students must take the numerics and analysis exams, and either one of the other two.

Further information on the department and degree requirements is available from the supplement to the catalog in the applied mathematics office or in the Graduate School.

Art and Art History

Degrees..... BA, BFA, MA, MFA

The Department of Art and Art History offers the bachelor of arts in art history and in studio, and the bachelor of fine arts in studio arts.

The undergraduate degree in art history emphasizes knowledge and awareness of:

- the major artistic monuments of the world in a historical context;
- varied methodologies used to study art historically; and
- artistic media and techniques.

In addition, students completing the degree in art history are expected to acquire the ability and skills to:

- relate individual monuments to their historical and cultural context by identifying technique, style, and subject matter;
- interpret historical and critical information about works of art, artists, and related issues; and
- organize and communicate concepts and data pertaining to the history of art effectively in written and oral form.

The undergraduate degree in studio art emphasizes knowledge and awareness of:

- the significance of the major monuments in art history, with an emphasis on contemporary art;
- at least one discipline of studio art;
- related critical issues in studio practice; and
- a wide range of stylistic approaches.

In addition, students completing a degree in studio art are expected to acquire the ability and skills to:

- analyze their own works of art in terms of form and content;
- interpret the work of others;
- execute ideas in one or more artistic media;
- demonstrate artistic ability and technical proficiency in one chosen medium; and
- communicate in verbal and written form the particular conceptual and perceptual attitudes and stances of their own artistic production.

Bachelor's Degree Programs

The degree requirements for the BA in art history are currently under review. For the most current information go to www.colorado.edu/finearts/resources/baah.html. BA degrees in art history and in studio arts require 39 credits in the major and a minimum of 75 nonmajor credits. The BFA degree in studio arts requires 63 credits in the major. Regular contact with fine arts advisors is recommended.

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

Bachelor of Arts (Art History)

(39 credit hours in the major)

<i>Required Courses</i>	<i>Semester Hours</i>
ARTS 1010 and 1020 Introduction to Studio Art	6
ARTH 1300 and 1400 World Art 1 and 2	6
ARTH 4919 BA Art History Seminar	3
3000-level art history courses	9
4000-level art history courses	9
ARTS or ARTH electives	6
Distribution Requirements: Complete at least six hours at the 3000 or 4000 level in each of three areas: Ancient and/or African/American/Asian/Australian, Medieval and/or Early Modern (a.k.a. Renaissance and Baroque), and Modern and/or Contemporary. Students must take at least one course in African, American, Asian, or Australian art at the 3000 or 4000 level.	

Graduating in Four Years with a BA in Art History

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of "adequate progress" as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress toward a BA in art history, students should meet the following requirements:

Declare the major by the beginning of the second semester.

By the end of the third semester, complete lower-division studio courses, lower-division art history courses, and two classes in upper-division art history.

By the end of the sixth semester complete up to 32 credit hours in the major. Final semesters not to exceed 45 credits toward the major.

Bachelor of Arts (Studio Arts)

(39 credit hours in the major)

<i>Required Courses</i>	<i>Semester Hours</i>
ARTS 1010 and 1020 Introduction to Studio Art	6
ARTH 1300 and 1400 World Art 1 and 2	6
Two 2000-level courses in area of emphasis	6
Any two upper-division art history courses.	6
Upper-division studio emphasis (minimum)	12
ARTS or ARTH electives	3

Graduating in Four Years with a BA in Studio Arts

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of "adequate progress" as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress toward a BA in studio arts, students should meet the following requirements:

Declare major by the beginning of the second semester.

Complete ARTS 1010 and 1020 Introduction to Art, two level-1 studio classes, and lower-division art history courses by the end of the third semester.

Complete 30–36 credit hours in the major by the end of the sixth semester.

Final semesters not to exceed 45 credits in the major.

Bachelor of Fine Arts (Studio Arts)

(63 credits toward the major)

Students must present and pass a portfolio review to be eligible for the BFA degree (a minimum of 30 credit hours is required).

<i>Required Courses</i>	<i>Semester Hours</i>
ARTS 1010 and 1020 Introduction to Studio Art	6
ARTH 1300 and 1400 World Art 1 and 2	6
Any two 2000-level studio courses in area of emphasis	6
Any two upper-division art history courses.	6
Upper-division studio emphasis (min.)	18
ARTS or ARTH electives	18
ARTS 4117 BFA Seminar	3

NOTE: BA/BFA candidates must complete 12 upper-division hours in the major on the Boulder campus.

Required Studio Courses for Studio Arts Majors

Painting and drawing majors must take any sequence of courses culminating in ARTS 4002 Drawing 4 or ARTS 4202 Painting 4.

Ceramics majors must take ARTS 4085 Ceramics 4 and ARTS 4095 Special Topics in Ceramics.

Printmaking majors are not required to take ARTS 1003 and may register for ARTS 3403, ARTS 3413, and ARTS 3423 as sophomores.

Graduating in Four Years with a BFA in Studio Arts

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of "adequate progress" as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress toward a BFA in studio arts or divisional studio arts, students should meet the following requirements:

Declare the major by the beginning of the first semester, freshman year.

Complete ARTS 1010 and 1020, ARTH 1300 and 1400, 9 credit hours of lower-division studio, two 2000-level courses, and one lower-division or upper-division studio or art history course by the end of the third semester (27 credit hours).

Apply for the BFA in the fourth or fifth semester, with a minimum of 30 hours in the major.

Complete up to 48 credit hours in the major by the end of the sixth semester.

Final semesters not to exceed 66 credits toward the major.

Honors

Students may graduate with departmental honors. Those interested in pursuing this program should contact the Honors Department and/or the Department of Art and Art History honors representative as early as possible. The minimum GPA requirement is 3.300 overall and 3.500 in the major. Students may take Studio or Art History Honors Thesis to complete individual work.

Student Fees

Each course in the department has a course fee calculated at \$50 per course for lecture and seminar courses and \$50 per credit hour for studio courses.

Special Programs

The CU Art Museum. The CU Art Museum is a cultural gateway to the University of Colorado Boulder, facilitating engagement with larger societal issues through a greater understanding of the arts in a global context. The CU Art Museum is committed to enhancing understanding and appreciation of the visual arts within the academic community and among regional, national, and international audiences. It provides access to art of the highest quality through exhibitions, publications, and related educational events that reflect diversity, critical thinking, and creative research. The museum also facilitates student training in museum practices. As a collecting institution, the CU Art Museum

promotes the excellence, preservation, scholarly interpretation, exhibition, and growth of its comprehensive permanent collection, which includes artworks from numerous time periods, artistic traditions, and cultures. The new 25,000-square-foot CU Art Museum contains five galleries including permanent collection galleries, changing exhibition galleries, and a video gallery. The CU Art Museum also includes a collections study center, allowing students, faculty, and researchers the opportunity to schedule appointments to view, research, and study works in its permanent collection.

The CU Art Museum's Permanent Collection. The Permanent Collection of the CU Art Museum contains over 6,000 works of art. The collection includes works from numerous time periods and cultures including ancient Greek pottery, Roman Glass, ancient Iranian pottery, Southwestern and South American santos, Southeast Asian pottery, African sculpture, Old Master works on paper, British 18th century prints, 19th and 20th century American prints and paintings, Japanese *ukiyo-e* prints, 19th century photography, Pop art, Minimalist works on paper, and modern and contemporary ceramics, sculpture, works on paper, paintings, photography, video, and new media art.

Visiting Scholar Program. This program is organized to explore the discipline of art history—its cultural connections, methodological pursuits, and its changing nature—by focusing extensively on the research and insights of individual academic experts. Three to five highly regarded art historians and/or art critics speak at a public lecture, presenting current research and published papers. During their week-long visit they work closely with students enrolled in the Visiting Scholar Seminar.

Visiting Artist Program. Artists of national and international reputation interact with graduate and advanced undergraduate students and discuss their studio work at seminar meetings. Artists present a public lecture during their visit, providing continuous input of significant developments and a comprehensive view of contemporary issues in the arts.

Visual Resources Center (VRC). The mission of the VRC is to provide and facilitate access to images, imaging, and related information resources for teaching and research in the Department of Art and Art History. This includes: 1) a departmental image collection and support for other important image resources; 2) resources, training, and support in digital imaging and image presentation software; and 3) equipment for use in creative work, documentation, and classrooms within the department. The digital image collection contains works by faculty, MFA thesis recipients, visiting artists, and other contemporary and historical works. Digital imaging resources include slide and flatbed scanning stations, with training available in digitization standards and best practices. VRC equipment includes laptops, data projectors, digital SLR cameras, video cameras, tripods, and other equipment for use in the department. The VRC also circulates its collection of DVDs containing lectures and interviews from the department's Visiting Artist Program. More information is available at www.colorado.edu/finearts/vrc/vrc.html.

Graduate Degree Programs

The master of arts degree is offered in art history, and the master of fine arts degree is offered in creative arts. It is expected that the program be completed within two years for the MA degree and two-and-a-half years for the MFA degree. The creative arts areas include ceramics, painting and drawing, media arts (photography, video, and digital arts), film (in collaboration with the Film Studies Program), printmaking, sculpture, and Integrated Arts (IA). Students are encouraged to consult with

an advisor in the appropriate area in order to obtain advice and current information.

The department, in conjunction with the Leeds School of Business, offers a dual degree program in which both MBA and MFA (or MA) degrees are awarded. The requirements are as follows:

Students must apply to and meet application requirements for each program separately.

Students must meet the admission standards for each program separately; Dual degree students may start either program first; in the first year of studies, courses are taken in one of the two departments exclusively; in the second year, courses are taken in the other department exclusively; in the third year, a combination of MBA and MFA (MA) courses is taken.

Master of Arts Degree (Art History)

Prerequisites. The following are required for admission to the graduate program:

1. A baccalaureate degree from an approved college with a cumulative grade point average of at least 3.000.
2. A score of 500 or higher on the verbal section and an average score (approximately 50 percent below) on all other sections of the Graduate Record Examination.
3. A broad general background in history, literature, and philosophy.
4. An extensive background in art history.
5. Applicants to the master's program in art history are asked to write a 750 to 1,000 word essay in Part II, number 6 on the application form. Applicants are also required to provide a writing sample of approximately 10–20 pages. Typically, this is a paper submitted for an undergraduate class.

Examinations. The comprehensive exams are given during the second year of study to measure graduate student knowledge of art history at the master's degree level. The exams consist of essay questions.

Degree Requirements: Plan I (Thesis Option). A minimum of 30 semester hours must be completed, of which 21 must be completed in residence on the Boulder campus. Requirements and regulations include:

1. Courses.

Theories of Art History (ARTH 6929) must be taken during the first semester.

This course may be taken twice for up to 6 credit hours.

Visiting Scholars Seminar (ARTH 5929) must be taken during the second semester. Students are encouraged to repeat this course.

At least one 3-credit, 5000- or 6000-level course in four of the following areas of art history: medieval, early modern and Renaissance, Art of the Americas, modern, contemporary, Asian, and critical theory/museology.

At least one 3-credit, 3000-level or above course in a department outside the Department of Art and Art History, which supplements the major or minor areas of specialization.

Comprehensive exam.

Master's Thesis (ARTH 6959): 4–6 credit hours (see below).

No more than 9 hours of independent study credit may be applied toward the MA degree.

Pass/fail courses do not count toward the MA degree.

A limit of 9 hours of transfer credits may be applied toward the MA degree.

Students are encouraged and expected to attend undergraduate lecture courses as needed to prepare themselves for graduate seminars and for the comprehensive exam.

2. **Thesis.** See thesis requirements under Master of Arts and Master of Science in the Graduate School section.
3. After acceptance of the final draft of the thesis by the thesis advisor, an oral examination takes place dealing with the

subject matter of the thesis and any areas of weakness that may have been found in the written comprehensive exam.

4. **Language Requirement.** The candidate for the MA degree in art history is required to demonstrate an adequate reading knowledge of French, German, or another appropriate language before receiving the degree by satisfactory course work equal to 3 progressive semesters at the college level or above or by passing an approved language examination. Language examinations may be arranged with one of the art history faculty on an individual basis.

Degree Requirements: Plan II (Project Option). Same requirements as above with the following exceptions:

1. A minimum of 36 semester hours is required.
2. The project replaces the thesis.

Master of Fine Arts Degree (Creative Arts)

Prerequisites. The following are required for admission to the graduate program:

1. Bachelor's degree from an approved college or school of art with a minimum grade point average of 2.750.
2. Minimum of 34 credit hours of acceptable work in art; 12 credits in fine arts history is preferred.
3. Submission of a portfolio, including 20 images, representing creative work, a written statement of goals and objectives, and an artist statement.
4. Applicants interested in media arts and film should submit a portfolio of creative work to include CDs, DVDs, video and/or audio tapes, film, etc., as appropriate (especially for documentation of performance and/or installations) for screening by the media arts and film committees.

Degree Requirements. A minimum of 54 credit hours (of which 36 credit hours must be taken in residence on the Boulder campus) of acceptable graduate work must be completed beyond the bachelor's degree, with the following requirements:

<i>Required Courses</i>	<i>Semester Hours</i>
Home studio (major area)	min. 12
Electives (student and non-studio; up to 6 credits may be taken in an allied field, at the 3000 level and above)	21
Art history, theory, or film critical studies	9
Visiting Artist Seminar	3
Graduate Art Seminar	3
Thesis	6

Film Track MFA

ARTF 5030 Visiting Filmmakers Seminar is allowed as a substitute for ARTS 5118 Visiting Artist Seminar.

Graduate First-Year Review

Graduate students are required to schedule a first-year review at the end of the first year of full-time study. The purpose of this review is to evaluate the student experience in the program and prepare the student for the comprehensive exam (art history) or prethesis review (studio arts).

Transfer of Credit

Procedures for transferring credit from other graduate programs are governed by the regulations of the Graduate School. Transfer credit, not to exceed 18 semester hours for studio arts or 9 semester hours for art history, must first be approved by faculty in the student major area.

Change in Area of Concentration

Students who wish to change their area of concentration after admission must petition the departmental graduate committee.

Graduation

Before registering for ARTS 6957 (MFA Thesis), students must have a pre-thesis review with their faculty advisor and thesis committee. Studio arts thesis work must take the form of original creative work of acceptable professional standards. The oral defense exam must be done in conjunction with the thesis exhibition, and the candidate must provide a critical written statement (creative thesis) concerning the work. The candidate's written creative statement is housed with the Art and Architecture Collection in Norlin Library, and 10–15 digital images (representing work in the exhibition) become part of and are housed with the departmental Visual Resources Center. The committee may request a contribution of original work.

Asian Languages and Civilizations

Chinese or Japanese Degree.....BA

East Asian Languages and Literature Degree..... MA

Asian Languages and Civilizations.....PhD

Undergraduate students may choose to major in either Chinese or Japanese. In either case they receive a thorough grounding in the modern language, an introduction to the classical language and literature, and a broad familiarity with the literary and cultural history of the selected area.

Before registering for specific courses, students should consult with a departmental advisor concerning appropriate placement in language classes. Also, students interested in Chinese or Japanese are encouraged to broaden their career options through a double major, combining either language with another field of interest. Recent graduates have found positions in such fields as government service, international business, and secondary-school teaching; others have gone on to graduate study in Chinese or Japanese.

Bachelor's Degree Programs

Chinese

The undergraduate degree in Chinese emphasizes knowledge and awareness of:

- Chinese literary history, focusing on selected canonical or widely recognized works;
- the historical and cultural contexts in which particular works were written;
- critical approaches to the study of Chinese language and civilization; and
- the challenges, deficiencies, and possible gains inherent in the process of translating from one language to another.

In addition, students completing the degree in Chinese are expected to acquire the ability and skills to:

- read modern Chinese at a level at which critical literary analysis can be performed;
- read classical Chinese, with the aid of appropriate reference works, at the level at which the text may begin to be appreciated for its literary value;
- speak and comprehend Mandarin sufficient for all situations in daily life and for a basic level of academic conversation;

- analyze and interpret literary texts in terms of style, structure, character, themes, and use of allusion; and
- communicate such interpretations competently in standard written English.

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below. CHIN 1010, 1020, and 2110 do not count toward the maximum of 45 credits in the major department.

Chinese Language and Literature Track

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below, including 30 credit hours of courses in Chinese language and literature above CHIN 2110. CHIN 2120 or its equivalent is the prerequisite to upper-division courses required for the major. At least 25 credit hours must be in upper-division courses.

<i>Required Courses</i>	<i>Semester Hours</i>
CHIN 2120 Intermediate Chinese 2	5
CHIN 3110 and 3120 Advanced Chinese 1 and 2	10
CHIN 4210 Introduction to Classical Chinese	4
CHIN 4220 Readings in Classical Chinese	4
Additional credit hours selected from the following courses:	
CHIN 3311 The Dao and the World in Medieval China.	3
CHIN 3321 Culture and Literature of Ancient China	3
CHIN 3331 Culture and Literature of Late Imperial China	3
CHIN 3341 Modern Chinese Literature in Translation	3
CHIN 3351 Reality and Dream in Traditional Chinese Fiction	3
CHIN 3361 Women and the Supernatural in Chinese Literature	3
CHIN 3371 Topics in Chinese Film	3
CHIN 3441 Language and Chinese Society	3
CHIN 3451 Language and Gender in China	3
CHIN 4110 Readings in Modern Chinese 1	3
CHIN 4120 Readings in Modern Chinese 2	3
CHIN 4300 Open Topics	3
CHIN 4750 Daoism	3
CHIN 4900 Independent Study	1-3
CHIN 4950 Honors Thesis	3

Chinese Language and Civilization Track

Requires successful completion of 30 credit hours, apportioned as follows:

CHIN 2120 Intermediate Chinese 2	5
CHIN 3110 and 3120 Advanced Chinese 1 and 2 or CHIN 4210 and 4220 Introduction to Classical Chinese and Readings in Classical Chinese	8-10

The remaining 15 or 17 credits may be chosen from other CHIN or EALC courses, excluding only language courses numbered below 2120. Six of these remaining hours may be satisfied by courses focusing wholly or substantially on China offered in other departments, subject to approval by the undergraduate advisor in Chinese.

Of the 30 credit hours presented for the degree, at least 18 must be at the upper division.

Graduating in Four Years with a BA in Chinese

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in Chinese, students should meet the following requirements:

Declare the major in the first semester.

Students wishing to major in Chinese and who have no prior knowledge of the language should begin the required major courses no later than the sophomore year.

Students must consult with a major advisor to determine adequate progress toward completion of the major.

Minor Program

A minor is offered in Chinese. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information, see www.colorado.edu/artsscience/students/undergraduate/academics/minors.html.

Japanese

The undergraduate degree in Japanese emphasizes knowledge and awareness of:

- the outlines of the history of Japanese literature from the Nara period to the present;
- the outlines of Japanese historical and cultural development; and
- appropriate research strategies for Japanese language, literature, and culture.

In addition, students completing the degree in Japanese are expected to acquire the ability and skills to:

- speak and comprehend Japanese sufficiently for daily life;
- read, interpret, and analyze modern written texts;
- compose letters and simple compositions;
- use cultural awareness and understanding to function appropriately in a range of social situations; and
- communicate the results of research in English.

In addition, students target one or more of the following goals:

- read and comprehend classical Japanese, with the aid of appropriate reference works;
- translate a range of Japanese texts into English; and
- understand and analyze the structure of the Japanese language and communication patterns in Japanese.

Japanese Language and Literature Track

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below. JPNS 1010, 1020, and 2110 do not count towards the maximum of 45 credits in the major department.

<i>Required Courses</i>	<i>Semester Hours</i>
Successful completion of 30 credit hours of courses in Japanese language and literature above JPNS 2110. JPNS 2120 or its equivalent is the prerequisite to upper-division language courses required for the major. At least 25 credit hours must be at the upper-division level.	
JPNS 2120 Intermediate Japanese	5
JPNS 3110 and 3120 Advanced Japanese 1 and 2	10
JPNS 4110 and 4120 Readings in Modern Japanese 1 and 2 or JPNS 4210 and 4220 Contemporary Japanese 1 and 2	6
Additional credit hours selected from the following courses including two of the asterisked courses):	
JPNS 3441 Language and Japanese Society.	3
*JPNS 3811 Classical Japanese Literature in Translation	3
*JPNS 3821 Medieval Japanese Literature in Translation	3
*JPNS 3831 Early Modern Japanese Literature in Translation.	3
*JPNS 3841 Modern Japanese Literature in Translation	3
JPNS 4030 Japanese Syntax	3
JPNS 4070 Second Language Acquisition in Japanese.	3
JPNS 4080 Kanji in Japanese	3
JPNS 4210 and 4220 Contemporary Japanese 1 and 2	6
*JPNS 4310 and 4320 Classical Japanese 1 and 2	6

JPNS 4300 Open Topics.	3
JPNS 4900 Independent Study.	1-3
JPNS 4950 Honors Thesis.	3

Japanese Language and Civilization Track

Requires successful completion of 30 credit hours, apportioned as follows:

JPNS 2120 Intermediate Japanese	5
JPNS 3110 and 3120 Advanced Japanese 1 and 2.	10

The remaining 15 credits may be chosen from other JPNS or EALC courses, excluding only language courses numbered below 2120. Six of these remaining credit hours may be satisfied by courses focusing wholly or substantially on Japan offered in other departments, subject to approval by the undergraduate advisor in Japanese.

Of the 30 credit hours presented for the degree, at least 18 must be at the upper-division level.

Graduating in Four Years with a BA in Japanese

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in Japanese, students should meet the following requirements:

Declare the major in the first semester.

Students wishing to major in Japanese and who have no prior knowledge of the language should begin the required major courses no later than the sophomore year.

Students must consult with a major advisor to determine adequate progress toward completion of the major.

Minor Program

A minor is offered in Japanese. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information, see www.colorado.edu/artssciences/students/undergraduate/academics/minors.html.

Courses Taught in English

The department offers several courses in translation. These courses require no previous study of the language, history, or culture of the area involved and are open to all interested students, whether majors in this department or not. They provide excellent introductions to Chinese or Japanese literary and cultural history.

CHIN 1051 is a core curriculum course in the area of literature and the arts that focuses on the great books of China, both ancient and modern. CHIN 2441 and CHIN 3371 concentrate on film and culture. CHIN 3311, 3321, 3331, and 3341 concentrate, respectively, on medieval, ancient, late imperial, and modern Chinese culture. CHIN 3351 and 3361 are devoted to issues in fiction and on women and the supernatural. CHIN 4750 (cross-listed with RLST) focuses on the historical development of Daoism.

EALC 1011 provides an interdisciplinary introduction to the history, literature, religion, and art of both China and Japan before major contact with the Western world. EALC 1021 focuses on the modern period, after major contact with the Western world. Both of these are core curriculum courses in the area of cultural and gender diversity.

JPNS 1051 is a core curriculum course in the area of literature and the arts focusing on both ancient and modern great books of Japan.

JPNS 2441 focuses on film and culture, JPNS 3441 explores language and society. JPNS 3811, 3821, 3831, and 3841 focus, respectively, on classical, medieval, early modern, and modern

Japanese literature. JPNS 3841 meets the arts and sciences core requirement for critical thinking.

Study Abroad

The department strongly recommends that all majors participate in study abroad. The University of Colorado is affiliated with study abroad programs based at Beijing, Nanjing, and East China Normal Universities in China; National Chengchi University in Taiwan; and the department has exchange programs with Kansai Gaidai, Sophia University, and Akita International University in Japan. Consult a departmental advisor. For further information, contact the Office of International Education. Note, however, that not more than 20 transfer credit hours from universities in the United States or abroad may count toward the major in Chinese or Japanese.

Concurrent BA/MA Program

The concurrent BA/MA degree program in East Asian Languages and Civilizations language and literature tracks offers a challenging and focused academic experience for exceptional students who demonstrate the ability to express their ideas clearly, both orally and in written form, using standard English. Highly motivated students who are accepted into the program begin graduate work no later than the senior year and earn both the BA and MA in five years. Students must have a minimum 3.25 GPA for all courses taken at CU-Boulder and must have completed most MAPS and core requirements by the end of the sophomore year. Three letters of recommendation indicating strong potential for advanced intensive study also are required. Applications will be reviewed by the graduate faculty in Chinese or Japanese. For specific requirements, please contact the department.

BA/MSIB Program (Bachelor of Arts in Chinese or Japanese/Master of International Business)

The Department of Asian Languages and Civilizations, in conjunction with the Business School at the University of Colorado Denver, offers a degree track in either Japanese or Chinese leading to accelerated admission to the UC Denver MSIB program. Students complete the standard requirements for the Japanese or Chinese major and a block of basic courses in Boulder Leeds School of Business. These courses, along with Japanese or Chinese language and culture requirements, are counted by the UC Denver Business School, allowing ALC graduates to complete the MSIB on an accelerated schedule. ALC students are also given special consideration for fellowship funding at UC Denver. See the undergraduate advisor for details.

Master's Degree Requirements

Applicants to the graduate program in Asian Languages and Civilizations (Chinese or Japanese emphasis) should have successfully completed the equivalent of the undergraduate major in Chinese or Japanese language and literature with advanced competence in modern Chinese or Japanese, an introduction to classical Chinese or Japanese, an understanding of the interrelationship of Chinese or Japanese language and society, and a familiarity with the history, major writers, and works of Chinese or Japanese literature. Foreign applicants must submit results from a TOEFL exam, with 560 being the minimum acceptable score.

The MA may be pursued in one of four different tracks: Chinese language and literature, Japanese language and literature, Chinese language and civilization, and Japanese language and civilization. All entering students must take either CHIN 5010 or JPNS 5010 at the earliest opportunity. Students employed as

teaching assistants also must take CHIN/JPNS 5020 Methods of Teaching Asian Languages. Selection of courses beyond these is made in consultation with the graduate advisor. Minimum requirements for graduation include a total of 24 hours of course work numbered 5000 or above, plus a thesis of 6 credit hours, or 30 hours of course work without a thesis. If deemed appropriate by the student's graduate committee, up to three courses (9 credit hours) taken outside the department may be included in the graduate curriculum.

Dual Master's Program

The Department of Asian Languages and Civilizations also participates in a dual master's program with the Departments of History and Religious Studies. Students interested in exploring this option should contact the department for specific requirements.

PhD Program

Prerequisites. The PhD in Asian Languages and Civilizations offers specializations in Chinese or Japanese with concentrations in literary and/or cultural studies of either the premodern or modern periods. Academic preparation is expected in both classical and modern language. The department will evaluate all applications for admission based on previous academic achievements and on the quality of the writing sample.

All international students whose native language is not English must score at least 620 (paper-based test) or 260 (computer-based test) or 105 (internet-based test) on the Test of English as a Foreign Language (TOEFL) to be considered for admission. Graduate Record Examination (GRE) General Test scores are not mandatory for admission. However, applicants wishing to be considered for competitive university fellowships will be strongly encouraged to take the GRE general test and submit the scores.

Language Requirement. In addition to the requirements of the University of Colorado Graduate School for regular degree students, the department requires all entering students to have superior proficiency in the target language and broad general knowledge of the literary and cultural traditions of their region of concentration.

General Requirements. The PhD in Asian Languages and Civilizations will require a minimum of 45 credit hours in graduate courses numbered 5000 or above in Chinese or Japanese; some graduate or advanced undergraduate course work from related fields may also be included, in accordance with Graduate School rules. Some course work completed for the MA degree at CU or other similarly rigorous institutions may count toward the 45 credit hours required. PhD students may transfer to the department up to 21 hours of acceptable graduate-level credit. All PhD students must take at least 24 credit hours of graduate course work at the University of Colorado Boulder in addition to 30 credit hours of dissertation work beyond the course work required.

Asian Studies

Degree BA

The Asian Studies Program offers a broad interdisciplinary undergraduate major in Asian studies. In addition, a number of departments offer graduate training with an emphasis on Asia.

Students planning to major in Asian studies may participate in study abroad programs with prior approval from the Asian Studies Program and the Office of International Education.

For additional information on the major program, contact Tim Weston at 303-492-3526.

Bachelor's Degree Program

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

<i>Required Courses</i>	<i>Semester Hours</i>
ASIA 1000 Introduction to South and Southeast Asian Studies or HIST 1408 Introduction to South Asian History	3
CHIN 1012 Introduction to Chinese Civilization or JPNS 1012 Introduction to Japanese Civilization or HIST 1608 Introduction to Chinese History or HIST 1708 Introduction to Japanese History	3-4
Two courses in Asian history.	3/3
Three semesters of a single Asian language.	9-15
ASIA 4830 Senior Thesis or Project in Asian Studies	3
Complete additional credit hours to accumulate the 39 credits needed for the major. At least 18 credit hours must be in upper-division courses and at least one course must be taken in both the humanities and social science. Select from the following approved Asian studies courses.	

Approved Asian Studies Courses

Most classes are offered for 3 credit hours. Not all classes are taught every semester or even every year. Other courses (including some study abroad courses) with primarily Asia-related content may be taken for major credit with the faculty advisor's approval.

Astrophysical and Planetary Sciences

Degrees BA, MS, PhD

The undergraduate major has two tracks—one in general astronomy and one in astrophysics/physics (see the website at aps.colorado.edu).

The track in general astronomy is designed to meet student needs for basic, undergraduate training in space sciences (astronomy, astrophysics, planetary sciences, and space physics). Undergraduates are prepared for both academic research careers and the industrial market (aerospace, computer software, instrumentation, and other technical areas) as well as for science education, science journalism, and space policy. This track provides a liberal arts degree in the science of astronomy, observations, and technology as well as core training in astronomical sciences and mathematics, applied physics, and computational and instrumental technology for professions in the space sciences. The track can focus on observations (ground-based telescopes, rocket probes, space-borne observatories) or on K-12 science education, for which astronomy provides excellent science content for motivating young students. It also offers broad training for careers in science policy and science writing.

The bachelor's degree track in astrophysics/physics is directed toward students interested in pursuing graduate studies in

astrophysics by focusing on multidisciplinary work in physics and mathematics together with astronomy. Graduates are provided with scientific and technological training in the space sciences, including mathematical, physical, computational, and instrumental expertise. A senior thesis or other research work is encouraged.

Specific goals for both programs are to provide:

- both theoretical and practical knowledge of astronomy and astrophysics at a level comparable to the best programs at other major U.S. public institutions. The Department of Astrophysical and Planetary Sciences is one of the few programs that combines both astrophysics and planetary science, providing a unified view of space sciences, the solar system and comparative planetology, stellar and galactic astronomy, and cosmology.
- courses and significant hands-on experience with telescopes, optics, instrumentation, and computer image processing and modeling. These skills are useful for students wishing to pursue graduate degrees or careers in aerospace, technical, or computer industries.
- opportunities for faculty-advised research and senior (honors) theses.

Bachelor's Degree Program

A major with two tracks (general astronomy and astrophysics/physics) was approved by the Regents and CCHE on June 1, 2000.

General Astronomy Track

This is appropriate for someone aiming for a career in K-12 education, science journalism, science policy, information technology, science management, or technical work that does not require a graduate degree.

ASTR 1030 and 1040 Accelerated Introductory Astronomy or ASTR 1010 and 1020 Introductory Astronomy	8
PHYS 1110, 1120, and 1140 General Physics 1 and 2	9
APPM 1350 and 1360 or MATH 1300 and 2300 Calculus 1 and 2	8-10

One of the following four courses:

ASTR/ASEN 2500 Gateway to Space	3
ASTR 2600 Computational Techniques	3
PHYS 2130 General Physics	3
PHYS 2170 Foundations of Modern Physics	3

Minimum of two additional courses selected from:

ASTR 2000 Ancient Astronomies	3
ASTR 2010 Modern Cosmology	3
ASTR 2020 Introduction to Space Astronomy	3
ASTR 2030 Black Holes	3
ASTR 2500 Gateway to Space	3
ASTR 2600 Computational Techniques	3
ASTR 3300 Extraterrestrial Life	3

One other science sequence with lab. Can be satisfied by any sequence that satisfies arts and sciences core curriculum in natural sciences with lab, for example:

CHEM 1113, 1114, and 1131, 1134; EBIO 1210-1230, GEOL 1010, 1020, and 1030, ATOC 1050, 1060, and 1070, or equivalent	7-10
--------------------------------------------------------------------------------------------------------------------------------	------

One upper-division course sequence:

ASTR 3720 Planets and their Atmospheres and ASTR 3750 Planets, Moons, and Rings or ASTR 3730 Astrophysics 1: Stellar and Interstellar and ASTR 3830 Astrophysics 2: Galactic and Extragalactic	6
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---

Four additional courses from the following or from those sequence courses not used for the upper-division sequence requirement, above:

ASEN 4010 Introduction to Space Dynamics	3
ASTR 3510 Observations and Instrumentation 1	4

ASTR 3520 Observations and Instrumentation 2	4
ASTR 3710 Formation and Dynamics of Planetary Systems	3
ASTR 3740 Cosmology and Relativity	3
ASTR 3760 Solar and Space Physics	3
ASTR 3800 Scientific Data Analysis and Computing	3
ASTR 4330 Cosmochemistry	3
ASTR 4800 Space Practice and Policy	3
ASTR 5760 Astrophysical Instrumentation (with instructor's permission)	3
ATOC 4720 Atmospheric Physics and Dynamics	3

A minor is available that may be satisfied by taking various combinations of courses among the diverse possibilities offered by the department (see below).

Astrophysics/Physics Track (Jointly Supervised by the APS and Physics Departments)

For students aiming for a graduate program in astronomy or planetary sciences. Similar to Physics Plan 2 (Astrophysics), with additional astrophysics instrumentation labs and different electives.

Required Courses Semester Hours

APPM 1350, 1360, 2350, and 2360 Calculus 1, 2, 3, and 4 or MATH 1300, 2300, 2400, and APPM 2360 Analytic Geometry and Calculus 1, 2, and 3 and Introduction Differential Equations with Linear Algebra	16-18
ASTR 1030 and 1040 Accelerated Introductory Astronomy	8
ASTR 3720 and 3750 planetary sequence or ASTR 3730 and 3830 stellar/galactic sequence.	6
PHYS 1110, 1120, and 1140 General Physics 1 and 2 and PHYS 2150, 2170, and 2210 Sophomore Physics	16
PHYS 3310 and 3320 Electromagnetism and PHYS 3210 and 3220 Classical and Quantum Mechanics	12

Suggested electives: PHYS 4230 Thermodynamics and Statistical Mechanics or PHYS 4410 Quantum Mechanics II or PHYS 4420 Nuclear and Particle Physics or PHYS 4510 Optics or PHYS 4150 Plasma Physics

Three additional courses from the following or any of 3720, 3750, 3730, 3830 not used for the requirement above:

ASEN 4010 Introduction to Space Dynamics	3
ASTR 3510 Observations and Instrumentation 1	4
ASTR 3520 Observations and Instrumentation 2	4
ASTR 3710 Formation and Dynamics of Planetary Systems	3
ASTR 3740 Cosmology and Relativity	3
ASTR 3760 Solar and Space Physics	3
ASTR 3800 Scientific Data Analysis and Computing	3
ASTR 4010/4020 Senior Research Practicum	3 each
ASTR 4330 Cosmochemistry	3
ATOC 4720 Atmospheric Physics and Dynamics	3

Any 5000- or 6000-level physical and planetary sciences course with instructor's permission 3

Total credit hours for the major 23 hours minimum in astrophysics and 28 hours minimum in physics (this must include at least 15 upper-division hours in astrophysics and 12 in physics).

Minor Program

Declaration of a minor in astrophysical and planetary sciences is open to any student enrolled at CU-Boulder, regardless of college or school. For more information see aps.colorado.edu/undergrad_APSMinor_courserequirements.html.

A total of 6 courses is required for the minor, at least 9 of which must be taken at the advanced (3500 and above) level. For guidance, see an astrophysical and planetary sciences (APS) faculty advisor or request written information from the departmental office.

Graduate Degree Programs

The curriculum and research in the department emphasizes three major areas: astrophysics, planetary sciences, and space physics.

The department offers both MS and PhD degrees. During the first year of graduate study, students generally obtain a broad background in courses regarded as basic to all three areas in addition to more specialized studies. Many students take graduate-level courses in other departments (e.g., Departments of Physics, Chemistry and Biochemistry, Geological Sciences, Applied Mathematics, or Aerospace Engineering), depending upon their particular interests or participation in interdisciplinary programs (see below). The basic first-year courses in the three areas are:

- ASTR 5110 Atomic and Molecular Processes
- ASTR 5120 Radiative and Dynamical Processes
- ASTR 5400 Introduction to Fluid Dynamics
- ASTR 5540 Mathematical Methods
- ASTR 5550 Observations, Data Analysis, and Statistics

Descriptions of more specialized courses follow. Students interested in applying to this department are invited to write to Graduate Program Assistant, Department of Astrophysical and Planetary Sciences, University of Colorado Boulder, 391 UCB, Boulder, CO 80309-0391.

Astrophysics (Including Solar Physics)

The department offers a broad range of courses and research in this area, leading to the PhD degree. Graduate-level courses are offered in the following subjects:

- ASTR 5140 Astrophysical and Space Plasmas
- ASTR 5700 Stellar Structure and Evolution
- ASTR 5710 High-Energy Astrophysics
- ASTR 5720 Galaxies
- ASTR 5730 Stellar Atmospheres and Radiative Transfer
- ASTR 5740 Interstellar Astrophysics
- ASTR 5760 Astrophysical Instrumentation
- ASTR 5770 Cosmology
- ASTR 6000 Seminar in Astrophysics

Research in observational and theoretical astrophysics is conducted in the following areas:

- Stellar atmospheres, radiative transfer, stellar winds of hot/cool stars
- Formation of stars and planetary systems
- Solar physics
- Interstellar and intergalactic medium
- Cosmology and large-scale structure of the universe; galaxy formation
- Stellar interiors, pulsations, black holes, and neutron stars
- Cosmic X-ray sources, supernovae and their remnants, and accretion phenomena jets and clusters of galaxies
- Galactic evolution, quasars, and active galaxies
- Radio and sub-millimeter astronomy, microwave background
- Plasma astrophysics and MHD
- Astrophysical fluid dynamics
- Laboratory and atomic astrophysics
- UV, optical, IR, submillimeter, and X-ray instrumentation
- Instrument and detector development

Departmental Equipment and Research

Research is carried out with the ARC 3.5m Apache Point telescope and with national telescopes and laboratories and international collaborators: High Altitude Observatory (HAO) in Boulder (solar physics), National Optical Astronomical Observatories in Tucson and Chile (optical astronomy), Caltech Sub-Millimeter Observatory, National Radio Astronomy Observatory (NRAO), the Very Large Array (VLA), the Green Bank Telescope (GBT), the Hubble Space Telescope (HST), the Chandra, SWIFT, and XMM X-ray telescopes, and the Fermi Gamma-Ray Space Telescope. CU-Boulder also is involved with the FUSE ultraviolet satellite, Cassini, Galileo, and New Horizons (Pluto) missions, and the HST Cosmic Origins Spectrograph.

Locally, APS operates a 24-inch Cassegrain-Coude and 16- and 18-inch Cassegrain telescopes, available for photographic, photometric, and spectrographic observations, as well as for instrument and detector development. Opportunities for graduate research also are found with the university's Laboratory for Atmospheric and Space Physics (LASP), the Center for Astrophysics and Space Astronomy (CASA), and JILA. See Graduate School for more information.

Planetary Sciences

As planetary sciences is an interdisciplinary field, students can obtain degrees from the Departments of Astrophysical and Planetary Sciences, Geological Sciences, Physics, or Aerospace Engineering. CU-Boulder is also home to a division of the Southwest Research Institute, with over 25 planetary scientists, many of whom work with CU students. Research and courses related to the physics and dynamics of the atmospheres of other planets, planetary surfaces and interiors, and other solar system studies are available in programs leading to the MS and PhD degrees. Courses related to the physics and dynamics of the Earth's atmosphere are offered through PAOS under the ATOC acronym. Graduate-level courses in these areas are:

- ASTR 5140 Astrophysical and Space Plasma
- ASTR 5300 Introduction to Magnetospheres
- ASTR 5330 Cosmochemistry
- ASTR 5410 Fluid Instabilities, Waves, and Turbulence
- ASTR 5800 Planetary Surfaces and Interiors
- ASTR 5810 Planetary Atmospheres
- ASTR 5820 Origin and Evolution of Planetary Systems
- ASTR 5830 Topics in Planetary Science
- ASTR 5835 Seminar in Planetary Science
- ATOC 5050 Physical Processes of the Atmosphere and Ocean
- ATOC 5560 Radiative Processes in Planetary Atmospheres
- ATOC 5960 Theories of Climate and Climate Variability

Research in theoretical, observational, and laboratory atmospheric and planetary science is conducted in the following areas:

- Planetary disks, Kuiper Belt objects, extra-solar planets;
- Dynamics and chemistry of planetary atmospheres, planetary clouds, and planetary climates; evolution of planetary atmospheres; and comparison of planetary and terrestrial atmospheres;
- Planetary aeronomy, airglow and aurora, UV and IR spectroscopy, noctilucent clouds, structure and composition of planetary atmospheres (Venus, Mars, Jupiter, Saturn, Uranus, Neptune, and Pluto), planetary magnetospheres, and cometary physics;
- Satellite monitoring of the Earth's atmosphere and environment, including remote sensing of mesospheric ozone, stratospheric trace species, convection, outgoing radiation, and magnetospheric dynamics; and
- Planetary geology, planetary interiors and surfaces, and planetary geophysics.

Graduate research opportunities exist with individual faculty members, as well as jointly with academic and research units such as the Departments of Geological Sciences, Physics, and Aerospace Engineering, as well as the Department of Atmospheric and Oceanic Sciences (ATOC), the National Center for Atmospheric Research (NCAR), the National Oceanic and Atmospheric Administration (NOAA), and the Laboratory for Atmospheric and Space Physics (LASP). The latter is involved in space investigations of the Earth, Sun, and planets. Financial support is available in connection with all of the above research activities.

Atmospheric and Oceanic Sciences

This interdisciplinary program provides an educational and research environment to examine the dynamical, physical, and chemical structures of the atmosphere, ocean, and land surface,

and the manner in which they interact. For further information, see the ATOC listing. APS participates in the master's degree program in computational science (under applied math).

Geophysics

The department participates in the interdepartmental PhD program in geophysics. For further information, refer to the discussion of the geophysics program in the Graduate School section.

Departmental Requirements

Those wishing to pursue graduate work in APS leading to candidacy for an advanced degree should carefully read requirements for advanced degrees in the Graduate School section. The following are special departmental requirements.

Master's Degree

Prerequisites. A thorough undergraduate preparation in physics and mathematics is necessary for graduate study. Courses should include thermodynamics, mechanics, electricity and magnetism, quantum mechanics, atomic physics, and mathematics at least through complex variables and differential equations.

Qualifying Examination. The Graduate Record Examination aptitude tests and advanced test in physics are used in place of a qualifying examination, and this examination should be taken before the time of application to the department.

Preliminary Interview. Students in the Department of Astrophysical and Planetary Sciences are given an oral interview prior to the beginning of the fall semester of their first year. This oral interview examines fundamental knowledge in undergraduate physics and mathematics. Students are required to overcome any academic deficiencies within a year in order to remain in the program.

Course Requirements. Under Plan I, a student must present a thesis for 6 credit hours plus 24 credit hours of course work, at least 12 of which must be APS courses numbered 5000 or above. Under Plan II, additional hours of approved graduate courses must be presented for a total of 30 credit hours, of which at least 16 must be APS courses numbered 5000 or above. The master's examination under Plan I covers the thesis and related topics. The examination under Plan II is more comprehensive and may be either written or oral or both. Master's examinations are given after other degree requirements have been completed, but may be given during the last semester of residence if the student is making satisfactory progress on required courses.

Doctoral Degree

In addition to the master's degree requirements above, PhD students must complete the following.

Course Requirements. A minimum of 39 semester hours of work (including 4 hours of graduate seminars) in courses numbered 5000 or above is required; however, the overall emphasis is on independent study and research.

Language Requirement. None.

Examinations. Students in the PhD program are required to remove any deficiencies identified at the preliminary interview, to pass a two-part comprehensive examination composed of a written test on graduate course material and an oral exam on a research paper based on a semi-independent research project, and satisfactorily defend the thesis before a faculty committee.

Atmospheric and Oceanic Sciences

Degrees..... *MS, PhD*

The Department of Atmospheric and Oceanic Sciences (ATOC) is an interdisciplinary program that provides an educational and research environment to examine the dynamical, physical, and chemical processes in the atmosphere, ocean, and land surface, and the manner in which they interact. A major theme is the establishment of a physical basis for understanding, observing, and modeling climate and global change.

Although an undergraduate degree program is not yet offered in ATOC, an undergraduate minor program is available. A total of 18 credit hours is required for the minor, including 9 lower-level ATOC credit hours and 9 upper-level ATOC credit hours. A full list of approved courses for the minor is available online and in the ATOC administrative offices.

Graduate students admitted to ATOC are eligible to receive an advanced degree in atmospheric and oceanic sciences. Graduate students outside of ATOC can pursue the Graduate Certificate in Atmospheric and Oceanic Sciences while earning a graduate degree from another department at CU-Boulder, or while taking course work as a non-degree-seeking student through Continuing Education's ACCESS Program provided they have already earned a bachelor's degree and meet the course prerequisites. In addition, students inside and outside the department may pursue a Graduate Certificate in Oceanography. For more information on graduate certificate programs, see the Graduate School/Interdisciplinary Programs section.

For more information about ATOC programs and application procedures, call the ATOC office at 303-492-6633, or visit atoc.colorado.edu.

Graduate Degree Program

ATOC offers a comprehensive graduate program with a core course structure that emphasizes the fluid dynamical, chemical, and physical processes in the atmosphere and ocean.

All ATOC graduate students are required to take one of the two following ATOC core course tracks, or their equivalent:

Atmosphere Track (A-Track)

ATOC 5050: Intro to Atmospheric Dynamics
 ATOC 5600: Physics and Chemistry of Clouds and Aerosols
 ATOC 5235: Intro to Atmospheric Radiative Transfer and Remote Sensing
 ATOC 5060: Dynamics of the Atmosphere
 ATOC 5051: Intro to Physical Oceanography
 ATOC 5151: Atmospheric Chemistry

Oceanography Track (O-Track)

ATOC 5050: Intro to Atmospheric Dynamics
 ATOC/ASTR 5400: Intro to Fluid Dynamics
 ATOC/ASEN 5215: Descriptive Physical Oceanography (previously Oceanography)
 ATOC 5051: Intro to Physical Oceanography
 ATOC 5061: Dynamics of Oceans
 ATOC/GEOL 5270: Marine Chemistry and Geochemistry

All ATOC graduate students must select one of these tracks upon entering the program with a track selection form. The degree will be in atmospheric and oceanic sciences, regardless of track chosen. The master's thesis or doctoral dissertation topic is not constrained by choice of track.

ATOC offers many graduate elective courses, and students are encouraged to take related electives offered by other departments.

Prerequisites. An undergraduate degree in mathematics, physics, engineering, chemistry, or another natural science is recommended. The general prerequisites expected of incoming graduate students include undergraduate courses in calculus, linear algebra, differential equations, and computer programming; as well as one-year sequences of undergraduate calculus-based physics and chemistry. Upper-division undergraduate courses in physics, chemistry, engineering, and mathematics are strongly recommended. Undergraduate courses in atmospheric and oceanic sciences are useful, but not expected, as part of the undergraduate background.

Master's Degree

Course Requirements. For both thesis and nonthesis options, a total of 30 credit hours is required with at least 15 credit hours of ATOC courses numbered 5000 and above. Other specific course requirements are in the *ATOC Graduate Handbook*.

Examinations. For the thesis option, the final examination consists of an oral exam on the thesis. There is a written final exam for the nonthesis option.

Doctoral Degree

Course Requirements. A total of 36 credit hours is required including the 18 credit hours in ATOC core courses listed above, as well as a graduate-level course in applied or computational mathematics. In addition, 30 dissertation hours are required. Other specific course requirements are covered in the *ATOC Graduate Handbook*.

Examinations. Students must pass a two-part comprehensive examination before admission into candidacy. Part I of the comprehensive examination is a written exam based on course material and is normally taken in the second year. Part II of the comprehensive examination is normally taken in the third year and is an oral examination based on an original research paper prepared by the student. After the PhD dissertation has been submitted, a final examination of the dissertation will be conducted.

Bibliography

Several courses in information access and library research methods are offered to students who wish to explore the structure, organization, retrieval, and evaluation of information for their study and career needs. See the course descriptions under Library Research for more information.

Biological Sciences

Course work and degree programs in the biological sciences are offered through the Department of Ecology and Evolutionary Biology (formerly the Department of Environmental, Population, and Organismic Biology); the Department of Molecular, Cellular, and Developmental Biology; and the Department of Integrative Physiology (formerly the Department of Kinesiology and Applied Physiology). Students should refer to program and course descriptions listed for each department.

British and Irish Studies

The Center for British and Irish Studies encourages students to develop programs that include a focus on British and Irish culture, history, and contemporary life from a variety of disciplinary perspectives. At the undergraduate level, the center offers a certificate in British and Irish studies for students who have

taken 24 credit hours in British and Irish literature, history, and/or other fields.

For graduate students, it offers occasional interdisciplinary seminars. These offer exposure to methods and sources outside the students' own departments and provide preprofessional training in presenting research. The center has funds for acquiring microfilm collections for dissertation research, and offers travel fellowships for graduate students.

For more information, contact the Center for British and Irish Studies at jeremy.smith@colorado.edu. For more information go to www.colorado.edu/artssciences/british.

Central and East European Studies

Students who seek in-depth, interdisciplinary knowledge of the region are encouraged to pursue the certificate in Central and East European studies. The certificate program offers students the opportunity to explore the culture, history, and politics of the nations of central and eastern Europe from a variety of disciplinary perspectives.

The purpose of the certificate program is to enhance, rather than to replace, the department major. Students work with CEES faculty advisors to plan an appropriate certificate program. The certificate is issued by the dean of the College of Arts and Sciences, and is awarded in addition to a bachelor's degree in another field.

The certificate program involves 24 hours of credit, including an introductory course (CEES 2002) and at least one course from each of three core clusters (historical, social science, and literature/culture). Students pursuing the CEES certificate are strongly encouraged to take advantage of a recognized study abroad program in Eastern Europe affiliated with CU-Boulder. Courses taken in such a program, as approved by an advisor, count toward the certificate in CEES. Only 9 credits that apply to the major can be used to fulfill requirements for the CEES certificate.

Contact the director of Central and East European Studies, Professor Elizabeth Dunn at **303-492-5388** for information.

Chemistry and Biochemistry

Degrees BA, MS, PhD

The undergraduate degree in chemistry and biochemistry emphasizes knowledge and awareness of:

- the basic principles of chemistry—atomic and molecular theory, reactivities and properties of chemical substances, and the states of matter;
- the basic subfields of chemistry—organic, physical, analytical, and inorganic chemistry (and biochemistry for biochemistry majors);
- mathematics sufficient to facilitate the understanding and derivation of fundamental relationships and to analyze and manipulate experimental data;
- the basic principles of physics (and for biochemistry majors, knowledge of biology); and
- safe chemical practices, including waste handling and safety equipment.

In addition, students completing the degree in chemistry or biochemistry are expected to acquire the ability and skills to:

- read, evaluate, and interpret information on a numerical, chemical, and general scientific level;

- assemble experimental chemical apparatus, design experiments, and use appropriate apparatus to measure chemical composition and properties (for biochemistry students, this includes properties of proteins, nucleic acids, and other biochemical intermediates); and
- communicate results of scientific inquiries verbally and in writing.

Bachelor's Degree Program

A student can earn a bachelor's degree in either chemistry or biochemistry. For either option, students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

Required Courses *Semester Hours*

Chemistry Option

CHEM 1251 and 1271, General Chemistry 1 and 2 for Chemistry and Biochemistry Majors, or CHEM 1351 and 1371, Honors General Chemistry 1 and 2 (recommended for the student with advanced high school training in mathematics and physics). CHEM 1113/114 and 1133/1134 General Chemistry 1 and 2 lecture and lab, also accepted.	10
CHEM 3351 and 3371 Organic Chemistry for Chemistry and Biochemistry Majors 1 and 2 or CHEM 3311 and 3331 Organic Chemistry 1 and 2	8
CHEM 3361 and 3381 Laboratory in Organic Chemistry 1 and 2 for chemistry majors	4
CHEM 4011 Inorganic Chemistry.	3
CHEM 4171 Principles of Instrumental Analysis	3
CHEM 4181 Instrumental Analysis Lab with Environmental Emphasis	3
CHEM 4511 and 4531 Physical Chemistry 1 and 2 or CHEM 4411 and 4431 Physical Chemistry with Biochemistry Applications 1 and 2	6
CHEM 4581/4591 Physical Chemistry Labs 1 and 2.	3
PHYS 1110 and 1120 General Physics 1 and 2	8
PHYS 1140 Experimental Physics 1	1
MATH 1300, 2300, and 2400, Analytical Geometry, and Calculus 1, 2, and 3 or APPM 1350, 1360, and 2350	12

All students, and especially those intending to go on to graduate school in chemistry, will benefit from additional advanced courses. Recommended electives include the following: CHEM 3151, 4021, 4251, 4271, 4611, 4711, 4731, 4901, graduate courses in various fields of chemistry, or advanced courses in mathematics or physics.

Biochemistry Option

CHEM 1251 and 1271, General Chemistry 1 and 2 for Chemistry and Biochemistry Majors, or CHEM 1351 and 1371, Honors General Chemistry 1 and 2 (recommended for the student with advanced high school training in mathematics and physics). CHEM 1113/114 and 1133/1134 General Chemistry 1 and 2 lecture and lab, also accepted.	10
CHEM 3351 and 3371 Organic Chemistry for Chemistry and Biochemistry Majors 1 or 2 or CHEM 3311 and 3331 Organic Chemistry 1 and 2	8
CHEM 3321 and 3341 Laboratory in Organic Chemistry 1 and 2 or CHEM 3361 and 3381 Laboratory in Organic Chemistry for Majors 1 and 2	2/4
CHEM 4411 and 4431 Physical Chemistry with Biochemistry Applications 1 and 2, or CHEM 4511 and 4531 Physical Chemistry 1 and 2	6
CHEM 4711 and 4731 General Biochemistry 1 and 2.	6
CHEM 4761 Biochemistry Laboratory	4
PHYS 1110 and 1120 General Physics 1 and 2	8
PHYS 1140 Experimental Physics 1	1
MATH 1300, 2300, and 2400 Analytical Geometry and Calculus 1, 2, and 3 or APPM 1350, 1360, and 2350	12
MCDB 1150 Introduction to Molecular Biology, MCDB 1151 Intro to Molecular Biology Lab, MCDB 2150 Principles of Genetics, and MCDB 2151 Principles of Genetics Lab or EBIO 1210 and 1220 General Biology 1 and 2 and EBIO 1230 and 1240 General Biology Laboratory 1 and 2 (the latter is recommended for premed students)	8
One of the following: MCDB 2150/2151 (if not taken above), MCDB 3120, 3135, 3500, EBIO 2070, 3400, 4530, or IPHY 3430	3-4

All students, and especially those intending to go on to graduate school in biochemistry, will benefit from additional advanced courses. Recommended electives include the following: CHEM 4011, 4021, 4171, 4181, 4751, 4791, 4901, graduate courses in various fields of chemistry, or advanced courses in biology or mathematics.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of "adequate progress" as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain progress in chemistry and biochemistry, students should meet the following requirements:

Declare chemistry or biochemistry as the major in the first semester. Students must consult with a major advisor to determine adequate progress toward completion of the major.

Minor Program

Minors are offered in chemistry and in biochemistry. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information see www.colorado.edu/artssciences/students/undergraduate/academics/minors.html.

American Chemical Society Certification

The American Chemical Society maintains a certification program in which a student graduating with a specified minimum program is certified to the society upon graduation. To be certified, a graduate must satisfy requirements in addition to the minimum for graduation. A list of these requirements may be obtained from the undergraduate Chemistry and Biochemistry office.

Chemistry Honors Program

Opportunity is provided for qualified chemistry and biochemistry majors to participate in the departmental honors program and graduate with honors (cum laude, magna cum laude, or summa cum laude) in chemistry or biochemistry. Students interested in the honors program should contact the departmental honors advisor during their junior year.

Transfer students who plan to take a chemistry or biochemistry major must complete at the Boulder campus a minimum of 12 credit hours of upper-division work covering at least two subdisciplines: organic, physical, analytical, and inorganic for chemistry majors; biochemistry and physical for biochemistry majors.

A more detailed listing of the bachelor's degree program, together with advising information and alternate course options, is available at the undergraduate office in the Department of Chemistry and Biochemistry.

Graduate Degree Programs

Students wishing to pursue graduate work in chemistry or biochemistry leading to candidacy for an advanced degree should read carefully requirements for advanced degrees in the Graduate School chapter. For information on the doctoral program in chemical physics offered jointly with the Department of Physics, see Chemical Physics under Interdepartmental Programs in the Graduate School section. Following are some of the special departmental requirements. Copies of more detailed rules are distributed to graduate students.

Prerequisites. An undergraduate major in chemistry, biochemistry, or a related field is desirable since entering graduate students are required to take examinations and complete selected course work covering the major fields of chemistry and biochemistry. The GRE general test and advanced subject test (in either chemistry or in biochemistry, cell, and molecular biology) is re-

quired for admission and for fellowship competition. Some or all of these tests may be waived under special circumstances.

Master’s Degree

Language. The department does not require foreign language proficiency for the master’s degree.

Examinations. Administration of preliminary examinations varies, depending on students’ entering field. Candidates opting for MS Plan I must pass a master’s final oral examination at the time they complete their work. MS Plan II does not require a final oral examination.

Course Requirements. There are two methods of obtaining a master’s degree from the Department of Chemistry and Biochemistry. Plan I requires 30 credit hours, including 15 credit hours of formal course work, 15 credit hours in research/seminar courses, the completion of a research investigation, and the presentation of a thesis. Plan II requires 30 credit hours including 21 credit hours of formal course work plus 9 credit hours of research/seminar, and presentation of a research report, but no thesis; Plan II is available only with departmental approval.

Doctoral Degree

Language. The department does not require foreign language proficiency for the PhD degree.

Examinations. Administration of preliminary examinations varies, depending on students’ entering field. These examinations are used in an advisory capacity. The minimum course work is 30 credit hours at the 5000, 6000, or 7000 level, of which 15 credit hours must be in formal course work. In addition, a minimum of 30 credit hours of dissertation work (CHEM 8991) is required. PhD students must pass a comprehensive examination consisting of a series of written cumulative exams and an oral examination. Students entering with a master’s degree start the comprehensive examinations in their second semester; others start them in their third semester. Candidates must write a research proposal during their studies, complete a research investigation and present a thesis, and pass a PhD final oral examination at the time they complete their work.

Classics

Degrees BA, MA, PhD

Through consultation with the undergraduate advisor, the bachelor’s degree in classics is tailored to the student’s interests in the field. Major and minor programs can be arranged with a concentration in either Latin or Greek or a combination of the two, with a focus on classical literature, culture, and thought (including mythology, literature, philosophy, religion, art, archaeology, and history) or with a particular emphasis on classical history, art, and archaeology. Prospective majors and minors should consult with the undergraduate advisor and review the departmental list.

The undergraduate degree in classics emphasizes knowledge and awareness of:

- the fundamental outlines of the history of Greek and Roman literature, from Homer to the end of classical antiquity;
- the historical and cultural contexts of particular works; and
- the art, religion, and philosophy of ancient Greece and Rome and their roles in world cultural history.

In addition, students completing the degree in classics are expected to acquire the ability and skills to:

- read, understand, and interpret written documents and works of literature in ancient Greek or Latin where relevant, as well as in translation;
- communicate in spoken and written form with adequate clarity and complexity for the relevant audience; and
- read and think critically.

Interested students are encouraged to consult www.colorado.edu/classics/undergrad for more information.

Bachelor’s Degree Program

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below, including at least 18 credit hours of upper-division courses.

Required Courses *Semester Hours*

Track I: Greek, Latin, or Greek and Latin

Greek and/or Latin 30

NOTE: Students must designate one language as the primary field of study. The first year of this language does not count toward the major. If you study both languages, the introductory sequence in the second language does count toward the major.

Electives (classical literature, culture and thought or ancient history, art and archaeology courses listed under Tracks II and III) 6

Track II: Literature, Culture, and Thought

Classical literature, culture, and thought (CLAS 1010, 1030, 1100, 1110, 1115, 1120, 1140, 2020, 2100, 2110, 2610, 3820, 4040, 4110, 4120, 4130, 4840; HEBR 1030; PHIL 3000) 18

Ancient history, art, and archaeology (CLAS 1051, 1061, 1509, 2009, 2019, 2041, 3039, 3049, 4021, 4031, 4041, 4061, 4071, 4081, 4091, 4109, 4119, 4129, 4139, 4149, 4169, 4199, 4209, 4219, 4761, 4849; HIST 3011) 12

Greek and/or Latin 6

NOTE: Students must designate either Greek or Latin as the primary field of language study. The first year of this language does not count toward the major. With the approval of the undergraduate advisor, upper-level Greek or Latin courses may be substituted for classical literature, culture, and thought or ancient history, art, and archaeology courses.

Track III: History, Art, and Archaeology

Survey course in ancient history or art and archaeology (CLAS 1051, 1061, or 1509) 3

Ancient history, art, and archaeology (CLAS 1051, 1061, 1509, 2009, 2019, 2041, 3039, 3049, 4021, 4031, 4041, 4061, 4071, 4081, 4091, 4109, 4119, 4129, 4139, 4149, 4169, 4199, 4209, 4219, 4761, 4849; HIST 3011) 15

Classical literature, culture, and thought (CLAS 1010, 1030, 1100, 1110, 1115, 1120, 1140, 2020, 2100, 2110, 2610, 3820, 4040, 4110, 4120, 4130, 4840; HEBR 1030; PHIL 3000) 12

Greek and/or Latin 6

NOTE: Students must designate either Greek or Latin as the primary field of language study. The first year of this language does not count toward the major. With the approval of the undergraduate advisor, upper-level Greek or Latin courses may be substituted for classical literature, culture, and thought or ancient history, art, and archaeology courses.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in classics, students should meet the following requirements:

Declare the classics major by the beginning of the second semester. Students must consult with a major advisor to determine adequate progress toward completion of the major.

Minor Program

A minor is offered in classics. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information see www.colorado.edu/artsscience/students/undergraduate/academics/minors.html or www.colorado.edu/classics/undergrad.

Graduate Degree Programs

The graduate program requirements are undergoing substantial revision this year. Please visit www.colorado.edu/classics/grad/graddegrees.html for up-to-date information.

Master's Degree

Candidates may choose to emphasize Greek, Latin, classical art and archaeology, classical antiquity, or the teaching of Latin (MAT).

It is expected that students opting for the teaching of Latin either have achieved accreditation at the secondary level or are planning to do so through the School of Education. The MA degree alone does not satisfy the state requirements for certification.

Degree Requirements. Candidates for the MA degree in Latin or Greek are required to complete at least six graduate level courses in Greek and/or Latin and to pass a written examination in translation of the major language. Students intending to pursue the PhD in classics are strongly advised to develop proficiency in both Latin and Greek, and to acquire a reading knowledge of German, French, or Italian.

Candidates for the MA degree in Classical Art and Archaeology are required to complete at least two graduate-level courses in Greek and/or Latin and five graduate-level courses in ancient and/or medieval art and archaeology (of which at least one must be at the 5000-level or above [not 4000/5000] and one must be a preapproved nonclassical course). In addition, they must pass written examinations on Greek and Roman art and archaeology. Students intending to pursue the PhD in classical archaeology are strongly recommended to develop proficiency in both Latin and Greek and to acquire a reading knowledge of German, French, or Italian. With the approval of the associate chair for Graduate Studies, graduate-level classes in Greek or Latin may be substituted for classical archaeology or history.

Candidates for the MA degree with emphasis on classical antiquity are required to complete at least two graduate-level courses in Greek and/or Latin and must pass a written examination in two of the following fields: history, art and archaeology, religion and mythology, philosophy and political theory, and Greek or Latin translation.

Candidates for the MA Plan I (24–27 hours of course work at the 5000-level or above, plus 3–6 credit hours of thesis) take an oral comprehensive examination in defense of the thesis. Candidates for the MA Plan II (30 credit hours at the 5000-level or above, without thesis) must have departmental approval and pass an oral comprehensive examination covering their course work and reading lists for their exams.

Candidates for the MA degree with emphasis on the teaching of Latin must pass a written examination in Latin translation and an oral comprehensive examination on teaching methods and their own Latin teaching project. Thirty hours of course work, including one Latin workshop and a special project, are required. Plan I is not offered for the MA degree with emphasis on teaching.

Doctoral Degree

Candidates for the PhD in classics must meet the following requirements:

1. A minimum of 42 hours of course work at the 5000 level or above (excluding thesis and accelerated courses). Course work completed in the MA program at the University of Colorado, or up to 21 hours of graduate credit transferred from another institution, may be applied toward this requirement. Courses should be distributed as follows:
 - a. Four 7000-level graduate seminars (at least one each in Greek and Latin).
 - b. Two courses in ancient history and/or classical archaeology.
 - c. One course in either Greek or Latin prose composition.
 - d. Two courses in special fields such as epigraphy, law, linguistics, literary theory, medieval studies, palaeography, papyrology, philosophy, or religion, as approved by the associate chair for graduate studies.
2. A minimum of 30 hours of doctoral dissertation credit with no more than 10 of these hours in any one semester. No more than 10 dissertation hours may be taken preceding the semester of taking the Oral Comprehensive Examination. Up to 10 hours may be taken during the semester in which the student passes the comprehensive examination.
3. A reading knowledge of German and one other modern foreign language (normally Italian or French). Proficiency is tested by a one-hour written translation test using a dictionary. Students may take a Foreign Language Exam at any time by arrangement with the associate chair for graduate studies. Students are encouraged to pass both modern language exams before the end of the third semester and required to do so before the end of the fourth semester in the PhD program.
4. Greek and Latin Translation Exams. Two examinations of three hours of written translation in Greek and Latin. Each examination will consist of two out of three prose passages and two out of three verse passages for a total of approximately 120 lines. There will be two administrations of each exam per year, in the fall and spring. Students are encouraged to pass both exams by the end of the second semester and required to pass them by the end of the second year in the PhD program.
5. Special Author Exams. Two oral examinations of 1.5 hours each on two ancient authors, one Greek and one Latin.
6. Oral Comprehensive Examination. Two hours on Greek and Latin Literature. Students are encouraged to complete this exam early in the fifth semester and must have completed it by the end of the sixth semester in the PhD program.
7. Dissertation Prospectus. To be circulated to the Dissertation Advisory Committee for approval. Students are encouraged to complete the prospectus during the fifth semester and must complete it during the seventh semester in the PhD program.
8. Dissertation. To be completed by the end of the tenth semester in the PhD program.
9. Final Examination (upon submission of dissertation). Two hours of oral defense of the dissertation.

Cognitive Science Studies

The Institute of Cognitive Science offers academic programs for both graduate and undergraduate students. Cognitive science is the study of human knowledge, of which one aspect is the study of how knowledge is acquired, stored, and represented in the mind, including the mind's underlying biological mechanisms. Another aspect of cognitive science concerns how knowledge is understood, remembered, communicated, and used in the performance of activities, including the acquisition and application of skills and information. This latter aspect provides the practical applications of cognitive science, and thereby ensures a demand for graduates in both academic and industrial markets. Training for graduates in cognitive science prepares students admirably for many of the fields that are targeted as the major growth fields of the 21st century: telecommunications, information processing, medical analysis, data retrieval, education, and multimedia services.

CU graduate students can apply to a certificate program or a combined PhD in conjunction with their home department PhD program. The combined PhD program allows for interdisciplinary study that adds cognitive science or cognitive neuroscience to the PhD program in the student's home department. There are currently two graduate certificate programs: one has a general science focus, the other focuses on human language technology. Undergraduates may also apply for a certificate program. The Cognitive Science Academic Certificate Programs are interdisciplinary programs for majors in the Departments of Psychology; Philosophy; Linguistics; Education; Speech, Language, and Hearing Sciences; Computer Science; and Architecture, Planning and Design.

The Undergraduate program includes courses in the six core departments, with basic courses and two of four possible advanced skill sequences of courses. For more information, either visit ICS.colorado.edu or call Donna Caccamise at 303-735-3602.

Communication

DegreesBA, MA, PhD

The bachelor of arts in communication provides analytic work from both humanistic and social-scientific perspectives, and practical work to improve communication performance in various kinds of situations.

The undergraduate degree in communication emphasizes knowledge and awareness of:

- the history and development of communication as an object of scholarly study, including both the humanistic and social-scientific traditions;
- the basic contexts in which communication is enacted (e.g., interpersonal, group, organizational, and public contexts);
- the various processes of interaction within these contexts;
- the basic methods of investigating questions about communication;
- the ethical issues and responsibilities of communication practice;
- the diversity of communication styles associated with gender and cultural differences; and
- the uses and implications of communication technology.

In addition, students completing the degree in communication are expected to acquire the ability and skills to:

- express ideas in an informed, coherent, and effective manner, particularly the ability to articulate and develop a sustained argument, both orally and in writing;
- analyze, criticize, and evaluate messages and interactions in a variety of practical contexts, both orally and in writing; and
- adapt messages and negotiate interactions responsibly in diverse and changing situations.

Graduate study in communication examines problems of human interaction and relationship, participation and collaboration, and deliberation, dialogue, and decision making in personal relationships, workplace and institutional contexts, and community and public life. The master's program provides students with knowledge of selected bodies of communication scholarship and develops their skills in analyzing complex communication situations for a range of professional positions in business, nonprofit institutions, and other types of community groups, and for doctoral study in communication. The doctoral program provides students with opportunities to conduct theoretically grounded, practically useful research that crosses traditional academic boundaries and that prepares them to assume faculty positions in universities, as well as in research and training programs in business, government, and social service agencies.

Bachelor's Degree Program

Majors must complete a minimum of 33 hours of course work in communication (24 hours above and beyond COMM 1210, 1300, and 1600), 18 of which must be upper division (3000 level or higher). Only courses with grades of C- or better count toward the major, and the overall major GPA must be 2.00 (a C- is 1.70).

<i>Required Courses</i>	<i>Semester Hours</i>
COMM 1210 Perspectives on Human Communication	3
COMM 1300 Public Speaking.	3
COMM 1600 Group Interaction.	3
COMM 3210 Human Communication Theory.	3
COMM 3300 Rhetorical Foundations of Communication	3
One methods course: COMM 3740, 3750, or 3760	3
One senior seminar: COMM 4220, 4300, 4400, 4510, or 4600	3
Two of the following:	
COMM 2360 Campaigns and Revolutions.	3
COMM 2400 Discourse, Culture, and Identities	3
COMM 2500 Interpersonal Communication.	3
COMM 2600 Organizational Communication	3

Two additional upper-division electives (3000- or 4000-level courses):
4000-level courses may be taken twice (only twice) with different topics. 6

Up to 8 credit hours of independent study and 6 hours of internships may be taken. These are upper-division elective hours but do not count toward major requirements. Eligible students interested in graduating with department honors should contact the department's honors coordinator as soon as possible.

The department encourages its majors to take related courses in: business; English; ethnic studies; journalism and mass communication; linguistics; philosophy; political science; sociology; speech, language, and hearing sciences; and theatre and dance.

Students who wish to major in communication should meet with a department advisor, where they will be advised of any changes in this list of requirements.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of "adequate progress" as it is used here only refers to maintaining eligibility for the four-year

guarantee; it is not a requirement for the major. To maintain adequate progress in communication, students should meet the following requirements:

Declare a communication major by the beginning of the second semester.
Complete COMM 1210, 1300, and 1600 by the end of the third semester.
Majors should register at designated times.

Graduate Degree Program

The department offers programs of study leading to the MA and PhD in communication. Interested students should contact the department for current admission and degree requirements, or see comm.colorado.edu.

Comparative Literature Program

Degrees MA, PhD

The Comparative Literature Program enables students to study the production, reception, and interpretation of written texts and related media from a comprehensive perspective involving at least two national literatures. Comparative literature has long crossed national linguistic frontiers. The discipline today questions the very basis of such boundaries, exploring the construction of national literatures, languages, and traditions and, insofar as this can be read in and out of verbal and other media, of nations and national consciousness itself. Extending its reflections on limits still further and in dialogue with other disciplines, the interpretive perspectives of comparative literature are not only crossdisciplinary, multi-media, and multilingual, but global. The aim is to analyze the world's cultures both as expressions of the various interdependent histories that have framed them, and as manifestations of the multifacetedness inscribed in the different forms by which human beings shape and communicate their experience. These forms can range from a single literary genre, period, movement, or tradition to larger concepts and constructs such as gender, sexuality, theory, or culture. Areas of analysis may also include authorship and the literary work, literacy, genre, literary history, and the canon. Students wishing to pursue graduate work in comparative literature should read the guidelines for the MA and PhD degrees in this field. These are available at complit.colorado.edu.

Master's Degree

Prerequisites. In addition to an undergraduate major in a relevant field, students applying for admission to the MA program in comparative literature should have completed three years of college-level study or its equivalent in one foreign language. Students are also encouraged to begin study of a second foreign language before applying.

Course Work Requirements. Candidates for the MA in comparative literature must take a total of 10 courses (representing 30 credit hours). Half the required credit hours are in courses offered by the Comparative Literature Program. At least 9 hours are in the department of the student's primary literature, and an additional 6 hours are in the department of the secondary literature.

Examinations and Thesis. Candidates for the MA in comparative literature must submit and defend orally a master's thesis.

Doctoral Degree

Prerequisites. Students are accepted for doctoral study in comparative literature directly from the BA or after completion of an MA in comparative literature, a national literature, or a related discipline. All students seeking admission to doctoral

study must be prepared to take graduate level courses in two foreign languages. The doctoral program does not provide time for remedial language work. Students unable to meet this requirement should consider applying for the MA program.

Course Work Requirements. Students who receive their MA in comparative literature from CU-Boulder are required to take a minimum of 48 hours of graduate course work, including 30 hours completed during the preparation for the MA and 18 hours completed during the first year of doctoral studies. Students receiving the MA from another institution or in another subject are required to take a minimum of 36 credit hours (12 courses) for the degree. Students who enter the PhD program directly from a BA program are required to take a minimum of 48 hours of graduate course work.

Examinations and Course Work. All PhD candidates take a comprehensive examination and a final examination. The final examination is an oral defense of the doctoral dissertation, and is conducted by the student's advisory committee after all other requirements for the PhD have been completed.

Distributed Studies Program

Degree BA

Admission to the distributed studies track requires completion of 60 credits or more and permission from the dean's office. The distributed studies track is intended for students who have accumulated a significant number of credit hours toward the completion of one or more majors and are not eligible to continue in those majors.

An individually structured track also is available in the distributed studies program. Students pursuing the individually structured track must write and defend a thesis based on original scholarly or creative work.

For more information, contact the College of Arts and Sciences Academic Advising Center in Woodbury 109.

Ecology and Evolutionary Biology

Degrees BA, MA, PhD

Ecology is concerned with describing and understanding the abundance, distribution, and interactions of organisms. Evolutionary biology provides a unifying conceptual framework for all of biology, including the characteristics of organisms and biological diversity. Ecology and evolutionary biology are fundamental, broad, interrelated, and interdisciplinary areas of scientific inquiry. Study in both areas is necessary for understanding the complex biological issues of today, and for solving some of the world's most demanding problems. Students of EBIO apply the scientific method to issues in ecology and evolution, with an emphasis on critical evaluation of the literature; generating and testing hypotheses; designing and carrying out experiments to test predictions; and articulating, in oral or written form, the results of investigations.

In the light of the broad importance of ecology and evolution for understanding biology, the undergraduate EBIO degree emphasizes knowledge of:

- The ecology of organisms, populations, and communities
- The distribution and function of terrestrial, freshwater, and marine ecosystems
- Principles and patterns of evolution, including natural selection and the history of life on Earth

- Comparative, systematic, evolutionary, and environmental aspects of botany, microbiology, and zoology
 - Adaptation of organisms to the physical and biotic environment
 - Animal behavior
 - Molecular evolution and population genetics
 - Developmental biology and the evolution of development
 - Conservation biology
 - The relevance of mathematics, chemistry, and physics to biology
 - The development of biological thought
EBIO majors include:
 - students who have strong and compelling interests in the natural world and who are interested in making a difference
 - students interested in pursuing advanced graduate degrees in science, especially biology
 - students intending to work in the areas of natural resources management, environmental consulting, environmental law, environmental science, science teaching and scientific journalism, among other professions
 - students with a passion to make a difference in the lives of others by improving their physical and mental health
 - students with an interest in studying biology, from the molecular to ecosystem levels
 - students fascinated with the complexity and diversity of nature
- A bachelor of arts degree in EBIO provides excellent training, education, and experience for admission and success in graduate or medical school
- because the educational program emphasizes a broad-based training in the physical, chemical, and biological sciences
 - because ecology and evolution are subjects of central importance for understanding our place in nature
 - because “nothing in biology makes sense except in the light of evolution” (T. Dobzhansky)
 - because of the department’s strong commitment to providing excellent educational and research opportunities for students

Bachelor’s Degree Program

Students in EBIO gain a well-rounded education in the sciences and mathematics, with an emphasis in ecology and evolutionary biology. In addition to the general College of Arts and Sciences requirements, students in EBIO must complete 15 credits selected from chemistry, physics, and mathematics, plus a statistics course and 38 hours of course work in EBIO. Up to 12 credit hours of courses taken in other departments may be counted toward the 38 credit hours required for the EBIO major. A list of acceptable courses can be obtained from the EBIO Undergraduate Advising and Resource Center. All required courses must be completed with a grade of C- or better. Students with scores of 4 or 5 on the AP biology test receive 8 hours of credit and are exempt from the general biology sequence (EBIO 1210 and 1220 General Biology 1 and 2, and EBIO 1230 and 1240 General Biology Lab 1 and 2). Students who score in the 66th percentile or higher on the CLEP test in biology receive 6 hours of credit and are exempt from EBIO 1210 and EBIO 1220. EBIO majors with transfer credit in biology from other institutions or advanced placement credits must consult with the EBIO Under-

graduate Advising and Resource Center. Transfer students must complete at least 12 upper-division (3000-level or above) EBIO courses on the Boulder campus.

Required Courses

Semester Hours

Biology sequence (EBIO 1210 and 1220 General Biology 1 and 2, and EBIO 1230 and 1240 General Biology Lab 1 and 2)	8
EBIO 2040 Principles of Ecology	4
EBIO 2070 Genetics: Molecules to Populations	4
EBIO 3080 Evolutionary Biology	4

One EBIO laboratory or field course, 3000 level or above. Possible choices include:

EBIO 3170/3175 Arctic and Alpine Ecology
 EBIO 3240 Animal Behavior
 EBIO 3400 Microbiology
 EBIO 3540 Functional Plant Biology
 EBIO 3630 Parasitology
 EBIO 3770 Animal Diversity: Vertebrates
 EBIO 3850 Animal Diversity: Invertebrates
 EBIO 4100 Mountain Research Station
 EBIO 4500 Plant Biodiversity and Evolution
 EBIO 4520 Plant Systematics
 EBIO 4510 Plant Anatomy and Development
 EBIO 4660 Insect Biology
 EBIO 4750 Ornithology
 EBIO 4760 Mammalogy

EBIO 4000-level or above (at least 6 credits). * Possible choices include:

EBIO 4020 Stream Biology
 EBIO 4030 Limnology
 EBIO 4060 Landscape Biology
 EBIO 4140 Plant Ecology
 EBIO 4100, 4110, or 4120 Advanced Ecology
 EBIO 4160 Introduction to Biogeochemistry
 EBIO 4175 Ecosystem Management of Public Lands
 EBIO 4180 Ecological Perspectives on Global Change
 EBIO 4290 Molecular Systematics and Evolution
 EBIO 4350 Biological Field Studies
 EBIO 4410 Biometry
 EBIO 4570 Advanced Plant Physiology
 EBIO 4630 Field Techniques
 EBIO 4660 Insect Biology
 EBIO 4740 Biology of Amphibians and Reptiles
 EBIO 4750 Ornithology
 EBIO 4760 Mammalogy
 EBIO 4800 Critical Thinking
 EBIO 4840, 4870 Independent Study/Research

EBIO electives 5-6

Statistics: MATH 2510, MATH 2520, IPHY 2800, PSYC 3101, or EBIO 4410 (of these, only EBIO 4410 counts toward the 38 hours of EBIO credit required for the major.)

* These 6 hours must be taken in the EBIO department on the Boulder campus, may include critical thinking courses, and may include a maximum of 3 hours of independent study or independent research.

Ancillary Courses

15 hours selected from the following:

Chemistry: CHEM 1071, 1113/1114, 1133/1134 or CHEM 1151 and 1171

Physics: PHYS 1110, 2010, 2020, or PHYS 1120 and 1140

Math: MATH 1300, 1310, 2300, or MATH 2520 or equivalent

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in ecology and evolutionary biology, students must meet the following requirements:

Declare the EBIO major and begin course work in the major in the first semester of the freshman year.
 Sign up during the first semester with the departmental undergraduate services coordinator as a participant in the guarantee program.
 Complete additional requirements for the four-year guarantee that are described on a handout available in the EBIO Undergraduate Advising and Resource Center.

Minor Program

A minor is offered in ecology and evolutionary biology. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information, see www.colorado.edu/artsscience/students/undergraduate/academics/minors.html.

Concurrent BA/MA Program

A combined BA and MA degree with thesis is offered for the highly motivated undergraduate major who is interested in completing a bachelor and master's degree within five years. Applications for the BA/MA degree are considered on a competitive basis. Freshmen, sophomores, and juniors are eligible. Applicants must have an overall GPA of 3.00 or higher in the EBIO major and the support of a faculty research advisor. Applications are available from the EBIO graduate coordinator, and are due on October 15 and March 15.

Candidates for this degree must complete all college core requirements by the end of the senior year. To be awarded BA and MA degrees, students must maintain a GPA of 3.00 or better and complete at least 144 credit hours. The degree requires 24 hours of graduate credit at the 5000-level or above and 4–6 hours of thesis credit. In addition to a thesis based on original research, the candidate is required to take a comprehensive examination in three subject areas by the end of the senior year. The final examination consists of a thesis defense to the thesis committee; it should be scheduled by the end of the fifth year.

Students interested in this degree are encouraged to consult with the director of the program early in their undergraduate career. The department considers this a terminal degree, and no financial support is available from the department for students enrolled in this program.

Graduate Degree Programs

The Department of Ecology and Evolutionary Biology offers degree programs leading to the MA and PhD in a wide range of areas of biological inquiry, as generally described above in the description of the undergraduate program. Modern laboratory facilities for graduate study are in the Ramaley biology building. In addition, the department has strong ties with the University Museum, the Institute of Arctic and Alpine Research (INSTAAR), the Institute of Behavioral Genetics (IBG), the Cooperative Institute for Research in Environmental Sciences (CIRES), the Environmental Studies Program (ENVS), and the Departments of Integrative Physiology, Geology, Geography, Anthropology, and Molecular, Cellular, and Developmental Biology. INSTAAR operates the Mountain Research Station, an alpine field laboratory 25 miles from campus. Graduate research support is available in the form of fellowships, teaching assistantships, and research assistantships.

Graduate Admission

Admission information may be obtained from the departmental office or from the CU-Boulder web page. Completed applications are due in the departmental office by December 31 for consideration for fall semester admission. A complete applica-

tion includes a statement of intent, letters of recommendation, official transcripts, and GRE scores. Applications for spring semester admission are not accepted. Students are required to have a bachelor's degree in biology or an equivalent. Students admitted without a sufficient background in chemistry, physics, or mathematics are expected to make up those deficiencies during their first year of graduate study.

The MA I Program

A master's degree with thesis is offered for students interested in continuing their training as professional biologists. For some students the MA I provides a basis for work on a PhD at the University of Colorado or at another institution, although the MA is not required for admission to the PhD program. Prospective students are urged to consult with faculty advisors before December 31 to see whether application for the MA I or PhD program is appropriate. Applications for the MA I program are considered on a competitive basis; the department only admits students for whom financial support is available. Thirty hours of course work are required for the degree, at least 24 of which must be at the 5000 level or above, including 4–6 hours of thesis credit. The thesis topic is presented to the thesis committee as a written research proposal. The MA I final examination consists of the thesis defense; it should be scheduled within two years for full-time students.

The MA II Program

A non-thesis master's degree program is offered for students who are interested in obtaining a greater knowledge of ecology and evolutionary biology but who are not interested in degree work beyond the MA. This program is suitable for secondary school teachers and others whose career choices do not require a research thesis. A faculty sponsor is required before admission can be granted; applicants are encouraged to communicate with potential sponsors before December 31. Financial support is not guaranteed for MA II students. Thirty credit hours of course work are required for the degree, at least 24 of which must be at the 5000 level or above, including 4 hours of independent research leading to a paper to be presented to the faculty sponsor. A final oral exam may be required by the student's MAII faculty advisory committee.

Doctoral Program

The PhD is a research degree, involving the production of a major piece of original research (the dissertation). Most recipients of the PhD from EBIO go on to teach and conduct research in a university setting, or to do research and pursue leadership roles in private or governmental institutions. Applicants are encouraged to communicate directly with potential thesis advisors and visit the department before completing the application. Applications are considered on a competitive basis and financial support in the form of fellowships or assistantships usually is made available. Students are expected to form an advisory committee of five faculty members (including one from outside EBIO) soon after beginning their studies. This committee aids the student in designing a research program and in making choices concerning course work. The PhD comprehensive exam is administered by the student's dissertation committee and must be taken within the first five semesters of degree work. It consists of a written research proposal on the dissertation topic, a formal presentation summarizing the student's research progress, and an oral examination centered on the student's research. Upon completion

of the dissertation, the student will be given a final examination administered by the dissertation committee.

A total of 30 hours of course work must be taken, although independent study credit may be included in this total. A total of 30 hours of PhD dissertation credits must also be taken. PhD students are required to teach at least one year, generally by serving as a departmental teaching assistant.

Economics

Degrees BA, MA, PhD

The undergraduate degree in economics emphasizes knowledge and awareness of:

- the conditions for efficiency in free market production and exchange;
- contemporary theories concerning economic growth, inflation, unemployment, distribution of income, and international environment;
- specialized fields of economics, such as international economics and finance, natural resources and environment, the economics of gender and discrimination, and public economics;
- the descriptive statistics commonly used by economists; and
- the institutional characteristics of the U.S. economy, and how these differ from those in other economies.

In addition, students completing the degree in economics are expected to acquire the ability and skills to:

- apply the tools of microeconomic theory to reach sound conclusions for simple economic problems;
- follow arguments concerning macroeconomic theory, to distinguish between sound and fallacious reasoning, and understand how differences in policy prescription may arise;
- perform statistical analysis such as multiple regression and understand similar analyses performed by others; and
- communicate economic reasoning in writing, understand similar writing by others, and appreciate the diversity of views that may reasonably exist about economic problems.

Bachelor's Degree Program

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

<i>Required Courses</i>	<i>Semester Hours</i>
Total Economics Credits	32-33
ECON 1000 Introduction to Economics or ECON 2010 and 2020 Principles of Microeconomics and Macroeconomics.	4-8
ECON 1078 and 1088, Math Tools for Economists I and II, or MATH 1071 and 1081 or MATH 1071 and MATH 1300 Analytic Geometry and Calculus 1 or Mathematics at or above the level of MATH 1300 (or APPM 1350) plus any one mathematics course above the level of MATH 1300.	6-8
ECON 3070 Intermediate Microeconomic Theory and ECON 3080 Intermediate Macroeconomic Theory	6
ECON 3818 Introduction to Statistics with Computer Applications	4
ECON 4818 Introduction to Econometrics or ECON 4848 Applied Econometrics.	3
Electives in upper-division ECON courses (15 credit hours of upper-division ECON courses if ECON 1000 is substituted for ECON 2010 and 2020)	12

Note: Transfer students majoring in economics must complete at least 12 credit hours of upper-division economics courses at CU-Boulder.

Graduating in Four Years

Consult the "Four-Year Guarantee Requirements" for information on eligibility. The concept of "adequate progress" as it

is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in economics, students should meet the following requirements:

Declare economics as a major by the beginning of the second semester.
Complete ECON 2010 and 2020 or ECON 1000 and all mathematics requirements by the end of the fourth semester.

Complete ECON 3070, 3080, and 3818, as well as 4818 or 4848 by the end of the sixth semester.

Complete 12 credit hours (15 if ECON 1000 is substituted for ECON 2010 and 2020) of additional upper-division economics credit by the end of the eighth semester.

Special Emphasis Options

The Economics Department offers four tracks for students who have a relatively high GPA and want to focus their upper-division course work in a specific area of interest. Interested students must have completed at least 6 hours of economics course work at CU in order to declare the special emphasis. Students must have a minimum of 3.000 GPA in economics course work at CU by the time of declaration and completion of the special emphasis. Requirements are listed on the economics website at www.colorado.edu/economics.

Business Emphasis

The business emphasis is designed for students interested in sampling the business core courses. This option allows students to supplement their economics major with core business skills in areas of accounting, finance, marketing, and management. This option may be of interest to students planning careers in business or intending to pursue graduate studies in business.

International Emphasis

The international emphasis is designed for students who have an interest in courses with an international perspective both within economics and outside the department. Courses in international trade and finance are combined with selections of international courses in related social science disciplines. This program may be of particular interest to students seeking careers in international business, international organizations, nongovernmental organizations, and government agencies.

Public Economics Emphasis

The public economics emphasis is designed for students who have an interest in taking courses with a public policy perspective both within economics and outside the department. Courses in public economics are combined with selections of policy oriented courses from various social sciences. This emphasis is recommended for students with interests in public policy seeking careers in local, state, national, or international agencies.

Quantitative Emphasis

The quantitative emphasis is designed for well-qualified majors with an interest in either theoretical or applied mathematics. Economics courses in quantitative methods are combined with courses from the Department of Mathematics and the Department of Applied Mathematics. This program may be of interest to students planning to pursue graduate studies in economics or those seeking a career in applied quantitative research.

Minor Program

A minor is offered in economics. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or

school. For more information, see www.colorado.edu/artssciences/students/undergraduate/academics/minors.html.

Economics Honors Program

The honors program in economics provides an opportunity for highly motivated majors to undertake individualized research and to graduate with honors (cum laude, magna cum laude, summa cum laude) in economics. Economics majors with senior standing and both economics and overall GPAs of 3.40 or better are eligible to participate. Participants enroll in the economics honors seminars, which provide instruction in research methodology essential to the preparation of the honors thesis. Students interested in the economics honors program should contact the departmental honors advisor during their junior year.

Graduate Degree Programs

Master's Degree

The Department of Economics does not currently offer a stand-alone MA degree program, although students enrolled in our PhD program will earn their MA degree as they progress toward their doctorate.

Doctoral Degree

Admission. An applicant for admission as a regular degree student must:

1. Hold a baccalaureate degree from a college or university of recognized standing, or have done work equivalent to that required for such a degree and equivalent to the degree given at this university. The undergraduate grade point average must be at least 2.75 (2.00=C).
2. Have completed intermediate microeconomic and macroeconomic theory courses, 6 semester hours of calculus at the university level or equivalent, and statistics.
3. Submit Graduate Record Examination (GRE) scores for aptitude (verbal and quantitative). International applicants whose native language is not English must also submit a TOEFL score with a speaking component, even if they have attended college in an English speaking country.
4. Arrange for the submission of three letters of recommendation.

Graduate study in economics is quantitative and analytical. Students should be comfortable with basic calculus (derivatives and integration), linear algebra, matrix algebra, and basic statistics.

The university deadline for international applications is December 1 for the following fall semester. The department encourages international applicants to comply with this deadline. Late applications may be considered. However, they may be at a disadvantage with respect to the award of financial aid. United States applicants who wish to be considered for financial assistance should apply by January 15. Students must begin the program in a fall semester.

Degree Requirements. Full-time students are expected to complete all requirements for the PhD degree within five years of entering the program (the maximum time allowed by the Graduate School is six years). The schedule of required courses below is centered on this expectation. Failure to make timely and satisfactory progress toward the degree may result in loss of financial assistance or dismissal from the program.

Course Requirements

1. Prior to beginning the program, students must demonstrate an acceptable degree of competence in differential and in-

tegral calculus and optimization techniques. (This requirement is in addition to the six hours of calculus required to apply to the program.) Such competence is normally demonstrated by taking ECON 7800 (an intensive, two-week preparatory course offered immediately prior to each fall semester) and passing its final examination with a grade of B- or better. No credit is offered for this course.

Other methods by which the required competence may be demonstrated are:

- Obtain a letter from the Director of Graduate Studies (DGS) confirming that the student has had sufficient mathematical preparation in prior studies;
- Pass the final examination in ECON 7800 at a level of B- without taking the course; or
- Pass a course which is substantially equivalent to ECON 7800 at another accredited graduate institution.

Students who fail the examination in ECON 7800 will be given a second opportunity to pass an equivalent examination two weeks later. Students who fail this examination on the second attempt must enter into extensive consultation with the DGS.

2. There are seven core courses in the PhD program: ECON 7010, 7020, 7030, 7040, 7050, 7818, and 7828. Course requirements beyond the core courses include:
 - Seven elective courses at the 8000 level. Basic fields of specialization are econometrics, economic development, economic history, industrial organization, international trade and finance, labor and human resources, natural resources and environmental economics, public economics, and urban and regional economics. Ordinarily, a student would take two elective courses in a basic field of specialization in preparation for a dissertation.
 - 6 credit hours in a research colloquium.
 - At least 30 hours of dissertation credit.
3. At least four of the core courses must be taken on the Boulder campus. Courses transferred for credit must be approved by the DGS. After entry into the PhD program, all remaining courses must be taken on the Boulder campus.
4. All courses for PhD credit taken on the Boulder campus must be passed with a grade of B- or better. A student who receives a grade of C+ or lower in a core course must retake that course the following academic year.
5. No more than 12 credit hours (exclusive of dissertation credit) from a single faculty member may be counted toward PhD requirements. Independent study is allowed only to satisfy elective requirements. No more than 6 credit hours of independent study may be applied to the PhD degree and no more than 3 credit hours of independent study may be taken from a single faculty member. In consultation with the DGS, students may choose to take up to two graduate offerings in other departments as elective courses.
6. Course requirements in the first and second years include:

First Year

Fall Semester

- ECON 7010 Microeconomic Theory 1
- ECON 7020 Macroeconomic Theory 1
- ECON 7818 Mathematical Statistics for Economists

Spring Semester

- ECON 7030 Microeconomic Theory 2
- ECON 7040 Macroeconomic Theory 2
- ECON 7828 Econometrics

Second Year

Fall Semester

- ECON 7050 Advanced Economic Theory

Elective course
 Elective course
Spring Semester
 Elective course
 Elective course
 Elective course

7. Course requirements in the third year include
 ECON 8209 (fall) and ECON 8219 (spring), which constitute the third-year research colloquium
 Remaining elective course(s)
 Dissertation research, if practicable.
8. Course requirements in the fourth year consist of relevant dissertation credit hours.

Preliminary Examinations. Written preliminary examinations in microeconomic theory, macroeconomic theory, and econometrics must be taken in the August examination period following the successful completion of the core courses in these areas. Under most circumstances this period would be prior to the second year. An examination attempted and failed must be taken again and passed in the next examination period. A second failure results in dismissal from the program, subject to appeal under extraordinary circumstances to the GCRC. In no case are attempts beyond the third granted.

Students who have failed any of the core courses are ineligible to take the preliminary examination in the area of failure. These students must retake the failed course(s) in the following year and attempt the relevant preliminary examination in the first scheduled examination period thereafter.

Students must pass all preliminary examinations within two-and-one-half years of beginning the PhD program.

MA Degree. An MA degree will be awarded to students who have successfully completed all core courses in the PhD program, completed 30 hours of graduate credit, and performed satisfactorily on the PhD preliminary examinations.

Third-Year Research Colloquium. Each third-year student is required to register for 3 credit hours per semester in the research colloquium, which will meet weekly under the direction of a faculty member. The purpose of the colloquium is to provide students the opportunity and guidance to complete the required third-year paper and to facilitate progress toward the dissertation stage. Meetings in the fall semester allow preliminary discussions of the research and lectures in research methodology, data sources, and the like. In the spring semester each student presents work in progress in the colloquium.

Under some circumstances, students may delay taking this colloquium until the fourth year with the approval of the DGS.

Comprehensive Examinations. Students must take an oral comprehensive examination before admission to candidacy. This examination may occur either at the time of the student's research presentation in ECON 8219 or at a later date and will encompass the materials in the presentation and all relevant course work completed by the candidate. At least two faculty members from the student's basic dissertation committee, as well as three additional faculty members, must certify the acceptability of the performance on the oral examination. Students who fail this comprehensive examination will be given a second chance during the following fall semester. For those students for whom the presentation in ECON 8219 does not serve as the oral comprehensive examination, a separate oral examination must be scheduled before admission to candidacy.

Admission to Candidacy and Dissertation Requirements. Students are formally admitted to candidacy for the PhD degree after

completing all course requirements and all preliminary and comprehensive examinations and after earning four semesters of residency (see the front section of this catalog for details). After admission to candidacy, students must register each fall and spring semester for dissertation credit (ECON 8999) until attaining the degree; the accumulated credit for the thesis must total at least 30 semester credit hours to attain the degree. A student must prepare a written dissertation and successfully pass an oral examination before a dissertation committee and other interested persons on its content before receiving the degree. The minimum residence requirement for the PhD degree is six semesters of scholarly work beyond the bachelor's degree.

Administration: Examining Committees for Examinations. Examining committees for preliminary examinations consist of three members of the economics department who teach in the relevant area. Examining committees for comprehensive examinations consist of at least two members of the economics department who teach in the relevant area, with a third member appointed from another department in cases where the student has structured a field including a course from that department.

Preliminary Examinations.

1. Written examinations are numbered so that insofar as possible the identity of the student is unknown. Each faculty member grades independently and writes no comments in the examination booklet. A meeting of the graders is called by the chair of the examination committee and the committee grade is submitted to the graduate program coordinator. The possible grades include *High Pass* or *Distinction* (used sparingly), *Pass*, and *Fail*.
2. Once examination grades are determined, a meeting of the examination committee is held to discuss and report examination results. In cases where there is a question of *pass* or *fail* on any exam, if two of the members of the examination committee vote affirmatively, a grade of *pass* will be recorded; if two of the members of the grading committee vote negatively, a grade of *fail* will be recorded. If the vote of the grading committee is tied and the third member is absent (but will be available within seven days), the decision to pass or to fail is to be made by the reconvened grading committee. If fewer than two members of the grading committee are present and voting, or if the vote of the grading committee is tied and the third member is not available within seven days, the decision to pass or fail will be made by the Graduate Curriculum and Review Committee (GCRC); in such circumstances the grade is reported as *pass* or *fail*, based on a majority vote.
3. When examination results are reported, a student who failed should have an opportunity to discuss his performance with a member of the examining committee.

Dissertation Guidelines.

1. To facilitate progress on the dissertation, a "basic committee" consisting of a supervisor and two other members who are most interested in the proposed research is organized by the student, in conjunction with the DGS, during the third year. Any subsequent changes in this committee (or of the full committee later) must be approved by the supervisor and recorded with the graduate program coordinator after all basic committee members have been consulted.
2. By January 1 of the academic year following the research colloquium, each student must submit a written dissertation proposal and conduct an oral defense of that proposal before his or her basic committee. A dissertation proposal

form must be signed by each member of the basic committee and submitted to the graduate program coordinator as well by this date. An acceptable proposal must include a statement of purpose and a justification for the importance of the work; a full literature review and a statement of how this research will contribute to the literature; and a detailed description of the methodologies to be used and of the data bases, if appropriate.

3. A successful proposal defense will result in a letter from the basic committee to the candidate indicating that successful completion of the planned research will constitute an acceptable dissertation. Students who fail to present a proposal in a timely fashion will be denied a passing grade on dissertation credit for which they are registered.
4. Ordinarily, within three months of the dissertation proposal presentation, the DGS, in consultation with the dissertation supervisor, appoints remaining members of the full dissertation committee. A full dissertation committee consists of at least four faculty members from the economics department and one member from outside the department.
5. Normally students are expected to complete their dissertations by the end of their fifth academic year. The graduate program coordinator provides details on submission of the dissertation and arrangements for the oral defense. After the defense, minor changes are agreed upon between candidate and supervisor. If major changes arise, the candidate and supervisor will consult with the DGS on a future course of action.

Yearly Review. Each spring the DGS and the department's Graduate Curriculum Committee meet to review the progress of each student in the PhD program. The regulations herein serve as a standard of minimal acceptable progress.

English

Degrees..... BA, MA, MFA, PhD

The undergraduate degree in English emphasizes knowledge and awareness of:

- canonical and non-canonical works of English and American literature;
- the general outlines of the history of British and American literature;
- literary theories, including recent theoretical developments; and
- the social and historical contexts in which the traditions developed.

In addition, students completing the degree in English are expected to acquire the ability and skills to:

- analyze literary texts;
- interpret texts on the basis of such analysis;
- relate analyses and interpretations of different texts to one another; and
- communicate such interpretations competently in written form.

The undergraduate degree in creative writing emphasizes knowledge and awareness of:

- literary works, including the genres of fiction, poetry, playwriting, and screenwriting, and the major texts of contemporary writers;

- literary history, including the origins and development of genres, major writers of the past, and the role of the writer in society; and
- literary analysis, including theories of literary composition and critical theory.

In addition, students completing the degree in creative writing are expected to acquire the ability and skills to:

- write in various poetic modes and styles;
- write in various fictive styles;
- write in various nonfiction styles; and
- evaluate other students' written work.

Bachelor's Degree Programs

English courses taken on a *pass/fail* basis do not fulfill major requirements. Independent study credit hours cannot fulfill a major requirement unless that requirement is not being offered or available within the year that the student graduates. A minimum of 12 hours of upper-division course work for the English major must be completed on the Boulder campus. English courses taken at other colleges must be evaluated by the Department of English. Courses taken in other departments (except approved cross-listed courses) normally do not count toward the English major.

NOTE: For the Advanced Placement examination in English literature and composition, students will receive credit for ENGL 1500 for an exam score of 4 or 5.

Students must complete the general requirements of the College of Arts and Sciences and one of the two programs listed below.

Literature

Students are subject to the major requirements in effect at the time they formally declare the major. A minimum of 36 credit hours must be earned in the Department of English, 18 of which must be upper division. Requirements may be fulfilled by taking specific courses designated by the Department of English.

<i>Required Courses</i>	<i>Semester Hours</i>
ENGL 2000 Literary Analysis	3
ENGL 2010 Introduction to Literary Theory	3
One course from each: backgrounds to literature in English, British literature to 1660, British literature after 1660, and American literature	12
One course from both categories: advanced theory/genre studies/popular culture and multicultural/gender studies	6
ENGL 4038 Critical Thinking in English Studies	3
Three elective courses in English	9

In addition to the 36 hours required for the major, another 9 hours may be taken, for a maximum of 45 hours in English.

The recommended sequence of courses to be taken during the initial year of the literature program is ENGL 2000 and an English elective for the first semester, and ENGL 2010 and a 2000-level ENGL course for the second semester.

Creative Writing

Students are subject to those major requirements in effect at the time they formally declare the major.

A minimum of 36 credit hours must be earned in the Department of English, 18 of which must be upper division.

<i>Required Courses</i>	<i>Semester Hours</i>
ENGL 2000 Literary Analysis	3
ENGL 2010 Introduction to Literary Theory	3

One course from any two of the following: backgrounds to literature in English, British literature to 1660, British literature after 1660, and American literature.	6
One course from advanced theory/genre studies/popular culture or multicultural/gender studies	3
ENGL 4038 Critical Thinking in English Studies.	3
Six creative writing workshops, three of which must be upper division	18

In addition to the 36 hours required for the major, another 9 hours may be taken, for a maximum of 45 hours in English.

The recommended sequence of courses to be taken during the initial year of the creative writing program is ENGL 2000 and ENGL 1191 for the first semester, and ENGL 2010 and a 2000-level workshop for the second semester.

Admission to the creative writing major is not automatic. Students must have completed at least 6 hours of writing within the program before being considered; for transfer students, 3 hours of creative writing can be transferred in. In addition, they must submit two copies of a manuscript (at least 7 poems, 20 pages of fiction, or a short stage or screen play) to the admissions committee for approval. Students should apply no later than the second semester of their junior year.

In order to take a workshop beyond the 2000-level, students who have not been formally admitted to the creative writing program must submit a manuscript to the Department of English prior to registration. Each workshop may be taken three times for credit. Students may not take two poetry or two fiction workshops in the department in the same semester.

Minor Program

A minor program is offered in creative writing. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information, see www.colorado.edu/English/crw/course/index.html.

Advising

The associate chair for undergraduate studies oversees the department advising program, working in conjunction with the College of Arts and Sciences Academic Advising Center. Upon declaring an English major, students are assigned to one of three primary English advisors. The primary advisors are available to meet with students by appointment or on a drop-in basis. The primary advisors monitor and evaluate student progress in completing the arts and sciences core curriculum and major requirements, evaluate transfer credit, preapprove study abroad course work, and certify students for graduation. The department encourages students to meet with their primary advisor at least once each semester to update their student file and ensure that they are making satisfactory progress in meeting the core and major requirements.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in English, students should meet the following requirements:

- Declare the English major and begin course work in the major no later than the beginning of the second semester.
- Successfully complete one-third of the hour requirements for the major by the end of the fourth semester. For literature track majors, this includes ENGL 2000, 2010, an English elective, and any 2000-level course for the major. For creative writing track majors, this includes ENGL 2000, 1191, 2010, and 2021 or 2051, as well as formal admission to the program.
- Successfully complete two-thirds of the hour requirements for the major by the end of the sixth semester.

Successfully complete the remaining major requirements by the end of the eighth semester.

Departmental Honors

Students interested in pursuing a special program leading to graduation with departmental honors should confer with the associate chair for undergraduate studies as soon as possible, but definitely no later than the beginning of spring term in their junior year.

Students Who Contemplate Teaching

Sheets listing the curriculum required for a teaching license for secondary schools may be obtained in Education 151. Since fulfilling requirements for both education and English makes a very tight schedule, students should seek early advising to complete their college requirements.

Undergraduate English Awards and Prizes

The Alex McGuiggan Scholarship was established in spring 2010 to recognize the achievement of an undergraduate English major studying creative writing with a preference for students whose strength is in writing poetry. The scholarship was established in memory of Alex McGuiggan, an English major at the University of Colorado Boulder.

The Katherine Lamont Scholarship. The Lamont scholarship is a variable annual award to a continuing English major in recognition of sustained excellence and exceptional scholarly performance in the major.

The Harold D. Kelling Essay Prize. The Kelling prize is a variable cash award for the best essay on literature submitted by an undergraduate currently enrolled in the university. The essay must have been written for an English class at CU-Boulder and should be submitted to the English department before March 15.

The Jovanovich Imaginative Writing Prize. The Jovanovich prize is an annual award for excellence in poetry, fiction, playwriting, or nonfiction prose. Information is available in Hellems 111.

Graduate Degree Programs

Admission Requirements

Master's Degree in English. The MA program offers theory and literary history combined with a rigorous training in critical analysis. Applicants interested in *English literature* should have satisfactory scores on the verbal and analytical writing sections of the GRE General Test. In addition, at least 24 credit hours in English (exclusive of composition, creative writing, and speech) are normally required for admission. Fifteen of the 24 hours must be in upper-division courses.

Master of Fine Arts Degree in Creative Writing. Applicants interested in creative writing must submit satisfactory scores on the verbal and analytical writing sections of the GRE. In addition, a BA degree, with an English major or at least 18 credit hours in English, is normally required. Each student must submit a manuscript of at least 10 pages of poetry or a minimum of 25 pages of fiction, nonfiction prose (other than literary criticism), or a screen or stage play for evaluation.

Doctoral Degree in English. Students must present satisfactory scores on the verbal and analytical writing sections of the GRE General Test and on the Advanced Literature Test, and must have either an MA degree in English or at least 30 hours of post-graduate English course work beyond the BA degree. Entering graduate students with no degree beyond the BA are normally admitted to the MA program. They may later apply for admission to the PhD program.

Degree Requirements

Students wishing to pursue graduate work in English should note requirements for advanced degrees in the Graduate School section and write the department for a more complete description of graduate programs in English, or visit www.colorado.edu/English.

Environmental Studies

Degrees..... BA, MS, PhD

The environmental studies major is administered through the Office of Environmental Studies and draws from curricula in the earth and natural sciences as well as the social sciences. See the program office (Benson Earth Sciences 246A) for details of the program requirements.

The bachelor's degree program is composed of a required common curriculum that exposes all students to the basics of physical and social environmental sciences, as well as a choice among three specializations: climate and energy, natural resources and the environment, or sustainable development.

The undergraduate degree in environmental studies emphasizes knowledge and awareness of:

- the causes, scale, and relative importance of the major environmental problems in the United States and the world;
- the complexity of factors relating to human interaction with the environment, especially the fact that environmental problems have both human and biophysical components; and
- the general principles of human-environmental interaction, global habitability and environmental change, and sustainable human societies.

Environmental studies is an interdisciplinary program, drawing on courses and expertise from over a dozen departments. Students who also wish to pursue a traditional, discipline-based education are encouraged to double major or complete a minor in one of the participating departments. An internship program is offered to provide the upper-level student with practical experience working in the field.

Students interested in environmental studies may want to consider the Baker Residential Academic Program. See Residential Academic Programs for more information.

Bachelor's Degree Programs

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

The degree program in environmental studies is undergoing revision. Students should consult the website envs.colorado.edu or the academic advisor in Benson 246.

Common Curriculum

Students are expected to complete the following common curriculum:

<i>Required Courses</i>	<i>Semester Hours</i>
-------------------------	-----------------------

ENVS 1000 Introduction to Environmental Studies.	4
----------------------------------------------------------	---

Biology Sequence

EBIO 1030/EBIO 1040 and EBIO 1050 Biology: A Human Approach and lab or EBIO 1210/EBIO 1220 and 1230/1240 General Biology and labs. 7-8

Chemistry or Physics

CHEM 1011 Environmental Chemistry or CHEM 1113/1114 General Chemistry 1 and lab or PHYS 2010 General Physics with lab or PHYS 1110 General Physics 3-5

Earth Science Sequence

GEOG 1001/GEOG 1011 Environmental Systems with labs or GEOL 1010/

GEOL 1060 (or /GEOL 1020 or /GEOL 1040) and GEOL 1030 Introduction to Geology/Global Change: An Earth Science Perspective (or /Introduction to Earth History or /Geology of Colorado) and lab or ATOC 1050/ATOC 1060 and ATOC 1070 Weather and the Atmosphere/Our Changing Environment: El Niño, Ozone, and Climate and lab. 7-8

Intermediate Natural Science

EBIO 2040 Principles of Ecology with lab or CVEN/ENVS 3434 Applied Ecology or ATOC 3600/ENVS 3600/GEOG 3601 Principles of Climate or GEOG 3511 Hydrology with lab. 3-4

Intermediate Social Science

SOCY 2077 Environment and Society or SOCY 4007 Global Human Ecology or SOCY/ENVS 4027 Inequality, Democracy, and the Environment 3

Introductory and Intermediate Values

ECON 1000 Introduction to Economics 4
 ECON 2010 Principles of Microeconomics 3
 ECON 3535 Natural Resource Economics or ECON 3545 Environmental Economics 3
 PHIL 3140 Environmental Ethics or GEOG 3422 Conservation Thought or PSCI 3064 Environmental Political Theory. 3

Intermediate Policy

PSCI 2106 Introduction to Public Policy Analysis or PSCI 3206 The Environment and Public Policy. 3

Skills

One statistic or calculus course 3-5

Advanced Writing

EBIO 3940 Argument in Scientific Writing or ENVS 3020 Advanced Writing in Environmental Studies or WRTG 3020 TPC: Environmental Writing 3

Application

EBIO 4090 Coral Reef Ecology or EBIO 4100 Mountain Research Station field course or EBIO/ENVS/MUSM 4795 Museum Field Methods/ Zoology and Botany or ENVS 2100 Colorado Ecosystem Studies or ENVS 3001 Sustainable Solutions Consulting or ENVS/CVEN 3434 Applied Ecology or ENVS /GEOL 3520 Mining 4 Corners or ENVS 3930 Internship or EVEN 4100 Environmental Sampling and Analysis or GEOL 2700 and GEOL 4715 or GEOL 4716 Field Geology minimum 3

Capstone Course

ATOC 4800 Policy Implications of Climate Controversies or ENVS 3800 The Art of Research or ENVS 4800 Biofuels or Cultural Politics of Climate Change or Environmental Property and Protest or Rethinking Hurricane Katrina or ENVS 4990 Senior Thesis or EBIO 4800 Discovering Climate Change or Ecosystem Management or Land Use Sustainability or Microbial Ecology or Novel Ecosystemsm or Soil Ecology or GEOG 4742 Environment and Peoples or GEOG 4430 Conservation Trends 3

Specialization Courses

Choose one and complete 15 credits within it. Additional course options may be available.

Climate and Energy

ATOC 3300/GEOG 3301 Analysis of Climate and Weather Observations 3
 ATOC 3500 Air Chemistry and Pollution 3
 ATOC 4500 Special Topics: Weather Analysis and Forecasting. 1-3
 ATOC 4215 Descriptive Physical Oceanography. 3
 ATOC 4720 Introduction to Atmospheric Physics and Dynamics 3
 ATOC 4750 Desert Meteorology and Climate. 3
 ENVS/PHYS 3070 Energy and the Environment. 3
 ENVS/GEOL 3520 Environmental Issues in Geosciences. 3
 ENVS 3621 Energy Policy and Society. 3
 ENVS 4100 Topics in Environmental Policy: Energy Policy. 3
 ENVS 4800 Policy and Climate 3
 ENVS/GEOG 4201 Biometeorology. 3
 GEOG 4271 The Arctic Climate System 3

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in environmental studies, students should meet the following requirements:

- Begin the common curriculum in the freshman year.
- Declare environmental studies as the major by the beginning of the second semester.
- Students must consult with a major advisor to determine adequate progress toward completion of major requirements.

Graduate Studies

Opportunities for interdisciplinary graduate studies and original research, leading to the MS and PhD degrees, are available with a variety of emphases, including water sciences, environmental policy and sustainability, energy, environmental social sciences, and biogeosciences. Particular programs of study are limited only by course offerings and faculty expertise.

Master’s Degree

Candidates for the master’s degree in environmental studies must complete at least 36 credit hours of graduate course work.

Both thesis (Plan I) and non-thesis (Plan II) options are available. Plan I requires that the student write and successfully defend a thesis for 6 research credits. Students who opt for Plan II must complete a 2-credit internship as part of their program. Additional information can be found at envs.colorado.edu.

MS/MBA

This is a dual degree program offered in conjunction with the Leeds School of Business. It requires 36 hours of graduate work in environmental studies and 43 hours of MBA course work (with 12 hours of environmental studies course work applying toward the required 55 credits for the MBA). The MBA program will be considered the student’s primary program.

MS/JD or PhD/JD

This is a dual degree program offered in conjunction with the Law School. The Law School will grant credit for acceptable performance in graduate-level environmental studies courses toward the JD degree for up to 9 (for MS students) or 12 (for PhD students) credit hours of the required 89 credits for the JD degree. Environmental studies will grant up to 9 (for MS students) or 12 (for PhD students) credit hours of acceptable performance in law courses. The JD program will be considered the student’s primary program.

Doctoral Degree

The PhD degree is a research degree, involving the production of a major piece of original research (the dissertation). Candidates for the doctoral degree must complete at least 42 degree-hours from a list of approved ENVS core and elective courses. In addition, 30 semester hours of dissertation credit must be taken. Students are expected to form an advisory committee of five faculty members (including one from outside ENVS) soon after beginning their studies. This committee helps the student in designing a research program and in making choices concerning course work. The PhD comprehensive exam is administered by the student dissertation committee and must be taken within the first five semesters of degree work. It consists of a written research proposal on the dissertation topic, a formal presentation summarizing the student research progress, and an oral examination centered on the student research. Upon the student completion of the dissertation, a final examination is administered by the dissertation committee.

Additional information may be found at envs.colorado.edu.

Ethnic Studies

Degree BA

The ethnic studies major was created to initiate and promote interdisciplinary research and teaching in Africana studies, American Indian Studies, Asian American studies, Chicana and Chicano studies, American studies, and cross cultural/comparative studies.

The discipline of ethnic studies comprises a series of distinct approaches and theoretical analyses of the historical, political, social, and cultural forces and phenomena that have shaped the development of America’s diverse racial and ethnic peoples. This approach begins with an overview and understanding of these group experiences prior to the time of the European invasion, and continues with a subsequent and primary analysis of the impact that race and ethnicity has had in America during the past 500 years.

The ethnic studies major provides a broad liberal arts education to all students. It imparts fundamental skills in critical thinking, comparative analysis, and oral and written expression. The major provides appropriate training especially for those considering admission to graduate or professional schools and careers in education, law, medicine, public health, school work, journalism, business, urban planning, politics, counseling, international relations, creative writing, as well as university teaching and research.

The Department of Ethnic Studies has a core faculty of its own, but also draws on the faculty resources of many departments in the College of Arts and Sciences, as well as the College of Architecture and Planning, the School of Education, the School of Journalism and Mass Communication, the School of Law, the College of Music, and University Libraries.

Bachelor's Degree Program

In addition to the general requirements of the College of Arts and Sciences, students must complete 33 credit hours of ethnic studies requirements: 12 hours of required ethnic studies core classes and an additional 21 credit hours in ethnic studies, 15 hours of which must be upper division for a total of 24 upper-division credits in the major (required courses mentioned below are included). The 21 credit hours in ethnic studies can be selected from the current ethnic studies course offerings; they may include courses that are cross-listed with the Department of Ethnic Studies, as listed in this catalog.

A grade of C- or better must be received in all courses used to satisfy the major requirements, with an overall average of 2.00 in the major. No more than 6 credit hours may be taken in independent study. No *pass/fail* graded courses may satisfy the 33-semester-hour minimum requirement.

<i>Required Courses</i>	<i>Semester Hours</i>
ETHN 2001 Foundations of Ethnic Studies	3
ETHN 3501 Research Methods in Ethnic Studies	3
ETHN 4511 Research Practicum	3
ETHN 4951 Senior Seminar in Ethnic Studies.	3

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in ethnic studies, students should meet the following requirements:

- Declare ethnic studies as their major.
- Complete at least 12 credit hours toward the ethnic studies major requirements by the fourth semester.
- Complete at least 21 credit hours toward the ethnic studies major requirements by the end of the sixth semester.
- Complete ETHN 3501 Research Methods in Ethnic Studies no later than the sixth semester.
- Complete ETHN 4511 Research Practicum in Ethnic Studies no later than the seventh semester.
- Complete ETHN 4951 Senior Seminar in Ethnic Studies no later than the eighth semester.

Minor Program

A minor is offered in ethnic studies. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information see www.colorado.edu/arts_sciences/students/undergraduate/academics/minors.html.

Graduate Certificate in Comparative Ethnic Studies (GCCES)

In order to enhance the Graduate School training for enrolled graduate students at the University of Colorado Boulder, the Department of Ethnic Studies (DES) has been approved to offer a 12-credit Graduate Certificate in Comparative Ethnic Studies (GCCES). The purpose of the certificate is to provide specialized training opportunities in race/ethnicity and gender studies, research and interdisciplinary training in Africana studies, American Indian studies, Asian American studies, Chicana/o-Latina/o studies, decolonial feminist studies, comparative ethnic studies, race and sexuality studies, and transnational/hemispheric ethnic studies to students pursuing degrees in various disciplines on campus. The certificate is the initial phase of graduate study within the department and signals the forthcoming Department of Ethnic Studies PhD program in comparative ethnic studies. This doctoral degree is pending approval from the president and the Board of Regents.

Ethnic Studies Faculty Involvement in Graduate Studies

Faculty actively work to recruit African American, American Indian, Asian American, and Chicana/o students for graduate studies at the CU-Boulder, with special attention given to students who are interested in carrying out theses and/or dissertations that involve substantive and theoretical work revolving around the broad topic of “ethnicity, race, and gender in America.” Faculty are further committed to the intellectual mentorship of such students, which might include instruction in graduate courses, directed reading courses, service on students’ MA or PhD committees, as well as helping to prepare graduate students for their qualifying examinations. An important dimension of this commitment includes attention to the step-by-step progress of these graduate students through their academic course work and research agendas.

Ethnic studies faculty will also recruit and employ whenever possible such students as graders and teaching assistants in large undergraduate courses, with the intention of providing experience in all aspects of classroom instruction, including syllabus design, design of assignments, grading, and issues of pedagogy vis-à-vis course content.

Ethnic studies faculty will mentor such graduate students in the area of writing for publication, and seek to facilitate publication opportunities in journals focusing on “ethnicity, race, and gender.” After successful completion of graduate studies, faculty will assist graduates with their employment goals.

In sum, by making an active commitment in each of these areas, ethnic studies faculty assume a responsible, proactive role in ensuring a greater diversity in the graduate programs at the University of Colorado.

Study Abroad

The Department of Ethnic Studies encourages students to participate in the study abroad programs offered through the Office of International Education. These programs give students a deeper understanding of culture and attitudes of people of color in other parts of the world and their carryover into the United States. CU-Boulder partners with several study abroad organizations that offer summer, semester, and full year programs in many locations around the world, most notably in Africa, Asia, and Latin America. Programs of special interest include study abroad in Mexico, Dominican Republic, Peru, Bolivia, Ecuador, Ghana, Morocco, Spain, Taiwan, Japan, Australia, and South Africa.

For additional information, contact the Office of International Education. Students should always consult with their academic advisor prior to choosing their study abroad program.

Film Studies

Degrees..... BA, BFA

The Film Studies Program educates students in the history and development of film as an art form and contemporary medium. The curriculum instills an informed analytic awareness of the ways in which film has been used and provides the resources for significant creative exploration of the medium.

The undergraduate degrees in film studies emphasize knowledge and awareness of:

- the major artistic contributions to the evolution of film, from the advent of the moving image to the present;
- the general outlines of world film from the silent period to the present, with emphasis on the historical contributions of major national cinemas; and
- film criticism and film theory.

Students completing either the BA or the BFA degree in film studies are expected to acquire the ability and skills to:

- analyze and interpret films critically;
- communicate such interpretations competently in essay form; and
- make a short creative film or video work (BFA majors only).

NOTE: Admission to any class after the third meeting of the class is contingent on professor permission. The department may drop a student from a class if the student misses the first two classes of the semester.

Admission to the BFA Program

Students are encouraged to consult with the Film Studies advisor in order to obtain advice and current information.

The BFA degree is competitive. In order to graduate with a BFA degree, students must first satisfy a number of prerequisites and then submit a formal application to the BFA program at the prescribed time (deadline will be posted each semester on the film studies website). In particular, applicants must have a cumulative GPA at CU-Boulder of 2.50 or higher and have passed FILM 1502, 2000 (or 2300), and 2500 each with a grade of C or higher, with a mean GPA in all three courses of at least 3.30 (B+). Applicants must submit a written application, a writing sample, and the FILM 2500 assignment (see FILM 2500 instructions for details). Applicants may also submit one additional “best” example of creative work (see specific admission guidelines for details). Admission into the BFA program and registration for FILM 3400, 4500, and other upper-division production courses are contingent upon approval of the application materials by the BFA committee. Students may only apply twice to the BFA program; complete details on the BFA application procedure are available on the film studies website. Students are required to attend a BFA orientation meeting prior to the semester in which they enroll in FILM 3400. The program recommends that BFA students purchase film and sound media-capable Apple computing systems (see www.colorado.edu/FilmStudies). BFA students are required to pass FILM 3400, 3515, and 3525 before they will be allowed to continue in the major.

Bachelor of Arts

No more than 6 hours of independent study may be credited toward the major. Students must complete the required film courses with a grade of C or better. The arts and sciences 18-hour minimum of upper-division hours must be met with CU film studies courses.

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below. The Film Studies Program requires a minimum of 38 hours in support of the BA requirements, including film courses and courses taken in other departments.

The Film Studies Program strongly urges the purchase of film and sound media-capable Apple computing systems for those pursuing production classes in the BA degree program (see www.colorado.edu/FilmStudies).

Required Courses

Semester Hours

Literature and the Arts Requirement

In addition to the 6-hour literature and the arts core requirement, Film Studies majors must take an additional 6 hours (3 of them upper-division) of literature and the arts core courses to satisfy the degree requirements. Students taking the HUMN 1010/1020 sequence are exempted from the 3-hour upper-division requirement.

Required Critical Studies Courses

FILM 1502 Introduction to Film Studies (Note 1)	4
FILM 3051 and 3061 Film History 1 and 2 (Note 2)	8
FILM 3104 Film Theory and Criticism	3

Critical Studies Elective Requirements

BA students must complete 18 hours from the following courses. At least 12 must be upper division.

FILM 2002 Recent International Cinema	3
FILM 2003 Film Topics (Note 3)	3
FILM 2005 Movies and Screenplays	3
FILM 2013 Film and the Quest for Truth	3
FILM 2312 Film Trilogies	3
FILM 2412 Melodrama and Culture	3
FILM 2513 Major Asian Filmmakers	3
FILM 2521 Classics of the Foreign Film: 1960s to the present	3
FILM 2613 Good/Evil through Film	3
FILM 3002 Major Film Movements (Note 3)	3
FILM 3003 Major Film Directors (Note 3)	3
FILM 3004 Films of Alfred Hitchcock	3
FILM 3005 Issues in Film Comedy	3
FILM 3012 Documentary Film	3
FILM 3013 Women and Film	3
FILM 3022 Jung, Film, and Literature	3
FILM 3023 Stage Drama into Film: O’Neill and Williams	3
FILM 3032 Stage Tragedy and Film	3
FILM 3033 Color and Cinema	3
FILM 3042 Horror Film	3
FILM 3043 Topics in Film Critical Studies (Note 3)	3
FILM 3081 American Film in the 1980s and 1990s	3
FILM 3091 Post-War American Film/Culture/Politics	3
FILM 3191 The Golden Age	3
FILM 3211 History of Russian Cinema	3
FILM 3301 Contemporary Issues in Russian Film	3
FILM 3422 Genre: Hollywood Musical	3
FILM 3503 German Film Through WWII	3
FILM 3504 Topics in German Film	3
FILM 3513 German Film After WWII	3
FILM 3514 German Film and Society after 1989	3
FILM 3603 Sound and Vision	3
FILM 3901 Independent Study (Note 4)	1-6
FILM 3940 Film Studies Internship	1-6
FILM 4001 Screening Race, Class, and Gender in the U.S. and the Global Borderland	3
FILM 4003 Film and Fiction	3

FILM 4004 Topics in Film Theory (Note 3)	3
FILM 4013 Film, Photography, and Modernism	3
FILM 4023 Topics in International Cinema (Note 3)	3
FILM 4024 Advanced Research Seminar (Note 3)	3
FILM 4043 Topics in Film Studies: Critical Studies (Note 3)	1-3
FILM 4105 Advanced Screenwriting	3
FILM 4135 Art and Psychoanalysis	3
FILM 4453 Elective Affinities: Avant-garde Film and the Arts	3
FILM 4604 Colloquium in Film Aesthetics	3
Any FILM class crosslisted with another department (i.e., foreign language) that has been approved by the film studies chair	3

Production Electives (not required)

Some production electives may be taken for BA credit; please see advisor for specific courses.

Curriculum Notes

1. This course is a prerequisite for FILM 2000 and 3051.
2. Must be taken in chronological order. FILM 1502 is a prerequisite.
3. Course may be taken for credit more than once, provided that the topics vary.
4. Total number of independent study credit hours cannot exceed 6.

Graduating in Four Years with a BA

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress toward a BA in film studies, students should meet the following requirements:

Declare a film studies major by the beginning of the second semester

Complete the lower- or upper-division literature and the arts requirement (3 credit hours) and FILM 1502 (3 credit hours) by the end of the fourth semester.

Complete the upper-division literature and the arts requirement (3 credit hours) and FILM 3051 and 3061 by the end of the sixth semester.

Complete 6 critical studies elective credit hours by the end of the seventh semester (at least 3 of these credits must be upper-division credits).

Complete an additional 12 credit hours of critical studies elective courses, including at least three upper-division courses (9 credit hours), and FILM 3104 (3 credits) by the eighth semester.

Bachelor of Fine Arts

No more than 6 hours of independent study may be credited toward the major. Students must complete the required film courses with a grade of C or better.

Students must complete the general requirements of the College of Arts and Sciences as well as the required courses listed below. The Film Studies Program requires a minimum of 46 hours in support of the BFA degree requirements.

Required Courses

Semester Hours

Literature and the Arts Requirement

In addition to the 6-hour literature and the arts core requirement, Film Studies majors must take an additional 6 hours (3 of them upper division) of literature and the arts core courses to satisfy the degree requirements. Students taking the HUMN 1010/1020 sequence are exempted from the 3-hour upper-division requirement.

Required Critical Studies Courses

FILM 1502 Introduction to Film Studies (Note 1)	4
FILM 3051 and 3061: Film History 1 and 2 (Note 2)	8

Required Production Courses

FILM 2000 or 2300 Beginning/Intermediate Filmmaking (Note 3)	3
FILM 2500 Introduction to Cinematography	3
FILM 3400 Cinema Production 1	3
FILM 3515 Camera Workshop	1
FILM 3525 Editing Workshop	1
FILM 4500 Cinema Production 2 (Note 4)	3

Production Course Electives

BFA students must take 9 hours of any combination of the following courses:

FILM 2010 Moving Image Computer Foundations	3
FILM 2105 Intro to the Screenplay	3
FILM 2610 Animation Production	3
FILM 2900 Lighting Workshop	3
FILM 3010 Film Production Topics	3
FILM 3030 Cinema Alternative Process	3
FILM 3501 Film Production Management or FILM 3563 Producing the Feature Film (Both are usually offered through Continuing Education; only one may count toward the film studies degree.)	3
FILM 3563 Producing the Film	3
FILM 3600 Digital Post-production Process	3
FILM 3620 Experimental Digital Animation	3
FILM 3700 Digital Audio Design	3
FILM 3900 Production Independent Study (Note 5)	1-6
FILM 3920 Professional Seminar	1-2
FILM 3940 Internship	1-2
FILM 4000 Advanced Digital Post-production	3
FILM 4005 Screenwriting: Short Form	3
FILM 4010 Topics in Film Studies: Production (Note 4)	1-3
FILM 4021 Directing/Acting for the Camera	3
FILM 4030 Visiting Filmmakers Seminar (Note 3)	3
FILM 4075 Scriptwriting Workshop	3
FILM 4105 Advanced Screenwriting	3
FILM 4240 Beginning Video Production	3
FILM 4340 Intermediate Video Production	3
FILM 4440 Advanced Video Production	3
FILM 4500 Cinema Production 2 (taken a second time)	3
FILM 4505 Screenwriting: Long Form	3
FILM 4600 Creative Digital Cinematography (Note 4)	3

Curriculum Notes

1. This course is a prerequisite for FILM 2000 and 3051
2. Must be taken in chronological order.
3. Either FILM 2000 or 2300 may be taken for degree credit. Only one of the two courses may be counted toward the BFA degree. FILM 2300 is offered summer session only.
4. Course may be taken for credit more than once.
5. Total number of independent study credit hours cannot exceed 6, and they cannot be used to duplicate regular course offerings.
6. Course may be taken for credit more than once, provided the topics vary.

Critical Studies Elective Requirements

BFA students must complete 6 hours.

FILM 2002 Recent International Cinema	3
FILM 2003 Film Topics (Note 3)	3
FILM 2005 Movies and Screenplays	3
FILM 2013 Film and the Quest for Truth	3

FILM 4004 Topics in Film Theory (Notes 3)	3
FILM 4013 Film, Photography, and Modernism.	3
FILM 4023 Topics in International Cinema 3 (Note 3)	3
FILM 4024 Advanced Research Seminar (Note 3)	3
FILM 4043 Topics in Film Studies: Critical Studies (Note 3)	3
FILM 4105 Advanced Screenwriting.	1-3
FILM 4135 Art and Psychoanalysis	3
FILM 4453 Elective Affinities: Avant-garde Film and the Arts.	3
FILM 4604 Colloquium in Film Aesthetics	3

Any FILM class crosslisted with another department (i.e., foreign language) that has been approved by the film studies chair 3

Curriculum Notes

1. This course is a prerequisite for FILM 2000 and 3051.
2. Must be taken in chronological order. FILM 1502 is a prerequisite.
3. Course may be taken for credit more than once, provided that the topics vary.
4. Total number of independent study credit hours cannot exceed 6.

Graduating in Four Years with a BFA

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress toward a BFA in film studies, students should meet the following requirements:

Declare and start the film studies major the first semester freshman year.

Complete FILM 1502 (3 credit hours), FILM 2000 (3 credit hours), and one lower- or upper-division critical studies course for 3 credits by the end of the third semester.

Complete the Literature and the Arts lower- or upper-division requirement (3 credit hours), and FILM 2500 (3 credit hours) by the end of the fourth semester.

NOTE: In order to graduate in four years, a student must be accepted into the BFA program on the first application. See “Admission to the BFA Program” for details of the application process.

Complete 3 credit hours of upper-division Literature and the Arts requirement (3 credit hours) and FILM 3051 and FILM 3061 (8 credit hours) by the end of the fifth semester.

Complete FILM 3400 (3 credit hours), 3515 (1 credit hour), 3525 (1 credit hour), and an additional 3 credit hours of upper-division critical studies elective requirements by the end of the sixth semester.

Complete two courses (6 credit hours) of production electives by the end of the seventh semester.

Complete 3 credit hours of FILM 4500 and 3 more credit hours of production electives by the end of the eighth semester.

Master of Fine Arts Degree in Film

The Graduate MFA degree in film studies is a filmmaking track integrated into the Art and Art History MFA program in much the same way as the tracks in painting and drawing, ceramics, sculpture, media arts, the IAP, and printmaking. The filmmaking track prepares students for professional artistic careers in filmmaking from the perspective of innovative image making. The aim of the MFA film program is to aid in the advancement

of the practice and understanding of art, with emphasis on the moving image and its role in this advancement. The MFA will, therefore, prepare graduates to assume creative leadership roles in filmmaking.

The interdisciplinary nature of the MFA program allows graduate students to work in various areas, in addition to their area of specialization. The MFA guidelines include a second area of the student’s choice as a requirement. The thesis project is two-fold, involving 1.) the student’s creative work (e.g., a film), displayed at the MFA exhibition, and 2.) a written thesis that eventually goes to the library.

See the Art and Art History section for descriptions of the MFA ARTF courses.

Prerequisites. The following are required for admission to the graduate program:

Bachelor’s degree from an approved college or school of art with a minimum grade point average of 2.75.

Minimum of 34 credit hours of acceptable work in art; 12 credits in fine arts history is preferred.

Submission of films and other examples representing creative work or electronic media. Students should submit a portfolio of creative work to include video and/or audio tapes, film, etc., as appropriate (especially for documentation of performance and/or installations) for screening by the electronic media committee for presentation to the full graduate faculty.

Degree Requirements. Effective fall 2008, the MFA program is a two-and-a-half year program. The degree requires a minimum of 54 credit hours of course work, of which 36 must be taken in residence on the Boulder campus, with the following requirements:

<i>Required Courses</i>	<i>Semester Hours</i>
Home studio (major area)	min. 12
Electives (studio and non-studio; up to 6 credits may be taken in an allied field, at the 3000 level and above).	21
Art history and theory	9
Visiting artist seminar	3
Graduate art seminar	3
Thesis	6

For the Film Track MFA students: ARTF 5030 Visiting Filmmakers Seminar is allowed as a substitute for ARTS 5118 Visiting Artist Seminar; ARTF Critical Studies courses are allowed as alternates to fulfill 3 hours of the art history requirement.

See the art and art history department section of this catalog and www.colorado.edu/FineArts/mfa/mfa_degree.html for more information on requirements.

Bachelor of Arts/Master of Arts (BAMA)

Overview. The film studies/art and art history bachelor of arts/master of arts critical studies degree gives highly-motivated BA students the opportunity to earn an MA degree using an accelerated undergraduate program in combination with a fifth year of study.

Program Description. The BA/MA degree in film studies (FS) is a critical studies track under the auspices of the Art and Art History (AAH) MA program. This collaboration between AAH and FS is an extension of our common interests in visual art and grows from our current shared MFA in filmmaking. The film studies tenured and tenured track faculty also has graduate faculty standing within art and art history.

The FS/AAH BA/MA track prepares students for professional careers in teaching and criticism, from the perspective of innovative critical approaches and in preparation for a PhD track at another university. The aim of the BA/MA film program is to aid in the advancement of the scholarly understanding of film art, with emphasis on theoretical and research approaches and

their role in academia. The BA/MA will, therefore, prepare its graduates to assume the responsibilities of the academic study of cinema as one of the fine arts and to pursue careers in teaching, research, curating, and the overall advancement of the study of cinema as art.

The program offers studies leading to the MA in the areas of film criticism and theory. Advanced students are encouraged to explore interdisciplinary approaches as well as to enhance their program of study with cognate courses in other departments such as history, comparative literature, anthropology, English, women's studies, ethnic studies, Spanish and Portuguese, French and Italian, Germanic and Slavic languages and literatures, and others. Film studies offers a broad selection of seminar topics on their current faculty research interests and in response to student demand. The Visiting Film Artist program brings additional distinguished, innovative film and video artists and critics to campus and students are encouraged to register for their seminars.

Admission to the Program

Admission to the program occurs during the second semester of the junior year. Applicants should have a cumulative GPA of 3.00 and have completed all MAPS deficiencies. Only currently enrolled CU-Boulder students may be considered for admission to the program. Transfer students must complete at least 24 credit hours as degree-seeking students before applying to the program. The BA/MA degree is limited to film BA (critical studies) students. By definition BFA (production) students do not have the BA/MA option.

Students who are admitted to the concurrent degree program may not pursue a double degree or double major of any other kind.

Applicants to the BA/MA program must complete the application process no later than the first Friday of October during their junior year. Prior to applying, they should have completed FILM 1502, FILM 3051, and FILM 3061 (for recommended sequence, see www.colorado.edu/FilmStudies/degrees/bama/reqs.htm).

The application form can be downloaded from www.colorado.edu/GraduateSchool/GSForms/ConcurrentForms/Concurrentapplication.pdf. NOTE: Applicants should specify on the form that they are applying for the spring term, BA/MA degree, major codes AS-FLM2 and GR-ART2.

For more information visit www.colorado.edu/FilmStudies/degrees/bama/index.shtml.

French and Italian

Degrees in French BA, MA, PhD

Degree in Italian BA

Bachelor's Degree Programs

French

Beyond providing mastery of the language skills (listening, speaking, reading, writing) of modern French needed for all purposes of daily life, the major introduces students to a central tradition of western and world culture. Since the Middle Ages, French literature, thought, taste, and art have helped shape the essential experience and self-understanding of humanity at large. Survey courses and upper-division seminars offer a range of exposures to the French cultural past and the far-flung ethnic and national diversity of the French-speaking present. The major explores distinctively French contributions to world culture, such as Arthurian romance, troubadour poetry, and Gothic architecture; the love sonnets of the Pléiade, the comic novels of Rabelais, and the essays of Montaigne; the neoclassical theatre of Corneille, Molière, and Racine and the critical philosophy of Descartes and Pascal; the Enlightenment philosophies of Voltaire, Diderot, and

Rousseau; the psychological refinements of French fiction from Mme de La Fayette to Proust; artistic revolutions like impressionism and surrealism; the renewal of artistic conventions in the Theatre of the Absurd, the New Novel, and the cinema of the New Wave; the French-language literature of Africa, Canada, and the Caribbean; and the vital presence of French writers in major movements of 20th century thought like existentialism, structuralism, feminism, psychoanalysis, and contemporary cultural studies and multiculturalism.

The undergraduate degree in French emphasizes knowledge and awareness of:

- the fundamental outlines of the history of French literature from the Middle Ages to the present;
- significant works of French literature and the literary culture of the French-speaking world;
- the historical context in which particular works were written and the relation between literature and other forms of cultural expression (e.g., art, philosophy, politics, religion);
- contemporary French culture, politics, and current events;
- a range of literary genres, their development and reception, and relevant critical methodologies; and
- the grammatical structure of modern standard French.

In addition, students completing the degree in French are expected to acquire the ability and skills to:

- speak and understand modern, spoken standard French sufficient for all purposes of daily life and for intellectual discussion in academic settings;
- read and write modern standard French with sufficient fluency and correctness for successful literary or linguistic analysis of French texts;
- analyze and interpret literary texts in terms of style, plot, structure, characters, themes, and the use of literary devices;
- communicate such analyses and interpretations simply in French or at a more sophisticated level in English, and discuss a wide range of topics concerning French culture, civilization, and current events; and
- follow with reasonable comprehension French broadcasts or film.

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below. Students wishing to pursue an Honors major should also consult the Honors requirements listed below.

NOTE: Students undertaking a major in French should expect to have regular conferences with a college advisor to ensure that they are making adequate progress and that requirements are being met in a timely way. The department will not certify majors for graduation when a failure to satisfy requirements is the fault of the student.

A minimum of 30 upper-division hours in French must be completed (see below for specific courses). FREN 2120 or its equivalent is the prerequisite for admission to courses required for the major.

<i>Required Courses</i>	<i>Semester Hours</i>
FREN 3010 French Phonetics and Pronunciation	3
FREN 3050, 3060 French Composition 1 and 2	6
FREN 3100 Critical Reading and Writing in French Literature	3
FREN 3110, 3120 Main Currents of French Literature 1 and 2	6
Four or more other courses at the 3000 or 4000 level, of which 9 hours must be at the 4100 level or above (6 of which must be completed at CU)	12

FREN 4990 Senior Seminar (including a senior essay and oral presentation, except where a student elects to present a senior honors thesis). NOTE: The seminar runs concurrently with one of the three courses taken at the 4100 level or above. See departmental brochure for details. 3

Honors Requirements

Honors candidates must meet all of the regular requirements for the major plus the following:

FREN 3200 Introduction to Literary Theory 3
 One semester of independent study. NOTE: The semester of independent study is taken concurrently with FREN 4980, and is devoted to one-on-one work on the senior honors thesis with a faculty advisor. See department for details. 3

Graduating in Four Years with a BA in French

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in French, students should meet the following requirements:

Declare French major by the beginning of the second semester of study. Complete FREN 3010, 3050, 3060, and 3100 by the end of the second (sophomore) year.

Complete FREN 3110 and 3120 and two other 3000- or 4000-level courses (including one at the 4100 level or above) by the end of the third (junior) year.

NOTE: Completion of French requirements includes the successful written and oral presentation of a senior essay or honors thesis by the end of the fourth (senior) year.

Minor Program

A minor program is offered in French. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information see www.colorado.edu/arts_sciences/students/undergraduate/academics/minors.html.

Concurrent BA/MA Program in French

The department also administers a concurrent undergraduate and graduate degree program in French, offering students the opportunity to graduate with a BA and an MA in French in five years. Students interested in this program should consult a college advisor and the associate chair for graduate studies for details. Students should also read the relevant guidelines available in the main department office.

Italian

The major provides the language skills (listening, speaking, reading, writing) of modern Italian needed for all purposes of daily life. Moreover, by combining courses offered by the faculty of the Department of French and Italian with courses of Italian interest taught in other units, including film studies, fine arts, and history, the program promotes an understanding of the role of the Italian literary and cultural tradition within western civilization at large. As the birthplace of Dante, Petrarca, Boccaccio, Ariosto, Tasso, Marino, Michelangelo, Raphael, and Da Vinci, Italy is the cradle of the Renaissance. Italy projects a powerful, formative influence into our own day through the work of 19th- and 20th century writers like Leopardi, Manzoni, Pirandello, Levi, and Calvino; operatic composers like Rossini, Puccini, and Verdi; philosophers and critics like Croce, d’Annunzio, Gramsci, and Ginzburg; and filmmakers like Fellini, Pasolini, and Bertolucci. Thus, in addition to supplying the necessary background for advanced professional study and specialization, the Italian major introduces students to a rich literary, artistic, and intellectual history at the roots of the modern world.

Students wishing to major in Italian are required to have a thorough advising session with the Italian program advisor. In this session the student program of study is outlined in detail. Students are required to see the advisor in the event that any of their major courses are canceled so that substitutions and revisions in their programs can be made. The department will not approve a major in Italian unless the student has been advised by the program advisor.

For courses in other departments with an Italian emphasis (e.g., comparative literature, fine arts, history, honors, etc.), see those sections.

The undergraduate degree in Italian emphasizes knowledge and awareness of:

- the fundamental outlines of the history of Italian literature from the Middle Ages to the present;
- significant works of Italian literature and the contribution to world literature of Italian letters;
- the historical context in which particular works were written;
- contemporary Italian culture, politics, and current events;
- a range of literary genres, their development and reception, and relevant critical methodologies; and
- the grammatical structure of modern standard Italian.

In addition, students completing the degree in Italian are expected to acquire the ability and skills to:

- speak and understand modern, spoken, standard Italian sufficient for all purposes of daily life and for intellectual discussion in academic settings;
- read and write modern standard Italian with sufficient fluency and correctness for successful literary or linguistic analysis of Italian texts;
- analyze and interpret literary texts in terms of style, plot structure, characters, themes, and the use of literary devices;
- communicate such analyses and interpretations simply in Italian or at a more sophisticated level in English, and discuss a wide range of topics concerning Italian culture, civilization, and current events; and
- follow with reasonable comprehension authentic Italian broadcasts or film.

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below. Thirty-six hours beyond the first year with a 2.00 (C) grade point average or better are required, as listed below.

Required Courses *Semester Hours*

Italian Lower-division Required Courses 9

- ITAL 2110 Intermediate Italian Reading, Grammar, and Composition 1
- ITAL 2120 Intermediate Italian Reading, Grammar, and Composition 2
- ITAL 2130 Introduction to Literary Analysis

Italian 3000-level Required Courses 12

- ITAL 3010 Advanced Composition and Conversation 1
- Choose one from the following two courses:
 - ITAL 3020 Advanced Composition and Conversation 2
 - ITAL 3030 Storia dell’arte: Advanced Composition and Conversation 3
- Choose two from the following three courses (prereq. ITAL 2130):
 - ITAL 3140 Readings in Italian Literature: 20th Century
 - ITAL 3150 Readings in Italian Literature: 19th Century
 - ITAL 3160 Readings in Italian Literature: Medieval/Renaissance

Italian 4000-level Courses 9

Students must take at least three 4000-level courses in the Italian department, of which one will be ITAL 4990, the Senior Seminar. Before registering for ITAL 4990, students must meet with the Italian advisor

Upper-division Electives 6

Electives may be chosen from courses outside the Department of French and Italian, the content of which is consistent with the goals of the Italian major, and always in consultation with the major advisor. It is recommended that students select courses in diverse disciplines and time periods.

Honors Requirements

Honors candidates must meet all of the regular requirements for the major plus the following:

FREN 3200 Introduction to Literary Theory. NOTE: FREN 3200 is taught in English and presupposes no knowledge of French. 3

One semester of independent study. NOTE: The semester of independent study is taken concurrently with ITAL 4980, and is devoted to one-on-one work on the senior honors thesis with a faculty advisor. It does not run concurrently with required 4000-level courses. See departmental brochure for details. 3

Graduating in Four Years with a BA in Italian

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in Italian, students should meet the following requirements:

Declare the Italian major by the beginning of the second semester of study. Complete 12 credit hours of requirements (including ITAL 2110 and 2120) by the end of the second (sophomore) year.

Complete 12 of the remaining 24 credit hours by the end of the third (junior) year. Complete the remainder of the major requirements in the fourth (senior) year.

Minor Program

A minor program is offered in Italian. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information see www.colorado.edu/artsscience/students/undergraduate/academics/minors.html.

Study Abroad

CU-Boulder offers French study abroad programs in Annecy, Paris, Rennes, Strasbourg, and Toulouse, France. In addition, students may study in Quebec, Brussels, Geneva, and in the Francophone African nations of Cameroon, Madagascar, Mali, and Senegal. CU-Boulder offers Italian study abroad programs in Ferrara, Florence, and Perugia, Italy. Students may obtain course-credit equivalences for work done while abroad. For further information about study abroad programs, students may visit departmental advisors or the Office of International Education. CU-Boulder also supports a summer program in Italy that focuses on Italian history and culture in Rome. Credits earned on this program may be applied to the Italian major. Students may also take a summer film class in Rome and/or Paris (in alternate years). This class is taught in English. The Ayer Romance Language Scholarship is available for majors who plan to study abroad; it is awarded by the Department of French and Italian.

Graduate Degree Programs in French

Students wishing to pursue graduate work in French leading to candidacy for an advanced degree should read carefully Requirements for Advanced Degrees in the Graduate School section. A graduate teaching exchange at the University of Tours is available to students who have earned a master's degree.

Master's Degree

Prerequisites. The following are prerequisite to graduate study in French: the ability to read, write, speak, and understand spoken standard French; general knowledge of French literature and civilization; and ability to read one language in addition to English and French. This last requirement may be fulfilled by passing a reading examination offered by the department. See department guidelines for the specific requirements for the MA in French.

Doctoral Degree

Prerequisites. Doctoral candidates should possess excellence in reading, speaking, writing, and understanding spoken standard French; general knowledge of French literature and civilization; and knowledge of one language other than English and French (see below).

Required Courses. See department guidelines for PhD candidates.

Language Requirement. A sound reading knowledge of one modern language other than English and French is required. Such reading knowledge must be certified by the student passing a reading examination in the language. The examination normally consists of a timed translation of a literary text or a text dealing with literature (e.g., literary criticism). A dictionary is permitted. This language should be relevant to the student's academic program.

Geography**Degrees BA, MA, PhD**

The Department of Geography offers theoretical and practical work in physical geography, including climatology, geomorphology, and biogeography; conservation of natural resources, including environmental education; human geography, including urban, social, economic, political, cultural, and population geography; geographic information science (GIS), including spatial analysis using GIS, remote sensing, computer cartography, GIS and society, and geography education; and regional analysis, including mountains, natural hazards, and specific regional courses. To complement its curriculum, the department offers geography majors internship opportunities.

The Department of Geography offers BA, MA, and PhD degree programs in geography.

The undergraduate degree in geography emphasizes knowledge and awareness of:

- the unique contributions of the discipline to understanding the spatial components of problems and the diverse factors relating to human interaction with the environment;
- the spatial distributions of physical and human characteristics on the Earth surface, the general patterns these form, and the processes that have created and are changing these patterns;
- the major themes of geographical analysis, including absolute and relative location; human and physical characteristics of place; human and environmental relations; movement of people, ideas, and products; and regionalization; and
- the general geographical principles of human-environment interaction, global change, and human spatial organization.

In addition, students completing the degree in geography are expected to acquire proficiency in:

- one or more of the specific geographic skill areas of cartography, remote sensing, and geographic information systems;
- writing, quantitative methods, computer literacy, and library and field methods of data collection; and
- identifying the geographic dimensions of a problem and analyzing, synthesizing, and evaluating relevant data, and applying geographic principles offering a geographic perspective on that problem.

Bachelor's Degree Program

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below. Students must complete at least 36 and no more than 45 credit hours in geography courses with grades of C- or better (22 hours must be upper division). *No pass/fail* grades are allowed in the major. Transfer students majoring in geography must complete at least 12 credit hours of upper-division geography courses at CU-Boulder.

<i>Required Courses</i>	<i>Semester Hours</i>
GEOG 1001 Environmental Systems I: Climate and Vegetation	4
GEOG 1011 Environmental Systems II: Landscapes and Water	4
One of the following:	
GEOG 1982 World Regional Geography	3
GEOG 1992 Human Geographies	3
GEOG 2002 Geographies of Global Change	3
GEOG 2412 Environment and Culture	3
One additional upper- OR lower-division human geography course (courses ending in 2)	
One of the following:	
GEOG 2053 Mapping a Changing World	4
GEOG 3053 Cartography 1: Visualization and Information Design (introductory statistics course recommended; may be taken concurrently)	4
One of the following:	
GEOG 3093 Geographic Interpretation of Aerial Photographs	3
GEOG 4023 Introduction to Quantitative Methods in Human Geography (prereq: GEOG 3023)	3
GEOG 4043 Cartography 2: Interactive and Multimedia Mapping (prereq: GEOG 3053)	4
GEOG 4093 Remote Sensing of the Environment	4
GEOG 4103 Introduction to Geographic Information Science (prereq: GEOG 2053, 3053 or equivalent and introductory statistics course)	4
GEOG 4173 Research Seminar (restricted to senior GEOG and ENVS majors)	3
GEOG 4203 Geographic Information Science: Modeling Applications (prereq: GEOG 4103)	4
GEOG 4383 Methods of Vegetation Analysis (prereq or coreq: GEOG 4371)	3
GEOG 4411 Methods of Soil Analysis (prereq: GEOG 1001 or 1011; prereq/coreq GEOG 4401/5401)	3
Introductory Statistics (Note 1)	
GEOG 3023 Statistics for Geography	4
ANTH 4000 Quantitative Methods in Anthropology	3
ECON 3818 Introduction to Statistics w/Computer Applications	4
MATH 2510 Introduction to Statistics	3
PSCI 2074 Quantitative Research Methods	3
PSYC 3101 Statistics and Research Methods in Psychology	4
SOCY 2061 Introduction to Social Statistics	3
SOCY 4061 Social Statistics	3

Notes

- 1 Courses taken in other departments may be used to satisfy the statistics requirement, but credits earned in these courses are not counted in the 36 hours of geography. Only GEOG 3023 applies to the 36 hours required in the Department of Geography.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in geography, students should meet the following requirements:

- Declare a geography major by the beginning of the second semester.
- Complete GEOG 1001, 1011, and one of the following courses: GEOG 1982, 1992, 2002, or 2412, by the end of the third semester.
- Complete GEOG 1982, 1992, 2002, or 2412 or an approved upper-division human geography course (must be different than the course used to complete the previous requirement) and 9 credit hours of upper-division geography courses by the end of the sixth semester.
- Complete GEOG 2053 or 3053 and statistics by the end of the sixth semester.
- Complete the remaining upper-division credit hours by the eighth semester.

Minor Program

A minor is offered in geography. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information see www.colorado.edu/artssciences/students/undergraduate/academics/minors.html.

MAPS (Minimum Academic Preparation Standards)

To fulfill a MAPS deficiency in geography, students may take any one of the following courses: GEOG 1982, 1992, 2002, or 2412, or pass the Geography Exemption Exam. For more information on the exemption exam, contact Testing Services at 303-492-5854 or careerservices.colorado.edu/testing.cs.

Geography Honors Program

Students interested in participating in a special honors program should contact the departmental honors advisor during their junior year.

Geography Internship Program

To complement its curriculum, the department offers geography majors internship opportunities in which students earn academic credit in GEOG 3930 Internship while working in selected positions in public agencies and firms.

Residential Academic Program

Geography students specializing in environmental issues may want to consider the Baker Residential Academic Program. Students may visit the geography department office or refer to Residential Academic Programs, www.colorado.edu/WRAP.

Graduate Degree Programs

Students wishing to pursue graduate work in geography leading to candidacy for advanced degrees should read carefully the requirements for advanced degrees in the Graduate School section. Graduate-level course work at the Boulder campus may be combined with graduate courses offered at the Denver and Colorado Springs campuses. Additional information should be obtained from the Department of Geography. The following are departmental requirements.

Master Degree

Prerequisites. For admission without deficiency and to meet the department mandatory requirements for a knowledge of basic geography, all entering graduate students are required to have the kind of knowledge presented in the department introductory courses in physical geography (GEOG 1001 Environmental Systems/Climate and Vegetation and GEOG 1011 Environmental

Systems/Landscapes and Water) and human geography (GEOG 1982 World Regional Geography, GEOG 1992 Human Geographies, GEOG 2002 Geographies of Global Change, and GEOG 2412 Environment and Culture). It is the responsibility of the student to obtain this knowledge as part of his/her preliminary exam. Students may gain the required knowledge by formally taking the introductory courses, by auditing the courses, by reading the textbooks, or by other means. This knowledge will enhance the student ability to perform at the level expected in the GEOG 5152–5161 core series. In addition to knowledge of basic geography, it is desirable that the student has course work in at least two areas outside geography in cognate fields in the social and natural sciences. Students are encouraged to have some background in college math, statistics, and computer skills.

General Requirements. The minimum requirements for an MA in geography may be fulfilled by completing 30 semester hours of graduate work, including a thesis, which carries up to 6 credit hours (i.e., 24 hours of course work at the 5000 level or above, plus a minimum of 4 but not more than 6 hours of thesis). Master students may, with the written approval of their advisor, use a maximum of 6 hours of 3000- or 4000-level course work to reach the required 30 hours.

Doctoral Degree

Prerequisites. The minimum requirements for admission to the PhD program are normally a master degree, significant published research, or equivalent standing.

General Requirements. The PhD degree is not conferred merely upon the satisfactory completion of a course of study. The candidate must also demonstrate proficiency in some broad subject of learning, and be able to critically evaluate work in the field, show the ability to work independently in the chosen field, and make an original contribution of significance to the advancement of knowledge.

The minimum requirements are 30 credit hours of course work numbered 5000 or above and 30 credit hours of dissertation. Ordinarily the number of course work hours and dissertation hours will be greater than 30 each. At least 20 of these hours must be taken at the University of Colorado; up to 10 credit hours from another institution may be transferred upon approval.

A 3.000 (B) average or higher must be maintained in all course work.

Six semesters of residence are required beyond the bachelor's degree, of which four must be at the University of Colorado; this may include two semesters for the master degree. Students with a University of Colorado master degree in geography, with departmental approval, may apply all credit hours from 5000 or above courses (except thesis credits) to the PhD requirements.

Geological Sciences

Degrees BA, MS, PhD

Bachelor's Degree Program

The options available in the undergraduate program in geological sciences are geology, geophysics, and environmental geosciences. Each option leads to the BA degree. All of these options provide a strong basis for understanding the functioning of the Earth system and a firm foundation for graduate study and professional employment. Students who are uncertain as to which option best suits their needs should contact a departmental advisor or faculty member. In all options, the undergraduate program emphasizes course work in theoretical, laboratory, and field-oriented aspects

of the geological sciences. The nearby Rocky Mountains provide a natural laboratory for many of these courses.

Students interested in the geological sciences may also wish to consider the Baker Residential Academic Program. Students who do not wish to pursue a career in the geosciences, or who would like to combine a basic knowledge of geologic sciences with that of some other field, should consider using geological sciences as one subject in a distributed studies major or as a minor. Students who intend to pursue graduate study in the geological sciences are encouraged to consider developing an honor thesis as part of their undergraduate studies.

The three options available in the undergraduate major offer different focus areas of instruction. All three options offer excellent preparation for students interested in pursuing professional careers, or graduate study, in the geological sciences.

Each option emphasizes knowledge in:

- the ways in which Earth responds to internal and external forces; the physical, chemical, and biological evolution of Earth; and the nature of the materials of which the Earth is made
- the role of physics, chemistry, mathematics, and biology in understanding geological processes
- the history of discoveries and ideas that have contributed to our current knowledge of the Earth and the planetary system

The geology option is a traditional geology degree program that emphasizes the following:

- the mineralogy and petrology of igneous, metamorphic, and sedimentary rocks
- the processes of sedimentation and the applications of stratigraphy and paleobiology in the reconstruction of Earth history
- the role of geophysics and geochemistry in understanding the nature of Earth and its history
- the study of faults, folds, and other rock structures and the tectonic processes that create those structures
- the methods used in the field to map and interpret the diverse variety of rock types and structures

The environmental geoscience option emphasizes the following:

- the function of the integrated Earth system including the atmosphere, hydrosphere, biosphere, and geosphere
- the fundamental controls on surface Earth processes including energy balance, hydrology, geomorphology, geochemistry, and biogeochemistry
- the role of humans in the Earth system

The geophysics option emphasizes:

- applications of fundamental mathematical formulations and physical principles to an understanding of the Earth
- methods utilized to map and characterize those portions of the planet that lie below the surface, from just beneath our feet down to the core

<i>Required Courses</i>	<i>Semester Hours</i>
GEOG 4960 Writing in Geosciences	1
CHEM 1113 and 1133 General Chemistry 1 and 2 and CHEM 1114 and 1134 Laboratory in General Chemistry 1 and 2	10
MATH 1300 and 2300 Analytical Geometry and Calculus 1 and 2 or APPM 1350 and 1360 Calculus for Engineers 1 and 2	8-10

PHYS 1110, 1120, and 1140 General Physics 1 and 2 and Experimental Physics 1	9
----------------------------------------------------------------------------------------	---

Geology Option

Students electing the geology option are required to take the following additional courses:

GEOL 1010 Introduction to Geology 1	3
GEOL 1020 Introduction to Earth History or GEOL 1040 Geology of Colorado or GEOL 1060 Global Change	3
GEOL 2700 Introduction to Field Geology	2
GEOL 3010 Introduction to Mineralogy	3
GEOL 3020 Petrology	3
GEOL 3120 Structural Geology	4
GEOL 3320 Introduction to Geochemistry	3
GEOL 3430 Sedimentology and Stratigraphy	4
GEOL 4130 Principles of Geophysics	3

Geology option students must also take courses from the following lists:

One from the following hydrogeosciences-focused courses:

GEOL 3030 Introduction to Hydrogeology	3
GEOL 3820 The Fluid Earth	3
GEOL 4060 Oceanography	4

Two from the following advanced-field modules:

GEOL 4711 Igneous and Metamorphic Field Geology	2
GEOL 4712 Structural Field Geology	2
GEOL 4714 Field Geophysics	2
GEOL 4715 Field Techniques in Hydrogeology	2
GEOL 4716 Environmental Field Geochemistry	2
GEOL 4717 Field Seminar in Geology and Tectonics	2

One upper-division elective, any 3000-4000 GEOL course, except the following:

GEOL 3040 Global Change	3
GEOL 3070 Introduction to Oceanography	3
GEOL 3500 Earth Resources and the Environment	3
GEOL 3520 Environmental Issues in Geosciences	3
GEOL 3720 Evolution of Life: the Geological Records	3
GEOL 3950 Natural Catastrophes and Geological Hazards	3
GEOL 4080 Societal Problems and Earth Sciences	3
GEOL 4500 Critical Thinking in Earth Sciences	3

Environmental Geoscience Option

Students electing the environmental geoscience option are required to take the following additional courses:

GEOL 2001 Planet Earth	4
GEOL 3230 Earth Materials	3
GEOL 3320 Introduction to Geochemistry	3

Environmental geoscience option students must also take courses from the following lists:

Two from the following water-focused courses:

GEOL 3030 Introduction to Hydrogeology	3
GEOL 3820 The Fluid Earth	3
GEOL 4060 Oceanography	3

One from the following biogeochemistry-focused courses:

GEOL 4160 Biogeochemistry	3
GEOL 4270 Marine Chemistry and Geochemistry	3

One from the following climate-focused courses:

GEOL 4040 Paleoclimatology	3
ATOC 3600 Principles of Climate	3

One from the following advanced field courses:

GEOL 4711 Igneous and Metamorphic Field Geology	2
GEOL 4714 Field Geophysics	2
GEOL 4715 Field Techniques in Hydrogeology	2
GEOL 4716 Environmental Field Geochemistry	2
EBIO 4630 Field Techniques in Environmental Science	2-6
EVEN 4100 Environmental Sampling and Analysis	3

Four additional courses from the following upper-division electives (electives not already used to fulfill a different major requirement). Two of the four

must be geology. Courses other than those listed below may be acceptable with advisor's permission:

GEOL 3023 Statistics for Earth Sciences	4
GEOL 3030 Introduction to Hydrogeology	3
GEOL 3050 GIS for Geologists	2
GEOL 3410 Paleobiology	3
GEOL 3430 Sedimentology and Stratigraphy	4
GEOL 3820 The Fluid Earth	3
GEOL 4040 Paleoclimatology	3
GEOL 4060 Oceanography	4
GEOL 4093 Remote Sensing for the Environment	4
GEOL 4130 Principles of Geophysics	3
GEOL 4160 Introduction to Biogeochemistry	3
GEOL 4241 Principles of Geomorphology	4
GEOL 4270 Marine Chemistry and Geochemistry	3
GEOL 4670 Isotope Geology	3

Water Focus

CVEN 3454 Water Quality	4
CVEN 4718 Mechanics and Dynamics of Glaciers	3
EBIO 4030 Limnology	3
GEOG 4321 Snow Hydrology	3-4
GEOG 4251 Fluvial Geomorphology	4
GEOG 4260 Glaciers and Permafrost	3

Biogeochemistry Focus

EBIO 4060 Landscape Ecology	3
EBIO 4570 Advanced Plant Physiological	3
GEOG 4401 Soils Geography	3
MCDB 4350 Microbial Diversity and the Biosphere	3

Climate Focus

ATOC 4720 Atmospheric Physics and Dynamics	3
ENVS/GEOG 4201 Biometeorology	3

Policy Focus

ATOC 4800 Policy and Climate	3
ECON 3403 International Economics and Policy	3
ENVD 4023 Environmental Impact Assessment	3
PSCI 4183 International Law	3

Geophysics Option

Students electing the geophysics option are required to take the following additional courses:

GEOL 1010 Introduction to Geology 1	3
GEOL 1020 Introduction to Earth History or GEOL 1040 Geology of Colorado or GEOL 1060 Global Change	3
GEOL 2700 Introduction to Field Geology	2
GEOL 3010 Introduction to Mineralogy	3
GEOL 3120 Structural Geology	4
GEOL 3320 Introduction to Geochemistry or GEOL 3020 Petrology	3
GEOL 4130 Principles of Geophysics	3
GEOL 4714 Field Geophysics	2
APPM 2360 Introduction to Linear Algebra with Differential Equations	4
MATH 2400 Analytical Geometry and Calculus 3 or APPM 2350 Calculus 3 for Engineers	4
PHYS 2130 Gen Physics III or PHYS 2170 Foundations of Modern Physics	3
PHYS 2210 Classical Mechanics and Mathematical Methods 1	3

Geophysics option students must also take courses from the following lists:

Two from the following:

PHYS 3210 Classical Mechanics and Mathematical Methods 2	3
PHYS 3310 Principles of Electricity and Magnetism	3
MATH 4470 Partial Differential Equations or APPM 4350 Methods in Applied Mathematics	3

Additional information on required courses and other departmental requirements may be obtained from the departmental office. Students should contact the department for a list of current major requirements.

Transfer students must satisfactorily complete a minimum of 12 credit hours of advanced work (3000-level or above) in the Department of Geological Sciences in Boulder if they wish to

obtain a degree in geology from CU-Boulder. Before registering for the first time, or within the first week of the semester, such students must see a geological sciences department undergraduate advisor to have previous course work in geology, math, and allied sciences evaluated.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in geology, students should meet all college requirements plus specific departmental requirements. These departmental requirements vary slightly between the three major options. Detailed information is available from the department office, but in general these requirements include:

- Declare a geology major and begin course work in the major during the first semester freshman year.
- Meet with a departmental advisor prior to the second and fifth semesters and during the seventh semester.
- Complete at least 33 credit hours (geology and environmental geoscience options; 44 credit hours for geophysics option) required for the major by the end of the fourth semester.
- Complete at least 47 credit hours (geology and environmental geosciences options; 63 credit hours for geophysics option) required for the major by the end of the sixth semester.
- Complete the remaining requirements for the major by the end of the eighth semester.

Minor Program

A minor is offered in geology. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information see www.colorado.edu/artsscience/students/undergraduate/academics/minors.html.

Geology Honors Program

Opportunity is provided for qualified geology majors to participate in the geology honors program and graduate with honors (cum laude, magna cum laude, or summa cum laude) in geology. Students interested in the honors program should contact the departmental honors advisor during their junior year.

Graduate Degree Programs

Students interested in graduate work in the geological sciences should carefully read the detailed information regarding admission, registration, and degree requirements that is available from the departmental office. A brief summary follows.

All students applying for admission must take the Graduate Record Examination. Results of this examination are used both for determining admittance and for initial academic counseling.

Entering students normally have completed at least 24 semester hours of basic courses in geological science and two semesters each of chemistry, physics, and calculus. In some cases, exceptional undergraduate preparation in other fields of science, mathematics, or engineering may substitute for part of the 24 hours in geological science.

Each student acquires a primary advisor and an advisory committee which provides guidance throughout the degree program.

Master's Degree

Candidates for the master's degree in geological sciences must complete at least 24 credit hours of graduate course work plus a thesis (Plan I), or 30 credit hours of graduate course work

without a thesis (Plan II). The Plan II program requires at least 3 hours of GEOL 6960 (Plan II Master's Research) under the supervision of the advisory committee. For both plans, at least 24 credit hours must be completed at the 5000 level or above. See Graduate School specifications for more information.

Doctoral Degree

Candidates for the doctoral degree must complete at least 30 credit hours in course work numbered 5000 or above, of which at least 20 must be taken at CU-Boulder. In addition to course work, candidates must take a total of at least 30 hours of GEOL 8990 doctoral dissertation hours, with not more than 10 of these in any one semester and not more than 10 before the comprehensive examination is passed.

The Department of Geological Sciences participates in the interdepartmental PhD program in geophysics and hydrology. For more information about this program, see the Graduate School section.

Germanic and Slavic Languages and Literatures

<i>Germanic Studies Degree</i>	BA
<i>German Degree</i>	MA
<i>Russian Studies Degree</i>	BA

Undergraduate students may choose to major in either Germanic studies or Russian studies.

The major in Germanic studies is an interdisciplinary program focusing on study of the German language, its manifestations in history, and its usage in the current cultural and social context; the literary, artistic, and philosophical aspects of German culture in the past and the present; the major historical events and developments in Germany and its neighboring countries, and the current political institutions and dynamics in Germany within the broader European framework.

The undergraduate degree in Germanic studies emphasizes knowledge and awareness of:

- the fundamental outlines of German history and culture;
- the history of modern German literature, 1750 to the present;
- cultural developments in modern German-speaking Central Europe, such as the arts, the cinema, and architecture; and
- central issues such as the Nazi era and the Holocaust, the roles of women, German attitudes toward non-Germans, German culture after reunification, and their reflection in German literature, arts, and media.

In addition, students completing the degree in Germanic studies are expected to acquire the ability and skills to:

- read German at a level at which critical literary and cultural analyses can be performed;
- write and speak German sufficiently to participate in critical discussions and write critical essays; and
- speak and comprehend German sufficiently for all situations in daily life, especially the business and professional sectors of German life.

The major in Russian studies is an interdisciplinary program focusing on study of the current cultural and social context, and the literary, artistic, and historical aspects of Russian culture in the past and present. The aim of the language curriculum is to equip students to read, write, speak, and understand Russian on a

level allowing communication with natives and other users of the language. Before registering for a course, students should consult with a departmental advisor concerning appropriate placement.

Students interested in Russian studies should consider a double major in order to increase their career opportunities. Prospective teachers might combine Russian studies with a major in another foreign language, while those preparing for a career in government, business, or social services should benefit from a combination of Russian studies and a social science or business major. Students structure their curriculum according to the departmental checklist for majors, in close consultation with a departmental advisor.

The undergraduate degree in Russian studies emphasizes knowledge and awareness of:

- the fundamental outlines of the history of Russian literature and culture from the Middle Ages to the present day;
- the major Russian creative writers of the 19th and 20th centuries;
- the historical context of Russian literature and culture; and
- basic critical methodologies as they relate to the study of Russian literature.

In addition, students with a degree in Russian studies are expected to acquire the ability and skills to:

- comprehend contemporary Russian, written or spoken, to a degree permitting sophisticated analysis of cultural texts;
- analyze Russian literary texts and give a reasoned response to them in literate English; and
- write and converse in Russian at their own intellectual level.

Bachelor's Degree Programs

Germanic Studies

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

The major requirement in Germanic studies is 34 hours beyond GRMN 2010 (with grades of C- or above). Students design their own major in consultation with the undergraduate advisor and a faculty mentor. Completion of the following courses is required; at least 18 hours from the department must be upper division. Students who test out of GRMN 2020 are required to complete 33 hours.

A. German Language Courses (13 semester hours minimum)

Completion of the following German language courses or demonstration of third year proficiency: GRMN 2020 Intermediate German 2 (4 hours) or GRMN 2030 Intensive Intermediate German (5 hours), GRMN 3010 Advanced German 1 (3 hours), GRMN 3020 Advanced German 2 (3 hours), GRMN 4010 Advanced Grammar and Stylistics (3 hours). GRMN 4010 is required of all majors.

B. German Culture, Literature, and Other Electives (21 semester hours)

GRMN 4550 Senior Seminar (required and must be taken at CU-Boulder) and any six GRMN literature/culture courses. At least two of the six courses must be upper-division, and at least two must be in German. With the approval of the German program faculty advisor, one course from another department may be taken in lieu of one of the six courses, provided that the course has a direct link to German studies.

I. Courses Taught in German

GRMN 3030 Business German; GRMN 3110 German Literature from the Avant-garde to the Postmodern; GRMN 3120 German Literature from the Enlightenment to Expressionism; GRMN 3130 Issues in German Philosophy and Literature; GRMN 3140 Current Issues in German Literature; GRMN 3150 Issues in German Politics and Literature; GRMN 3520 Open Topics in the Cultural Context; GRMN 3900 Independent Study; GRMN 3930 Internship;

GRMN 4330 The Age of Goethe; GRMN 4340 Seminar in German Literature; GRMN 4450 Methods of Teaching German. Students have the option of taking the exam *Zertifikat Deutsch als Fremdsprache* in GRMN 3020, the *Zertifikat Deutsch für den Beruf (ZDfB)* in GRMN 3030, and the *Goethe-Zertifikat C1* in GRMN 4010.

II. Courses Taught in English

GRMN 1601 Germany Today; GRMN 1602 Metropolis and Modernity; GRMN 1701 Nature and Environment in German Literature and Thought; GRMN 2301 Inside Nazi Germany; GRMN 2501 20th-Century German Short Story; GRMN 2502 Representing the Holocaust; GRMN 2503 Fairy Tales of Germany; GRMN 2601 Kafka and the Kafkaesque; GRMN 2603 Moral Dilemmas in Philosophy and Literature; GRMN 3201 German and Russian Culture in Comparative Perspective; GRMN 3501 German-Jewish Writers; GRMN 3502 Literature in the Age of Goethe; GRMN 3503 German Film through WWII; GRMN 3504 Topics in German Film; GRMN 3505 The Enlightenment; GRMN 3513 German Film and Society, 1945–1989; GRMN 3514 German Film and Society after 1989; GRMN 3601 German Women Writers; GRMN 3702 Dada and Surrealist Literature; GRMN 4251 Marxism; GRMN 4253 Philosophy of Language; GRMN 4301 Gender, Race, and Immigration in Germany and Europe; GRMN 4501 Seminar: Literature in Cultural Context; GRMN 4502 Nietzsche: Literature, and Values; GRMN 4503 Issues in German Thought; GRMN 4504 Goethe's *Faust*; GSLL 3401 The Heart of Europe: Filmmakers and Writers in 20th Century Central Europe; GSLL/HIST 1108 Introduction to Jewish History; GSLL 3401 The Heart of Europe: Filmmakers and Writers in 21st Century Central Europe; JWST 4544 History of Yiddish Culture.

C. Required for Students in the Secondary Teacher Certification Program

GRMN 4450 Methods of Teaching German; and GRMN 4460 High School German Teaching

Plus other requirements as stated by the School of Education

NOTE: GRMN 4450 and 4460 can be taken only after full admission to the teacher education program in the School of Education.

Minor Program

A minor is offered in Germanic Studies. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information see gsll.colorado.edu

Certificate in International Engineering in German

The purpose of this certificate is to provide engineering students training in language and culture, giving them skills necessary to work effectively with engineers in multinational teams and to succeed during overseas assignments in today's global marketplace. It is an indication to prospective employers that the students have a certain degree of proficiency in German language and an understanding of the culture. Visit ecadw.colorado.edu/engineering/academics/international-german.htm for more information.

Study Abroad

The department strongly recommends that all majors take part in study abroad. The university programs in Regensburg and Berlin provide a full year of study abroad. Two Berlin summer sessions are also offered. Please consult with the major advisor. For more information on study abroad programs, see studyabroad.colorado.edu.

Nordic Studies (Scandinavian)

Courses are offered in English on Nordic culture and civilization. Courses are also offered in Norwegian and/or Swedish language. The language courses satisfy arts and sciences language requirements for the BA and BFA degrees. In addition, this is an exchange program with Uppsala University in Sweden and with the University of Copenhagen in Denmark (DIS). A minor is

offered in Nordic studies. Declaration for a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For specific requirements, contact the department or visit gsll.colorado.edu.

The summer program in Reykjavik, Iceland, is a two-week intensive offered through CU-Boulder's Study Abroad Program. It consists of lectures complemented by excursions in Reykjavik and surrounding areas, including visits to deCODE Genetics (a global leader in gene discovery), the Geothermal Resource Park at Svartsengi and the Blue Lagoon Spa, and a day trip to the glacier of Langjokull. Students receive 3 upper-division credit hours for SCAN 3201 Contemporary Nordic Society and Culture, which fulfills the core requirement for contemporary societies.

Hebrew Studies

Hebrew language instruction is offered over six semesters at the beginning, intermediate, and advanced levels. By the end of this cycle students have a sound basis in Hebrew language production (spoken and written) and comprehension (oral and written). The Jewish literature and culture courses introduce students to Jewish literature, culture, and religion, and examine Jewish identity in the modern and contemporary worlds.

Russian Studies

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

Completion of 38 hours from tracks A or B or 36 hours from Track C with grades of C- or better. (None may be taken as *pass/fail*.) At least 18 RUSS hours must be completed at the 3000 or 4000 level. Note: RUSS 1010 and 1020 will not be counted toward the 38/36 hours required for the bachelor's degree in Russian. RUSS 1010 and 1020 will not count toward the maximum of 45 hours in the major department. Students are required to structure their curriculum in close consultation with a departmental advisor.

Transfer credit must be approved by the department.

Students with advanced Russian language skills are strongly encouraged to meet with a departmental faculty advisor to discuss language placement. Students who have Russian language transfer credit and/or students who are Russian language native speakers may enter the program at the upper-division level, with faculty permission. Students with previous knowledge of Russian must take the placement exam no later than the end of the first week of classes. Students who place out of Russian language courses required for the major must replace the credits with additional course work in Russian studies. To meet this requirement the student may take available Russian courses from either major track approved by the departmental faculty advisor. Any substitutions to major course work must be pre-approved by the Russian faculty advisor.

NOTE: Beginning or middle-level language course requirements may be met by transfer credit or by testing out of the course. Students who enter the program at the third-year level must complete at least 18 credit hours in residence in courses numbered 3000 or above with grades of C- or better. (None may be taken pass/fail.) Students who enter at and enroll in Russian language courses at the 3000- or 4000-level may not receive credit for lower-division Russian language courses, unless lower-division language course work was completed prior to registration for 3000- and 4000-level Russian language courses.

Required Courses

Semester Hours

Track A: Russian Language and Culture

RUSS 2010 Second-Year Russian I	4
RUSS 2020 Second-Year Russian 2	4
RUSS 3010 Third-Year Russian 1	3
RUSS 3020 Third-Year Russian 2	3
RUSS 4010 Advanced Conversation and Composition 1	3
RUSS 4020 Advanced Conversation and Composition 2	3
RUSS 2211 Introduction to Russian Culture or RUSS 2221 Introduction to Modern Russian Culture, or RUSS 3601 Russian Culture Past and Present	3

Any two of the following courses:	
RUSS 3000 Advanced Conversation	3
RUSS 3050 Business Russian.	3
RUSS 4210 Open Topics: Russian Literature and Culture	3
RUSS 4230 Russian Cultural Idioms	3
RUSS 4851 Russian Film and Society	3
Any other advanced RUSS language course (3000-level or higher) or upper-division study abroad RUSS language course.	3
RUSS 4811 19th Century Russian Literature	3
RUSS 4821 20th Century Russian Literature and Art.	3
One 2000–4000-level RUSS course or JWST 4544 History of Yiddish Culture	3

Track B: Russian Culture and Literature

RUSS 2010 Second-Year Russian I	4
RUSS 2020 Second-Year Russian 2	4
RUSS 2211 Introduction to Russian Culture or RUSS 3601 Russian Culture Past and Present	3
RUSS 2221 Introduction to Modern Russian Culture or RUSS 3601 Russian Culture Past and Present	3
RUSS 3301 Contemporary Issues in Russian Film or RUSS 4471 Women in 20th Century Russian Culture or RUSS 3211 History of Russian Cinema	3
RUSS 4221 Cultural Mythologies of Russian Communism or RUSS 4301 American-Russian Cultural Relations.	3
RUSS 4811 19th Century Russian Literature	3
RUSS 4821 20th Century Russian Literature and Art.	3

Any two of the following courses:	
RUSS 4421 Gogol.	3
RUSS 4431 Dostoevsky	3
RUSS 4441 Tolstoy	3
RUSS 4451 Chekhov	3
RUSS 4831 Contemporary Russian Literature	3
RUSS 4861 Absurd and Supernatural in Russian Literature	3
GSSL 3401 The Heart of Europe: Filmmakers and Writers in 20th Century Central Europe	3
One 3000-level Russian language course (3000, 3010, 3020, or 3050)	3
One 2000–4000-level RUSS course or JWST 4544 History of Yiddish Culture	3

Track C: Russian Major for Heritage Speakers (36 hours)

Students who are native speakers of Russian (speak or spoke Russian at home while growing up) and/or who attended school in Russian in the former Soviet Union for one or more years when their family lived in the former Soviet Union, may be eligible for a special major track for heritage speakers. Heritage speakers of Russian who wish to major in Russian should speak with the advisor for the Russian major to map out the specific plan for their major. The Heritage Speaker track requires 36 credits as follows:

RUSS 3060 Russian for Heritage Speakers I	3
RUSS 4060 Russian for Heritage Speakers II.	3

Any two of the following courses:	
RUSS 4210 Open Topics: Russian Language and Culture	3
RUSS 3050 Business Russian.	3
RUSS 4230 Russian Cultural Idioms	3
RUSS 4851 Russian Film and Society.	3
Any other advanced RUSS language course (3000-level or higher) or upper-division study abroad RUSS language course	3
RUSS 2211 Introduction to Russian Culture or RUSS 3601 Russian Culture Past and Present.	3
RUSS 2221 Introduction to Modern Russian Culture or RUSS 3601 Russian Culture Past and Present	3
RUSS 3211 History of Russian Cinema or RUSS 3301 Contemporary Issues in Russian Film or RUSS 4471 Women in 20th Century Russian Culture.	3
RUSS 4221 Cultural Mythologies of Russian Communism or RUSS 4301 American-Russian Cultural Relations.	3
RUSS 4811 19th Century Russian Literature	3
RUSS 4821 20th Century Russian Literature and Art.	3

RUSS 2231 Fairy Tales of Russia or RUSS 2471 Russian Women: From Folklore to 19th Century.	3
Any one of the following courses:	3
RUSS 4221 Gogol	
RUSS 4431 Dostoevsky	
RUSS 4441 Tolstoy	
RUSS 4451 Chekov	
RUSS 4831 Contemporary Russian Literature	
RUSS 4861 Absurd and Supernatural in Russian Literature	
GSLI 5352 Russian Novel: Theory and Practice	
GSLI 3401 The Heart of Europe: Filmmakers and Writers in 20th Century Central Europe	

Language Placement

One year of high school Russian is usually considered equivalent to one semester of college Russian. Thus, a student with two years of high school Russian should enroll in RUSS 2010. Students who think that they should be placed at a level different from the normal one should consult the department for advice. Placement level is determined in consultation with the department and should be done before registration.

Minor Program

A minor is offered in Russian Studies. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information see gsll.colorado.edu.

Study Abroad

The department strongly recommends that all Russian majors take part in the university summer language program in St. Petersburg. For more information on CU Study Abroad programs, see studyabroad.colorado.edu.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in Germanic or Russian studies, students should meet the following requirements:

Begin to study the language in the freshman year, or have received AP credit. In consultation with the major program advisor before the end of the drop/add period in the first semester, plan a tentative schedule of courses to be taken over eight semesters.

Discuss progress toward the degree each semester with the major advisor.

Note: Although these requirements apply only in cases in which students are seeking to graduate under the terms of the four-year guarantee, they are good advice for all majors. Consult the program advisor about the major at any time.

Courses Taught in English

A number of courses are offered in translation. These courses generally require no previous study in the language, history, or culture of the area involved, and are open to all interested students, regardless of major.

Concurrent BA/MA Program in Germanic Studies

Highly motivated undergraduates majoring in Germanic studies at CU-Boulder have the opportunity to enter a BA/MA program, thereby earning both the BA and the MA in five years. The concurrent degree program offers a unique academic credential designed to produce skilled graduates for a variety of occupations. In most cases, students must make written application no later than April 1 of the sophomore year. A minimum GPA of 3.25 for all courses is required, as well as three letters

of recommendation indicating strong potential for advanced, intensive work in German. The recommended track requires a total of 58 hours of courses, with graduate courses in the fourth and fifth years only. Students should have completed most of their MAPS/core requirements (at least 30–37 hours) by the end of the sophomore year. Only CU-Boulder students may apply. For specific requirements please contact the department or see gsll.colorado.edu.

Master’s Degree in German

Students wishing to pursue the interdisciplinary master’s in German should read carefully Requirements for Advanced Degrees in the Graduate School section. The following prerequisites and requirements apply: BA or equivalent in German or BA-level proficiency in German with a BA in a related field; general knowledge of the German-speaking countries’ literature, history, and culture; 24 hours of approved course work and a master’s thesis (6 hours), or 30 hours of course work without thesis; and reading knowledge of one modern foreign language in addition to German and English. For specific requirements please contact the department or see gsll.colorado.edu.

Master’s Degree in German/ Master’s of Business Administration

To support the university’s mission of advancing knowledge across disciplines, the Leeds School of Business and the Department of Germanic and Slavic Languages and Literatures offer a dual degree, Master of Business Administration and Master of Arts in German Studies. In most cases, students should be able to complete the dual degree in three years with a total of 70 credit hours. Prospective students must apply to and meet the application and admission requirements for each program separately. See the Department of Germanic and Slavic Languages and Literatures for application to the German MA program, and the Leeds School of Business to apply to the MBA program.

Graduate Certificate Program in Critical Theory

The Graduate Certificate Program in Critical Theory offers students a background in philosophical foundations of critical theory. Drawing on disciplines such as philosophy, psychoanalysis, Marxism, literary criticism, and sociology, critical theory develops analytical tools for describing and evaluating modern society and cultural production. Students who are currently enrolled in a graduate disciplinary degree or a professional degree program are encouraged to apply for the Graduate Certificate in Critical Theory early in their graduate career. For further information, please visit our website at gsll.colorado.edu.

History

Degrees..... BA, MA, PhD

Bachelor’s Degree Program

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

(NOTE: These requirements took effect at the beginning of the 2011 fall term. Students who became history majors prior to that term may fall under previous major requirements and should consult one of the department’s undergraduate advisors to determine which requirements to follow.)

Total Hours

Students must complete 42 hours in history courses with grades of C- or better. Of those 42 hours, 24 must be at the upper division. Students should complete the required 1000-level survey courses, HIST 1800, and HIST 3000 before the end of their sophomore year and before they enroll in any 4000-level history classes.

Required Courses

Semester Hours

Lower-division Requirements

One of following linked sequences of 1000-level survey courses	6
HIST 1010 and 1020 Western Civilization 1 and Western Civilization 2; HIST 1015 and 1025 History of the United States to 1865 and History of the United States since 1865; HIST 1018 and 1028 Introduction to Early Latin American History to 1820 and Introduction to Modern Latin American History since 1820; HIST 1051 and 1061 World of the Ancient Greeks and The Rise and Fall of Ancient Rome; HIST 1113 and 1123 Introduction to British History to 1660 and Introduction to British History since 1660. (NOTE: The courses in your sequence do not have to be taken in chronological order.)	
One 1000-level survey course from each of the two geographic areas not covered by your sequence.	6
United States: HIST 1015 or 1025	
Europe: HIST 1010, 1020, 1051, 1061, 1113, or 1123	
World Areas: HIST 1018, 1028, HIST 1038 Introduction to Latin American History, HIST 1108 Introduction to Jewish History, HIST 1208 Sub-Sa- haran Africa to 1800, HIST 1308 Introduction to Middle Eastern History, HIST 1408 Introduction to South Asian History, HIST 1608 Introduction to Chinese History, or HIST 1708 Introduction to Japanese History	
HIST 1800 Introduction to Global History	3

Upper-division Requirements

HIST 3000 Historical Thinking and Writing	3
One 4000-level United States history course	3
One 4000-level Europe history course	3
One 4000-level world areas history course	3
One 4000-level comparative or global history class	3
Two 4000-level HIST electives	6
One 3000-level Senior Seminar.	3
Any additional 3000-level seminars can fulfill requirements that normally are fulfilled by 4000-level courses.	

Lower- or Upper-division Elective Requirement

Any other history course	3
Historical Period: Included in the 42 hours earned to complete the major requirements must be 6 hours in courses whose focus falls primarily before 1800 and 6 hours in courses whose focus falls primarily after 1800. 2000-level non-major HIST courses cannot be used to fulfill this require- ment. (The department maintains a list of courses broken down by geographic areas and historical periods.)	
Ancillary Written Communication Requirement: In addition to the history re- quirements listed above and a minimum of 42 credits in history, students must complete two writing courses with a C- or better, one course from each of the two lists of courses under the following written communication core requirements.	
Lower-division Written Communication: ARSC 1080 College Writing and Re- search, ARSC 1150 Writing in Arts and Sciences, WRTG 1100 Extended First-Year Writing and Rhetoric, WRTG 1150 First-Year Writing and Rhetoric, WRTG 1250 Advanced First-Year Writing and Rhetoric, or any course that fulfills the upper-division written communication core requirement.	
Upper-division Written Communication: WRTG/NRLN 3020 Topics in Writing or one of the following acceptable alternative upper-division writing classes: ARSC 3100 Multicultural Perspectives and Academic Discourse, ENV5 3020 Advanced Writing in Environmental Studies, HONR 3220 Advanced Honors Writing Workshop, PHIL 3480 Critical Thinking and Writing in Philosophy, RLST 3020 Advanced Writing in Religious Studies, WMST 3800 Advanced Writing in Feminist Studies, or WRTG 3007 Writing in the Visual Arts.	3

NOTE: Under normal circumstances, no more than 45 credit hours in history may be used toward a student's total University of Colorado graduation requirements. Students must have a grade point average of at least 2.000 in the major in order to graduate. Students may receive credit for HIST 1020 and/or HIST 1025 and/or 3 lower-division elective HIST credits by obtaining a score of four or better on the high school Advanced Placement history test(s). Some types of International Baccalaureate credit are acceptable; consult one of the major advisors to determine individual applicability. The CLEP test is not accepted for credit.

All students majoring in history must complete at least 12 credit hours of upper-division history in courses taught by the CU-Boulder faculty. In addition, HIST 1800, HIST 3000, and the 3000-level Senior Seminar must be successfully completed on the CU-Boulder campus with a C- or better.

Graduating in Four Years

Students should consult the Four-Year Guarantee Requirements for further information on eligibility for the four-year guarantee. The concept of "adequate progress" as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in history, students must consult a history advisor each semester, but the following plan provides a rough outline of acceptable progress:

Declare the major no later than the second semester of the freshman year.

Required Courses

Semester Hours

Recommended Sequence of Courses

Freshman Year	total 12
Any two of the required 1000-level HIST survey courses 6	
HIST 1800 Introduction to Global History 3	
The ancillary lower-division written communication course 3	
Sophomore Year	total 12
The two remaining required 1000-level HIST survey courses 6	
HIST 3000 Historical Thinking and Writing 3	
One more 1000-level HIST survey course OR one 4000-level HIST lecture course. 3	
Junior Year	total 12
Three 4000-level HIST lecture courses 9	
The ancillary upper-division written communication course 3	
Senior Year	total 12
Three 4000-level HIST lecture courses 9	
One 3000-level Senior Seminar. 3	
Grand total all terms	48

Graduate Degree Programs

Students wishing to pursue graduate work in history leading to candidacy for an advanced degree should read carefully requirements for advanced degrees in the Graduate School section. The following are special departmental requirements. Additional information should be obtained from the Department of History.

Admission Requirements. For purposes of admission to the graduate program, the general Graduate Record Examination is required and a score in the 85th percentile or above on the verbal component is generally expected.

Master's Degree

Prerequisites. As general preparation for graduate work in history, a broad liberal arts education, as well as a major in history, are desirable, though not specifically required. Candidates for

graduate degrees may be required to pursue such fundamental courses in history as the department deems necessary to provide a suitable historical background.

Residence. While it is possible to obtain the MA degree in two full semesters of residence, more time is generally necessary.

Degree Requirements. A total of 24 credit hours of course work plus 6 hours of MA thesis, or 30 credit hours of course work without a thesis, is required for the degree. A comprehensive examination must be passed in the field of study before the degree is granted.

Doctoral Degree

Prerequisites. Students who wish to work toward the PhD degree in history must indicate knowledge of certain fields of history, acquaintance with the fundamental tools of historical scholarship, and the ability to do original work. The PhD program does not require the completion of a master’s degree, but directly admits those qualified applicants who hold an undergraduate history degree or who have completed appropriate undergraduate history preparation and who have been recommended by the graduate admissions committee.

Residence. At least three years of graduate study, two of which must be spent in residence, are required for the PhD degree.

Degree Requirements. A total of 45 postbaccalaureate credit hours, at least 30 of which must be taken at this university, and a dissertation are required for the degree. A minimum of one foreign language is required; however, students must be able to use those languages essential to research and advanced study in their respective fields. In addition, as required by the Graduate School, those students pursuing a PhD should complete a minimum of 30 credit hours of dissertation work beyond the minimum course work requirement.

A comprehensive written and oral examination, a dissertation which is an original contribution to knowledge, and an oral examination on the dissertation must be successfully completed.

Humanities

Degree BA

Bachelor’s Degree Program

Humanities is an interdepartmental major that offers an interdisciplinary and comparative approach to the study of the arts within their historical and cultural context. As a direct result of its encouragement of interdisciplinary approaches to the analysis and interpretation of literature, music, film, art, and modern media, humanities offers an opportunity for students and faculty to pursue a wide variety of modes of reflection.

Humanities is committed to a profoundly comparative perspective enabling students and faculty to bring together not only different arts, but works drawn from different eras and cultures, Western and non-Western alike. At the same time as it uses historical and generic categories as a means of organizing material, it also provides an opportunity for critically examining these categories, sometimes challenging them, at other times bringing their latent content more fully to light.

The undergraduate degree in humanities emphasizes knowledge and awareness of:

- the ways cultures and traditions define both themselves and each other;
- the formal, rhetorical, and ideological properties of cultural texts in a variety of forms and media (literature, history,

philosophy, film, music, visual arts, architecture, dance, theatre, performance);

- the dynamic relations between texts and their social and historical contexts;
- the genres and modes of texts and their production, transformation, and reception; and
- the theoretical and ideological underpinnings and implications of one’s own and others’ interpretive approaches and assumptions.

In addition, students completing the degree in humanities are expected to acquire the ability and skills to:

- analyze and interpret texts in a variety of forms and media;
- articulate such analyses and interpretations at a sophisticated level in both written and oral form;
- discern similarities and differences among individual works, artistic media, historical periods, and cultural traditions;
- reason critically; and
- explore the connections between contemporary issues and academic work.

<i>Required Courses</i>	<i>Semester Hours</i>
HUMN 1010 and 1020 Introduction to Humanities 1 and 2	12
HUMN 2000 Methods and Approaches to the Humanities	3
Upper-division humanities courses	15
Area of concentration: either a single language/literature (English or a foreign language, ancient or modern; first-year language courses may not be counted) or a field related to the humanities, such as history, art history, anthropology, etc.	18
(At least 12 of these 18 hours must be taken at the upper-division level.)	
Secondary field: courses chosen from one other humanities-related discipline such as fine arts, music, dance, theatre, film, philosophy, foreign language literature (first-year language courses may not be counted), or other discipline	12

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. Because the humanities department is unique in requiring courses from a number of different departments in addition to its own courses, it is imperative that students wishing to graduate in four years declare the major early and meet regularly with a departmental advisor. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in humanities, students should meet the following requirements:

- Complete the lower-division sequence HUMN 1010–1020 by the end of the fourth semester.
- Complete at least two lower-division courses in the secondary field and/or area of concentration by the end of the fourth semester.
- Complete 15 of the remaining 42 credit hours at the upper-division level by the end of the sixth semester—at least two of these must be upper-division humanities courses.
- Complete all remaining required courses (no more than 27 credits) by the end of the eighth semester.

Integrative Physiology

Degrees BA, MS, PhD

Physiology is the field of biology that deals with function in living organisms. The academic foundation of the department is the knowledge of how humans and animals function at the level of genes, cells, organs, and systems. Our multidisciplinary

curriculum requires students to take foundational courses in anatomy, biochemistry, mathematics, physics, physiology, and statistics. With this basic knowledge, students can undertake a flexible curriculum that includes the study of biomechanics, cell physiology, comparative physiology, endocrinology, immunology, exercise physiology, and neurophysiology. The department also encourages student participation in research.

Students completing a degree in integrative physiology are expected to acquire the ability and skills to:

- Read, evaluate, and synthesize information from the research literature on integrative physiology;
- Observe living organisms and be able to understand the physiological principles underlying function;
- Be able to interpret movement and performance data from laboratory equipment; and
- Communicate the outcome of an investigation and its contribution to the body of knowledge on integrative physiology.

These goals are achieved by providing a curriculum that comprises required courses and elective experiences. The required courses establish the foundation of knowledge for the discipline, whereas the elective courses provide opportunities to extend this knowledge on selected topics. The elective courses include seminars, critical thinking classes, independent study, and research projects on such topics as applied exercise science, biochemical basis of performance, cellular and systemic cardiovascular physiology, comparative physiology of exercise, developmental neurobiology, ecophysiology, environmental and comparative endocrinology, genetics of substance abuse, mechanics and neural control of locomotion, molecular behavioral genetics, molecular neurogenetics, motor behavior, neurophysiology of movement, neuroimmunophysiology, reproductive endocrinology, sleep and chronobiology, and vascular biology. More detailed information is available at www.colorado.edu/intphys.

Bachelor's Degree Program

Students must complete the general requirements of the College of Arts and Sciences and the required courses below.

<i>Required Courses</i>	<i>Semester Hours</i>
A grade must be earned of C- or better.	
IPHY 2800 Introduction to Statistics	4
IPHY 3410 Introduction to Human Anatomy with IPHY 3415 Introduction to Human Anatomy Lab and IPHY 3470 Human Physiology 1 and IPHY 3480 Human Physiology 2 and IPHY 3435 Physiology Lab. NOTE: IPHY 3450 Comparative Animal Physiology can be substituted for IPHY 3480	13
EBIO 1210-1240 General Biology 1 and 2 with labs or MCDB 1150 and 1151 Introduction to Molecular Biology with lab and MCDB 2150 and 2151 Principles of Genetics with lab	8
CHEM 1113/1114 and 1133/1134 General Chemistry 1 and 2 with labs	10
PHYS 2010 and 2020 General Physics 1 and 2	10
One of the following courses: MATH 1300 Analytic Geometry and Calculus 1, MATH 1310 Calculus 1 with Computer Applications, or APPM 1350 Calculus 1 for Engineers	4-5
Three of the following six courses: IPHY 3060 Cell Physiology, IPHY 4600 Immunology, IPHY 4440 Endocrinology, IPHY 4540 Biomechanics IPHY 4650 Exercise Physiology, and IPHY 4720 Neurophysiology	12-14

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in integrative physiology, students should meet the following requirements:

Declare the major by the first semester.

Complete the biology and chemistry requirements before the beginning of the fifth semester.

Complete the anatomy and physiology requirements by the end of the sixth semester.

Students must consult with a major advisor to determine adequate progress toward completion of major requirements.

Concurrent BA/MS Program

The Department of Integrative Physiology has developed a curriculum that results in simultaneously conferring BA and MS degrees following a five-year course of study. The program has been designed to provide qualified undergraduate students with an opportunity to enhance their knowledge base in the discipline, engage in research, increase their opportunities for employment, and make their applications to medical/allied health professional schools more competitive. Candidates for the program are recruited from the undergraduate population of declared integrative physiology majors during the beginning of their junior year. All interested candidates must apply by October 15. Decisions regarding acceptance into the program will be made by November 15. To apply, students must have a minimum GPA of 3.30 and one letter of recommendation. Approximately 5–10 of the applicants will be selected on a competitive basis to begin the program.

Once accepted into the program, a student must maintain a GPA of 3.00 in all course work undertaken. By the completion of their senior year, students must have completed the 114 undergraduate credits as outlined in the concurrent degree plan options. Continuing students must register for at least 5 graduate course credits per semester, beginning with the fall semester of their senior year. Students deciding to discontinue the program may do so at any time during their course of study. All credits completed toward the concurrent degree program will be counted toward the completion of the requirements for a BA degree in integrative physiology.

The curriculum for all students in the first year of the program is the same and is designed for students to complete their undergraduate requirements (114 credit hours) and 8 of their graduate credits. To complete the program in 5 years, students will be allowed to count 6 credits of their graduate work as electives for the undergraduate degree and 6 prespecified credits of undergraduate work toward the master's degree. See the section on Master of Science Degree below for more information.

Graduate Degree Programs

To obtain materials for application and for any additional information, visit the departmental website at www.colorado.edu/intphys/grad.

Entering graduate students must have an undergraduate preparation equivalent to the basic core curriculum requirements in integrative physiology at the University of Colorado or departmental approval of their academic preparation for graduate study.

All graduate applicants must have an introductory course in statistics or research design. In addition, students should have

the knowledge base that would be obtained by completing three of the following six courses:

IPHY 3060 Cell Physiology	4
IPHY 4440 Endocrinology	4
IPHY 4540 Biomechanics	5
IPHY 4600 Immunology	4
IPHY 4650 Exercise Physiology	5
IPHY 4720 Neurophysiology	4

Satisfactory scores on the Graduate Record Examination tests are also required for admission to the department. These scores should be submitted at the time of application.

Deficiencies. If the undergraduate preparation of a prospective graduate student is not adequate, the student may be allowed to pursue graduate study with the understanding that identified deficiencies will be completed. The graduate admissions committee will determine the nature and extent of these deficiencies.

Deficiencies in any area of the undergraduate major may be met by completing approved course work in the subject at CU-Boulder or at other institutions. All entering graduate students with deficiencies must satisfy at least one deficiency per semester until all deficiencies are satisfied. Graduate courses taken before removing deficiencies may be accepted for graduate degree credit only if prior approval of the graduate coordinator has been granted.

Master of Science Degree

Master's candidates entering the graduate program may select Plan I (thesis—30 credit hours, including 4-6 thesis hours), Plan II (nonthesis—30 credit hours including a 3-credit hour research project), or Plan III (course work only) for the degree program. Prior to or during their first academic year in the program, students should identify a graduate faculty member who will serve as their scholarly mentor for the development of a thesis or research project (Plan I or II). The scholarly mentor assists the student in deciding upon the thesis and nonthesis options based upon a careful examination of the candidate's academic record, the goals of the candidate, and the availability of departmental resources.

Basic Requirements. The following are required of all students for the master's of science degree: IPHY 5100 Colloquium in Integrative Physiology and IPHY 5800 Advanced Statistics and Research in Integrative Physiology, a minimum cumulative GPA of 3.00 in all graduate work undertaken, satisfactory performance on the comprehensive exam, and completion of the requirements for advanced degrees as stipulated by the Graduate School. For students enrolled in Plan I, IPHY 6950 Master's Thesis is required; for students enrolled in Plan II, IPHY 6840 Research Project is required.

Comprehensive Examination. Candidates are required to complete an oral examination covering the thesis (Plan I) or a written summary of the research project (Plan II).

Doctoral Degree

Basic Requirements. Doctoral students must complete 30 credit hours of course work at or above the 5000 level and 30 semester hours of dissertation research (IPHY 8990). The following are required of all doctoral degree students: IPHY 5100 Colloquium in Integrative Physiology (2 academic year semesters); IPHY 5800 Advanced Statistics and Research in Integrative Physiology; IPHY 6830 Professional Skills for the Research Scientist; satisfactory completion of the department preliminary review; and satisfactory completion of both the comprehensive and final examinations.

Advisory Committee. The advisory committee consists of the student's mentor, a faculty member in the student's interest area, and either the department graduate coordinator or the department chair. The committee assists the student in planning a program of study.

Preliminary Review. After the first academic year, usually consisting of 18–20 hours of course work, the student completes the preliminary review process. This process is performed by the student's advisory committee. The preliminary evaluation includes an evaluation of the student's academic status (GPA of at least 3.00 required), a detailed proposal of the student's curriculum, written input from the student's mentor, and other pertinent materials deemed necessary by the committee.

The outcome of the preliminary review process can be one of three judgments: pass, fail, or probation. A student who passes may continue to pursue the doctoral degree. A student who fails may not continue in the doctoral program. A student on probation must complete any deficiencies determined by his or her committee before continuing to pursue the doctoral degree.

Comprehensive Examination. The comprehensive exam will be administered to the student within four semesters of entry into the doctoral program. The format of the exam, and the composition of the comprehensive exam committee, will be determined by the mentor in consultation with the student. The examination will be based on a document that is about 20 pages in length and designed to demonstrate the student's comprehensive knowledge on a topic. The membership of the committee (a minimum of five members) is submitted to the dean of the Graduate School for approval. Students are given two opportunities to pass the comprehensive exam. The written portion of the exam is based upon the student's course work and requires demonstration of broad-based knowledge in integrative physiology. Specific areas to be evaluated are determined by the mentor and the student.

Dissertation. Successful completion of the comprehensive exam advances the student to doctoral candidate status, and the student may then begin a dissertation. All students must complete a formal written dissertation that conforms to the requirements established by the Graduate School at the University of Colorado Boulder.

Final Examination. After completion of the dissertation, a final examination is scheduled. The exam consists of a written submission of the dissertation work and an oral defense. The final examination committee consists of at least five members, one of whom must be from outside the department. Three of the members must be Boulder campus resident faculty.

International Affairs

Degree BA

Our major requirements have been updated, effective summer 2009. Students who declared the IAFS major before summer 2009 have the option of using the current catalog plan, described below, or the old plan to fulfill graduation requirements. The new and old plans are available at iafs.colorado.edu.

With the increasing importance of world issues to the United States, employment opportunities in government, international organizations, and business continue to expand. Today there is an urgent need for college graduates with a strong background in international affairs. To meet this need, the University of Colorado offers a comprehensive and flexible interdisciplinary program in international affairs leading to the BA degree.

The undergraduate degree in international affairs emphasizes knowledge and awareness of:

- major political, economic, social, and cultural problems facing the international community, including international economic relations, world population, and resource utilization
- the international political system in the broadest global context, international organizations and alliances, and foreign political systems and processes
- ethical issues involved in international relations
- patterns of conflict and cooperation among nations and peoples
- chief historical factors that give rise to existing international institutions and processes
- problems and issues in United States foreign policy

In addition, students completing the degree in international affairs are expected to acquire the ability and skills to:

- analyze an international problem from a political, economic, historical, and cultural perspective
- read, critically evaluate, and synthesize information obtained from international affairs literature
- analyze international phenomena critically so as to separate the essential from the irrelevant and identify the probable
- communicate, orally and in writing, findings to other students of international affairs and to a broader audience

Bachelor's Degree Program

Students must complete the general requirements of the College of Arts and Sciences and a minimum of 47 hours of specified courses with a grade of C- or better (none may be taken *pass/fail*), distributed as follows

Required Courses

Semester Hours

Lower-division Requirements (14–18 hours)

ECON 1000 Introduction to Economics or ECON 2010 Principles of Microeconomics and ECON 2020 Principles of Macroeconomics	4-8
IAFS 1000 Global Issues and International Affairs	4
PSCI 2012 Introduction to Comparative Politics	3
PSCI 2223 Introduction to International Relations	3

Upper-division Requirements

Complete the requirements listed below for general upper-division functional areas and the requirements for geographic concentration, foreign language, and senior seminar. There are two options.

Option I: Seven functional area classes plus three geographic concentration classes

Option II: Six functional area classes plus four geographic concentration classes

For either option, at least one class in each of the four functional areas must be completed (12 hours total). Students may specialize by applying up to four classes in a given functional area with Option I. Students cannot apply more than four functional area classes from any one department. IAFS 3000 can be repeated up to 9 credits for different topics.

Development and Culture (Functional Area I)

ANTH 4020 Explorations in Anthropology (approved sections only); ANTH 4500 Cross-cultural Aspects of Socioeconomic Development; ANTH 4510 Applied Cultural Anthropology; ECON 3784 Economic Development; ECON 4774 Economic Reform in the Developing Countries; ECON 4784 Economic Development; GEOG 3682 Geography of International Development; GEOG/ECON 4292 Migration, Urbanization, and Development; JOUR 4201 International Mass Communication (IMC students only); LING 3545 World Language Policies; PSCI 4012 Global Development; PSCI 4732 Critical Thinking

in Development; SOCY 3002 Population and Society; SOCY 3012 Women and Development; SOCY 4007 Global Human Ecology; SOCY 4052 Social Inequalities of Health; WMST 3500 Global Gender Issues; WMST 4300 Sex, Power, and Politics: International Perspectives

International Economics, Business, and Political Economy (Functional Area II)

ECON 3403 International Economics and Policy; ECON 3545 Environmental Economics; ECON 4413 International Trade; ECON 4423 International Finance; ECON 4545 Environmental Economics; ECON 4999 Economics in Action (approved sections only); FNCE 4060 London Summer in International Finance; INBU 4200 International Financial Management; INBU 4300 International Business and Management; MKTG 3450 (formerly 4400) International Business and Marketing; PSCI 4193 International Political Economy; PSCI 4272 The Political Economy of Advanced Industrial Democracies

Political Geography, International Security, Foreign Policy (Functional Area III)

ANTH 4580 The Holocaust; GEOG 4712 Political Geography; HIST 4050 The World War II Era; HIST 4126 US Diplomatic History since 1940; HIST 4146 Military History; HIST 4166 The War in Vietnam and its Legacy; PHIL 3190 War & Morality; PSCI 3123 War, Peace and Strategic Defense; PSCI 3143 Problems in International Relations; PSCI 3163 American Foreign Policy; PSCI 3191 National Security Organization and Policy Making; PSCI 3193 International Behavior

International Institutions, Rights, and Norms (Functional Area IV)

HIST 4820 Human Rights: Historical Perspectives; JOUR 4341 Global Media (IMC students only); PHIL 3260 Philosophy and International Order; PRLC 3810 Global Issues in Leadership; PSCI 3062 Revolution and Political Violence; PSCI 4173 International Organization; PSCI 4183 International Law; PSCI 4213 Europe in the International System; PSCI 4783 Global Issues; SOCY/ENVS 4027 Inequality, Democracy, and the Environment; SOCY 4111/INVS 4402 Nonviolent Social Movements; SOCY 4121 Sociology of Religion

Geographic Concentration

International affairs majors should choose a geographic concentration, and a language appropriate to that geographic concentration, no later than the beginning of their junior year.

Requirements. International affairs majors are required to complete courses concentrating on the whole or part of a region outside the United States, including sub-Saharan Africa, Asia, Europe/Eurasia, Latin America, or the Middle East.

The geographic concentration will include three or four classes, depending on whether option I or II is chosen. It should be primarily in the social sciences, must include one course incorporating contemporary history, and can include a 3-hour course of contemporary literature (taught in the foreign language).

Language Requirement

A third-year university-level proficiency in a foreign language appropriate to the geographic concentration is required. This requirement may be met by completion of one or two semester-long, third year, university-level grammar courses (depending on the language) with a grade of C- or better, while also satisfying language department requirements for advancement through the sequence, or by certification from the appropriate department of such competence.

Senior Seminar

IAFS 4500 Post-Cold War World or IAFS 4800 Honors Seminar in International Affairs is required.

Recommendations

- All international affairs majors should have a good command of the English language.
- Students should choose electives with a view to their relevance to this program or usefulness as prerequisites for upper-division work.
- During the semester prior to graduation, students must complete a statement of major status obtained from their advisor.
- Students in the international affairs program are encouraged to consider the possibility of participating in one of the Study Abroad programs affiliated with the University of Colorado. Students wishing to participate in such a program should contact their advisor to work out an appropriate program.
- Internships are a useful experience for students seeking a career in international affairs. The Internship in International Affairs (IAFS 4930) provides the opportunity to earn academic credit for appropriate internships in the field. This course is generally offered during the spring and summer sessions; enrollments are limited. Interested sophomores, juniors, or seniors should consult with the director of the Internship Program. An application is required for admission to the Internship Program; see iafs.colorado.edu for more details. IAFS 4930 could count for upper-division functional area or geographic concentration credit with approval from the internship director.
- The IAFS Honors Program offers the opportunity to learn and apply research skills for a select number of IAFS majors. Entry into the IAFS Honors Program is limited to seniors with a 3.400 major GPA and a 3.300 overall GPA. The Honors Seminar in International Affairs (IAFS 4800—offered each fall semester) provides instruction in research methods and facilitates the development of a sound research project. Research continues into the spring semester under the guidance of individual faculty members and through the continuation course, Honors in International Affairs (IAFS 4810). Interested and eligible students should consult with their academic advisor and the director of the Honors Program before spring break of their junior year. An application is required for admission to the Honors Program; see iafs.colorado.edu for more details. IAFS 4810 could count for either an upper-division functional area or a geographic concentration class with approval from the honors director.
- Students interested in international affairs may want to consider the Global Studies Residential Academic Program offered through the residence halls. See Residential Academic Programs for information.

The specific courses that may be counted to meet the requirements in this program are determined by the committee on international affairs and the dean of the College of Arts and Sciences.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in international affairs, students should meet the following requirements:

Declare the major by the beginning of the second semester.

Begin language study by the third semester.

Complete the lower-division requirements by the end of the sophomore year.

Begin area of geographic concentration courses in first semester of the junior year.

Begin upper-division general international affairs requirements in the first semester of the junior year.

Successfully complete any remaining major requirements by the end of the eighth semester.

International Media Certificate

An International Media Certificate is available to students majoring in international affairs or enrolled in the School of Journalism and Mass Communication. This certificate offers international affairs majors courses in the journalism school that present the basics of journalism and the practice of news gathering and dissemination internationally. It provides journalism students with courses in the College of Arts and Sciences that offer context and perspective on contemporary global issues.

The certificate requires 24–25 credit hours (depending on the lower-division courses chosen). Fifteen of the credit hours must be upper-division courses. Students majoring in international affairs or enrolled in the School of Journalism and Mass Communication are eligible to apply for admission to the certificate program if they have completed 30 credit hours and 6 credits of courses in their major with a GPA of 2.750 or better. For more information consult iafs.colorado.edu or www.colorado.edu/journalism.

INVST Community Studies

Consistent with their vision for a just and sustainable world, INVST Community Studies programs develop engaged citizens and leaders who work for the benefit of humanity and the environment. INVST Community Studies innovatively operates as a community-based organization, practicing service learning and participatory education. In order to fulfill this mission, the program offers:

- a comprehensive two-year Community Leadership Program (CLP) focused on developing community leaders who engage in compassionate action as a lifetime commitment;
- a Community Studies electives that foster civic responsibility and leadership potential;
- a Public Achievement Program for local high school students; and
- a Youth Council for Public Policy that empowers young people to use the democratic process as a tool for positive social change.

The INVST CLP is the flagship program that offers a unique and transformational educational experience to all majors. Each year the INVST CLP admits a small group of students who are committed to making a positive difference with their lives. The two-year program is designed to cultivate deep understanding about issues facing people and the planet, and to provide skills and experiences for community leaders to fulfill progressive visions for change. Specifically, students participate in theory classes, skills-training classes, and two summer service-learning experiences, one domestic and one international. In addition, students intern six hours each week with community-based organizations during their first academic year, and collectively design, implement, and evaluate community leadership projects during their second academic year. Students learn and serve together in a small group environment throughout the program. Applications for the INVST CLP are due every year in March. For more information, call **303-492-7719**.

Jewish Studies

The Program in Jewish Studies explores Jewish culture, history, society, and thought from a broad, interdisciplinary perspective. The program's faculty are cutting-edge, engaged scholars and teachers from a variety of fields in the humanities and social sciences. Jewish Studies faculty members seek to inspire students and the larger community, both on and off campus, to connect Jewish thought and text to action and people's lives.

As Jews have spread across the world over the last two millennia, they have influenced and been influenced by the cultures in which they have resided. The study of Jewish culture, society, history, and religion is, by its nature, comparative. Within the liberal arts, the Jewish Studies curriculum is related to many different areas.

The purpose of the program is to familiarize students with the different facets of Jewish civilization and to see how these facets relate to the larger world. In completing the certificate, students will have a competence in a number of areas of Jewish Studies. The certificate provides students with an opportunity to learn more about this new and growing field of scholarship.

Required Courses

Semester Hours

Students must successfully complete, with a grade of C- or better, 24 hours approved for the certificate. This must include one introductory course, currently either HEBR/JWST 2350 Introduction to Jewish Culture or HIST/JWST 1108 Introduction to Jewish History. Many Jewish Studies courses also fulfill core course requirements.

Regularly offered Jewish Studies courses include:

ANTH 4050 Topics in Jewish Anthropology	3
ANTH 4580 The Holocaust: An Anthropological Perspective	3
ENGL 3312 The Bible as Literature	3
ENGL 3677 Jewish-American Fiction	3
GRMN 2301 Inside Nazi Germany	3
GRMN 2502 Representing the Holocaust	3
GRMN 2601 Kafkaesque	3
GRMN 3501 German-Jewish Writers: From Enlightenment to the Present	3
GRMN 5803 Ruins of Modernity	3
GSSL 3401 The Heart of Europe: Filmmakers and Writers in the 20th Century Europe	3
HEBR 1010 Beginning Modern Hebrew	4
HEBR 2110 Intermediate Modern Hebrew	4
HEBR 2350 Introduction to Jewish Culture	3
HEBR 2551 Secular Jewish Literature	3
HEBR 3010 Third Year Modern Hebrew	3
HEBR 3202 Women, Gender, and Sexuality in Judaism	3
HEBR 4101 Topics in Hebrew Literature	3
HEBR 4301 Venice: The Cradle of European Jewish Culture	3
HIST 1108 Introduction to Jewish History	3
HIST 4338 History of Modern Israel	3
HIST 4348 Topics in Jewish History	3
HIST 4433 Nazi Germany	3
HIST 4454 Jewish Intellectual History	3
HIST 4544 History of Yiddish Culture	3
HIST 4803 Topics: Modern European Jewish History	3
HIST 4827 Modern U.S. History	3
IAFS 3600 Global Secular Jewish Societies	3
IAFS 3610 Topics in Jewish International Affairs	3
PHIL 2800 Topics in Modern Jewish Thought	3
JWST 3930 Jewish Studies Internship	3
RLST 2600 Judaism, Christianity, and Islam	3
RLST 3100 Judaism	3
RLST 4050/5050 Hebrew Bible	3
RLST 4260 Topics in Judaism	3
WRTG 3020 After the Holocaust	3

As the Program in Jewish Studies is growing rapidly, new courses are continually being added. Visit www.colorado.edu/jewishstudies for the most current course information.

Lesbian, Gay, Bisexual, and Transgender Studies

The Lesbian, Gay, Bisexual, and Transgender Studies (LGBT) certificate program encourages students to think critically about the function of sexuality and gender in the world around them. It asks philosophical questions such as why the social categories "homosexual" and "heterosexual" exist, and it asks historical questions about the specificity of lesbian, gay, bisexual and transgender lives.

Open to any student in the university, this interdisciplinary program consists of two required lower-division courses and a series of relevant courses in a number of different departments. Requiring 24 credit hours, the certificate is awarded upon completion of its requirements in addition to a bachelor's degree in another field.

By developing an understanding of diverse sexual and gender identities, and the processes individuals move through in developing these identities, certificate program students apply the meaning and function of sexuality to a broad range of historical and contemporary institutions and societies.

For more information about the Lesbian, Gay, Bisexual, and Transgender Studies certificate program, contact the program directors, Dr. Scarlet Bowen at **303-735-5755**, or Dr. Bud Coleman at **303-492-5809**.

Linguistics

Degrees..... BA, MA, PhD

Linguistics is the study of all aspects of human language: how languages make it possible to transmit ideas and feelings; how and why languages are similar and different; how we develop different styles and dialects; what will be required for computers to understand and produce spoken language; and how languages are used in everyday communication as well as in formal settings. Linguists try to figure out what it is that speakers know and do by observing the structure of languages, the way children learn language, slips of the tongue, conversations, storytelling, the acoustics of sound waves, and the way people's brains react when they hear speech or read. Linguists also reconstruct pre-historic languages, and try to deduce the principles behind their evolution into the thousands of languages of the world today.

The major in linguistics is useful for careers involving cognitive science, computer science, psychology, international business, language teaching, advertising, publishing, law, and documentation. Double majors and minors are encouraged with language, computer science, psychology, communication, sociology, anthropology, international affairs, philosophy, and education.

The core of the major is a set of courses, taught in the Department of Linguistics, on the nature of language. In addition, the major requires language courses offered by other departments (except for fluent speakers of languages other than English).

The undergraduate degree in linguistics emphasizes knowledge and awareness of:

- the fundamental architecture of language in the domains of phonetics and phonology, morphology and syntax, and semantics and pragmatics;
- the diversity of languages structures;

- the main interactions between language, culture, and society, including the role of language as a cultural institution and the social functions of language diversity; and
- the approaches to the study of language that are used by a discipline other than linguistics.

In addition, students completing the degree in linguistics are expected to acquire the ability and skills to:

- demonstrate proficiency in a second language equivalent to the third-year university level;
- infer language structures from the analysis of data from unfamiliar languages; and
- give coherent general interpretations of common language phenomena in terms of language structure and language use.

Bachelor's Degree Program

Majors in linguistics must complete a total of 33 hours of study in general linguistics, including 9 in a natural language (for exceptions, see below). Language study is taken in other departments.

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

<i>Required Courses</i>	<i>Semester Hours</i>
Complete the following courses in general linguistics with grades of C- or better:	
LING 2000 Introduction to Linguistics	3
LING 3100 Language Sound Structures	3
LING 3430 Semantics	3
LING 4420 Morphology and Syntax	3

Natural Language. Students must complete with a grade of C- (2.000) or better a minimum of 9 credit hours of study of a natural language other than English (including signed languages used by deaf communities). At least 5 credit hours offered in satisfaction of this requirement must be at the 3000 level or above. The natural language requirement may be satisfied by examination or waived for foreign students whose native language is not English; in these cases, students must still meet the college minimum major requirement of 18 credit hours of upper-division course work and 30 credit hours overall in the major. Students who wish to have their language requirement waived must obtain the consent of an undergraduate advisor before registering for the fall term of the junior year.

Electives. A minimum of 9 elective hours must be completed with a grade of C- (2.000) or better. Courses may be chosen from the following:

LING 1000 Language in U.S. Society	3
LING 1010 Study of Words	3
LING 2400 Language and Gender	3
LING 3005 Cognitive Science	3
LING 3220 American Indian Languages	3
LING 3500 Language/Public Interest	3
LING 3545 World Language Policies	3
LING 3810 Undergraduate Seminar (may be repeated once for credit)	1
LING 4100 Perspectives on Language	3
LING 4220 Language and Mind	3
LING 4560 Language Development	3
LING 4610 English Structure for TESOL	3
LING 4800 Language and Culture	3

Other upper-division linguistics courses may also be chosen if available; graduate courses may be taken with permission of the department.

The department recommends that prospective majors complete LING 2000 and at least two 1000-level foreign language

courses (in the same language) by the end of the sophomore year, unless the student's foreign language proficiency is already advanced.

The fall semester of the junior year should include LING 3430, a 2000-level foreign language course, and a linguistics elective or LING 4420. It must also include LING 2000 if that was not taken earlier. The spring semester of the junior year should include LING 3100, a linguistics elective, and a further 2000-level foreign language course (if needed to prepare the student for the required upper-division foreign language hours).

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of "adequate progress" as it is used here refers only to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in linguistics, students should meet the following requirements:

- Declare linguistics as a major by the beginning of the second semester.
- Complete two semesters of study of a natural (spoken or signed) language other than English by the end of the sophomore year (fourth semester) at the latest, continue study at the 2000 level during the junior year at the latest, and take 5 credit hours at the 3000 level during the senior year (seventh and eighth semesters) at the latest. The language requirement is waived for native speakers of a language other than English, but if it is waived, 6 additional upper-division credit hours in linguistics must be taken.
- Take LING 2000 (required) and LING 1000 or LING 2400 (electives) during the freshman or sophomore years and one or both of LING 3430 or 4420 during the fall of the junior year.
- Take LING 3100 and an upper-division linguistics elective in the spring of the junior year. Take the remaining courses as needed during the junior or senior year.

NOTE: A linguistics major who has been excluded from any upper-division linguistics course due to enrollment limitations will be given first preference for a seat in that course the following year if the exclusion is made known to the department staff within two weeks after it occurs. No declared linguistics major who still needs LING 2000 for fall of the junior year and attempts to register for it during the regular registration period for continuing students (spring of the sophomore year) will be excluded from the course.

Minor Program

A minor is offered in linguistics. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information see www.colorado.edu/artssciences/students/undergraduate/academics/minors.html.

Study Abroad

Language study and some courses in the major may be completed in university or university-affiliated study abroad programs, and such study is recommended. Students interested in doing part of their major work in a study abroad program should discuss the matter with their advisor before going abroad. For information on study abroad programs, consult the Office of International Education.

Graduation with Honors

The honors program in linguistics offers the opportunity for highly motivated undergraduates to undertake a deeper and more individualized study of linguistics than is provided by the regular BA curriculum. Linguistics majors with an overall grade point average of 3.30 or higher are eligible to participate in the program. Honors that may be earned are cum laude (with honors), magna cum laude (with high honors), and summa cum laude (with highest honors).

Students interested in pursuing departmental honors are encouraged to consult with the departmental honors advisor by the beginning of their junior year to ensure that they will be able to meet the requirements for departmental honors before graduation.

Concurrent BA/MA Degree Program

The department has a five-year concurrent bachelor's and master's degree program, which is recommended only for the most serious and able graduate students. For further information, see the graduate advisor in the spring of the sophomore year or during the first week of the fall semester of the junior year.

Graduate Degree Programs

Students wishing to pursue graduate work in linguistics should carefully read Requirements for Advanced Degrees in the Graduate School section of this catalog and the detailed degree requirements available from the department office. A brief summary of MA and PhD requirements follow.

Prerequisites. Applicants should hold a recognized baccalaureate degree. They should have considerable knowledge of a language other than their native language. This knowledge may have been gained by formal study or by use of the language in a country, community, or institution where it is the usual means of communication. The department may require formal study of a foreign language by graduate students whose proficiency in this area is less than the equivalent of the college junior level. GRE scores are required from United States residents; scores are also required from native speakers of English who wish to be considered for fellowship aid. TOEFL scores are normally required from foreign applicants.

Master's Degree

The master's degree calls for a minimum of three semesters of study, though four semesters is usual. Students must complete LING 5030 Linguistic Phonetics, LING 5410 Phonology, LING 5420 Morphology and Syntax, LING 5430 Semantics and Pragmatics, and LING 5570 Introduction to Diachronic Linguistics.

The remaining courses are normally taken at the 5000-level or above. Students in Plan I (thesis) must complete a total of 30 semester hours, including 4–6 thesis hours. Students in Plan II (nonthesis) must complete a total of 30 semester hours of course work. All students must pass a comprehensive written examination covering general topics in linguistics plus the thesis topic if any.

The MA in linguistics for TESOL professionals is a graduate program in linguistics. The MA will provide a cohesive, professionally oriented program addressing the increased demand for professionalization in the field of teaching English as a second language. The program requires completion of 30 credit hours: 12 in graduate linguistics course, 12 in required TESOL courses, a 3-credit practicum, and a 3-credit elective course. A comprehensive examination and teaching portfolio are required.

Doctoral Degree

To be admitted to the PhD program, students must have completed course work equivalent to LING 5030 Linguistic Phonetics, LING 5410 Phonology, LING 5420 Morphology and Syntax, LING 5430 Semantics and Pragmatics, LING 5570 Introduction to Diachronic Linguistics, and LING 6450 Syntactic Analysis. Students who do not have this preparation will be initially admitted to the MA program and reconsidered for admission to the PhD program when these requirements are close

to completion. Students may be admitted to the PhD program before finishing the MA.

In addition to phonology, syntax, semantics, and pragmatics, the department offers specializations in sociolinguistics, conversation analysis, historical linguistics, typological comparison, Amerindian linguistics, African linguistics, linguistic anthropology, psycholinguistics, neurolinguistics, language development, cognitive linguistics, and computational modeling of language knowledge. Students should select a specialization and begin their own research as early as possible.

Thirty-six hours of course work are normally required for the PhD.

Four linguistics courses are required at the 6000 level or above: LING 6450

Syntactic Analysis, LING 7100 Field Methods 1, and any two of LING 7410 Phonological Theory, LING 7420 Syntactic Theory, LING 7430 Semantic Theory, or LING 7570 Diachronic Theory.

The remaining eight courses may include up to four courses in other departments appropriate to the specialization.

All PhD students must demonstrate the ability to read linguistic literature in a language other than English.

As a PhD preliminary examination, students submit a data-based research paper at the beginning of the second year in the PhD program. The University comprehensive examination requirement is completed in two steps: the completion of a synthesis paper followed by the defense of a dissertation prospectus.

Mathematics

Degrees..... BA, MA, MS, PhD

The undergraduate degree in mathematics emphasizes knowledge and awareness of:

- basic real analysis of one variable;
- calculus of several variables and vector analysis;
- basic linear algebra and theory of vector spaces;
- the structure of mathematical proofs and definitions; and
- at least one additional specialized area of mathematics.

In addition, students completing a degree in mathematics are expected to acquire the ability and skills to:

- use techniques of differentiation and integration of one and several variables;
- solve problems using differentiation and integration;
- solve systems of linear equations;
- give direct proofs, proofs by contradiction, and proofs by induction;
- formulate definitions;
- read mathematics without supervision; and
- utilize mathematics.

Bachelor's Degree Program

The Department of Mathematics offers three tracks leading to a BA in mathematics. To earn a BA in mathematics, a student must complete the general requirements of the College of Arts and Sciences as well as well as the five mathematics core courses and the six additional courses for one of the three tracks (described below). Students must earn a grade of C- or better in each of the mathematics core courses and the six additional courses, and have at least a C average for all attempted work in mathematics.

<i>Required Courses</i>	<i>Semester Hours</i>
Mathematics Core (required of all mathematics majors)	
Calculus 1 (e.g., MATH 1300 or APPM 1350)	3
Calculus 2 (e.g., MATH 2300 or APPM 1360)	3
MATH 2001 An Introduction to Discrete Mathematics	3
MATH 3001 Analysis I	3
MATH 3130 Linear Algebra	3

Comprehensive Track

Aimed at students seeking a general background in mathematics or intending to pursue graduate work in mathematics.

Additional Courses Required

Calculus III (e.g., MATH 2400 or APPM 2350)	4
MATH 3140 Abstract Algebra I	3
One of MATH 4140 Abstract Algebra II or MATH 4001 Analysis II	3
Plus 3 upper-division MATH or approved APPM courses (at least one at the 4000-level)	9

(For a complete list of approved courses see spot.colorado.edu/~carriem/math_advising)

Applicable Track

Aimed at students seeking a background in applied or applicable mathematics.

Additional Courses Required

Calculus III (e.g., MATH 2400 or APPM 2350)	4
MATH 4510 Introduction to Probability	3
MATH 4430 Introduction to Ordinary Differential Equations	3
One of MATH 4520 Mathematical Statistics or MATH 4470 Partial Differential Equations 1	3
Plus 2 upper-division MATH or approved APPM courses	6

(For a complete list of approved courses see spot.colorado.edu/~carriem/math_advising)

Secondary Education Track

Aimed at students intending to teach mathematics at the secondary level.

Additional Courses Required

MATH 3120 Functions and Modeling	3
MATH 3510 Introduction to Probability and Statistics	3
MATH 3140 Abstract Algebra I	3
MATH 3110 Introduction to the Theory of Numbers	3
MATH 3210 Euclidean and Non-Euclidean Geometry I	3
MATH 4210 Euclidean and Non-Euclidean Geometry II	3

NOTE: Completion of the Secondary Education Track does not provide the student a teaching license. For information about the secondary education teaching licensure program, see the School of Education section.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress,” as it is used here, refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major.

Comprehensive Track

Declare major by the beginning of the second semester.

Complete Calculus 1, Calculus 2, Calculus 3, MATH 2001, 3001, and 3130 by the end of the fourth semester.

Complete MATH 3140, 4140, or 4001, and one additional approved MATH or APPM course by the end of the sixth semester.

Complete the major by the end of the eighth semester.

Applicable Track

Declare major by the beginning of the second semester.

Complete Calculus 1, Calculus 2, Calculus 3, MATH 2001, 3001, and 3130 by the end of the fourth semester.

Complete MATH 4510 and 4430, and either MATH 4520 or 4470 by the end of the sixth semester.

Complete the major by the end of the eighth semester.

Secondary Education Track

Declare major by the beginning of the second semester.

Complete Calculus 1, Calculus 2, MATH 2001, 3001, 3120, and 3130 by the end of the fourth semester.

Complete MATH 3510 and 3210, and either MATH 3110 or 3140 by the end of the sixth semester.

Complete the major by taking MATH 4210 and the remaining of MATH 3110 or 3140 the end of the eighth semester.

Residency Requirement

For the BA degree in mathematics, all students must have completed at least 12 credit hours of upper-division mathematics courses, with grades of C (2.00) or better, taken in the College of Arts and Sciences on the Boulder campus. Additional courses transferred from other universities or from other campuses of the University of Colorado that are used to meet the minimum 24-hour upper-division requirement must be approved by the Department of Mathematics. Courses accepted as mathematics credit but excluded from the minimum 24-hour upper-division requirement still count in the 45 maximum hours allowed in mathematics.

Undergraduate students planning to do graduate work in mathematics should follow the Comprehensive Track, as well as fulfill the arts and sciences language requirement with German, French, or Russian.

Minor Program

A minor is offered in mathematics. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For minor information see www.colorado.edu/artsscience/students/undergraduate/academics/minors.html.

Graduate Degree Programs

The Department of Mathematics offers programs leading to the degrees MA or PhD in mathematics and MS in applied mathematics. Students interested in any of these programs should read carefully the materials describing the university requirements in the Graduate School section. The student is responsible for satisfying these requirements at the proper time.

Applicants must have demonstrated mathematical maturity and accomplishment roughly at the level of a successful mathematics major at CU-Boulder. Applicants must also demonstrate mathematical potential: success in courses in advanced calculus and abstract algebra help demonstrate this potential. General and Mathematics GRE subject scores are required.

The basic requirements for the various degrees are summarized here, and full details are available in the department office or online at www.colorado.edu/math. For fulfillment of all course requirements, mathematics courses must be numbered 5000 or higher excluding MATH 5800.

All master's degree students must complete 30 hours of approved graduate credit. No more than 6 credit hours of seminars or independent study may be included for this requirement.

All master's degree students must take two 2-semester sequences. No language is required of master's degree students.

To earn an MA or MS degree, a student must pass a master's examination based on the particular program of the student.

For the MA degree in mathematics, students can pursue a “thesis option,” which requires 4–6 credit hours of thesis work, and a thesis defense.

For the MS degree in applied mathematics, 6–12 credit hours must be in an approved minor program outside the mathematics department.

Before being admitted to candidacy for the PhD degree in mathematics, a student must pass examinations in real analysis and modern algebra, take courses in topology and complex analysis, and pass a comprehensive exam. The basic requirements for a PhD degree in mathematics are as follows:

- Demonstrate reading knowledge of French, German, Italian, or Russian.
- Complete at least 30 credit hours of graduate course work and 30 credit hours of thesis work
- Prepare a written thesis that contains substantial original contributions to mathematics
- Successfully complete a final examination.

For more current and precise details, contact the mathematics office or go to the department website at www.colorado.edu/math.

Medieval and Early Modern Studies

To the Middle Ages, the modern world owes the preservation and transmission of Latin and Greek; the development of a host of vernaculars; the evolution of Judaism and Christianity, and the rise of Islam; the renewed study of Roman law; the growth of a mercantile class; the creation of musical notation; the erection of ecclesiastical monuments; the foundations of constitutional government; and the institution of universities. The early modern period inherited and elaborated all these institutions and inventions, adapting them to fit new conceptions of man (and woman), church, and state.

The Center for Medieval and Early Modern Studies is founded on the convictions that the period from c. 400 to c. 1800, conceived in a global context, is a dynamic cultural continuum and ever-evolving system; that study of both periods in tandem sheds new light on each; and that the unity and diversity of the premodern world can be understood and appreciated only from an interdisciplinary perspective. Medieval and Early Modern Studies therefore crosses boundaries of period, nation, language, and discipline, and the center's prime function is to facilitate and encourage interdepartmental study and teaching.

Courses throughout the curriculum are available to students whose area of specialization within a given department is the medieval and/or early modern period(s) and who wish to broaden their knowledge of the cultures of the period. With the approval of the major department, a coherent group of these courses may be accepted as a related program of study and as part of the requirements for an undergraduate degree. For additional details concerning these courses, see departmental listings.

For more information, and to inquire about the undergraduate certificate program, consult Professor Paul Hammer, director, Center for Medieval and Early Modern Studies, Department of History, University of Colorado Boulder, 234 UCB, Boulder, CO 80309-0234.

Molecular, Cellular, and Developmental Biology

Degrees..... BA, MA, PhD

The undergraduate degree in molecular, cellular, and developmental biology emphasizes knowledge and awareness of:

- the biological sciences in general and detailed understanding of currently important aspects of cellular biology, molecular biology, biochemistry, genetics, and developmental biology; and

- the relationship of the specialty area to broader areas of science and to society in general, including ethical issues raised by current biological research and by the rapid growth of biotechnology as an important shaping force for the future.

In addition, students completing the degree in molecular, cellular, and developmental biology are expected to acquire the ability and skills to:

- learn detailed laboratory procedures rapidly when the need arises;
- demonstrate a scientific vocabulary and an understanding of research methods that permits the comprehension of articles from current journals, extraction of pertinent information, and judgment of the quality of the work described;
- evaluate a biological problem, determine which aspects are understood, and apply basic research methods and techniques to the unknown aspects; and
- communicate scientific concepts and analytical arguments clearly and concisely, both orally and in writing.

Bachelor's Degree Program

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

<i>Required Courses</i>	<i>Semester Hours</i>
MCDB 1150 Introduction to Molecular Biology and 1151 Introduction to Molecular Biology Laboratory or MCDB 1111 Biofundamentals: The Evolutionary, Molecular, and Cellular Basis of Life (Note 1)	4
MCDB 2150 Principles of Genetics and MCDB 2151 Principles of Genetics Laboratory	4
MCDB 3135 Molecular Cell Biology I	3
MCDB 3140 Cell Biology Laboratory	2
MCDB 3145 Molecular Cell Biology II	3
MCDB 4650 Developmental Biology or MCDB 4300 Immunology or MCDB 4777 Molecular Neurobiology (spring 2010)	3
Upper-division electives in MCDB. Two courses must be lecture courses. One of these must be a 4000-level MCDB course (see department for approved courses.) A maximum of 6 credit hours	11-12
MCDB 3135 Molecular Cell Biology I	3
MCDB 3140 Cell Biology Laboratory	3
MCDB 3145 Molecular Cell Biology II	3
CHEM 1113/1114; CHEM 1133/1134; CHEM 1251/1271, General Chemistry 1 and 2 lecture and lab, or CHEM 1351 and 1371 Honors General Chemistry 1 and 2	10
CHEM 3311 Organic Chemistry 1 and CHEM 3321 Laboratory in Organic Chemistry 1 or CHEM 3351 Organic Chemistry 1 and CHEM 3361 Laboratory in Organic Chemistry 1 for Chemistry Majors.	5-6
CHEM 4611 Survey of Biochemistry or CHEM 4711 General Biochemistry 1	3
PHYS 1110 and 1120 General Physics 1 and 2 and PHYS 1140 Experimental Physics or PHYS 2010 and 2020 General Physics 1 and 2, or PHYS 1110 and PHYS 2020	9-10
MATH 1300 Analytic Geometry and Calculus 1 (Note 2).	5

It is strongly recommended that MCDB majors consult with a departmental advisor before applying AP, IB, or CLEP credit. Students majoring in MCDB who transfer biology credit from other institutions also must consult a departmental advisor.

Curriculum Notes

1. EBIO 1210 and 1230 are acceptable alternatives.
2. APPM 1350 or MATH 1310 are acceptable alternatives.

MCDB Prerequisites Statement

It is MCDB policy to enforce the course prerequisites listed on the Student Information System (SIS). If you have not either taken *and passed* (C- or better) the prerequisites for a course, or obtained permission from the instructor or a departmental ad-

visor to take the course based on equivalent preparatory course work or experience here or elsewhere, *you may be administratively dropped from the course.*

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in molecular, cellular, and developmental biology, students should meet the following requirements:

The MCDB major must be started in the first semester for a student to be eligible for guaranteed four-year graduation. Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below. Adequate progress is defined as cumulative completion of at least one-fourth of the required course work for the major during each academic year, including the following specific requirements:

Either general chemistry or the introductory MCDB sequence must be completed during the first year.

General chemistry and the introductory MCDB sequence must both be completed by the end of the second year.

Organic chemistry and the second-level sequence in MCDB (cell biology and molecular biology) must be completed by the end of the third year.

Animal Use Policy

Biology is the science of life, and a major in it must include some hands-on experience with living organisms to be complete. Exercises involving the use of living animals or animal tissues are included, therefore, in MCDB laboratory courses. Majors with objections on moral grounds may arrange to limit their participation in these exercises, although their educational experience is compromised by doing so.

Nonmajors may take MCD biology lecture courses without the accompanying laboratories. Laboratory courses in which living vertebrate animals or tissues are used are identified in the course description section of this catalog. For additional information, please contact the department.

Graduate Degree Programs

Opportunities for graduate study and original research, leading to the PhD degree, are available in a variety of areas.

Molecular Biology. Includes gene regulation, virology, nucleic acid-protein interactions, chromosome structure and function, chromosome replication, microbial diversity, human genome structure, RNA structure, and catalysis.

Cell Biology. Includes cytoskeleton, biophysical cytology, vacuole assembly, analysis of yeast spindle pole bodies and vertebrate centrosomes, synthesis and secretion of glycoproteins and polysaccharides, defense responses in plants, and 3-D high resolution reconstruction, biogenesis of mitochondria and chloroplasts, energy metabolism, assembly of membrane protein complexes, cell cycle regulation and checkpoints, and signal transduction.

Developmental Biology. Covers mechanisms and regulation of morphogenesis and cell growth, genetic control of development, molecular genetics of embryogenesis, sex determination, ras proteins and vulval development, and programmed cell death in nematodes, molecular genetics of *Drosophila* neurobiology, developmental genetics of *Drosophila* and *Caenorhabditis*, neural development in mice, transgenic mice, and muscle development and function.

Genetics. Includes genetics of human disease, complex traits, mouse development, and invertebrate development.

Entrance Requirements and Prerequisites. The graduate program of the Department of Molecular, Cellular, and Developmental

Biology is sufficiently flexible to accommodate students with a wide range of training. Students with bachelor's degrees in any of the biological, biochemical, or physical sciences are encouraged to apply. Background necessary for the program includes the equivalent of undergraduate courses in cell biology, developmental biology, genetics, organic chemistry, biochemistry, chemical thermodynamics, differential and integral calculus, and general physics. Students accepted with deficiencies may demonstrate mastery of the required areas by taking appropriate undergraduate courses, by passing advanced-standing examinations, or by successfully completing graduate-level courses that require the undergraduate courses as prerequisites. Students admitted generally have independent research experience.

Areas of Study. All students are expected to develop competence in five areas: biochemistry, genetics, cell structure and function, developmental systems and mechanisms, and current research techniques of experimental biology. Students also are expected to develop their abilities as independent investigators who identify important questions in biology and design experiments to address those questions.

Doctoral Program

Course of Study. The faculty of the department offers a variety of courses to help graduate students acquire knowledge in the various areas of study. Further, students are required to work in at least three different laboratories to broaden their education and to help them identify the field of greatest interest for their thesis work.

Examination Sequence. An advisory committee, appointed upon entrance, develops an appropriate curriculum based in part on the student's background. A written preliminary exam consists of a series of courses and exams administered during the first year. A comprehensive qualifying exam administered at the end of the second year includes a written research proposal and an oral defense of the proposal that emphasizes breadth and depth of knowledge as well as an ability to communicate and synthesize facts into a coherent scientific argument.

Language. The department does not have a language requirement.

Thesis. The principal elements in graduate training are defining a thesis problem, investigating this problem with a coherent piece of research that constitutes a substantial contribution to knowledge, and writing a report on this work in the form of peer-reviewed journal articles and a thesis submitted to a departmental committee for approval. After completion of the thesis, each candidate for the PhD degree is required to take a final oral examination on the thesis and related topics, and to present a public seminar.

Teaching. Generally, each candidate for the PhD degree does two semesters of apprentice teaching. This obligation is usually met during the student's first year of graduate study.

Course Requirements. A minimum of 30 credit hours of courses numbered 5000 and above, plus 30 hours of doctoral thesis, are required. Specific courses depend on the student background and field of specialization.

Master's Program. In view of the strong research orientation of the fields involved, the department does not accept applications from students seeking the MA as a terminal degree. The master's of arts degree, either with a thesis (Plan I) or without (Plan II), is awarded under special circumstances. Candidates must pass the preliminary examination and a comprehensive final examination. For Plan I a thesis based on original research must

be submitted. Final determination of whether a student follows Plan I or Plan II is made by the department.

Museum and Field Studies

Degree MS

Museum courses listed in this catalog may be taken with the approval of the student's major department and the course instructor, although no undergraduate major is offered in museum studies. A graduate professional certificate in Museum and Field Studies is offered to graduate students in other disciplines.

Graduate training in anthropology, art history, history, botany, entomology, paleontology, and zoology is provided under the direction of museum faculty in cooperation with cognate departments and the museum and field studies program. Areas of study include, but are not limited to:

- anthropological interpretation
- diatom taxonomy, systematics, and ecology
- southwestern archaeology and ethnology
- plant taxonomy, evolution, and phytogeography
- vertebrate paleontology and Cenozoic stratigraphy
- biology of aquatic invertebrates
- systematics and population biology of insects of the Rocky Mountain Region
- plant-insect interactions

Museum assistantships include support from the Walker Van Riper fund and research support from the Collie and William Henry Burt museum funds. Other financial assistance is available to selected students. Students interested in working toward advanced degrees under the direction of museum faculty should write the University of Colorado Museum, Museum and Field Studies, University of Colorado Boulder, 218 UCB, Boulder, CO 80309-0218, e-mail mfsinfo@colorado.edu, or visit cumuseum.colorado.edu/MFS.

Graduate Degree Program

The University Museum offers a program leading to the degree of Master of Science, Museum and Field Studies. Please see Interdisciplinary Programs in the Graduate School section.

Applicants accepted for graduate work by museum faculty must be admitted to the Graduate School.

Neuroscience

See Psychology and Neuroscience for information on the major.

The neurosciences certificate program encourages undergraduate students interested in how the brain controls behavior to take courses in the basic sciences while providing the means to specialize in neuroscience. Since this subdiscipline of the biological sciences spans a number of departments at the university (e.g., integrative physiology, psychology, and MCD biology), students are encouraged to obtain greater academic breadth through interdepartmental course selection.

To obtain the certificate, a student must satisfy the requirements of a major and the certificate program, and maintain a grade point average of 3.200 or better.

For more information, see www.colorado.edu/neuroscience program.

Nordic Studies (Scandinavian)

See Germanic and Slavic Languages and Literatures.

Peace and Conflict Studies

The Certificate Program in Peace and Conflict Studies (PACS) is designed to help students explore why conflict and violence occur and learn how conflict can be managed and transformed to accomplish constructive ends. The certificate is granted by the dean of the College of Arts and Sciences, but students in any school or major at the University of Colorado may earn it.

The program takes an interdisciplinary perspective to the study of conflict, cooperation, war, and peace. Course work from various departments focuses on personal and social change, intra- and international conflicts, processes of conflict resolution, creative nonviolent activism, and the analysis of violence of various forms. The program encourages hands-on, "in the field" learning of peace and conflict issues through volunteer and internship placements with a wide variety of peace, justice, and development agencies.

Completion of the certification requires 24 credit hours (15 upper division) of study including:

- PACS 2500 Introduction to Peace and Conflict Studies
- PACS 4500 Senior Seminar in Peace and Conflict Studies
- 9 credit hours of relevant course work in the student's major
- 9 credit hours of relevant course work outside the major.

For information or application go to the program's website: 3cg.colorado.edu/drupal_pacs.

Philosophy

Degrees BA, MA, PhD

The undergraduate degree in philosophy emphasizes knowledge and awareness of:

- some of the principal philosophical texts in the history of western philosophy, from its beginnings in Greece to the late 19th century;
- some of the main currents in 20th century philosophy, including some acquaintance with contemporary philosophical issues and modes of inquiry;
- a single major author or a single philosophical movement; and
- elementary formal logic.

In addition, students completing the degree in philosophy are expected to acquire the ability and skills to:

- form reasoned opinions about the issues—moral, religious, political, etc.—that educated people debate;
- understand, analyze, and evaluate complex arguments and theories;
- distinguish between the main thrust of an argument or position and what is ancillary to it;
- discover and critically examine the underlying presuppositions of major systems of ideas or programs for action;
- see important connections between different systems of ideas or programs for action;
- explain difficult ideas and concepts in an informed, effective, and coherent manner;
- develop a thesis and present a coherent argument for it;
- write a clear and coherent essay; and
- engage in rational and productive discussion of issues and arguments.

Bachelor's Degree Program

For the undergraduate degree in philosophy, students must take 33 to 45 credit hours in philosophy, earning 33 hours with a grade of C- or better in each course in philosophy and 2.00 (C) average for all work attempted in philosophy. Also, students must take 18 hours of upper-division work in philosophy with a grade of C- or better, with at least 12 of those 18 credit hours completed on the CU-Boulder campus. No more than 8 credit hours of independent study may count toward the minimum requirement.

Students are advised to consult the online Schedule Planner for the most accurate information on prerequisites, since these sometimes vary with instructors.

Courses may be taken in any order providing prerequisites, if any, are met. However, the department strongly recommends completion of PHIL 2440, 3000, 3010, and 3480 in the first year of the major program.

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

<i>Required Courses</i>	<i>Semester Hours</i>
History (three courses)	9
PHIL 3000 History of Ancient Philosophy, Ancient and Medieval	
PHIL 3010 History of Modern Philosophy, Modern	
One course of the following:	
PHIL 4010 Single Philosopher	
PHIL 4020 Topics in the History of Philosophy	
PHIL 4030 Medieval Philosophy	
PHIL 4040 20th Century Philosophy	
PHIL 4070 Existentialist Philosophy	
PHIL 4080 Introduction to Phenomenology	
PHIL 4250 Marxism	
Logic (one of the following courses)	3
PHIL 2440 Symbolic Logic	
PHIL 4440 Topics in Logic	
Philosophical Writing (one course)	3
PHIL 3480 Critical Thinking and Writing in Philosophy (prereq. or coreq., PHIL 2440 Symbolic Logic)	
Values (two courses)	
The following required course: PHIL 3100 Ethical Theory (prereq. or coreq., PHIL 3480 Critical Thinking and Writing in Philosophy)	3
One of the following additional courses	3
PHIL 2140 Environmental Justice	
PHIL 2200 Major Social Theories	
PHIL 2220 Philosophy and Law	
PHIL 2290 Philosophy and Women	
PHIL 3110 Feminist Practical Ethics	
PHIL 3140 Environmental Ethics	
PHIL 3160 Bioethics	
PHIL 3190 War and Morality	
PHIL 3200 Social and Political Philosophy	
PHIL 3260 Philosophy and the International Order	
PHIL 4110 Contemporary Moral Theory	
PHIL 4200 Contemporary Political Philosophy	
PHIL 4250 Marxism	
Metaphysics and Epistemology (two courses)	
The following required course: PHIL 3340 Epistemology (prereq. or coreq. PHIL 3480 Critical Thinking)	3
One of the following additional courses	3
PHIL 3600 Philosophy of Religion	
PHIL 4300 Philosophy of Mind	
PHIL 4360 Metaphysics	
PHIL 4400 Philosophy of Science	
PHIL 4490 Philosophy of Language	
Electives (two courses) (includes all courses that are at the 2000 level or above, and are not taken to satisfy any of the above requirements)	6

NOTE: The department offers topically oriented majors that are interdisciplinary in nature, including law and society, and values and social policy. These majors require two semesters in the history of philosophy, as well as a series of core courses that vary according to the topic. A student intending to complete a topical major in philosophy should see the departmental undergraduate advisor as soon as possible.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of "adequate progress" as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in philosophy, students should meet the following requirements:

Declare major by the beginning of the second semester.

Complete an average of 6.7 credit hours of required philosophy courses in each of the next five semesters.

Meet with the undergraduate advisor at the time the major is declared.

Complete PHIL 2440, PHIL 3480, PHIL 3000, and PHIL 3010 by the end of the fifth semester of study.

Minor Program

A minor is offered in philosophy. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information, see www.colorado.edu/artssciences/students/undergraduate/academics/minors.html.

Graduate Degree Programs

Applicants for admission to the Graduate School for work toward a master's or doctoral degree with a major in philosophy are expected to have had 18 or more credit hours in undergraduate courses in the subject.

Through its MA and PhD programs, the department offers three areas of concentration in graduate study: history of philosophy, contemporary metaphysics, and moral theory and practical ethics.

Beyond the required course work and examinations for the PhD, a diversified faculty provides opportunity for a wide range of specialization in the dissertation project. The department makes available a limited number of teaching assistantships and assists with job placement. Descriptions of all degree programs are available from the Department of Philosophy.

Students wishing to pursue graduate work in philosophy should note requirements for advanced degrees in the Graduate School chapter and should obtain a copy of the *Graduate Program Rules* from the department.

Descriptions of all degree programs are available from the Department of Philosophy.

Physics

Degrees..... BA, MS, PhD

The undergraduate degree in physics emphasizes knowledge and awareness of:

- the basic subfields of physics (classical mechanics, electricity and magnetism, quantum mechanics, statistical mechanics, and thermodynamics), as well as at least one specialty area of application (e.g., solid state physics or optics);
- the major principles of physics, their historical development, and the roles they play in the various subfields of physics;
- the interrelations between theory and observation, the role of systematic and random experimental errors, and methods used to analyze experimental uncertainty and compare experiment with theory;

- physical phenomena and experience in the use of basic experimental apparatus and measuring instruments;
- mathematics sufficient to facilitate the acquisition and application of physical principles; and
- the importance of physics in other fields such as chemistry, biology, engineering, medicine, and in society at large.

In addition, students completing the degree in physics are expected to acquire the ability and skills to:

- apply physical principles to new situations;
- construct and assemble experimental apparatus, conduct and analyze measurements of physical phenomena, analyze properly experimental uncertainty, and make meaningful comparisons between experiment and theory; and
- communicate results of scientific inquiries verbally and in writing.

Bachelor's Degree Programs

Three different plans are available to students in physics. Because there is some flexibility within each plan, the department encourages students to pursue their own interests in setting up their curriculum. The final responsibility for fulfilling the requirements for the degree rests with the student.

Students who have declared physics as a major are required to consult with the departmental advisor at least once per semester. Even if first-year students are only considering physics as a major, they are strongly encouraged to visit the departmental advisor and discuss the situation. Because most of the advanced physics courses have various prerequisites, failure to settle on an appropriate plan of study early in the college career can result in delay and complications later.

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

Plan I

Primarily for those planning graduate work in physics, this plan includes 45 credit hours of physics courses.

<i>Required Courses</i>	<i>Semester Hours</i>
PHYS 1110 and 1120 General Physics 1 and 2	8
PHYS 1140 Experimental Physics 1	1
PHYS 2150 Experimental Physics	1
PHYS 2170 Foundations of Modern Physics	3
PHYS 2210 Classical Mechanics and Math Methods 1	3
PHYS 3210 Classical Mechanics and Math Methods 2	3
PHYS 3220 Quantum Mechanics and Atomic Physics I	3
PHYS 3310 Principles of Electricity and Magnetism 1	3
PHYS 3320 Principles of Electricity and Magnetism 2	3
PHYS 3330 Junior Laboratory.	2
PHYS 4230 Thermodynamics and Statistical Mechanics	3
PHYS 4410 Quantum Mechanics and Atomic Physics 2	3
Electives in physics (chosen from the departmental list)	minimum 9

Three of the 9 hours must be one of the courses PHYS 3340, PHYS 4430, or PHYS 5430 or a research activity of 3 credit hours. The research activity may be completed in one of the following ways: (1) under either PHYS 4610/4620/4603 Honors or PHYS 4840/4850 Independent Study; or (2) by documentation of your accomplishments as an intern with a research activity within the physics department or a suitable cognate department, institute, or external entity such as NCAR, NIST, NOAA, etc. Approval by a physics department advisor is required for option (2) and should be obtained in advance. Up to 3 credit hours earned under choice (1) may be counted toward the electives requirement. No academic credit is earned under the internship option (2), so if an internship is taken, students must still earn credit through one of the required courses.

In addition, the following nonphysics courses are required:

MATH 1300 Analytic Geometry and Calculus 1 or APPM 1350 Calculus 1 for Engineers	4-5
MATH 2300 Analytic Geometry and Calculus 2 or APPM 1360 Calculus 2 for Engineers	4-5
MATH 2400 Analytic Geometry and Calculus 3 or APPM 2350 Calculus 3 for Engineers	4
APPM 2360 Introduction to Differential Equations with Linear Algebra, or both MATH 3130 Introduction to Linear Algebra and MATH 4430 Ordinary Differential Equations	4-6
CHEM 1113/1114 and 1133/1134 General Chemistry 1 and 2 or CHEM 1151 and 1171 Honors General Chemistry 1 and 2	10

Plan II

For students desiring either an interdisciplinary or an applied physics program. The interdisciplinary program includes astrophysics, atmospheric physics, geophysics, or a combination of a physics major with work in another area such as applied mathematics, biophysics, chemical physics, environmental sciences, philosophy and history of science, or pre-medicine. The applied physics program includes biotechnology, optics, fluid dynamics, or electronic devices. For the interdisciplinary program, 33 hours of physics courses, plus 3 hours of physics electives, plus 12 hours of interdisciplinary courses are required. For the applied physics program, 33 hours of physics courses plus 15 hours of applied physics courses are required.

<i>Required Courses</i>	<i>Semester Hours</i>
PHYS 1110 and 1120 General Physics 1 and 2	8
PHYS 1140 Experimental Physics 1	1
PHYS 2150 Experimental Physics	1
PHYS 2170 Foundations of Modern Physics	3
PHYS 2210 Classical Mechanics and Math Methods 1	3
PHYS 3210 Classical Mechanics and Math Methods 2	3
PHYS 3220 Quantum Mechanics and Atomic Physics 1	3
PHYS 3310 Principles of Electricity and Magnetism 1	3
PHYS 3320 Principles of Electricity and Magnetism 2	3
PHYS 3330 Junior Laboratory.	2
PHYS 4230 Thermodynamics and Statistical Mechanics	3
Electives in physics (chosen from the departmental list)	minimum 3

In addition, the following nonphysics courses are required:

MATH 1300 Analytic Geometry and Calculus 1 or APPM 1350 Calculus 1 for Engineers	4-5
MATH 2300 Analytic Geometry and Calculus 2 or APPM 1360 Calculus 2 for Engineers	4-5
MATH 2400 Analytic Geometry and Calculus 3 or APPM 2350 Calculus 3 for Engineers	4
APPM 2360 Introduction to Differential Equations with Linear Algebra, or both MATH 3130 Introduction to Linear Algebra and MATH 4430 Ordinary Differential Equations	4-6
CHEM 1113/1114 and 1133/1134 General Chemistry 1 and 2 or CHEM 1151 and 1171 Honors General Chemistry 1 and 2	10

Courses in the interdisciplinary or applied physics subjects may not be double counted with the required 33 hours of physics courses. Interdisciplinary or applied physics courses must be approved by the physics department, either by the preapproved existing list of courses in each discipline or by a physics department mentor on a course-by-course basis. It is therefore imperative that students in Plan II be in close contact with the physics department advisor.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of "adequate progress" as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain

adequate progress in physics plans I and II, students should meet the following requirements:

Declare a major in physics in the first semester of the freshman year.

Complete PHYS 1110, 1120, 1140, MATH 1300 or APPM 1350, and MATH 2300 or APPM 1360 during the freshman year.

Complete PHYS 2150, 2170, and 2210, CHEM 1111 or 1151, CHEM 1131 or 1171, MATH 2400 or APPM 2350, and APPM 2360 during the sophomore year. Either MATH 3130 or 4430 can substitute for APPM 2360.

Complete PHYS 3210, 3220, 3310, 3320 and 3330 during the junior year.

Students must meet with the physics advisor before the beginning of the junior year and get the fifth-semester approval for completion plan (FSACP).

In addition to completing PHYS 4230 and 4410, plan I students must get approval to complete 9 credit hours in physics electives, with a research participation component. In addition to completing PHYS 4230, interdisciplinary Plan II students must complete 3 credit hours of physics electives and 12 credit hours of interdisciplinary courses. Applied physics students must complete 15 credit hours of applied physics courses.

NOTE: Early in the first semester of the senior year, the student must meet with the physics advisor to have the statement of major status (a part of the graduation package provided by the College of Arts and Sciences) filled in. This includes a plan for completing the requirements of the major during the senior year and must be signed by the student and the advisor. Further details concerning the execution of the guarantee can be obtained from the department.

Plan III

For students intending to become elementary/secondary school teachers, this plan involves a minimum of 28–31 credit hours of physics and a minimum of 35 hours in education courses. An education student advisor, who should be consulted for updated requirements, is available by appointment at **303-492-2559**.

Required Courses	Semester Hours
PHYS 1110 and 1120 General Physics 1 and 2	8
PHYS 1140 Experimental Physics 1	1
PHYS 1150 Experimental Physics 2	1
PHYS 2130 General Physics 3	3
PHYS 2150 Experimental Physics	1
PHYS 2210 Classical Mechanics and Math Methods 1	3
PHYS 3210 Classical Mechanics and Math Methods 2	3
PHYS 3310 Principles of Electricity and Magnetism 1	3
PHYS 3330 Junior Laboratory	2
PHYS 4450 History and Philosophy of Physics	3
ASTR 1030 Accelerated Introduction to Astronomy 1	4

An additional required course for teaching in secondary schools:

PHYS 3220 Quantum Mechanics and Atomic Physics 1 3

In addition, the following nonphysics courses are required:

CHEM 1011, 1031 Environmental Chemistry 1 and 2, or CHEM 1113/1114 and 1133/1134 General Chemistry 1 and 2, or CHEM 1151 and 1171 Honors General Chemistry 1 and 2	7-10
MATH 1300 Analytic Geometry and Calculus 1 or APPM 1350 Calculus 1 for Engineers	4-5
MATH 2300 Analytic Geometry and Calculus 2 or APPM 1360 Calculus 2 for Engineers	4-5
MATH 2400 Analytic Geometry and Calculus 3 or APPM 2350 Calculus 3 for Engineers	4
APPM 2360 Introduction to Differential Equations with Linear Algebra or both MATH 3130 Introduction to Linear Algebra and MATH 4430 Ordinary Differential Equations	4-6

Special Requirements	Semester Hours
----------------------	----------------

PLACE Basic Skills Assessment

Prior to or during the semester for which students are seeking admission to the Teacher Education Program, they must take the PLACE Basic Skills Assessment. A copy of the PLACE Registration Bulletin form is available in the Office of Teacher Education in Education 151. Students should read it carefully for specific information on the assessments and registration procedures. Students must successfully complete the Liberal Arts, Professional Knowledge, and Contents Fields portions of this examination.

Liberal Arts

Humanities (i.e., from "Literature and the Arts" in the College of Arts and Sciences core curriculum)	6
Social sciences (i.e., from "Content Area Studies" in the College of Arts and Sciences core curriculum, except "Literature and the Arts" and "Natural Sciences").	6

Science

MATH 1300 Analytic Geometry and Calculus 1	5
Two courses (minimum of 3 semester hours) in each of biology, chemistry, earth science, and physics. The eight courses must include a course with attached laboratory work in three of the four subjects)	
EDUC 5312 The Nature of Science and Science Education	3
Science course work taken in the past five years	6

Education

EDUC 3013 Proseminar 1: Becoming a Teacher	4
EDUC 3023 Proseminar 2: Schools, Culture, and Society	4
EDUC 4112-3 Educational Psychology and Adolescent Development (or PSYC 4205)	3
EDUC 4122-3 Principles and Methods of Secondary Education	3
EDUC 4232 Language and Literacy Across the Curriculum	3
EDUC 5385 Methods and Materials in Secondary Science (EDUC 4122 is a prerequisite and EDUC 5312 is a prerequisite or corequisite)	4
EDUC 4513 Proseminar 3: Education and Practice	2
EDUC 4712 Student Teaching—Secondary (must be taken concurrently with EDUC 4513)	12

Minor Program

A minor is offered in physics. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information see www.colorado.edu/artssciences/students/undergraduate/academics/minors.html.

Graduate Degree Programs

Graduate study and opportunities for basic research are offered in the areas of nuclear physics, theoretical physics, condensed matter physics, elementary particle physics, plasma physics, atomic and molecular physics, optical science and engineering, laser physics, gravitational physics, fundamental measurements, and liquid crystal science and technology.

Doctoral programs in chemical physics and geophysics are offered jointly with the Department of Chemistry and with the other departments that participate in the interdepartmental geophysics program. For information on these programs, see Interdepartmental Programs in the Graduate School section.

Departmental Requirements

Students wishing to pursue graduate work in physics leading to candidacy for an advanced degree should carefully read the requirements for advanced degrees in the Graduate School section. Following are special departmental requirements.

Master's Degree

Prerequisites. Entering graduate students must have a thorough undergraduate preparation in physics, equivalent to an undergraduate physics major at a recognized college or university. This preparation includes courses in general physics, analytical mechanics, electricity and magnetism, thermodynamics, quantum mechanics, atomic physics, and mathematics through differential equations and complex variables.

Language. The department has no foreign language requirement.

Course Requirements. There are two separate plans for obtaining the master's degree. Plan I includes a thesis (4 credit hours), PHYS 5210 Theoretical Mechanics, 5250 Introduction to Quantum Mechanics I, and 7310 and 7320 Electromagnetic

Theory along with electives (5 credit hours) and mathematics (3 credit hours). The minimum requirement for the master's degree is 30 credit hours. At least 24 hours must be completed at the 5000 level or above. This may include 4–6 thesis hours.

Plan II (without thesis) includes PHYS 5210, 5250, 7310, 7320, and 5260 Introduction to Quantum Mechanics 2 or 7550 Atomic and Molecular Spectra along with mathematics (6 credit hours) and electives (6 credit hours).

All courses must be graduate courses numbered 5000 or above. A maximum of 6 credit hours may be completed at the 3000 or 4000 level as approved by the physics graduate committee for plans I and II.

Qualifying Examination. The Graduate Record Examination aptitude tests and advanced test in physics are normally used in place of a qualifying examination, and this examination is normally taken before the time of entry into the Graduate School.

Comprehensive-Final Examination. The physics department no longer offers a written qualifying exam. In spring of 2001, the faculty unanimously voted to replace the written exam with required course work. The associate chair may waive courses for students with graduate level equivalents. In addition to abolishing the written exam, the faculty modified the oral exam to better test skills used in professional research. The new examination includes a formal research paper and a formal presentation, followed by a question and answer session. Students usually present a thesis prospectus the semester following the exam.

Doctoral Degree

Prerequisites. Same as for master's degree, above.

Languages. The department has no requirement in foreign languages.

Qualifying Examination. Same as for master's degree, above.

Comprehensive Examination. The comprehensive examination is divided into three parts. Part I consists of the six required courses outlined in the next section. Part II consists of a formal paper summarizing a broad research topic, an oral presentation on the research paper, and an oral exam on the topic and general physics. Part III consists of a thesis prospectus presented to the thesis committee.

Part II of the comprehensive examination must be taken within one year of successful completion of the six required courses described in the next section. Part III will take place early in the semester following Part II. Students with prior graduate education must take Part II in the spring semester following the first semester of course work in this department. Parts II and III of the comprehensive examination may be taken a second time, no more than one year after the first attempt. Students with insufficient preparation may petition for a one-year extension.

Course Requirements. To earn a PhD, candidates must complete 30 credit hours of course work and 30 hours of dissertation credit. As part of the course work, the following six courses are required: Theoretical Mechanics (PHYS 5210), Statistical Mechanics (PHYS 7230), Quantum Mechanics I and II (PHYS 5250 and 5260), and Electromagnetic Theory I and II (PHYS 7310 and 7320). In addition to satisfying the Comprehensive Examination requirements, candidates must complete these courses with a grade of B- or better in each in order to advance to candidacy. For a PhD, students with strong undergraduate preparation or previous graduate level work may petition to waive required courses.

At least 27 of the 30 credit hours of course work must be 5000-level or above physics courses, and the six required courses total 18 hours. All courses, required or otherwise, must

be passed with a grade of B- or better, and a course may be repeated only once.

Final Examination. The final examination is oral and covers the thesis.

Political Science

Degrees..... BA, MA, PhD

The Department of Political Science offers instruction and research in the art and science of politics. Work within the department is organized around six basic fields: American government and politics, comparative politics, international relations, public policy, political theory, and empirical theory and methodology. In addition to excellence in the traditional fields, the department is committed to a cross-field emphasis on globalization and democratic governance.

The department participates in the distributed studies program. Programs leading to the MA and PhD degree are offered.

At the most general level, the goal of the undergraduate curriculum in political science at the University of Colorado Boulder is to offer students the opportunity to develop an appreciation of politics and government and of the students' roles within them.

The undergraduate degree in political science emphasizes knowledge and understanding of:

- the values and beliefs that constitute the Western political tradition, as well as alternative ideologies and belief systems;
- the institutions and processes of the American political system and its strengths and weaknesses in the 21st century;
- other political systems, both Western and non-Western, which are members of the world community, our allies and competitors in international relations, and through comparative analysis offering a source of insight into American society and politics;
- the patterns of interaction among members of the world community, the causes of war and peace, and the sources of international conflict and cooperation; and
- the domestic and international policy issues facing the United States and the world community and the ability to make reasoned judgments—integrating facts and values, means and ends—regarding policies to address those problems.

In addition, students completing the degree in political science are expected to acquire the ability and skills to:

- evaluate conflicting arguments, assemble and present empirical evidence, and make reasoned conclusions from the evidence available; and
- communicate effectively, both orally and in written form.

Students interested in political science may want to consider the Global Studies Residential Academic Program. See Residential Academic Programs in this section for more information.

Bachelor's Degree Program

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

Required Courses *Semester Hours*

Students in the regular political science major must complete 36 credit hours in the department, of which 21 hours must be in upper-division courses.

All 36 hours must be completed with grades of C- or better and an overall grade point average of 2.000. None of the required hours may be taken *pass/fail*.

Twelve hours are required from the following lower-division fields:

American

PSCI 1101 The American Political Systems. 3

Comparative

PSCI 2012 Introduction to Comparative Politics 3

International

PSCI 2223 Introduction to International Relations 3

Theory

PSCI 2004 Survey of Western Political Thought 3

Of the required 21 upper-division hours, students must take one course in at least four of the primary fields with two courses in one primary field. The primary fields are: American, comparative, international relations, theory, methodology, and policy.

Required courses in addition to political science courses:

ECON 2010 Principles of Microeconomics 4

ECON 2020 Principles of Macroeconomics. 4

NOTE: Students who have completed ECON 1000 prior to declaration of the major should consult an undergraduate advisor in political science for an appropriate substitution for ECON 2010 and 2020

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in political science, students should meet the following requirements:

Declare major by the beginning of the second semester.

Complete PSCI 1101 and two of the following required courses by the end of the third semester: PSCI 2012, 2223, or 2004.

Complete the remaining lower-division political science course and the two ancillary courses, ECON 2010 and 2020, by the end of the fourth semester.

Complete 12 upper-division credit hours of political science courses, including at least one course in three of the following fields by the end of the sixth semester: American government and politics, comparative politics, international relations, public policy, political theory, and empirical theory and methodology.

Complete 12 credit hours of political science courses, including at least 9 upper-division credit hours and all remaining upper-division field distribution requirements during the seventh and eighth semesters.

Students seeking to combine a political science major with a social science certification in education should consult an undergraduate advisor in political science. Students who have completed ECON 1000 prior to declaration of the major should consult an undergraduate advisor in political science for an appropriate substitution for ECON 2100 and 2020.

Minor Program

A minor is offered in political science. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information, see www.colorado.edu/artssciences/students/undergraduate/academics/minors.html.

Graduate Degree Programs

Applications for the MA and PhD degrees are accepted from qualified and motivated students wishing to probe deeply into the analysis of political life. Professional courses in the graduate curriculum range from problem definition in policy analysis to the study of the global political economy. The curriculum is structured to lead to the PhD degree and also offers several programs culminating in the MA degree. In addition to the regular master’s degree in political science, special focus is placed on two professionally oriented MA degrees: one oriented toward entry into the public sector as a policy analyst; and one that prepares students for careers in global affairs.

Students wishing to pursue graduate work toward one of these degrees should read carefully the Graduate School requirements for admission and degrees in this catalog. In addition, they should refer to the departmental website for additional information on graduate programs.

Departmental Admission Requirements

Applicants to the graduate program in political science should normally present evidence of at least 18 credit hours of course work in political science or in related fields, 9 of which should be at the upper-division level. In addition, the department requires applicants to present quantitative and verbal GRE scores that total at least 1100 and that show a score of at least 500 on the verbal section. Three letters of recommendation, an undergraduate grade point average of at least 3.00, official transcripts, and a short essay detailing interests and plans also are required to complete the application packet. Foreign applicants must supplement their application by presenting TOEFL scores or other proof of English proficiency. Online applications should be submitted to the department by December 31. Decisions regarding admission and financial aid are typically completed during March each year.

Master of Arts in Political Science

Students shall concentrate in any one of six political science fields and take 3 credit hours of work in regularly scheduled political science seminars in each of three areas defined as follows: American politics, public policy, international relations, comparative politics, political philosophy, and empirical theory and methodology.

Students are responsible for familiarizing themselves with all degree requirements, some of which are outlined in the Graduate School section of this catalog. In brief, the degree requirements include a minimum of 31 credit hours of graduate credit, including at least 24 credit hours at the 7000 level or above (at least 15 credit hours of work must be in regularly scheduled political science seminars), and 4 credit hours for the MA thesis. Students may take up to 6 hours in political science graduate research topics, and up to 6 hours in a cognate discipline (senior undergraduate course, or independent study), but not more than a total of 9 hours combined. The 9 credit hours may not be substituted for required seminars. MA students on assistantship are required to take PSCI 7008 Teaching Political Science.

A thesis based on original investigation and showing mature scholarship and critical judgment, as well as familiarity with tools and methods of research, is required.

Students select a faculty advisor from among the regular members of the department graduate faculty at the earliest possible date, but no later than the end of the second week of the second semester of residence. The faculty advisor must have general competence in the student primary field of emphasis and serves as the first reader of the MA thesis. The second reader, who likewise has general competence in the topic of the MA thesis, must be associated intimately with the thesis from its inception and in no case after the student begins writing. The completed draft of the thesis must be in the hands of the second and third readers at least four weeks prior to the comprehensive-final examination.

Each candidate for a master’s degree is required to take a comprehensive-final examination *after* the other requirements for the degree have been completed. This examination may be given near the end of the last semester of residence while the candidate is still taking required courses for the degree, provided satisfactory progress is being made in those courses. The examination is oral

and lasts approximately two hours. It concentrates on the student field of emphasis as well as the MA thesis. The comprehensive-final examination committee has three members, including the faculty advisor (the chair) and the second reader of the thesis. At least two committee members must be chosen from among regular members of the graduate faculty of this department, in consultation with the faculty advisor; the third committee member may be a graduate faculty representative from a cognate discipline. Satisfaction of the examination requires the affirmative vote of each of the three committee members.

Master of Arts in Political Science (International Affairs)

The increased participation of the United States in world politics has opened a variety of new careers in international affairs. The master's program in international affairs of the Department of Political Science is designed to provide a well-rounded education in international affairs for students who are seeking careers of international service with the national government, with international organizations, with private business, with nongovernmental organizations, or in the fields of teaching and research. This MA program is also a logical step toward obtaining a PhD in political science at the University of Colorado or elsewhere.

Degree requirements include a minimum of 31 credit hours of graduate credit, 24 of which must be at the 7000 level or above. Of the required 31 credit hours, students desiring an MA in political science (international affairs) must include, in addition to the required seminars, 12 credit hours of work in the international area and 9 of the 12 credit hours must be in the field of international relations. It is advisable for the student to include the international relations core seminar in the 9 hours in the field of international relations. If a student plan of study so indicates, and permission is granted by the student faculty advisor and the department chair, the student may substitute up to 6 hours of credit from another department for the 3 hours in each of the other two areas of study.

Each student in this program must pass a GSFLT proficiency test in a foreign language approved by the student advisors and/or present evidence of an advanced proficiency in social statistics or computer science. The latter proficiency may be achieved by obtaining a B or better in a sequence of courses to be identified by the student's advisory committee. A list of the course sequences that have been approved to meet this requirement is available in the departmental office. In exceptional cases, the graduate curriculum committee may accept other evidence that the student has acquired a good working knowledge of a foreign language or the advanced proficiency in social statistics or computer science.

Master of Arts in Political Science (Public Policy)

The goal of the MA program in public policy is to train professional policy analysts for nonacademic careers. The curriculum is designed to provide the analytical skills necessary to participate responsibly and effectively in the policy process. The MA in political science (public policy) may be taken concurrently with the interdisciplinary graduate certificate program in environmental policy.

This is an MA with thesis, requiring 33 credit hours. It includes 27 hours of course work, 2 hours in an applied research internship, and 4 hours of thesis credit. Completion of these requirements normally takes two years and at least one summer.

The core curriculum consists of five required seminars in policy analysis, introduction to data analysis, and context-sensitive methods. Specific courses in economics are not required, but

there is a strong expectation that all students should be familiar with the tools of economic analysis, particularly in the policy area in which they are interested. The remaining 12 hours of electives should be used to develop additional analytical skills and/or a specialization in the student's area of substantive interest. The certificate program in environmental policy provides one alternative for substantive specialization, drawing on courses in economics, philosophy, geography, and the law school. The internship is a supervised applied research project for a policy client, which should lead into the thesis project.

The thesis is a research report on a policy problem that provides concrete demonstration of the student analytical skills, intellectual perspective, and substantive knowledge. As a general rule, the policy thesis is somewhat shorter (but not less analytical) than a standard MA thesis.

Doctor of Philosophy in Political Science

For the PhD, the Department of Political Science requires at least 42 hours of course work (with a cumulative GPA of >3.000) beyond the bachelor's degree. Except for 3 credit hours that may be taken at the senior undergraduate level in a cognate field at this university, all 42 hours must be at the 5000 level or above. Not to be included in the 42 hours are dissertation and research hours, master's thesis hours, or those hours used to fulfill the language requirements.

The PhD candidate must present three fields of competence. The first two, labeled the major field and second field, are to be the subject of the PhD comprehensive examination. A minimum of three seminars must be taken in each of these fields. Competence in the third field may be demonstrated by completing two graduate seminars in that field with a GPA of 3.000 or higher. Each student shall select three seminars from the following six concentrations: American politics, public policy, international relations, comparative politics, political philosophy, and empirical theory and methodology.

Students taking comprehensive exams will have the option of offering a "thematic" cross-field topic for the second exam field for their written and oral comps, with the agreement of their advisor. To do so, students must still meet the three-course minimum for a second field from the six designated fields before the last day of the semester prior to taking comps, submit to the director of graduate studies a written agreement with an advisor on a reading list appropriate for the cross-field examination and a list of names of political science faculty conversant with the topic who have also approved the reading list. Approval of the cross-field topic is at the discretion of the director of graduate studies; the minimum criteria include bringing together two distinct fields of study. The director of graduate studies will select the committee for the written and oral exams in this cross-field exam, as for the other field exams.

Of the 42 required hours, 35 hours must be taken in political science. Of this 35, 32 must be in regularly scheduled seminars. Not more than 6 hours of political science graduate research topics combined are allowed toward the degree. The maximum amount of work that may be transferred to this university for the PhD is 21 semester hours.

All graduate students in the PhD program are required to take PSCI 7008 Teaching Political Science and three core field seminars. During the first year in residence, two core seminars in at least two fields must be completed. Also during the first year in residence, students enrolled in the PhD program must take PSCI 7075 Introduction to Professional Political Science and PSCI 7085 Introductory Data Analysis.

Qualifying PhD Research Paper. Each PhD student is required to select a topic that leads to the formulation, execution, and written presentation of a piece of original research. This research paper is expected to be of potentially publishable quality.

The research paper is read by the student's three-person advisory committee, consisting of the student's major advisor, a second major field reader, and a representative of the student's second field of concentration. Following consideration of the written work, an oral examination is conducted by the advisory committee to test both the depth of the student research as well as the breadth of the student's general training. Competence in core seminar materials is expected.

The oral examination committee is charged with the task of evaluating the potential of each PhD student. Students whose work is deemed inadequate are asked to leave the program.

Students who have not previously earned a master's degree in political science are eligible for a plan II MA upon completion of 32 hours of graduate course work. The awarding of the Plan II MA is at the discretion of the examining committee. This decision is independent of the decision to encourage or discontinue the student in the PhD program.

Research Competence. Each PhD student must fulfill the research competence requirements as determined in conjunction with the advisory committee.

Methodological competence is demonstrated by completing PSCI 7095 with a grade of *B* or better, and requires completion of at least two advanced methods courses beyond PSCI 7085.

Language competence is evidenced by completion of a fourth-semester college-level language course of 3 or more credit hours with a grade of *B* or better, high GSFLT scores for the language, high scores on another standardized examination recognized by University of Colorado language departments, or other evidence of competence in the language. Advanced competence is demonstrated by completion of at least a fifth-semester language course or other work deemed appropriate by the advisory committee.

The competence requirement also may be met by demonstrating basic competence standards in both methodological and language skills (i.e., by completing PSCI 7095 and fourth-semester foreign language skills).

Committees may set higher research competence standards for the student than those outlined above.

The competence standard must be communicated in writing to the Director of Graduate Studies by the end of the second year in residence. Both the principal advisor and the student must signify that they accept the committee determination of research competence standard. Required course work (or its surrogate) must be completed no later than the semester in which the PhD comprehensive examination is taken.

Comprehensive Examination. The comprehensive examination serves to demonstrate that students have acquired the skills and knowledge necessary to function as independent scholars in political science generally and in their chosen fields of specialization. Broad knowledge is expected as well as a critical understanding of the literature and the ability to apply that understanding to the central, enduring questions of politics and government.

Comprehensive examinations are administered once each semester. Oral examinations are administered one to two weeks later.

A final grade of *pass* or *fail* is assigned following the orals. Students who fail the written exams are provided a single opportunity to retake them, and are given an explanation of the failure by the readers.

Dissertation Requirements and Final Examination. A dissertation based on original investigation and showing mature scholarship and critical judgment, as well as familiarity with tools and methods of research, is required. A candidate for the PhD selects a dissertation topic in consultation with a dissertation advisor who is rostered in the student's primary field of emphasis, a second reader who has general competence in the dissertation topic, and at least one additional faculty member rostered in the student's primary field of interest. The student submits the topic, along with the names of the second reader and other faculty consulted in its selection, to the director of graduate studies for approval.

Once the dissertation has been accepted tentatively by the first two readers, a final oral examination is conducted by the dissertation committee. Approved by the dean of the Graduate School, the committee shall consist of not fewer than five representatives from those departments in which a student has worked, including at least one professor of authority outside the political science department who qualifies for university graduate faculty membership.

The examination is open to the public. More than one dissenting vote from the committee disqualifies the candidate in the final examination.

Psychology and Neuroscience

Degrees..... BA, MA, PhD

At the undergraduate level, this department offers a major in either psychology or neuroscience. Psychology is a broad discipline that seeks to understand human cognition, emotion, and behavior. It is also an applied field that is concerned with testing perception, psychopathology, inheritance of complex behavioral traits, mental health, memory, and social factors that influence behavior. Neuroscience is the study of the mechanisms of nervous system—the brain, the spinal cord, and networks of sensory nerve cells, or neurons. Neuroscientists work to describe how neural circuits transmit signals and process different types of information. The principles of neuroscience are derived from the application of methods from many scientific disciplines, including molecular and cellular biology, biochemistry, physiology, structure, and computational modeling. Note that no terminal master's degree is offered except for the concurrent BA/MA program in cognitive psychology.

Students contemplating postgraduate education, either in professional or in graduate school, are encouraged to participate in the departmental honors program, which provides special opportunities for individualized attention.

CU-Boulder's Department of Psychology and Neuroscience has been ranked by the National Academy of Sciences as one of the best in the country with respect to the quality of the faculty and their scholarly productivity. Moreover, the department offers undergraduates a wide range of opportunities for involvement in research.

Bachelor's Degree Programs

Students must complete the general requirements of the College of Arts and Sciences and one of the two programs listed below. Additional explanatory notes are available in the department advising office in Muenzinger D243.

Neuroscience Major

Students are subject to the major requirements in effect at the time they formally declare the major. A major in neuroscience requires a minimum of 30 hours in neuroscience course work with

grades of C- or better. At least 18 of these hours must be in upper-division course work. The department recommends completing NRSC 2100 and NRSC 2110 by the end of the sophomore year.

Required Courses

Semester Hours

Complete <i>one</i> of the following genetics courses (completion of requirement #1 is a prerequisite):	
MCDB 2150 with 2151 Principles of Genetics with Lab or EBIO 2070 Genetics: Molecules to Populations (EBIO 1220 and 1240 are also prerequisites) or CHEN 2820 Foundations in Bioengineering	3-4
NRSC 2100 Introduction to Neuroscience 1	3-4
NRSC 2110 Introduction to Neuroscience 2	3
Statistics/Computation requirement (complete <i>one</i> of the following):	
IPHY 2800 Introduction to Statistics or ECON 3818 Introduction to Statistics with Computer Applications or MATH 2510 Introduction to Statistics or MATH 2520 Introduction to Biometry or PSYC 3101 Statistics and Research Methods in Psychology or APPM 1710 Introduction to Games Development 1 or APPM 2750 Java: Training and Mathematical Algorithms or CHEN 3010 Applied Data Analysis and CHEN 3130 Chemical Engineering Lab 1	3-4

Upper-division Neuroscience Major Requirements

Complete MCDB 3135 Molecular Cell Biology 1	3
Complete at least one of the following:	
NRSC 4032/PSYC 4032 Neurobiology of Learning and Memory, NRSC 4052/PSYC 4052 Behavioral Neuroscience NRSC 4132/PSYC 4132 Neuropharmacology	3-4
Complete 12 hours by taking additional courses from upper-division requirement above or from the following neuroscience and general science electives (please check all prerequisites and co-requisites before enrolling in courses):	
NRSC 4011 Senior Thesis/ Research Ethics	
NRSC 4072/PSYC 4072 Clinical Neuroscience	
NRSC 4092/PSYC 4092 Hormones and Behavior	
NRSC 4155/PSYC 4155 Cognitive Neuroscience/Neuropsychology	
NRSC 4911 Teaching of Neuroscience	
CHEM 3311 with 3321 Organic Chemistry 1 with Lab	
CHEM 3351 with 3361 Organic Chemistry 1 for Chemistry and Biochemistry Majors with Lab	
CHEM 4611 Survey of Biochemistry	
CHEM 4711 General Biochemistry 1	
ECEN 3030 Electrical/Electronic Circuits Non-Major	
ECEN 4811 Neural Signals and Functional Brain Imaging	
EBIO 3240 Animal Behavior	
EBIO 3770 Animal Diversity: Vertebrates	
EBIO 3850 Animal Diversity: Invertebrates	
IPHY 3410 Human Anatomy	
IPHY 3430 Introduction to Human Physiology	
IPHY 3470 Human Physiology 1	
IPHY 3720 Brain and Behavior	
IPHY 4200 Physiological Genetics and Genomics	
IPHY 4720 Neurophysiology	
MCDB 3140 Cell Biology Lab	
MCDB 3280 Molecular Cell Physiology	
MCDB 4777 Molecular Neurobiology	
PSYC 3005 Cognitive Science	
PSYC 4165 Psychology of Perception	
PSYC 4175 Computational Cognitive Neuroscience	12

Ancillary Foundation Courses

Ancillary molecular biology requirement: EBIO 1210 with 1230 General Biology 1 with Lab or MCDB 1150 with 1151 Introduction to Cellular and Molecular Biology with Lab or CHEN 2810 Biology for Engineers	3-4
Ancillary calculus requirement: MATH 1300 Analytical Geometry and Calculus 1 or MATH 1310 Calculus 1 with Biological Applications or APPM 1350 Calculus 1 for Engineers or APPM 1340 and 1345 Calculus 1, Part A and Calculus 1, Part B	4-6
Ancillary general chemistry sequence requirement: CHEM 1113 with 1114 and CHEM 1133 with 1134 General Chemistry 1 and 2 with Labs	

or CHEM 1251 and 1271 General Chemistry 1 and 2 for Chemistry and Biochemistry majors or CHEM 1351 and 1371 Honors General Chemistry 1 and 2	10
--------------------------------------------------------------------------------------------------------------------------------------------------------	----

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in psychology-neuroscience, students should meet the following requirements:

The psychology-neuroscience major must be started in the first semester.

Adequate progress is defined as cumulative completion of at least one fourth of the required course work for the major during each academic year, including the following specific requirements:

- The ancillary molecular biology requirement and the genetics requirement must be completed during the first year;
- All ancillary requirements (molecular biology, calculus, and general chemistry) and Introduction to Neuroscience 1 and 2 must be completed by the end of the second year.

The psychology-neuroscience major requires at least 51 hours of required course work. Thus, at least 13 hours must be completed yearly, including timely completion of advanced course prerequisites.

The four-year guarantee also requires completion of 30 hours of core curriculum courses by the end of the sophomore year. Calculus counts as three hours of QRMS; chemistry and molecular biology count as 13 hours of natural science.

Psychology Major

In order to graduate with a degree in psychology, the department requires that students fulfill the following course requirements with a grade of C- or better. Additional explanatory notes are available in the department advising office, Muenzinger D243.

The department recommends taking PSYC 1001, 2012, 2145, and 2606 by the end of the sophomore year, and 3101 by the end of the junior year.

Required Courses

Semester Hours

PSYC 1001 General Psychology	4
PSYC 2012 Biological Psychology	3
PSYC 2145 Introductory Cognitive Psychology	3
PSYC 2606 Social Psychology	3
PSYC 3101 Statistics and Research Methods in Psychology	4

One of the following:

PSYC 3102 Behavioral Genetics	3
PSYC 3313 Psychopathology	4
PSYC 4303 Abnormal Psychology	3

At least one course from the following upper-division laboratory and methods courses:

PSYC 3001 Honors Research Methods Seminar, NRSC 4052 Behavioral Neuroscience, PSYC 4136 Human Judgment and Decision-Making Lab, PSYC 4145 Advanced Cognitive Psychology, PSYC/NRSC 4155 Cognitive Neuroscience/Neuropsychology, PSYC 4165 Psychology of Perception, PSYC 4175 Computational Cognitive Neuroscience, PSYC 4376 Research Methods in Social Psychology, PSYC 4443 Research Methods in Clinical Psychology, or PSYC 4733 Psychological Testing and Assessment	4
-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---

Additional electives to bring total hours in psychology and neuroscience to at least 31, but not more than 45, of which at least 18 must be upper division. (Students are encouraged to use independent study to gain field or laboratory experience. However, independent study hours are *pass/fail* credit only and cannot be used toward the 31 hours required for graduation.)

In addition to the course requirements listed above, and the minimum of 31 hours in psychology, the student is required to pass one of the following natural science sequences with a grade of C- or better:

CHEM 1011 and 1031 Environmental Chemistry 1 and 2
CHEM 1051 and 1071 Introduction to Chemistry and Introduction to Organic and Biochemistry

CHEM 1111 and 1071 General Chemistry 1 and Introduction to Organic and Biochemistry
 CHEM 1113 and 1133 General Chemistry 1 and 2
 CHEM 1251 and 1271 General Chemistry 1 and 2 for Chemistry / Biochemistry majors
 EBIO 1210 and 1220 General Biology 1 and 2 (formerly EPOB 1210 and 1220)
 MATH 1300 and 2300 Analytical Geometry and Calculus 1 and 2
 MCDB 1150 and 2150 Introduction to MCD Biology 1 and Principles of Genetics
 MCDB 1150 and EBIO 1220 Introduction to MCD Biology 1 and General Biology 2
 PHYS 1110 and 1120 General Physics 1 and 2 (science and engineering majors only)
 PHYS 2010 and 2020 General Physics 1 and 2

NOTE: Transfer students must complete a minimum of 12 upper-division hours of psychology course work on the Boulder campus with a C- or better. Of those 12 hours, one laboratory and methods course must be included.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in psychology, students should meet the following requirements:

Declare the major by the beginning of the second semester.

Complete PSYC 1001, 2012, 2145, 2606, and the natural science sequence during the first two years of study.

Complete PSYC 3313 or 3102 or 4303, the laboratory and methods course, and at least two upper-division PSYC electives during the junior (third) year. (If students are unable to enroll in these courses due to oversubscription during the junior year, they will have top enrollment priority the senior year.)

Complete remaining elective requirements during the senior year.

Department of Psychology and Neuroscience Prerequisites Statement

It is policy to enforce the course prerequisites listed in the course descriptions. If you have not either taken and passed (C- or better) the prerequisites for a course, or obtained permission from the instructor or a departmental advisor to take the course based on equivalent preparatory course work or experience here or elsewhere, you may be administratively dropped from the course.

Concurrent BA/MA Program with Specialization in Cognitive Psychology

A concurrent BA/MA in psychology, with specialization in cognitive psychology, is offered. Both the BA and MA degree must be completed within a five-year period. In recent years, both basic and applied research in cognitive psychology have come to rely increasingly on related findings, theories, and methods in other cognitive science disciplines, including philosophy, computer science, and linguistics.

The purpose of this degree program is to provide training that prepares students either for continuing doctoral study in cognitive psychology or for technical careers involving cognitive psychology in government and industry. Students complete the requirements for an undergraduate major in psychology, an interdisciplinary undergraduate certificate in cognitive science, and a master’s degree in the cognitive psychology graduate training program. Because of the demanding nature of this program, only highly qualified students are admitted.

Graduate Degree Programs

PhD Programs

Students are admitted for graduate studies leading to the PhD in one of five fields: behavioral genetics, behavioral neuroscience (including learning and motivation), clinical, cognitive, and social psychology. Note that no terminal master’s degree program is offered. The behavioral genetics program focuses on the study of genetic contributions to individual differences in behavior. The fundamental tenet of the behavioral neuroscience program is that a complete understanding of behavior entails unraveling mechanisms and principles at any and all levels of organization (i.e., behavior, neuroanatomy, neurophysiology, neurochemistry). The major training goals of the clinical psychology program follow the Boulder model in that the preparation of scientist-practitioner is stressed. The clinical psychology program is accredited by the American Psychological Association. The cognitive psychology program includes course work and research in the following areas of cognition: problem solving, thinking, human learning and memory, judgment and decision making, language, artificial intelligence, reading, attention and performance, perception, and information processing. The program in social psychology trains students to conduct research, either applied or basic, in the fields of social cognition, self-concept development, close relationships, and health. Additional courses in the department offer graduate training in the knowledge, theory, and research methodology relating to cultural influences on behavior.

Requirements for the PhD Degree

All students are admitted with the expectation that they will work toward the PhD degree. Many students receive a master of arts degree in the course of working toward the PhD. Students who receive the PhD degree must demonstrate that they are proficient in some broad subject of learning and that they can critically evaluate work in this field; furthermore, they must show the ability to work independently in their chosen field and must make an original contribution of significance to the advancement of knowledge.

In the first year of graduate study, all psychology graduate students enroll in a two-semester graduate statistical sequence. There is a first-year research requirement that starts the student on an active program of research. The student also must enroll in a sequence of courses designed to give exposure to various research topics and methods.

Before admission to candidacy for the PhD degree, the student must pass a comprehensive examination in the field of concentration and related fields. This examination tests the student mastery of a broad field of knowledge, not merely the formal course work completed.

A variety of advanced research seminars are taught on a regular basis. Students are required to be enrolled in at least one substantive course in the department each semester until the comprehensive examinations have been successfully completed. Upon completing the comprehensives, students engage in the dissertation research, culminating in a public oral defense.

Religious Studies

Degrees..... BA, MA

The curriculum in religious studies includes the study of traditions such as Buddhism, Christianity, Confucianism, Daoism, Hinduism, Islam, Judaism, and Native American and other tra-

ditional religions. The program examines topics such as ritual studies, peace studies, dance, religion and literature, women and religion, and religion and psychology.

The undergraduate degree in religious studies emphasizes knowledge and awareness of:

- the academic study of religion and the related writing and critical skills directed toward one area of concentration (tradition, issue, or theme); and
- different theoretical and methodological approaches to the study of religion.

In addition, students with a degree in religious studies are expected to acquire the ability and skills to:

- identify textual, performative, and artifactual data relevant to the study of religion;
- draw connections between different historical and/or cultural contexts of religion; and
- communicate data analysis and interpretation competently in written form.

Bachelor's Degree Program

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

Major Requirements

Students must complete at least 36 hours of religious studies course work including the following required courses and projects:

Two required seminars in the Academic Study of Religion

RLST 3020 Advanced Writing in Religious Studies (taken at the first available offering after declaring major and reaching junior status). This course, which also fulfills the advanced writing requirement, focuses the development of writing skills on the introduction and preparation of students for a major in the academic study of religion. Taught fall semester.

RLST 4800 Critical Studies in Religion. This course provides experience in the academic study of religion through the exploration of contemporary models and issues that demonstrate the excitement and promise in this field.

RLST 4830 Senior Majors Seminar (taken the last year as an undergraduate after all other requirements have been met). This course involves students in an extensive exploration of the academic study of religion. The topic will be selected by the faculty person offering the course including a careful consideration of the theoretical dimensions of the work presented in historical context. Student papers culminating the concentration area are presented at the conclusion of this course. Taught spring semester.

Concentration Area—three courses (9 hours). With the consultation and approval of an undergraduate advisor, three RLST courses are to be selected so that the courses build competence in a designated area of concentration. A 10-page paper reflects on the coherency of the select area including how the three courses taken interrelate and how the area of concentration relates to the academic study of religion. The paper is the basis for capstone discussion during the last weeks of Senior Seminar.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in religious studies, students should meet the following requirements:

Declare the major at the beginning of the second semester of study.

Complete two religious studies courses each semester.

Take the senior seminar the last spring semester in residence.

Minor Program

Students must complete at least 18 credit hours in Religious Studies course work, including at least 6 hours of lower-division and 9 hours of upper-division work. At least 12 hours must be taken in the CU Department of Religious Studies.

Graduation with Honors

The honors program in religious studies offers the opportunity for highly motivated undergraduates to undertake a deeper and more individualized study than is provided by the regular BA curriculum and to earn an honors designation on their diploma. Religious studies majors with at least a 3.300 overall grade point average and 3.500 in the major are eligible to participate in the program. Honors that may be earned are cum laude (with honors), magna cum laude (with high honors), and summa cum laude (with highest honors).

Students interested in pursuing departmental honors are encouraged to consult with the departmental undergraduate advisor by the beginning of their junior year.

Graduate Degree Program

Master's Degree

A graduate degree represents the mastery of a significant body of knowledge and interpretation within an academic discipline. A degree is not granted merely because a student completes a specific number of courses. Students should not expect to gain all knowledge and training necessary for the degree from formal courses alone. The student is expected to acquire both breadth and depth in religious studies. Breadth is achieved by satisfying two types of course requirements as set forth in 2 below, which include exposure to a diversity of approaches to the study of religion. Depth is achieved through three courses in a particular area or approach and by independent work related to the thesis or concentration, as set forth in 3 below. Listed below are the minimum formal requirements for the MA degree in religious studies.

1. The student must successfully complete 31 semester hours of academic work, at least 24 of which must be completed at the 5000 level or above.
 - Up to 9 credit hours of course work may be taken outside the department or transferred from another accredited institution, consistent with the student's special needs and interests and with the advisor's approval. Independent study credit hours shall not exceed six hours.
2. To insure breadth of learning, the student must successfully complete two types of required courses:
 - Approaches. RLST 6830 Introduction to the Academic Study of Religion, offered every fall term. This course should be taken the first fall term the student is in residence.
 - Three seminars in the academic study of religion. At least one seminar will be designated each semester.
3. To ensure depth of learning, the student must successfully complete two types of required courses:
 - Three research concentration courses (to be determined in consultation with one's advisor). These may be taken in or out of the department, as appropriate.
 - In the final semester of graduate study, which must be taken in residence, students will select either a thesis or non-thesis research option. Those selecting the thesis option will take a 4-credit thesis course, which will culminate in the completion and defense of a thesis. Those selecting the non-thesis option will take a 4-credit directed readings course on secondary scholarship in a specific field (theoretical topic, geographic area, or religious tradition) which will culminate in the successful passing of a written examination on this topic.
4. A final oral comprehensive examination, given by the student's research committee, will focus on three substantial term papers and either the thesis or the written examination in a specific field.

5. Courses for each term must be approved by the student's faculty advisor and be in compliance with the requirements of the Graduate School where necessary. In order to register for any given term, the student must have the course of study for that term approved in writing by the advisor on the student's "Record of Progress Toward the MA Degree" form. No changes can be made in registration without the advisor's approval.
6. In order to receive the degree a student must meet the foreign language requirement. The student must have a satisfactory reading knowledge of a language other than English, demonstrated by a *B* or better in the fourth semester of the language, or by successful completion of a translation exam on material related to the student's field; and material in the language must be employed in a significant way in the thesis or other project.
7. All students must fulfill the residency requirement. In general this can be fulfilled by either two full-time semesters or four part-time semesters of study. A full-time program is defined as either five hours of course work at the 5000 level or higher, eight hours of total course work, or at least one hour of thesis research.

A student who has not completed at least 12 semester hours, or the equivalent, of undergraduate academic course work directly related to the study of religion will be required to do remedial work to make up this deficit before beginning graduate study, or, with the director of Graduate Studies' permission, after beginning the program. This can be done by attaining a grade of *B* or better in an appropriate 2000- or 3000-level course taken within the first year. Remedial courses may not be counted toward the degree.

Dual Master's Program

The Department of Religious Studies also participates in a dual master's degree program with the Departments of History and Asian Languages and Civilizations. Students interested in exploring this option should contact the graduate director of the department for specific requirements.

Concurrent Bachelor's/Master's Degree Program

A concurrent bachelor's/master's degree program offers a select group of exceptional undergraduates the opportunity to begin graduate work while still an undergraduate and thereby complete the BA and MA degrees simultaneously and on an accelerated schedule. The entire program normally requires five to six years and permits 6 credits to be double-counted toward both degrees. Otherwise requirements for the two degrees remain unchanged.

Admission to the Program

Applicants to the program must be full-time, continuously enrolled students with a minimum overall GPA of 3.000, and a 3.500 GPA in RLST courses. They must have completed at least 24 credit hours prior to admission to the concurrent BA/MA degree program, and must have satisfied any MAPS deficiencies. Applications will include letters of recommendation from RLST faculty and will be evaluated by faculty as a whole, much as graduate applications are.

Continuation in the Program

Students enrolled in the concurrent BA/MA program must maintain a minimum cumulative GPA of 3.250, and 3.500 in the department. Concurrent degree students may not participate in the Time Out program; exceptions may be granted by the CDAC (Concurrent Degree Appeals Committee) based on a review of extenuating circumstances. Each BA/MA student will be assigned a graduate advisor with whom to meet regularly and will be required to demonstrate satisfactory progress toward degree to the advisor within the framework of the department's graduate student assessment policies.

Curriculum

Students enrolled in the concurrent BA/MA program are permitted to double-count 6 credits of course work, thereby reducing the total amount of RLST course work to (36 + 31 - 6 =) 61 credit hours. One of these courses must be RLST 6830 Intro to the Academic Study of Religion, which would replace Senior Seminar for BA/MA students, and the other must be in an area of depth concentration. Otherwise program students will fulfill all the normal requirements for the BA and the MA degree.

Scandinavian (now Nordic Studies)

See *Germanic and Slavic Languages and Literatures*.

Sociology

Degrees..... BA, PhD

The undergraduate degree in sociology emphasizes knowledge and awareness of:

- the basic data, concepts, theories, and modes of explanation appropriate to the understanding of human societies;
- the structure of modern American society, its social stratification, its ethnic, racial, religious, and gender differentiation, and its main social institutions—family, polity, economy, and religion;
- the basic social processes that maintain and alter social structure, especially the processes of integration, organization, and conflict; and
- the diversity of human societies, including the differences between major historical types such as foraging, agricultural, industrial, and post-industrial societies.

In addition, students completing the degree in sociology are expected to acquire the ability to:

- locate and consult works relevant to a sociological investigation and write a sociological paper that is coherent, cogent, and grammatically correct;
- understand the basic procedures of sociological research and analyze sociological data;
- understand and interpret the results of sociological research; and
- integrate and evaluate sociological writings.

Bachelor's Degree Program

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below. A minimum of 36 credit hours (but not more than 45) in sociology is required for the degree. Of the 36 semester hours, 21 must be upper division with a minimum of 15 upper-division credit hours of course work in the major taken on the Boulder campus. All required major courses must be completed with a grade of C- or better. The cumulative GPA required in sociology courses is 2.000.

<i>Required Courses</i>	<i>Semester Hours</i>
SOCY 1001 Introduction to Sociology	3
SOCY 2061 Introduction to Social Statistics or SOCY 4061 Social Statistics. A non-SOCY statistics course (C- grade or higher) can be used to substitute for SOCY 2061 or 4061 if one additional SOCY course is taken.	3
SOCY 3001 Classical Theory	3
SOCY 3301 Survey Methods or SOCY 3401 Field Methods	3
Electives	24

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in sociology, students should meet the following requirements:

- Declare the major by the beginning of the second semester.
- Complete SOCY 1001 and 3001 and 6 credit hours of sociology electives by the end of the fourth semester.
- Complete SOCY 2061 or 4061 and either 3301 or 3401 and 15 credit hours, with a minimum of 9 upper-division credit hours of sociology electives, by the end of the sixth semester.
- Complete 36 credit hours (but not more than 45), in sociology with at least 21 credit hours in upper-division courses by the end of the eighth semester.

Graduate Degree Program

Students wishing to pursue graduate work in sociology leading to candidacy for an advanced degree should carefully read the requirements for advanced degrees in the Graduate School section.

The following are additional requirements for admission to the graduate degree programs of the department:

- A combined grade point average of at least 3.00 (*B*) for all courses in sociology undertaken as an undergraduate or graduate student prior to admission.
- Satisfactory scores (as determined by the department) on the Graduate Record Examination, including both the verbal and quantitative sections.
- Proficiency in statistics as demonstrated by a grade of *B* or better in an undergraduate statistics course.

The deadline for applications is December 15 for the academic year.

Master's Degree

The Department of Sociology does not have a master's degree program. However, students may obtain the MA degree in transit to the PhD if they wish, and students unable to complete PhD requirements may pursue a terminal MA degree, pending approval by the Graduate Committee. The department does not allow extra time for the completion of the MA degree.

All MA students are required to complete a minimum of 30 semester hours of graduate credit. These 30 hours must include at least 6 credit hours in at least two seminars in the student's major fields. Students may take a maximum of 6 hours of independent study. These may not be substituted for required seminars. In addition, all students must take courses from at least four different members of the faculty. Finally, all MA students must designate a Master's Advisory Committee. This committee must consist of at least three regularly appointed graduate faculty members from the Department of Sociology.

Plan I—Thesis Option

For the MA degree, a student must complete 24 hours of course work at the 5000 level or above, including the required Theory and Methods sequence, and at least 4 and a minimum of 6 hours of thesis credits. Students must register for thesis credit hours in the semester of thesis defense.

Plan II—Non-Thesis

For the MA degree, a student must complete 30 hours of course work at the 5000 level or above, including the required Theory and Methods sequence, and take a written exam in their major area within sociology. The Advisory Committee, here constituted as an examining committee, creates an exam that will assess the candidate's competence in the relevant areas of sociological knowledge.

Doctoral Degree

The main requirements for the doctoral degree are:

- A minimum of 45 credit hours at or above the 5000 level. At least 24 of these 45 hours must be taken in the sociology department at CU-Boulder.
- The following required courses must be included in the 45 hour minimum: 6 hours of sociological theory (including SOCY 5201); 9 hours of research methods and statistics (SOCY 5031, 5111, and 6111); two 1.5-hour graduate forums (SOCY 6821); and one 1-hour proseminar (SOCY 6831).
- A student must have passed all first-year work with a 3.500 GPA and no grade lower than a *B* to continue into the second year.
- Successful completion of exams in sociological theory and methods by the end of the first year.
- Successful first-year and second-year reviews.
- A student must pass the comprehensive examination, having become eligible to take this examination only after having satisfied requirements 1, 2, and 3 above.
- A student must write a PhD dissertation and defend this dissertation in an oral examination.

A detailed description of the PhD program is given in the graduate handbook available from the graduate program assistant of the sociology department. All inquiries about graduate programs should be addressed to the Graduate Program Assistant, Department of Sociology, University of Colorado Boulder, 327 UCB, Boulder, CO 80309-0327 or by e-mail to sociology@colorado.edu. For more information, visit the department website at socsci.colorado.edu/SOC.

Spanish and Portuguese

Degrees in Spanish..... BA, MA, PhD

Portuguese: Although no major in Portuguese alone is offered, the department offers a combined Spanish and Portuguese Language and Culture degree option (see the Spanish Majors section). Language courses at the elementary and intermediate levels are also available, as well as senior and graduate courses in Luso-Brazilian civilization and literature.

The department has identified the following as educational outcomes for the three tracks within the Spanish major.

The undergraduate degree in Spanish language and literature emphasizes knowledge and awareness of:

- the fundamental outlines of the history of Spanish literature or of Spanish American literature;
- the major creative writers in either Spanish or Spanish American literature;
- basic critical methodologies in the study of poetry, drama, narrative fiction, and the essay; and
- the social and historical contexts in which particular literary traditions developed.

In addition, students completing the degree in Spanish language and literature are expected to acquire the ability and skills to:

- read sophisticated Spanish texts at a level at which literary analysis can be performed;
- write and speak Spanish sufficiently to participate in critical discussions and write critical essays;
- analyze and interpret literary texts in terms of themes, characters, structure, style, and overall textual strategies;
- relate analysis and interpretations of different texts to one another; and
- communicate such interpretations competently in written form in Spanish.

The undergraduate degree in Spanish and Portuguese language and culture emphasizes knowledge and awareness of the same topics listed in the degree in Spanish Language and Literature, but specifies electives and related field courses, focusing on the Luso-Brazilian culture and adding knowledge of the Portuguese language.

The undergraduate degree in international Spanish for the professions emphasizes knowledge and awareness of:

- modern business practices as applied to the Spanish-speaking world;
- the theories of economics, business law, and international trade and finance;
- fundamental business Spanish terminology;
- the cultural environment in which business is conducted in the Spanish-speaking world;
- basic business according to the canons of this discipline; and
- international relationships.

In addition, students completing the degree in international Spanish for the professions are expected to acquire the ability and skills to:

- read and interpret in cultural and business-related terms sophisticated Spanish texts concerning business transactions;
- write and speak Spanish sufficiently to communicate effectively on business-related issues, be involved in critical discussions, and write critical essays on the subject;
- analyze a particular business problem to place it in a relevant context and formulate an appropriate response; and
- adequately translate business-related documents.

Bachelor’s Degree Programs

Students must complete the required courses of the College of Arts and Sciences and the required courses listed below. All Spanish majors are encouraged to consult with their designated departmental advisor before they register each semester.

<i>Required Courses</i>	<i>Semester Hours</i>
<hr/>	
Language and Literature Option	
<hr/>	
SPAN 3000 Advanced Spanish Language Skills, SPAN 3100 Literary Analysis in Spanish, and SPAN 3120 Advanced Spanish Grammar . . .	11
Hispanic linguistics requirement. Of the total 32 credit hours required for the degree, at least 3 credit hours must be in Hispanic linguistics (SPAN 3050, 3150, 4430, or 4450).	
At least 9 credit hours in upper-division literature, culture, and/or language (may include the Hispanic linguistics requirement)	9
At least 12 credit hours in courses at the 4000 level or above, with at least 9 credit hours devoted to literature (3 credit hours must come from either SPAN 4150 or 4160, and 3 credit hours must come from either SPAN 4170 or 4180). (Twelve credit hours may include the Hispanic linguistics requirement.)	12
In addition to the 32 credit hours in the Department of Spanish and Portuguese, 6 credit hours in courses from outside the Spanish department in one or more related fields	6

Spanish and Portuguese Language and Culture Option

Students must complete the required courses of the College of Arts and Sciences and the required courses listed below. All majors are encouraged to consult with their designated departmental advisor before they register each semester.

Note that prerequisites for the program include sufficient Spanish knowledge to be admitted to 3000-level courses and

sufficient knowledge of Portuguese to be admitted to 2000-level courses.

PORT 2110 Second-Year Portuguese 1 or PORT 2350 Portuguese for Spanish Speakers	3
PORT 2120 or SPAN/PORT upper-division	3

Upper-division Courses

PORT 3003 Advanced Portuguese Language Skills	3
PORT 3220 Latin American Culture: Spanish America and Brazil or PORT 3230 Lusophone Cultures: Brazil, Portugal, and Lusophone Africa	3
4000-level PORT course	3
SPAN 3000 Advanced Spanish Language Skills, SPAN 3100 Literary Analysis in Spanish, and SPAN 3120 Advanced Spanish Grammar	11

Hispanic linguistic requirement. Of the total 32 upper-division credit hours required for the degree, at least 3 hours must be in Hispanic linguistics (SPAN 3050, 3150, 4430, or 4440). Upper-division SPAN or PORT literature, culture, and/or language (may include Hispanic linguistics requirement) 6

“Masterpieces” courses. Three of these credit hours must come from either SPAN 4150 or 4160, and 3 credit hours must come from either SPAN 4170 or 4180 6

SPAN or PORT 4000-level course 3

NOTE: Directly-related courses outside of the department, such as ANTH 4730, can replace 3 hours of Spanish or Portuguese elective credits. These courses must be preapproved by the department.

Native speakers of Portuguese, and in general, all students whose Portuguese skills are beyond the PORT 2120 or 2150 level, are not required to take these courses. However, students have to make up these credit hours by taking 6 hours of upper-division SPAN or PORT courses or any related courses outside the department. Related courses must be approved by the department.

NOTE: To fulfill the requirements for a Spanish Language and Literature or a Spanish and Portuguese Language and Culture major, students must complete 32 credit hours in courses at the 3000 level or above and at least 12 upper-division credits at CU-Boulder, 6 of which must be from the masterpiece courses listed previously (SPAN 4150 or 4160, and SPAN 4170 or 4180).

No more than 3 independent study credit hours may count toward the major.

No grade lower than C- in a Spanish course will be counted in the major requirement.

Students seeking teaching certification in Spanish must take SPAN 3050, 3120, and 3200 or 3210.

Students who want certification for teaching at the secondary level should note that the School of Education requires SPAN 4650 and 4660. Students who major in Spanish are expected to meet with their departmental advisor before registration. Failure to do so may delay graduation. Students considering entering graduate school for an advanced degree in Spanish, either at CU-Boulder or any other institution, should see a departmental advisor as early as possible.

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in Spanish, students should consult with the department associate chair for undergraduate studies to obtain detailed guidelines.

International Spanish for the Professions Option

In cooperation with the Leeds School of Business, the department offers an interdisciplinary major in international Spanish for the professions. It offers students numerous career possibilities, both in government and private industry, at home and abroad. Those

choosing this major are not able to enter the Boulder graduate program in Spanish without fulfilling the requirements in the language and literature major. Only a limited number of students may enroll in the international Spanish for the professions major. Courses within the major normally are completed in the student's junior and senior years. Declaration of the major should be completed as early as possible in the student's academic career, but no later than the second semester of the sophomore year.

NOTE: Prerequisites for the program include sufficient Spanish to be admitted to 3000-level courses, ECON 2010 and 2020. SPAN 3040 and SPAN 4070 must be taken at CU-Boulder.

<i>Required Courses</i>	<i>Semester Hours</i>
-------------------------	-----------------------

Professional Spanish Courses

(No substitutions permitted.)	15 credit hours
SPAN 3030 Professional Spanish for Business 1.	3
SPAN 3040 Professional Spanish for Business 2.	3
SPAN 3200 Spanish Culture or SPAN 3210 The Cultural Heritage of Latin America or 3220 Latin American Culture: Spanish America and Brazil or SPAN 3420 Catalan Culture.	3
SPAN 4060 Problems of Business Translation in Spanish 1	3
SPAN 4070 Problems of Business Translation in Spanish 2	3

Spanish Language Courses 17 credit hours

SPAN 3000 Advanced Spanish Language Skills	5
SPAN 3100 Literary Analysis in Spanish	3
SPAN 3120 Advanced Spanish Grammar	3
Any SPAN 4000-level course	3
Upper-division elective (recommended: SPAN 3050, 3310, 3340, 4930)	3

Courses in the Leeds School of Business

(No substitutions permitted.)	16 credit hours
BCOR 2000 Accounting and Financial Analysis	4
BCOR 2050/2400 Fundamentals of Marketing	3
BCOR 2150/2300 Adding Value with Management	3
BCOR 3000/3100 Business Law, Ethics, and Public Policy	3
ECON 3403 International Economics and Policy (Prereq. ECON 1000 or ECON 2010 and 2020)	3
Completion of the above sequence does not fulfill all requirements for a minor in the Leeds School of Business. Majors interested in this option must consult with the Spanish department advisor and will have to take some courses for the minor during the summer.	

Area Courses 12 credit hours

Students are required to take courses outside the Spanish department in a field related to their professional interests or a second major or degree. These may include courses in business, economics, computer science, linguistics, another foreign language, Chicano studies, Latin American studies and international affairs, and any course dealing with the Hispanic world from anthropology, history, political science, and geography. Courses meeting this requirement must be approved by an advisor.

Six credit hours may be taken in lower-division courses.

Six credit hours must be taken in upper-division courses.

NOTE: The College of Arts and Sciences does not allow more than 45 credit hours in any one discipline to be counted toward the 120 credit hours required for a BA degree. This rule does not mean that a student may not take more than 45 credit hours in Spanish, but rather that one must have a least 75 credit hours in courses other than Spanish. PORT 2110 and 2120 or 2150 will be accepted as partially fulfilling upper-division courses in other foreign languages. No Spanish or approved area courses with a grade lower than a C- will be counted in the major requirements. The ancillary GPA (made up of the combined grades from the Business courses and the Area courses) must be at least 2.00.

Concurrent BA/MSIB

This program is designed for exceptional students who wish to combine their BA in international Spanish for the professions with an MS in international business (MSIB) from the University of Colorado Denver. Students are able to complete both degrees in five years, including two summer sessions, because 15 credit

hours of the undergraduate major can be used to waive the common body of knowledge requirement of the MS program.

Students who wish to pursue the joint degree will need to take the following undergraduate business courses.

<i>Required Courses</i>	<i>Semester Hours</i>
BCOR 2000 Accounting and Financial Analysis	4
BCOR 1010/2010 Business Statistics (must be taken during summer).	3
BCOR 2050/2400 Fundamentals of Marketing.	3
BCOR 3000/3100 Business Law, Ethics, and Public Policy	3
ECON 3403 International Economics and Policy	3

Admission Procedures. Students apply for the MSIB program in their third year by declaring their intention to the Spanish for the professions advisor, submitting the standard MSIB application forms, and completing admissions requirements, which include the GMAT (Graduate Management Admissions Test). Students are notified of acceptance to the program before the start of their fourth year. Students must have at least a 3.00 GPA to be considered for admission.

Minor Program

A minor program is offered in Portuguese. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. For more information, visit www.colorado.edu/artsscience/students/undergraduate/academics/minors.html.

Study Abroad

The department strongly recommends that all majors include some study in a Spanish-speaking country in their major program. The university cooperates with full-year and semester programs in Argentina, Bolivia, Chile, Costa Rica, Dominican Republic, Ecuador, Mexico, Nicaragua, and Spain. There are also programs in Brazil and Portugal for Portuguese speakers. Credit earned normally counts toward satisfaction of the major requirements, but the student should see the associate chair for undergraduate studies before enrolling in a foreign program to discuss transfer of credit. Credit for work done in special programs offered by foreign universities is evaluated on an individual basis. It should be noted that courses taken abroad and designated as Spanish are also subject to the 45-hour maximum rule of the College of Arts and Sciences.

Students interested in study abroad should see International Education in the first chapter of this catalog for more information.

Students who present transfer work or credit earned in CU study abroad programs to satisfy major requirements are expected to complete at least 12 upper-division credits, including at least 6 from the 4000-level masterpiece courses listed above, on the Boulder campus. As an exception, one of the masterpiece courses can be taken in the program at Santiago de Compostela, Spain.

Graduate Degree Programs

Students wishing to pursue graduate work in Spanish leading to candidacy for advanced degree should read carefully requirements for advanced degrees in the Graduate School section.

Master's Degree

Language Requirement. Students must demonstrate, as early as possible and before taking the comprehensive examination, a communication knowledge (as defined by the Graduate School) of a foreign language other than Spanish. They also must be able to speak, read, and write English well.

Areas of Concentration. The MA in Spanish is offered in two areas of concentration: one with an emphasis on literature, and

one with an emphasis on linguistics. (Contact the department for further information.)

Doctoral Degree

Residence Requirement. PhD students must complete a minimum of one academic year in residence on the Boulder campus (excluding summer) within the four years immediately preceding the date on which they present themselves for the PhD comprehensive examination.

Language Requirement. The student must demonstrate as early as possible, but at least one full semester before taking the comprehensive examination, a communication knowledge (as defined by the Graduate School) of one foreign language and a reading knowledge of a second language in addition to Spanish. The languages are chosen by the student in consultation with the advisory committee.

Areas of Concentration. The PhD in Spanish is offered in six literary periods of concentration: medieval, golden age, 18th and/or 19th century peninsular, 20th century peninsular, colonial and 19th century Spanish American, and 20th century Spanish American. For further information on these options, contact the department.

Speech, Language, and Hearing Sciences

Degrees..... BA, MA, AuD, PhD

The undergraduate program in speech, language, and hearing sciences (SLHS) introduces concepts basic to human communication, and provides opportunities for students to acquire an understanding of normal and disordered speech, language, and hearing processes. The curriculum for the undergraduate degree in SLHS has been designed to fulfill the prerequisite requirements for entrance into accredited graduate programs in speech-language pathology and audiology, but also provides a strong academic foundation for students with other professional goals.

The undergraduate degree in speech, language, and hearing sciences emphasizes knowledge and awareness of:

- the anatomy of the speech and hearing mechanisms, as well as the processes of speech production, transmission, and reception;
- the development of language;
- scientific methods used in investigating speech/language/learning and hearing processes;
- the etiologies, manifestations, and treatments of speech/language/learning and hearing disorders; and
- the role of the professional speech-language pathologist and audiologist, including the history and development of the profession, the scientific traditions of the discipline, and the ethical issues in providing service to individuals with communication disorders.

In addition, students completing the degree in speech, language, and hearing sciences are expected to acquire the ability and skills to:

- express themselves effectively both orally and in written scientific and clinical discipline-specific reports;
- critically evaluate literature in the discipline; and
- analyze the acoustic output of the speech production process auditorily and/or instrumentally.

Bachelor's Degree Program

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

Required Courses

Semester Hours

Majors must present a minimum of 35 credit hours of course work in the recommended sequence below.

Freshman and/or Sophomore Year

SLHS 2000 Introduction to Communication Disorders	3
SLHS 2010 Human Communication Science	3
LING 2000 Introduction to Linguistics	3
SLHS 3006 Phonetics or LING 3100 Sound Structure of Language.	3
PSYC 1001 (as prerequisite for SLHS 4560)	4

Junior Year

Fall Semester

SLHS 3106 Hearing Science	3
SLHS 4560 Language Development	3
SLHS 4918 Introduction to Clinical Practice	3

Spring Semester

SLHS 3116 Speech Science	3
SLHS 4918 Introduction to Clinical Practica (Only one semester of SLHS 4918 is required and may be taken in either the fall or spring.) . . .	2

Senior Year

Fall Semester

SLHS 4502 Language Disorders: Child and Adult.	3
SLHS 4704 Audiological Evaluation	3

Spring Semester

SLHS 4512 Speech Disorders.	3
SLHS 4714 Audiological Rehabilitation	3

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in speech, language and hearing sciences students should meet the following requirements:

Declare the major by the beginning of the sophomore year

Complete prerequisite courses—LING 2000 and PSYC 1001—by the end of spring semester of sophomore year.

Complete the required courses in the sequence listed above.

Graduate Degree Programs

The graduate curriculum in speech, language, and hearing sciences leads to either a master's or a doctoral degree. The programs in speech-language pathology and audiology are accredited by the Council on Academic Accreditation (CAA) and the Colorado State Department of Education.

Prospective students should read requirements for advanced degrees in the Graduate School section.

Master's Degree

There are two areas of focus available at the MA level: 1) MA leading to professional certification in speech-language pathology by the American Speech Language Hearing Association (ASHA) and licensure for the Colorado State Department of Education and 2) research. Within departmental and ASHA guidelines, master's students with a focus in speech-language pathology devise individualized programs of academic and clinical study that allow them to develop clinical specialties of their choosing. Clinical assignments are initiated in the department on-site Speech, Language, and Hearing Center; later, student input is obtained in making off-campus clinical assignments in educational and medical settings.

Students with an undergraduate degree in speech-language pathology and audiology can expect to complete the program in two calendar years. Those without such a background are required to make up undergraduate deficiencies, which normally require at least an additional 28 credit hours of courses in speech, language, and hearing sciences and related disciplines. Students must meet standards for both academic and clinical competence, as well as professional conduct. Full-time graduate study is required. Students not seeking clinical certification place major emphasis on speech, language, or hearing sciences under the guidance of their primary advisor and thesis research committee.

Doctoral Degree

There are two areas of focus available at the doctoral level: 1) AuD leading to professional certification in audiology, and 2) PhD with emphasis on research. The PhD program is grounded in research and demands demonstrated expertise beyond the academic knowledge and clinical skills required for clinical certification in speech-language pathology and/or audiology. Supervisory, administrative, instructional, and research activities are provided to acquaint students with problems and concepts at a higher level of professional activity and responsibility.

Wide latitude prevails in planning individual programs. It is expected that students have some professional experience before entering the program, and that they have specific academic or professional goals in mind. PhD candidates must take a four-course sequence in statistics and computer science and four core courses within Speech, Language, and Hearing Sciences (SLHS). Beyond that, student degree plans are individually prepared through the joint efforts of the student and an advisory committee.

The AuD program is a four-year post-baccalaureate program consisting of academic course work, clinical practicum experiences, capstone project, and advanced clinical rotations. Clinical assignments are initiated in the Boulder satellite of the University of Colorado Hospital Marion Downs Hearing Center; later student input is obtained in making off-campus clinical assignments. The program is designed so students complete all requisite clinical and academic experience for ASHA certification.

In addition, the department offers students the opportunity to pursue an integrated program of study leading to dual doctorate degrees in the field of audiology and hearing science. The PhD/AuD dual degree program trains students in clinical research and clinical practice in audiology. Students in the program gain training that will prepare them to become independent scholars, to teach in higher education, to conduct research, to become certified clinical audiologists, and to gain skills in leadership. The dual degree program allows students to pursue both their clinical training and their research training in a rigorous, intensive, and streamlined program. Students may apply to both programs simultaneously, or may apply to the PhD portion after having been accepted into the AuD portion or may apply to the AuD portion after having been accepted into the PhD portion.

Theatre and Dance

Degrees in Theatre..... BA, BFA, MA, PhD

Degrees in Dance..... BA, BFA, MFA

The Department of Theatre and Dance offers undergraduate and graduate degrees in both theatre and dance. These programs combine traditional studies with practical training. Ambitious seasons of theatre productions and dance concerts feature student performers and student designers, directors, and choreographers. Guest artists of national and international fame often participate in curricular and extracurricular activities. Recent guests have included Art Bridgman/Myrna Packer, Rennie Harris, Heidi Henderson, Kathleen Hermesdorf, Deborah Jowitz, Darrell Jones, Susan Marshall & Co., Bebe Miller, David Dorfman, Joe Goode, Kevin Wynn, and Shelley Senter in dance; Ami Dayan, Terry Berliner, Lee Blessing, Jim Moody, Tim Miller, Holly Hughes, Jane Page, Joan Schirle, Karen Finley, and Mark Medoff in theatre.

Students interested in theatre and dance are urged to consult with an advisor in the appropriate field to obtain both advice and the most current information concerning program opportunities and expectations.

Bachelor's Degree Programs in Theatre

The undergraduate degrees in theatre emphasize knowledge and awareness of:

- the major works of dramatic literature that are representative of the most important eras in the development of theatre and drama in the western world;
- the history of theatrical production—its styles, conventions, and socially related mores—from the ancient Greeks to the present time;
- the various means through which a theatrical concept is realized; and
- the aesthetic and intellectual relationship between theatre in its various 21st century modes and contemporary society.

In addition, students completing a degree in theatre are expected to acquire the ability and skills to:

- analyze and interpret plays and performances with particular attention to acting and performance of literature, designing, directing, and/or playwriting and criticism;
- use, with safety and efficiency, the tools and equipment basic to theatre production technology;
- communicate to an audience through at least one of the components of theatrical art—acting, directing, designing, playwriting, or criticism; and
- function effectively as a member of a production team in the preparation of regularly scheduled public productions.

BA Degree in Theatre

The BA degree program in theatre requires 44 credit hours in theatre, 3 in dance, and 6 in dramatic literature and/or global arts outside the department. It is a broadly based program of theatre practice and study for the student who may wish to pursue in-depth studies in another area as well. It also serves as the core of studies for a student who wishes to pursue further theatre training in one of the BFA areas of concentration. A grade of C- or better is needed in each required course toward the BA degree.

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

<i>Required Courses</i>	<i>Semester Hours</i>
-------------------------	-----------------------

THTR 1011 Development of Theatre 1: Global Ancient and Classical Theatre	3
THTR 1019 Theatre Foundations	3
THTR 1105 Stage Technologies	3
THTR 1115 Costume Technologies	3
THTR 2003 Acting 1	3
THTR 2005 Introduction to Theatre Design	3
THTR 2021 Development of Theatre 2: Modern Theatre and Drama	3
THTR 3035 Practicum (including section 821 Tech Studio)	5
THTR 3149 Professional Orientation	2
THTR 4021 American Theatre and Drama	3
THTR 4149 Theatre Internship	1

One upper-division performance course from the following:	3
THTR 3043 Voice for the Stage	
THTR 3053 Acting 2	
THTR 4059 Open Topics: Performance for Justice and Development	
THTR 4063 Audition Techniques	
THTR 4073 Performing Voices of Women	
THTR 4103 Acting for Camera	

Electives in theatre (all must be upper-division)	9
Electives in dance	3
Electives in dramatic literature and/or global arts, outside the Department of Theatre and Dance, including at least 3 upper-division	6

Curriculum Notes

1. Choices must be advisor approved; BFAs do not have the same options as BAs.
2. BFA Performance students must take 3 credits in Shakespeare (ENGL 3563 or 3573).
3. No more than 2 credit hours of THTR 3035 may be taken in a given semester.

Recommended sequence of courses during the initial year of theatre major program, BA and BFA:

THTR 1011 Development of Theatre 1	3
THTR 1019 Theatre Foundations	3
THTR 1105 Stage Technologies	3
THTR 1115 Costume Technologies	3
THTR 2003 Acting 1	3

Graduating in Four Years with a BA in Theatre

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress toward a BA in theatre, students should meet the following requirements:

- Complete THTR 1011, 1105, 1115, 1003, 2003, or 1019, and 2021 by the end of the fourth semester
- Complete 6 upper-division credit hours plus 1 credit of THTR 3035 by the end of the fifth semester
- Complete 9 additional upper-division credit hours, including all practicum/tech studio requirements by the end of the sixth semester
- Complete 6 additional upper-division credit hours, plus all 3 credits in dance by the end of the seventh semester
- Complete THTR 4021 by the end of the eighth semester

BFA Degree in Theatre

The BFA degree programs in theatre offer preprofessional training to a limited number of highly motivated and talented students aiming at professional careers. The BFA student pursues one of three possible areas of concentration: performance, theatre design, technology and management, or musical theatre.

Admission is limited not only due to student capacity, but also to ensure the type of individual attention necessary for effective training. Interested students should identify themselves as early as possible.

Formal application to the musical theatre concentration should be made concurrent with application to the university. Auditions/interviews will be held at the regular spring auditions for the College of Music. Formal application to the performance concentration should be made at the beginning of the second semester. Formal application to the design/technology/management concentrations should be made at the beginning of the third semester.

Admission is based on talent, academic record, motivation, and audition-interviews. Contact the department for information concerning auditions for these BFA tracks.

The college counts only 67 credit hours of THTR credits toward the total hours required for graduation. A grade of C- or higher is needed in each course required to fulfill the requirements of the BFA degree.

In addition to the general College of Arts and Sciences requirements for the BA degree, requirements for the BFA degree are as follows. (Courses taken as part of a student BFA concentration cannot also be counted towards fulfillment of the BA electives.)

<i>Required Courses</i>	<i>Semester Hours</i>
-------------------------	-----------------------

Concentration in Performance

61 credit hours are required in THTR, plus 9 in other disciplines. Students accepted into the performance concentration each year constitute an ensemble and as a group follow the required sequence of courses. Specific details about this sequence are available from the department. Students in this concentration must fulfill BA requirements in theatre, with specified electives, and are required to audition for major season productions each semester.

THTR 3013 Studio 1: Building a Character	3
THTR 3023 Studio 2: Creating a Role	3
THTR 3033 Acting Practicum (1 credit repeated twice)	2
THTR 3043 Advanced Voice for the Stage	3
THTR 4013 Studio 3: Acting Shakespeare	3
THTR 4023 Studio 4: Playing with Styles	3
THTR 4033 Movement for the Actor	3
THTR 4193 Studio 5: Creating an Ensemble	3

Concentration in Design, Technology, and Management

62 credit hours are required in THTR, plus 15 in other disciplines. Students in the design, technology, and management concentration must fulfill BA requirements in theatre as advised and will use the electives in the BA requirements to fulfill prerequisites for the following.

THTR 2035 Design Fundamentals	3
THTR 4085 Theatre Management	3
THTR 4555 Production Studio (1–2 credits repeated for a total of 6)	6
Four Advanced Technical Theatre electives (as advised)	12

As advised, courses in other departments in drawing, painting, drafting, sculpture, and/or environmental design 6

Concentration in Musical Theatre

60 credit hours are required: 26 in THTR courses, 4 in DNCE courses, and 30 in the College of Music. See department website for audition information and application, www.colorado.edu/theatredance/theatre/education.html.

Theatre/Dance

THTR 1019 Theatre Foundations	3
THTR 1105 Stage Technologies	3
THTR 1115 Costume Technologies	3
THTR 2003 Acting 1	3
THTR 3011 Development of American Musical Theatre	3
THTR 3035 Production Practicum	3
THTR 3135 Tech Studio	2
THTR 3053 Acting 2 or THTR 2043 Voice for the Stage	3
THTR 4039 Musical Theatre Repertory	3
Electives in Dance Technique	4

Music

(MUSC 1081 Basic Music Theory/Aural if needed)	(3)
MUSC 1101 Music Theory 1	2
MUSC 1111 Music Theory 2	2
MUSC 1121 Aural Skills	1
MUSC 1131 Aural Skills	1
MUSC 1802 Introduction to Music History	3
PMUS 1105 Keyboard Musicianship 1	1
PMUS 1205 Keyboard Musicianship 2	1
PMUS 1726 Voice	9
PMUS 4137 Opera Theatre 1	1
PMUS 4147 Opera Theatre 2	1
PMUS 4157 Opera Practicum	2
Non-Western Music History (2000–4000 level)	3
Western Music History (2000–4000 level)	3

Graduating in Four Years with a BFA in Theatre

Consult the Four-Year Guarantee Requirements for information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress toward a BFA in theatre, students should meet the following requirements:

All potential BFA students in musical theatre must declare, in writing, their intention to audition before December 1, the year before they intend to start at CU. Actual auditions and interviews for the performance and design/technology concentrations must take place by the second semester of study. Students who are accepted into a major in these BFA concentrations must declare their major immediately upon acceptance. In addition to the specific course requirements listed for completing a BFA degree in the performance and design/technology/management concentrations, students must fulfill all requirements for the BA degree in theatre. Once accepted into a BFA concentration, students should meet with a departmental advisor to confirm, in writing, specific courses to be completed within the remaining semesters of study.

As part of the first two years of study, all students who intend to enter the BFA programs in performance and design/technology must complete the following courses: THTR 1011, 1019, 1105, 1115, 2003, and one semester of 3035.

Performance Concentration

Upon acceptance to the performance concentration, students must meet immediately with a departmental advisor. All BFA performance majors must complete the following courses in the prescribed order: THTR 3013, 3023, 3043, 4013, 4023, 4093. Students are also encouraged to complete EMUS 1184 (voice).

All students in this concentration must audition for all main stage departmental productions.

Theatre Design, Technology, and Management Concentration

Upon acceptance to the theatre design, technology, and management concentration, students must meet immediately with a departmental advisor. Students in this concentration must take THTR 1019 Theatre Foundations as well as complete a design course in their chosen area by the end of the sophomore year.

Musical Theatre Concentration

All potential BFA musical theatre students must declare in writing, during the application process, their intention to audition by submitting the appropriate pre-audition materials (www.colorado.edu/TheatreDance/theatre/application2.html). Students who are accepted into the BFA musical theatre concentration must confirm their decision to enroll as TBFA MUS immediately upon acceptance following the audition. They must also meet immediately with a departmental advisor.

Bachelor’s Degree Programs in Dance

The CU Dance Program is designed to provide a well-rounded dance education including both physical and intellectual training that instill concrete skills in performance and choreography as well as an appreciation of the role that dance plays in human culture around the world. The following areas of knowledge and experience are central to all the undergraduate degrees in dance:

- physical accomplishment at a basic level in a range of dance styles, including modern, ballet, jazz, African, and other world dance traditions, and advanced study of at least one of these styles, according to the student’s individual interests;
- experience with the process and underlying aesthetics of dance creation and composition;
- basic familiarity with cultural, sociological, and aesthetic issues important to the contemporary realities of the field of dance, including a working knowledge of major world dance styles, works of dance literature, and the history of dance;
- knowledge of the various means, such as stagecraft, costuming, makeup, and promotion, through which a public presentation of dance is realized;
- study and practical experience with the act of teaching dance, including issues of creativity, style, and pedagogical appropriateness;
- basic knowledge of tactics for prevention of injury to the dancer’s body, first aid and approaches to rehabilitation from injury, and of various somatic approaches to dance training; and
- experiential study of the relationship between dance and music, including concrete practice of skills in playing and hearing music.

In addition, students completing a degree in dance are expected to acquire the ability and skills to:

- actively participate in dance as an art form with particular attention to at least one of the following areas of dance: performance, choreography, dance production, scholarship, pedagogy, or criticism;
- understand and mobilize knowledge of appropriate use of the anatomy and physiology of the body in performance and teaching;
- communicate effectively to an audience through at least one of the components of dance—performance, choreography, teaching, or scholarship; and
- function constructively as a member of a dance community in the preparation of regularly scheduled public productions.

BA and BFA students are expected to take at least one course each in modern, ballet, jazz, and African dance technique before the end of their sophomore year. Dance majors must earn a C- or better in all required courses. Students who have not placed in the major technique class (DNCE 2021, 3041, or 4061) by their second semester in dance program are strongly advised not to continue in the major program in dance. Placement into and successful completion of major technique is a prerequisite for enrollment in other required dance courses.

BA Degree in Dance

Required Courses	Semester Hours
DNCE 1012 Dance Production 1	2
DNCE 1013 Improvisation	2
DNCE 1027 Introduction to Dance and Culture	3
DNCE 2501 African Dance	2
DNCE 2005 Movement Awareness and Injury Prevention for the Dancer	3
DNCE 2014 Rhythmic Analysis	2
DNCE 2021 or DNCE 3041 or DNCE 4061 Major Technique (Note 1)	6
DNCE 2033 Beginning Composition	3
DNCE 4015 Movement Analysis	3
DNCE 4016 Creative Dance for Children or DNCE 4036 Methods of Teaching Dance	3
DNCE 4017 History and Philosophy of Dance.	3
DNCE 4037 Looking at Dance.	3
DNCE 4939 Senior Project: Internship	2
THTR 1115 Costume Technologies.	3
THTR 3035 Practicum	2
THTR 4029 Touring Ensemble.	2
THTR 4081 Senior Seminar	3
Electives in dance technique courses ending in "1" (Note 1)	6
General electives in dance	2

Curriculum Note:

1. Students are placed at the appropriate level based on audition. Students without sufficient training will be asked to take nonmajor technique classes to make up the deficiency. These classes will not count toward the degree requirement.

Graduating in Four Years with a BA in Dance

Consult the Four-Year Guarantee Requirements for more information on eligibility. The concept of "adequate progress" as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress toward a BA in dance, students should meet the following requirements:

Declare the major by the beginning of the second semester.

Complete by the end of the sophomore year: 2 credits of DNCE 2021, 3041, or 4061; 2 credits of DNCE 2501.

Complete by the end of sophomore year: DNCE 2005, 1012, 1013, 1027, 2014, and 2033; THTR 1115, 3035, and 4029.

Complete during junior and senior years: DNCE 4037, 4015, 4016 or 4036, and 4017.

Complete during senior year: DNCE 4939, THTR 4081.

Complete additional 4 hours of DNCE 2021, 3041, or 4061; 6 hours of additional courses ending in "1"; and 2 hours of dance electives at appropriate time with the advice of the advisor.

BFA Degree in Dance

The BFA in dance is designed to meet the needs of highly talented students interested in preparing for a professional dance career while in an academic setting. The degree requires 67 credit hours in dance and 12–13 hours in theatre. Admission is limited by faculty consent to ensure the type of individual attention necessary for effective training. Students apply during the third semester while taking DNCE 2033. Students should be advised that 9 or 10 semesters are often needed to complete the BFA program. More than 120 hours may be needed for graduation.

Required Courses	Semester Hours
DNCE 1012 Dance Production 1	2
DNCE 1013 Improvisation	2
DNCE 1027 Introduction to Dance and Culture	3
DNCE 2501 African Dance	2
DNCE 2005 Movement Awareness and Injury Prevention for the Dancer	3
DNCE 2014 Rhythmic Analysis	2
DNCE 2021, 3041, or 4061 Major Technique (Note 1).	12
DNCE 2033 Beginning Composition	3

DNCE 3024 Musical Resources	2
DNCE 3043 Intermediate Comp.	3
DNCE 3601 Alexander Technique	2
DNCE 4012 Concert Production	1
DNCE 4015 Movement Analysis	3
DNCE 4016 Creative Dance for Children or DNCE 4036 Methods of Teaching Dance	3
DNCE 4017 History and Philosophy of Dance.	3
DNCE 4037 Looking at Dance.	3
DNCE 4053 Advanced Composition	3
DNCE 5052 Studio Concert	3
THTR 1003 or 2003 Acting or DNCE 4018 Performance Improvisation Techniques	2-3
THTR 1115 Costume Technologies.	3
THTR 3035 Practicum	1
THTR 4029 Touring Ensemble.	total 3
THTR 4081 Senior Seminar	3
Electives in dance technique courses ending in "1" (Note 1)	9
Electives in dance	3

Curriculum Note:

1. Students are placed at the appropriate level based on audition. Students without sufficient training will be asked to take nonmajor technique classes to make up the deficiency. These classes will not count toward the degree requirement.

Graduating in Four Years with a BFA in Dance

Consult the Four-Year Guarantee Requirements for more information on eligibility. The concept of "adequate progress" as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress toward a BFA in dance, students should meet the following requirements:

Acceptance into the BFA by the end of the third semester with consent of dance faculty.

Complete by the end of the sophomore year: 4 credits of DNCE 2021, 3041 or 4061; 2 credits of DNCE 2501.

Complete by the end of the sophomore year: DNCE 1012, 1013, 1027, 2005, 2014, 2033; THTR 1115, 3035 and 2 credits of THTR 4029.

Complete during junior and senior years: DNCE 3024, 3043, 4012, 4015, 4016 or 4036, 4037, 4053; 1 credit of THTR 4029.

Complete during senior year: DNCE 5052, THTR 4081.

Complete at appropriate time with advice from advisor: 8 additional credits of DNCE 2021, 3041, or 4061; 9 hours of dance technique courses ending in "1"; 3 credits of dance electives; DNCE 3601; THTR 1003 or 2003 or DNCE 4018.

Minor Programs

The dance minor is a 20-credit program open to any student enrolled at CU, regardless of college or school. For more information see www.colorado.edu/artssciences/students/undergraduate/academics/minors.html.

Graduate Degree Programs

The MA and PhD degrees are offered in theatre. The MFA degree is offered in dance. A joint MA/MBA degree is offered in theatre with the CU Leeds School of Business.

Departmental Requirements

Students wishing to pursue graduate work in theatre or in dance should carefully read both requirements for advanced degrees in the Graduate School section and the following departmental requirements. Students should note that departmental requirements are sometimes more comprehensive than those minimums established by the Graduate School.

Prerequisites. Applicants are admitted to the graduate pro

gram in theatre and in dance on the basis of their academic records and recommendations. Students admitted who are unable to offer a substantial number of credit hours of work in the area of their intended specialization or allied fields must expect that a significant number of additional courses and credit hours are required of them in order to make up deficiencies.

Applicants for the MFA program in dance must audition in person; international students may audition by video tape. Applicants are expected to show a high level of proficiency in dance performance and choreography. Contact the dance office for specific audition dates; auditions are usually held in February or March for admission the following fall. The deadline for applications from U.S. citizens is December 15; from non-U.S. citizens, it is December 1. Applicants who want to apply for graduate part-time instructor (GPTI) positions must apply by December 1.

Diagnostic Meeting. Every student will have a meeting with faculty upon entering the program. Topics discussed in the meeting and other available information are employed to design the best possible course of study for the student. This evaluation may indicate course work as necessary above and beyond the required hours for the degree.

Advisor and Graduate Committee. For every student who declares an intention to work toward an advanced degree, an advisor and committee are designated so that a degree plan may be designed before the end of the first semester of residence.

All candidates for a degree have the responsibility of making certain that the appropriate persons or committees have been appointed to supervise the various steps in their graduate programs. Detailed instructions are available from the department.

MA Degree in Theatre

Course Requirements. All master's degree students in theatre are required to complete THTR 5011, 6009, and two of the following: THTR 6011, 6021, 6031, or 6041. Students can choose either a thesis or nonthesis track program.

After any undergraduate deficiencies have been removed, students must earn 30 semester hours, at least 16 of which must be in THTR courses at the 5000 level or above. Four to six thesis credit hours may be counted toward the 30-hour requirement. At least 24 of the 30 hours must be at the 5000-level or above.

Master of Business Administration/Master of Arts, Theatre, and Dance

The Leeds School of Business, in conjunction with the Department of Theatre and Dance, offers students the ability to earn an MBA and an MA in theatre or dance through a three-year dual-degree program. Students in the MBA/MA dual-degree program pursue careers in a wide variety of fields and jobs in the world of the performing arts. Types of organizations include theatre companies, dance companies, opera companies, symphonies, arts councils, performing arts complexes, civic auditoriums, and arts presenters.

Admission. An individual must apply separately and be admitted to both programs under each school's or college's admission procedures and standards. Applicants are encouraged to apply to the two programs concurrently.

Course of Study. Students in the MBA/MA in theatre and dance spend the first year of their dual-degree program exclusively in either the business school or the theatre/dance program. In the second year, courses are taken exclusively in the other department. The third year offers students the opportunity to take both MBA and theatre/dance elective courses.

Credit for Courses. Dual-degree students are required to complete 43 hours of MBA course work and 24 hours of theatre/dance course work. A minimum of 67 approved credits must be completed to earn both degrees.

PhD Degree in Theatre

Doctoral students in theatre are normally expected to earn 30 credit hours of course work beyond the master's degree at the 5000-level or above. When approved by the student advisory committee, credits from other departments on campus may count, provided the course is taught by a member of the graduate faculty in that department.

Doctoral study in theatre is based on the following core of required advanced courses.

THTR 5011 Theory and Criticism

THTR 6009 Research Strategies and Techniques

Plus three of the following:

THTR 6011 On-Stage Studies: Classical and Neoclassical Drama

THTR 6021 On-Stage Studies: Elizabethan and Jacobean Drama

THTR 6031 On-Stage Studies: American Theatre and Drama

THTR 6041 On-Stage Studies: Modern European Drama

Beyond the core courses, studies are determined by students and their advisors, consistent with Graduate School and departmental requirements. Doctoral students are required to demonstrate proficiency in a foreign language equivalent to the completion of a second-semester college level before taking the comprehensive exam. In addition to the 30 hours of course work, 30 dissertation credits (THTR 8999) are required.

MFA Degree in Dance

Course Requirements. The three-year program requires a minimum of 60 credit hours, at least 30 of which must be taken in dance at the 5000 level or above. The program focuses on performance/choreography and secondary areas of specialization. At least 6 credit hours must be taken outside of dance in an approved allied field. The program is designed to accommodate recent BA or BFA graduates and practicing professionals desiring a graduate degree who have a bachelor's degree.

The MFA in dance is based on a required core of courses including modern dance, ballet, African dance, Alexander technique, choreography, history, readings in dance, seminars in dance and music, research strategies, pedagogy, and a creative project or thesis. Contact the department for detailed information.

Project or Thesis. In the second year of the degree program, a written proposal for a creative project or thesis must be presented and approved. Upon its completion, an oral defense of the project or thesis is required.

Graduate Comprehensive Essay Portfolio. Three well defined essays are submitted during the final semester that demonstrate knowledge of scholarly sources and articulation of personal philosophy.

Western American Studies

The Center of the American West offers an undergraduate certificate program in Western American Studies for students who have an intellectual commitment to any of a broad range of issues and aspects of the American West, including history and literature, culture and society, and economic and environmental challenges facing western communities. Courses involve students in an exploration of the past, an appreciation for traditional and contemporary stories and art in the region, and an understanding of western landscapes, ecosystems, and the factors that affect them.

The certificate program is interdisciplinary, drawing on courses and expertise from over a dozen departments spanning the humanities, natural sciences, and social sciences. Course work may be taken concurrently with undergraduate studies. Students complete 24 credit hours of C or better course work, of which a minimum of 15 are upper division and a minimum of 12 are from outside the student's major. Contact the Center of the American West at **303-735-1399** or visit www.centerwest.org/academics/certificate for program details.

Western Civilization Studies

The Center for Western Civilization (CWC) offers an undergraduate certificate program, Foundations of Western Civilization, for students interested in a rigorous grounding in Western culture. The certificate promotes critical reflection and academic research on the traditions and issues that characterize Western civilization through the study of Western culture, science, and government in their ancient, medieval, and modern forms, with special emphasis on the Classical Tradition and the American Founding. It helps students understand their role as citizens in a nation founded on the ancient ideals of consensual rule and republican government.

The curriculum is interdisciplinary with over 30 courses taught by faculty in departments that include classics, English, history, philosophy, religious studies, and Germanic languages and literatures. The certificate requires the completion with a grade of C- or better of eight courses (24 credit hours), of which 15 credit hours must be at the upper-division level. Up to three courses (or nine credit hours) may come from the student's major. In addition, students must fulfill the requirements for a BA in their major in a school or college at the University of Colorado. For more information on the program, requirements, and current course offerings, contact CWC Assistant Director Vincent McGuire at **303-735-3019** or Vincent.McGuire@colorado.edu.

Women and Gender Studies

Degree BA
Students may earn a bachelor of arts degree in women's studies or a women's studies minor to supplement study in their major field.

Since 1974, the Women and Gender Studies Program has offered an interdisciplinary curriculum encompassing social sciences and humanities. Courses reflect the new scholarship on women: they focus on the interface of the public and private spheres of women's lives; on the intersection of gender, race, ethnicity, sexuality, nation and class; feminist theory; gender identity and theories of inequality. The curriculum is multifaceted, offering courses on women of color, women and development, global feminism, feminist research methods, and gender and sexuality. The program houses a reading library and organizes colloquia, workshops, and other cultural and educational events.

A women's studies major is useful in pursuing careers in law, medicine, government, public health, public policy, social work, teaching, counseling, advocacy, journalism, television production, labor and nonprofit organizing, public relations, education, politics, fundraising, small business development, librarianship, arts administration, and the Foreign Service.

The undergraduate degree in women's studies emphasizes knowledge and awareness of:

- the historical and cross-cultural variability of social norms of masculinity and femininity;
- the ways in which ideas of masculinity and femininity shape and interact with class, race, ethnicity, sexuality, ability, and nationality;
- the centrality of gender at the local, national, and international levels of society, politics, and the economy;
- the diversity of global feminism;
- how women interact with the global economy;
- how power and privilege function in relation to the intersections of gender, race, class, sexuality, and nationality;
- women's participation in, contribution to, and transformation of areas of social life including culture, society, politics, the economy, and religion;
- discrimination and violence against women;
- women's activism and resistance;
- the varied research methods and theoretical perspectives used in women, gender, and sexuality studies scholarship, including the relationship between theory and practice; and
- the history of women and gender studies as an academic discipline and the main themes that have characterized its emergence.

In addition, students completing the program in women's studies are expected to acquire the ability and skills to:

- express ideas clearly in spoken form;
- employ creative problem-solving techniques;
- organize and synthesize material in new ways;
- analyze texts and information critically;
- articulate clearly complex ideas in written form; and
- participate in teamwork successfully.

Students must complete the general requirements of the College of Arts and Sciences and the required courses listed below.

<i>Required Courses</i>	<i>Semester Hours</i>
-------------------------	-----------------------

Students must complete a minimum of 36 credit hours with grades of C- or better in women and gender studies courses, a minimum of 24 credits of which must be upper division (3000 or 4000 level).

Required Courses (12 hours)

WMST 2000 Introduction to Feminist Studies	3
WMST 2600 Gender, Race, and Class in a Global Context	3
WMST 3100 Feminist Theories	3
WMST 4800 Senior Colloquium in Feminist Studies	3

Lower-division Elective Courses

(no more than 6 additional credit hours at the 1000–2000 levels)

Students may choose from any of the lower-division courses listed below, or courses approved by the advisor and the WMST department, that are not applied to courses listed either above or below.

ENGL 1260 Into to Women's Literature	3
SOCY 1006 Social Construction of Sexuality or SOCY 1016 Sex, Gender, and Society 1	3
LGBT 2707 Introduction to Lesbian, Bisexual, and Gay Literature	3
WMST 2020 Femitinities, Masculinities, Alternatives	3
WMST 2050 Gender, Sexuality, and Popular Culture	3
WMST 2200 Women, Literature, and the Arts	3
WMST 2400 Women of Color and Activism	3
WMST 2700 Psychology of Contemporary American Women	3

Upper-division Courses

(at least 18 credit hours; total credits hours must come to 36)

Students must take at least one course from each of the following cognate areas: gender/sexuality; race/ethnicity; global/transnational. For the remaining 9 credits, students may take additional courses from these three categories and/or the upper-division electives list. Consult the WMST advisor or the department for additional choices.

Gender/Sexuality (at least 3 credits)

LGBT 3796 Queer Theory	3
PSCI 3301/WMST 3300 Gender, Sexuality, and U.S. Law	3
SOCY 3046/WMST 3046 Topics in Sex and Gender	3
SOCY 4016/WMST 4016 Sex, Gender, and Society 2	3
WMST 4287/LGBT 4287 Studies in Lesbian, Gay, Bisexual, and Transgender Literature	3
WMST 4636 Lesbian and Gay History	3

Race/Ethnicity (at least 3 credits)

ETHN 3026 Women of Color: Chicanas in U.S. Society	3
ETHN 3213/WMST 3210 American Indian Women	3
WMST 3044 Race, Class, Gender, and Crime	3
WMST 3135 Chicana Feminisms and Knowledges	3
WMST 3505 Historical and Contemporary Issues of African American Women	3
WMST 3600 Latinas: History, Culture, and Social Activism	3
WMST 3900 Asian American Women: Historical and Contemporary Issues	3
WMST 4619 Women in Asian History	3

Global/Transnational (at least 3 credits)

ANTH 3180 Gender, Culture, and Sexuality	3
WMST 3220 Women in Islam	3
WMST 3500 Global Gender Issues	3
WMST 3650 Women and Politics in Latin America	3
WMST 3670 Immigrant Women in the Global Economy	3
WMST 3672 Gender and Global Economy	3
WMST 3730 Third World Women and the Politics of International Development	3
WMST 4300 Sex, Power, Politics: International Perspectives	3

Upper-division Electives

ARTH 3209 Art, Culture, and Gender Diversity: 1400–1600	3
ENGL 3217 Topics in Gender Studies	3
FILM 3013 Women and Film	3
HIST 3016 Seminar in the History of Gender and Science	3

HUMN 3065 Feminist Theory/Women's Art	3
ITAL 4730 Italian Feminisms: Culture, Theory, and Narratives of Difference	3
THTR 4041 Women and Theatre/20th Century	3
THTR 4073 Performing Voices of Women	3
WMST 3000 Gender, Work, and Public Policy	3
WMST 3016 Marriage and the Family in the U.S.	3
WMST 3020 Methods of Inquiry in Gender, Race, Class, and Sexuality	3
WMST 3090 Critical Thinking in Feminist Studies	3
WMST 3110 Feminist Practical Ethics	3
WMST 3200 Religion and Feminist Thought	3
WMST 3267 Women Writers	3
WMST 3302 Facilitating Peaceful Community Change	3
WMST 3314 Violence against Women and Girls	3
WMST 3601 German Women Writers	3
WMST 3656 History of Women in Progressive Social Movements	3
WMST 4000 Senior Seminar: Special Topics	3
WMST 4063 Women in Victorian England	3
WMST 4086 Family and Society	3
WMST 4277 Topics in Women's Literature	3
WMST 4331 Women and Popular Culture	3
WMST 4471 Women in 20th Century Russian Culture	3
WMST 4614 Women and Society in Industrial Europe	3
WMST 4616 History of Women in the U.S. to 1890	3
WMST 4626 History of Women in the U.S. since 1890	3

Honors

Students may take up to 6 credits of honors hours in WMST; credits apply to upper-division electives in the major.

WMST 4950 Honors Research	1-6
-------------------------------------	-----

Internship

Students may take up to 6 credits of internship hours in WMST; credits apply to upper-division electives in the major.

WMST 3930 Women's Studies Internship	1-6
------------------------------------------------	-----

Special Topics

Students may take up to 6 credit hours in WMST topics courses; course topics vary each semester. Ask the WMST advisor or department about how each course applies to major cognates.

WMST 3700 Contemporary Topics in Women, Gender, and Sexuality Studies	3
WMST 3710 Topics in Global Gender Studies	3
WMST 4000 Senior Seminar: Special Topics	3

Graduating in Four Years

Consult the Four-Year Guarantee Requirements for more information on eligibility. The concept of “adequate progress” as it is used here only refers to maintaining eligibility for the four-year guarantee; it is not a requirement for the major. To maintain adequate progress in women and gender studies, students should meet the following requirements:

Declare major by the beginning of the second semester.

Complete WMST 2000 and 12 additional credit hours of major requirements by the end of the fourth semester.

Complete WMST 3100 and 27 total credit hours of major requirements by the end of the sixth semester.

Complete WMST 4800 and one additional 3-credit course of the major requirements by the end of the eighth semester.

Minor Programs

A minor program in women's studies is offered. Declaration of a minor is open to any student enrolled at CU-Boulder, regardless of college or school. Students must complete a minimum of 21 approved WMST credit hours with a grade of C- or better, 12 credits of which must be upper division (3000 or 4000 level).

Graduate Certificate in Women and Gender Studies

The Graduate Certificate in Women and Gender Studies is designed to provide graduate students with opportunities to think

in an interdisciplinary fashion about women and gender, and is available to students currently enrolled in a graduate disciplinary degree or professional degree program. Requirements are 9 semester hours of course work in Women and Gender Studies and one additional course equaling 3 semester hours to be approved by the WMST graduate advisor, for a total of 12 semester hours.

Writing and Rhetoric, Program for

The Program for Writing and Rhetoric (PWR) is a free-standing unit in the College of Arts and Sciences responsible for campus-wide instruction in expository writing. The program coordinates and oversees all writing curricula and instruction intended to meet college and campus requirements, including efforts in specific disciplines and targeted campus programs.

The program is committed to training students to think critically about the texts they read and the writing they produce, and to enable them to shape and express ideas with clarity and grace in any context: academic, professional, or civic. Classes are generally conducted as intensive writing workshops, placing a premium on thoughtful, substantive revision.

The program offers both lower-division and upper-division courses, as well as some graduate seminars. Certain undergraduate courses fulfill the College of Arts and Sciences written communication requirement, and some also fulfill graduation requirements in other colleges. Students should check with their advisors to be sure that they are taking the right course to fulfill their requirement.

For information about specific classes and their instructors, students should visit www.colorado.edu/pwr.

Faculty— College of Arts and Sciences

Anthropology

HERBERT H. COVERT, department chair; professor. BA, University of Massachusetts; MA, Arizona State University; PhD, Duke University.

DOUGLAS B. BAMFORTH, professor. BA, University of Pennsylvania; MA, PhD, University of California, Santa Barbara.

DAVID A. BRETERNITZ, professor emeritus.

CATHERINE M. CAMERON, professor. BA, University of California, Berkeley; MA, University of New Mexico; PhD, University of Arizona.

LINDA S. CORDELL, professor emerita.

DARNA L. DUFOUR, associate dean for faculty and administrative affairs, College of Arts and Sciences; professor. BS, Northeastern University; MA, PhD, State University of New York, Binghamton.

FRANK W. EDDY, associate professor emeritus.

DONNA M. GOLDSTEIN, associate professor. BS, Cornell University; EdM, Harvard Graduate School of Education; PhD, University of California, Berkeley.

GERARDO GUTIÉRREZ, assistant professor. BA, The National School of Anthropology and History, Mexico; MA, El Colegio de México, Mexico; PhD, Pennsylvania State University.

DAVID LEE GREENE, professor emeritus.

KIRA HALL, associate professor of linguistics; associate professor attendant rank. BA, Auburn University; MA, PhD, University of California, Berkeley.

JAMES J. HESTER, professor emeritus.

CARLA JONES, assistant professor. BA, MA, University of California, Berkeley; PhD, University of North Carolina at Chapel Hill.

ARTHUR A. JOYCE, associate professor. BA, University of Delaware; MA, PhD, Rutgers University.

DOROTHEA V. KASCHUBE, professor emerita.

ALEC J. KELSO, professor emeritus.

GOTTFRIED O. LANG, professor emeritus.

STEVEN H. LEKSON, professor; curator of museum studies. BA, Case Western Reserve University; MA, Eastern New Mexico University; PhD, University of New Mexico.

JAMES E. LOUDON, instructor. BS, Central Washington University; MA, University of Calgary; PhD, University of Colorado Boulder.

J. TERENCE McCABE, professor. BA, University of Notre Dame; MA, PhD, State University of New York at Binghamton.

DENNIS B. MCGILVRAY, professor. BA, Reed College; MA, PhD, University of Chicago.

JAMES RUSSELL MCGOODWIN, professor emeritus.

CAROLE M. McGRANAHAN, associate professor. BA, Colgate University; MA, PhD, University of Michigan.

RICHARD Y. NISHIKAWA, assistant dean for curricular affairs, College of Arts and Sciences; assistant professor attendant rank. AB, University of California, Santa Cruz; PhD, University of Washington.

L. KAIFA ROLAND, assistant professor. BA, Oberlin College; MA, Howard University; PhD, Duke University.

MICHELLE L. SAUTHER, associate professor. BA, Montana State University; MA, Arizona State University; PhD, Washington University.

JENNIFER SHANNON, assistant professor. BA, Bowdoin College; MA, University of Chicago; PhD, Cornell University.

PAUL SHANKMAN, professor. BA, University of California, Santa Barbara; PhD, Harvard University.

PAYSON D. SHEETS, professor of distinction. BA, MA, University of Colorado; PhD, University of Pennsylvania.

MATT SPONHEIMER, associate professor. BA, Bucknell University; MA, PhD, Rutgers University.

DENNIS P. VAN GERVEN, professor. BA, University of Utah; MA, PhD, University of Massachusetts Amherst.

DEWARD E. WALKER JR., professor (joint with the Department of Ethnic Studies). BA, PhD, University of Oregon.

Applied Mathematics

JAMES H. CURRY, department chair; professor. BA, MA, PhD, University of California, Berkeley.

MARK J. ABLOWITZ, distinguished professor. BS, University of Rochester; PhD, Massachusetts Institute of Technology.

JEROLD BEBERNES, professor emeritus.

GREGORY BEYLKIN, professor. BS, MS, University of Leningrad; PhD, Courant Institute of Mathematical Sciences, New York University.

Y. SUJEET BHAT, instructor. BS, PhD, University of Florida; MS University of Texas at Dallas.

DAVID BORTZ, assistant professor. BA, Rice University; MS, PhD, North Carolina State University.

JEM CORCORAN, associate professor. BS, Colorado State University; MS, Purdue University; PhD, Colorado State University.

CHRISTOPHER W. CURTIS, instructor. BS, Illinois Institute of Technology; PhD, University of Washington.

ANNE DOUGHERTY, associate chair; senior instructor. BS, Texas Christian University; MS, Oregon State University; PhD, University of Wisconsin.

VANJA M. DUKIC, associate professor. BS, Bryant University; MS, PhD, Brown University.

ROBERT EASTON, professor emeritus.

BENGT FORNBERG, professor. BS, PhD, Uppsala University.

KEITH JULIEN, professor. BS, Kings College, University of London; PhD, Churchill College, Cambridge University.

CONGMING LI, professor. BS, University of Science and Technology of China; MS, Institute of System Sciences; PhD, Courant Institute of Mathematical Science, New York University.

MANUEL E. LLADSER, assistant professor. BS, Universidad de Chile; MS, University of Wisconsin; PhD, Ohio State University.

THOMAS MANTEUFFEL, professor. BS, University of Wisconsin; MS, PhD, University of Illinois.

PER-GUNNAR MARTINSSON, associate professor. Diploma and Licentiate degree, Chalmers University of Technology in Gothenburg; PhD, University of Texas at Austin.

STEVEN McCORMICK, professor. BA, San Diego State College; PhD, University of Southern California.

JAMES D. MEISS, graduate chair; professor. BS, University of Washington; MA, PhD, University of California, Berkeley.

MARY NELSON, instructor. BS, Marquette University; MS, George Mason University; PhD, University of Colorado.

J. ADAM NORRIS II, instructor. BS, University of Colorado; MS, Massachusetts Institute of Technology; PhD, University of Colorado.

JUAN RESTREPO, assistant professor. BS, MS, Universidad de los Andes; PhD, University of Maryland.

HARVEY SEGUR, professor. BS, Michigan State University; MS, PhD, University of California, Berkeley.

TIEJUN TONG, assistant professor. BS, MS, University of Science and Technology of China; PhD, University of California, Santa Barbara.

JOHN WILLIAMSON, professor emeritus.

Art and Art History

GARRISON ROOTS, chair; professor. BFA, Massachusetts College of Art; MFA, Washington University, St. Louis.

ALBERT ALHADEFF, associate professor. AB, Columbia University; MA, PhD, New York University.

KIRK AMBROSE, associate professor. BA, Oberlin College; MA, PhD, University of Michigan, Ann Arbor.

MARK AMERIKA, professor. BA, University of Florida; MFA, Brown University.

RONALD M. BERNIER, professor emeritus.

MARILYN BROWN, professor. BA, Birmingham-Southern College; MA, PhD, Yale University.

H. SCOTT CHAMBERLIN, professor. BA, San Francisco State University; MFA, New York State College of Ceramics at Alfred University.

ALBERT CHONG, professor. BFA, School of Visual Arts, New York; MFA, University of California, San Diego.

CLINTON C. CLINE, professor emeritus.

JAMES CÔRDOVA, assistant professor. BA, New Mexico State University; MA, PhD, Tulane University.

ROBERT E. DAY, professor emeritus.

KIM DICKEY, associate professor. BFA, Rhode Island School of Design; MFA, New York State College of Ceramics at Alfred University.

FRANÇOISE DURÉESÉ, assistant professor. BFA, BA, Wayne State University; MFA, Temple University.

LUIS E. EADES, professor emeritus.

ROBERT R. ECKER, professor emeritus.

CLAIRE J. FARAGO, professor. BA, Wellesley College; MA, Brown University; PhD, University of Virginia.

CHARLES S. FORSMAN, professor emeritus.

SUZANNE R. FOSTER, assistant professor emerita.

FRANCIS J. GECK, professor emeritus.

ALVIN GREGORIO, assistant professor. BFA, California State University, Fullerton; MFA, Claremont Graduate University.

DEBORAH J. HAYNES, professor. BFA, MFA, University of Oregon; MTS, Harvard Divinity School; PhD, Harvard University.

JOHN D. HOAG, professor emeritus.

KEN IWAMASA, associate professor emeritus.

JERRY W. KUNKEL, professor emeritus.

KAY MILLER, professor emerita.

VERNON H. MINOR, professor emeritus.

ROBERT NAUMAN, senior instructor. BME, Central Missouri State University; MMus, MA, University of Colorado Boulder; PhD, University of New Mexico.

JONG PHIL PARK, assistant professor. BA, Seoul National University, Korea; MA, PhD, University of Michigan.

THOMAS J. POTTER, professor emeritus.

CHARLES A. QUALLEY, professor emeritus.

JEANNE QUINN, associate professor. BA, Oberlin College; MFA, University of Washington.

GEORGE RIVERA, professor. BA, MA, University of Houston; PhD, State University of New York.

YUMI JANAIRO ROTH, associate professor. BA, Tufts University; BFA, School of Museum of Fine Arts, Boston; MFA, State University of New York.

JOHN FRANKLIN SAMPSON, professor emeritus.

RICHARD SAXTON, assistant professor. BFA, University of Nebraska; MFA, Indiana University.

C. MAXX STEVENS, assistant professor. AA, Haskell Indian Junior College; BFA, Wichita State University; MFA, Indiana University.

ALEX J. SWEETMAN, associate professor. BA, New York University; MFA, State University of New York at Buffalo.

LUIS VALDOVINO, professor. BFA, Ohio University; MFA, University of Illinois.

AMY L. VANDERSALL, professor emerita.

KIRA VAN LIL, assistant professor. BA, MA, PhD, Ludwig-Maximilians-Universität, München.

MELANIE WALKER, associate professor. BA, San Francisco State University; MFA, Florida State University, Tallahassee.

JOHN B. WILSON, professor emeritus.

LYNN ROBERT WOLFE, professor emeritus.

MICHAEL WOMACK, assistant professor. BFA, University of Georgia; MFA, Pratt Institute.

JOO YEON WOO, assistant professor. BFA, MFA, Kyungpook National University, Korea; MFA, Pennsylvania State University.

ELIZABETH A. WOODMAN, professor emerita.

GEORGE E. WOODMAN, professor emeritus.

MELANIE YAZZIE, associate professor. BA, Arizona State University, Tempe; MFA, University of Colorado Boulder.

Asian Languages and Civilizations

JANICE BROWN, department chair; professor of Japanese. BA, MA, PhD, University of British Columbia.

HAYTHAM BAHOURA, assistant professor. BA, University of Michigan; MA, PhD, New York University.

LAURA BRUECK, assistant professor of Hindi. BA, Smith College; MA, PhD, University of Texas at Austin.

VICTORIA B. CASS, associate professor emerita.

JIN CHEN, instructor of Chinese. BA, Yunnan Normal University; MA, University of Colorado Boulder.

PATRICK DISILVA, Instructor of Arabic. BA, Macalester College; MA, Harvard Divinity School.

REZA FAROKHFAL, instructor of Farsi. BA, Pahlavi University, Iran; MA, Concordia University.

CHUN-LING HSU, instructor in Chinese. BA, Soochow University, Taiwan; MEd, University of Wisconsin-River Falls.

CHUNG-KANG KIM, teaching scholar in residence for Korean. BA, Yonsei University; MA, PhD, University of Illinois at Urbana-Champaign.

RANDLE KELLER KIMBROUGH, associate professor of Japanese. BA, Colorado College; MA, Columbia University; MA, PhD, Yale University.

FAYE YUAN KLEEMAN, associate professor of Japanese. BA, Soochow University, Taiwan; MA, Ochanomizu University, Japan; PhD, University of California, Berkeley.

TERRY F. KLEEMAN, associate professor of Chinese. BA, University of Miami; MA, University of British Columbia; PhD, University of California, Berkeley.

PAUL W. KROLL, professor of Chinese. BA, MA, PhD, University of Michigan.

CHEOL LEE, instructor of Korean. BA, Kangwon National University; MA, University of Colorado Boulder.

MINORI MURATA, instructor of Japanese. BA, MA, Kanazawa University; MA, University of Colorado Boulder.

AMBER HSINYI NAVARRE, senior instructor in Chinese. BA, National Taiwan University; MA, PhD, Pennsylvania State University.

NILASKSHI PHUKAN, instructor of Hindi. BA, Guwahati University; MA, PhD, Dr. B.R., Ambedkar University.

LAUREL RASPLICA RODD, professor of Japanese. BA, DePauw University; MA, PhD, University of Michigan.

ANTJE RICHTER, assistant professor of Chinese. PhD, Munich University.

MATTHIAS RICHTER, assistant professor of Chinese. PhD, Hamburg University.

KYOKO SAEGUSA, senior instructor of Japanese. BA, Japan Women's University; MA, Arizona State University.

SATOKO SHIMAZAKI, assistant professor of Japanese. BA, Keio University; MA, PhD, Columbia University.

HIDEKO SHIMIZU, senior instructor of Japanese. BA, MA, University of Colorado Denver; PhD, University of Denver.

G. ANDREW STUCKY, assistant professor of Chinese. BA, Colgate University; MA, PhD, University of California, Los Angeles.

MARGARETHA SUDARSIH, senior instructor of Indonesian.

KUMIKO TAKAHARA, associate professor emerita.

DONALD SIGURDSON WILLIS, professor emeritus.

Asian Studies

LAUREL RASPLICA RODD, director; professor of Japanese. BA, DePauw University; MA, PhD, University of Michigan.

TIMOTHY B. WESTON, associate director and Asian Studies faculty advisor; associate professor of history. BA, University of Wisconsin; MA, PhD, University of California, Berkeley.

Astrophysical and Planetary Sciences

MITCHELL C. BEGELMAN, departmental chair; professor. AB, AM, Harvard University; PhD, Cambridge University.

PHILIP ARMITAGE, associate professor. BA, MA, PhD, University of Cambridge.

THOMAS R. AYRES, research professor. AB, Harvard College; PhD, University of Colorado.

FRANCES BAGENAL, professor. BSc, University of Lancaster, England; PhD, Massachusetts Institute of Technology.

DANIEL BAKER, professor. BA, MS, PhD, University of Iowa.

JOHN BALLY, professor. BS, University of California, Berkeley; MS, PhD, University of Massachusetts Amherst.

CHARLES A. BARTH, professor emeritus.

ALBERT L. BETZ, lecturer. PhD, University of California, Berkeley.

THOMAS J. BOGDAN, associate professor adjunct. PhD, University of Chicago.

ALEXANDER BROWN, lecturer. BSc, PhD, University of St. Andrews, Scotland.

ROBIN CANUP, professor adjunct. BS, Duke University; MS, PhD, University of Colorado.

WEBSTER C. CASH, professor. BS, Massachusetts Institute of Technology; PhD, University of California, Berkeley.

CLARK CHAPMAN, professor adjunct. BA, Harvard College; MS, PhD, Massachusetts Institute of Technology.

PETER S. CONTI, professor emeritus.

JEREMIAH K. DARLING, assistant professor. BS, California Institute of Technology; PhD, Cornell University.

CRAIG E. DEFOREST, associate professor adjunct. BA, Reed College; PhD, Stanford University.

GEORGE A. DULK, professor emeritus.

DOUGLAS K. DUNCAN, senior instructor. BS, California Institute of Technology; PhD, University of California, Santa Cruz.

ERICA ELLINGSON, associate professor. BS, Massachusetts Institute of Technology; PhD, University of Arizona.

ROBERT ERGUN, professor. BS, MS, Cornell University; PhD, University of California, Berkeley.

LARRY W. ESPOSITO, professor. BS, Massachusetts Institute of Technology; PhD, University of Massachusetts.

CYNTHIA S. FRONING, assistant research professor. BS, MA, PhD, University of Texas.

PETER A. GILMAN, professor adjunct. BA, Harvard College; MS, PhD, Massachusetts Institute of Technology.

JASON GLENN, associate professor. BS, University of New Mexico; PhD, University of Arizona.

JAMES GREEN, professor. BS, Stanford University; MA, PhD, University of California, Berkeley.

DAVID H. GRINSPON, associate professor adjunct. BA, BS, Brown University; PhD, University of Arizona.

JOHN GRUNSFELD, professor adjunct. BS, Massachusetts Institute of Technology; PhD, University of Chicago.

NILS HALVERSON, assistant professor. BS, Stanford University; MS, PhD, California Institute of Technology.

ANDREW J. S. HAMILTON, professor. BA, St. Catherine's College, Oxford; MSc, Liverpool University and Queen Mary College, London University; PhD, University of Virginia.

CARL J. HANSEN, professor emeritus.

BRADLEY W. HINDMAN, assistant research professor. BA, University of Puget Sound; PhD, University of Colorado Boulder.

SETH HORNSTEIN, senior instructor. BA, Virginia Polytechnic Institute & State University; MS, PhD, University of California, Los Angeles.

MICHAEL KNÖLKER, professor adjunct. Diploma in Physics, University of Gottingen, Germany; PhD, University of Freiburg, Germany.

STEVEN W. LEE, lecturer. PhD, Cornell University.

HAROLD F. LEVISON, professor adjunct. AB, Franklin and Marshall College; MS, PhD, University of Michigan.

JEFFREY L. LINSKY, research professor. BS, Massachusetts Institute of Technology; MA, PhD, Harvard University.

J. McKIM MALVILLE, professor emeritus.

WILLIAM E. McCLINTOCK, lecturer. BA, MA, PhD, Johns Hopkins University.

RICHARD A. McCRAY, distinguished professor emeritus.

ROSALBA PERNA, assistant professor. BA, University of Salerno; MA, PhD, Harvard University.

CAROLYN PORCO, professor adjunct. BS, State University of New York; PhD, California Institute of Technology.

ANNIK POUQUET, professor adjunct. BS, University of Nice; PhD, University of Paris.

CORA E. RANDALL, lecturer. MS, PhD, University of California, Santa Cruz.

MARK P. RAST, associate professor. BA, University of California, Davis; BA, University of California, Santa Cruz; PhD, University of Colorado.

DAVID W. RUSCH, lecturer. BS, Loras College; PhD, University of Colorado Boulder.

NICHOLAS SCHNEIDER, associate professor. BS, Dartmouth College; PhD, University of Arizona.

J. MICHAEL SHULL, professor. BS, California Institute of Technology; MA, PhD, Princeton University.

THEODORE P. SNOW JR., professor. BA, Yale College; MS, PhD, University of Washington.

THEODORE W. SPEISER, professor emeritus.

A. IAN STEWART, professor attendant rank. BSc, PhD, Queens University, Ireland.

GLEN STEWART, lecturer. PhD, University of California, Los Angeles.

JOHN T. STOCKE, professor. AB, Princeton University; PhD, University of Arizona.

GARY E. THOMAS, professor emeritus.

JURI TOOMRE, professor. BS, MS, MSc, Massachusetts Institute of Technology; PhD, Trinity College, Cambridge University.

WILLIAM WARD, professor adjunct. BS, University of Missouri at Kansas City; PhD, California Institute of Technology.

JAMES W. WARWICK, professor emeritus.

Atmospheric and Oceanic Sciences

OWEN BRIAN TOON, chair; professor. AB, University of California, Berkeley; PhD, Cornell University.

JOHN CASSANO, associate chair; associate professor. BS, Montana State University; MS, University of Wisconsin–Madison; PhD, University of Wyoming.

JOAN ALEXANDER, professor adjunct. BS, Purdue University; MS, PhD, University of Colorado Boulder.

LINNEA AVALLONE, associate professor; director, Miramontes Arts and Sciences Program. BS, Massachusetts Institute of Technology; MA, PhD, Harvard University.

BAYLOR FOX-KEMPER, assistant professor. BA, Reed College; MA, Brandeis University; PhD, Massachusetts Institute of Technology/Woods Hole Oceanographic Institution.

KATJA FRIEDRICH, assistant professor. Abitur, Thomas-Gymnasium, Leipzig; MS, Leipzig University; PhD, Ludwig-Maximilians University, Munich.

WEIQING HAN, associate professor. BS, Nanjing Institute of Meteorology; MS, Chinese Academy of Meteorological Sciences; PhD, Nova SE University.

JOHN E. HART, professor emeritus.

RICHARD A. KEEN, instructor emeritus.

DAVID NOONE, associate professor. BS, PhD, University of Melbourne.

NICOLE LOVENDUSKI, assistant professor. BS, Washington University in St. Louis; MS, PhD, University of California, Los Angeles.

JULIE LUNDQUIST, assistant professor. BS, Trinity University; MS, PhD, University of Colorado Boulder.

ROGER A. PIELKE SR., senior research associate. BA, Towson State College; MS, PhD, Pennsylvania State University.

PETER PILEWSKIE, professor. BS, Pennsylvania State University; MS, PhD, University of Arizona.

CORA E. RANDALL, professor. BA, State University of New York, College at Purchase; MS, PhD, University of California, Santa Cruz.

DARIN W. TOOHEY, professor. BA, BS, California State University, Fullerton; MS, PhD, Harvard University.

THOMAS T. WARNER, research professor. BS, MEd, MS, PhD, Pennsylvania State University.

JEFFREY B. WEISS, associate professor. BS, University of Illinois; MA., PhD, University of California, Berkeley.

Bibliography

YEM FONG, associate professor. BA, University of Colorado at Colorado Springs; MA, University of California, Berkeley.

FRED (SKIP) HAMILTON, senior instructor. BA, MA, Utah State University; MLS, University of Tennessee at Knoxville.

JENNIFER KNIEVEL, assistant professor. BA, Colorado State University; MS, University of Illinois, Urbana-Champaign.

SUZANNE T. LARSEN, interim associate director for public services, senior instructor. BA, University of California, Santa Barbara; MA, University of Denver.

THEA LINDQUIST, assistant professor. BA, North Dakota State University; MA, PhD, University of Wisconsin–Madison.

Chemistry and Biochemistry

BRUCE EATON, department chair; professor. BS, MS, University of Oregon; PhD, University of California, Berkeley.

NATALIE AHN, professor. BS, University of Washington; PhD, University of California, Berkeley.

MARGARET R. ASIRVATHAM, senior instructor. BSc, MSc, University of Madras, India; PhD, Kansas State University.

ROBERT T. BATEY, associate professor, BS, University of California, Irvine; PhD, Massachusetts Institute of Technology.

VERONICA M. BIERBAUM, professor. BA, Catholic University of America; PhD, University of Pittsburgh.

JOHN W. BIRKS, professor emeritus.

MARVIN H. CARUTHERS, distinguished professor. BS, Iowa State University; PhD, Northwestern University.

THOMAS R. CECH, distinguished professor. BA, Grinnell College; PhD, University of California, Berkeley.

NIELS DAMRAUER, assistant professor. BS, University of Pennsylvania; PhD, University of California, Berkeley.

CHARLES H. DEPUY, professor emeritus.

GORDANA DUKOVIC, assistant professor. BA, Rutgers University; PhD, Columbia University.

JOEL EAVES, assistant professor. BS, University of Wisconsin–Madison; PhD, Massachusetts Institute of Technology.

G. BARNEY ELLISON, professor. BS, Trinity College; PhD, Yale University.

JOSEPH J. FALKE, professor. BA, Earlham College; PhD, California Institute of Technology.

R. RAY FALL, professor retired.

DANIEL FELDHEIM, professor. BA, San Jose State University; PhD, Colorado State University.

STEVEN M. GEORGE, professor. BS, Yale University; PhD, University of California, Berkeley.

DOUGLAS L. GIN, professor. BSc, University of British Columbia; PhD, California Institute of Technology.

JAMES A. GOODRICH, professor. BS, University of Scranton; PhD, Carnegie Mellon University.

MELVIN HANNA, professor emeritus.

SUSAN HENDRICKSON, senior instructor. BA, Bates College; PhD, Colorado State University.

JAMES T. HYNES, professor. BA, Catholic University of America; PhD, Princeton University.

JOSE LUIS JIMENEZ, associate professor. BS, Universite de Technologie Compiègne; MS, Universidad de Zaragoza; PhD, Massachusetts Institute of Technology.

RALPH JIMENEZ, associate professor adjunct. BA, Cornell University; PhD, University of Chicago.

DAVID M. JONAS, professor. BS, University of California, Berkeley; PhD, Massachusetts Institute of Technology.

EDWARD L. KING, professor emeritus.

ROB KNIGHT, assistant professor. BSc, University of Otago; PhD, Princeton University.

TAD H. KOCH, professor. BS, Ohio State University; PhD, Iowa State University.

CARL ANTHONY KOVAL, professor. BS, Juniata College; PhD, California Institute of Technology.

ROBERT KUCHTA, professor. BA, Cornell University; PhD, Brandeis University.

JENNIFER KUGEL, assistant research professor. BA, St. Olaf College; PhD, University of Colorado.

W. CARL LINEBERGER, distinguished professor. BEE, MSEE, PhD, Georgia Institute of Technology.

XUEDONG LIU, associate professor. BS, Shandong University, Jinan; MS, Chinese Academy of Sciences; PhD, University of Wisconsin–Madison.

CHARLES MCHENRY, professor. BS, Purdue University; PhD, University of California, Santa Barbara.

JOSEF MICHL, professor. MS, Charles University; PhD, Czechoslovak Academy of Sciences.

DAVID J. NESBITT, professor adjunct. BA, Harvard College; PhD, University of Colorado.

ARTHUR NOZIK, professor adjunct. BChE, Cornell University; MS, PhD, Yale University.

WILLIAM OLD, research assistant professor. BS, University of Texas at Austin; PhD, University of Colorado Boulder.

AMY PALMER, assistant professor. BA, Dartmouth College; MA, PhD, Stanford University.

ARTHUR PARDI, professor. AB, University of California, San Diego; PhD, University of California, Berkeley.

ROBERT P. PARSON, professor. ScB, Brown University; MS, PhD, University of Michigan.

KEVIN PETERS, professor retired.

CORTLANDT G. PIERPONT, professor. BS, Columbia University; PhD, Brown University.

KRISTEN C. ROY, instructor.

JOHANNES RUDOLPH, senior instructor. BS, University of Washington; PhD, Massachusetts Institute of Technology.

TAREK SAMMAKIA, professor. BS, University of North Carolina; PhD, Yale University.

ROBERT E. SIEVERS, director, environmental program; professor. BChem, University of Tulsa; MS, PhD, University of Illinois.

REX T. SKODJE, professor. BA, Harvard University; PhD, University of Minnesota.

MARCELO C. SOUSA, associate professor. PharmD, PhD, University of Buenos Aires.

DYLAN J. TAATJES, assistant professor. BS, Calvin College; PhD, University of Colorado Boulder.

BERT MILLS TOLBERT, professor emeritus.

MARGARET TOLBERT, professor. AB, Grinnell College; MS, University of California, Berkeley; PhD, California Institute of Technology.

VERONICA VAIDA, professor. BS, Brown University; PhD, Yale University.

RAINER VOLKAMER, assistant professor. BSc, PhD, Ruprecht-Karis University.

DAVID M. WALBA, professor. BS, University of California, Berkeley; PhD, California Institute of Technology.

XIANG WANG, assistant professor. BS, University of Science and Technology of China; PhD, Boston University.

MATHIAS WEBER, assistant professor. Diploma, PhD, University Kaiserslautern.

IRWIN B. WILSON, professor emeritus.

MATTHEW WISE, instructor. BS, Ohio University; PhD, University of Colorado Boulder.

DEBORAH S. WUTTKE, professor. BS, University of Rochester; PhD, California Institute of Technology.

HANG YIN, assistant professor. BS, Peking University; PhD, Yale University.

WEI ZHANG, assistant professor. BS, Peking University; PhD, University of Illinois.

Classics

PETER HUNT, department chair; associate professor. BA, Swarthmore College; MA, University of Colorado Boulder; PhD, Stanford University.

ANDREW J. CAIN, associate professor. BA, University of South Carolina; MA, PhD, Cornell University.

DIANE A. CONLIN, associate professor. BA, State University of New York at Stony Brook; MA, PhD, University of Michigan.

ELSPETH R. M. DUSINBERRE, associate professor. AB, Harvard University; PhD, University of Michigan.

JACQUELINE M. ELLIOTT, assistant professor. BA, University College, Oxford. MA, MPhil, PhD, Columbia University.

HAROLD D. EVJEN, professor emeritus.

ERNST A. FREDRICKSMEYER, professor emeritus.

JOHN C. GIBERT, associate professor. BA, Yale University; PhD, Harvard University.

JOY K. KING, associate professor emerita.

PETER E. KNOX, professor. AB, Harvard College; PhD, Harvard University.

NOEL E. LENSKI, associate professor. BA, Colorado College; MA, PhD, Princeton University.

CAROLE NEWLANDS, professor. PhD, University of California, Berkeley.

ALISON ORLEBEKE, instructor. BA, Carleton College; MA, PhD, Princeton University.

LAURIALAN B. REITZAMMER, assistant professor. BA, Brown University; MA, PhD, University of California, Berkeley.

ECKART E. W. SCHÜTRUMPF, professor. PhD, University of Marburg; Habilitation in Classics, University of Marburg.

TERPSICHORI H. TZAVELLA-EVJEN, professor emerita.

Communication

BRYAN C. TAYLOR, department chair; professor. BA, University of Massachusetts Amherst; MS, PhD, University of Utah.

JOHN M. ACKERMAN, associate professor. BA, MA, University of Missouri; PhD, Carnegie Mellon.

KAREN ASHCRAFT, professor. BA, California State University, Hayward; PhD, University of Colorado Boulder.

MARLIA ELIZABETH BANNING, assistant professor. BS, MS, PhD, University of Utah.

JOHN WAITE BOWERS, professor emeritus.

DAVID BOROMISZA-HABASHI, assistant professor. MA, Pazmany Peter Catholic University of Hungary; MA, State University of New York, Albany; PhD, University of Massachusetts.

KATHLEEN G. CAMPBELL, senior instructor emerita.

ROBERT T. CRAIG, professor. BA, University of Wisconsin; MA, PhD, Michigan State University.

BRIAN DANIELL, senior instructor emeritus.

DONALD K. DARNELL, professor emeritus.

STANLEY A. DEETZ, professor. BS, Manchester College; MA, PhD, Ohio University.

JANE ELVINS, senior instructor. BA, University of Missouri, St. Louis; MA, PhD, University of Denver.

LAWRENCE R. FREY, professor. BS, Northwestern University; MA, PhD, University of Kansas.

GERARD A. HAUSER, professor. BA, Canisius College; MA, PhD, University of Wisconsin.

JOHN P. JACKSON, associate professor. BA, Iowa State University; PhD, University of Minnesota.

MICHELE H. JACKSON, associate professor. BA, Macalester College; MA, PhD, University of Minnesota.

STANLEY E. JONES, professor emeritus.

MATT KOSCHMANN, assistant professor. BBA, University of Wisconsin; MA, University of New Mexico; PhD, University of Texas.

TIMOTHY R. KUHN, associate professor. BA, MA, University of Minnesota; PhD, Arizona State University.

PATRICIA M. MALESH, assistant professor. BA, MA, Salisbury State University; PhD, University of Arizona.

PETER SIMONSON, associate professor. AB, AM, Stanford University; PhD, University of Iowa.

JENNIFER SIMPSON, assistant professor adjunct. BA, Utica College; MA, PhD, University of Colorado Boulder.

ELAINE V. TOMPKINS, senior instructor emerita.

PHILLIP K. TOMPKINS, professor emeritus.

KAREN TRACY, professor. BS, Pennsylvania State University; MA, Bowling Green State University; PhD, University of Wisconsin.

CINDY H. WHITE, associate professor. BA, MA, Texas Tech University; PhD, University of Arizona.

Comparative Literature Program

RICARDO LANDEIRA, director; professor of Spanish. BA, MA, Arizona State University; PhD, Indiana University.

ERNESTO ACEVEDO-MUÑOZ, associate professor of film studies. BA, University of Puerto Rico; MA, PhD, University of Iowa.

CHRISTOPHER BRAIDER, professor of French and Italian. BA, PhD, Trinity College, Dublin.

ROBERT ADLER PECKERAR, assistant professor of European Jewish Studies. BA, Brandeis University; PhD, University of California, Berkeley.

JEFFREY COX, associate vice chancellor for faculty affairs; professor of humanities and English. BA, Wesleyan University; PhD, University of Virginia.

CLAIRE FARAGO, professor of art and art history. BA, Wellesley College; MA, Brown University; PhD, University of Virginia.

VALERIO FERME, associate professor of Italian. BA, Brown University; MA, Indiana University; PhD, University of California, Berkeley.

DAVID FERRIS, professor of humanities. BA, University of Leeds, England; PhD, State University of New York at Buffalo.

LEILA G. GÓMEZ, associate professor of Spanish. Licenciature, Universidad Nacional de Tucumán, Argentina; MA, PhD, Johns Hopkins University.

PAUL GORDON, professor of humanities. BA, State University of New York at Buffalo; PhD, Yale University.

PATRICK GREANEY, associate professor of German. BA, Yale College; MA, PhD, Johns Hopkins University.

JEREMY GREEN, associate professor of English. BA, Oxford University; PhD, Cambridge University.

GERARD HAUSER, professor of communication. BA, Canisius College; MA, PhD, University of Wisconsin.

JILLIAN HEYDT-STEVENSON, associate professor of English. BA, University of Colorado Boulder; MA, University of Iowa; PhD, University of Colorado Boulder.

JAVIER KRAUEL, assistant professor of Spanish. MA, University of North Carolina at Chapel Hill; PhD, Duke University.

PAUL KROLL, professor of Chinese. BA, MA, PhD, University of Michigan.

MARK LEIDERMAN, associate professor of Russian. BA, MA, PhD, Ural State University.

RUTH MAS, assistant professor of religious studies. BA, MA, Concordia University; PhD, University of Toronto.

WARREN F. MOTTE, JR, professor of French and Italian. BA, University of Pennsylvania; Maitrise des Lettres, Université de Bordeaux; MA, PhD, University of Pennsylvania.

HELMUT MULLER-SIEVERS, professor of German. BA equivalent, University of Düsseldorf; MA, Free University of Berlin; PhD, Stanford University.

LAURA OSTERMAN, associate professor of Russian. BA, State University of New York; MA, Indiana University; PhD, Yale University.

HENRY PICKFORD, assistant professor of German. BA, Dartmouth University; MA, Stanford University; MA, University of Pittsburg; PhD, Yale University.

J. E. RIVERS JR, professor of English. AB, Davidson College; MA, PhD, University of Oregon.

DAVIDE STIMILLI, associate professor of humanities and German. BA, Laurea, University of Pisa; MA, PhD, Yale University.

BEVERLY WEBER, assistant professor of German. BA, Gustavus Adolphus College; MA, Pennsylvania State University; PhD, University of Massachusetts Amherst.

ERIC WHITE, associate professor of English. BA, Columbia University; MA, Cambridge University; MA, PhD, University of California, Berkeley.

MARK WINOKUR, associate professor of English. BA, Brandeis University; MA, PhD, University of California, Berkeley.

SUE ZEMKA, associate professor of English. BA, Saint Louis University; PhD, Stanford University.

Ecology and Evolutionary Biology

PAMELA K. DIGGLE, department chair; professor. BA, University of California, Santa Barbara; MS, University of California, Riverside; PhD, University of California, Berkeley.

WILLIAM ADAMS III, professor. BA, MA, University of Kansas; PhD, Australian National University.

DAVID M. ARMSTRONG, professor emeritus.

NICHOLE BARGER, assistant professor. BS, The Evergreen State College; MS, University of California, Berkeley; PhD, Colorado State University.

JOHN M. BASEY, senior instructor. BA, California State University, Stanislaus; MS, PhD, University of Nevada.

MARC BEKOFF, professor emeritus.

CARLE E. BOCK, professor emeritus.

JANE H. BOCK, professor emerita.

ERIK K. BONDE, professor emeritus.

M. DEANE BOWERS, professor. BA, Smith College; PhD, University of Massachusetts.

WILLIAM BOWMAN, professor. BA, University of Colorado; MS, San Diego State University; PhD, Duke University.

MICHAEL D. BREED, professor. BA, Grinnell College; MA, PhD, University of Kansas.

JOHN H. BUSHNELL, professor emeritus.

HARRISON CARPENTER, senior instructor. BS, Ferris State University; MS, PhD, Michigan Technological University.

SHARON K. COLLINGE, professor (joint with Environmental Studies Program). BA, Kansas State University; MS, University of Nebraska at Lincoln; PhD, Harvard University.

DAVID W. CRUMPACKER, professor emeritus.

ALEXANDER CRUZ, professor. BS, City College of New York; PhD, University of Florida.

MILFORD F. CUNDIFF, associate professor. BA, PhD, University of Colorado.

KENDI DAVIES, assistant professor. BSc, PhD, Australian National University.

BARBARA DEMMIG-ADAMS, professor. BA, PhD, Dr. rer. nat. habil., Universität Würzburg, Germany.

NOAH FIERER, assistant professor. BA, Oberlin College; PhD, University of California, Santa Barbara.

SAMUEL M. FLAXMAN, assistant professor. BS, PhD, Cornell University.

WILLIAM E. FRIEDMAN, professor. AB, Oberlin College; PhD, University of California, Berkeley.

MICHAEL C. GRANT, associate vice chancellor for undergraduate education; director, Norlin Scholars Program; professor. BA, MA, Texas Tech University; PhD, Duke University.

ROBERT GURALNICK, associate professor. BA, PhD, University of California, Berkeley.

PIETER T. J. JOHNSON, assistant professor. BS, Stanford University; PhD, University of Wisconsin.

CAROL KEARNS, senior instructor. BS, Southampton College; MS, University of New Hampshire; PhD, University of Maryland.

J. PATRICK KOCIOLEK, professor. BS, St. Mary's College of Maryland; MS, Bowling Green State University; PhD, University of Michigan.

WILLIAM M. LEWIS, JR., director, Center for Limnology (CIRES); professor. BS, University of North Carolina; PhD, Indiana University.

YAN B. LINHART, professor emeritus.

CAROL B. LYNCH, professor emerita.

ANDREW MARTIN, professor. BS, University of Arizona; MS, PhD, University of Hawaii.

STEPHANIE S. MAYER, senior instructor. BS, Stanford University; MS, University of California, Davis; PhD, University of California, Berkeley.

CHRISTY McCAIN, assistant professor. BS, Humboldt State University; PhD, University of Kansas.

VALERIE McKENZIE, assistant professor. BS, MS, University of Connecticut; PhD, University of California, Santa Barbara.

DANIEL MEDEIROS, assistant professor. BS, University of Hawaii; PhD, California Institute of Technology.

BRETT A. MELBOURNE, assistant professor. BSc, PhD, Australian National University.

JEFFRY B. MITTON, professor. BA, University of Connecticut; PhD, State University of New York at Stony Brook.

RUSSELL K. MONSON, professor emeritus.

HARVEY NICHOLS, professor emeritus.

PATRICK NOSIL, assistant professor. BSc, University of Victoria; PhD, Simon Fraser University.

REBECCA SAFRAN, assistant professor. BS, University of Michigan; MS, Humboldt State University; PhD, Cornell University.

STEVEN K. SCHMIDT, professor. BS, Boise State University; MS, Colorado State University; PhD, Cornell University.

TIMOTHY R. SEASTEDT, professor. BA, University of Montana; MS, University of Alaska; PhD, University of Georgia.

HOBART M. SMITH, professor emeritus.

CHARLES H. SOUTHWICK, professor emeritus.

DAVID STOCK, associate professor. BS, Texas A&M University; PhD, University of Illinois.

ALAN TOWNSEND, professor. BA, Amherst College; PhD, Stanford University.

CAROL A. WESSMAN, professor. BS, Colorado State University; MS, PhD, University of Wisconsin–Madison.

JOHN T. WINDELL, professor emeritus.

PAUL W. WINSTON, professor emeritus.

Economics

NICHOLAS E. FLORES, department chair; professor. BA, University of Texas at Austin; MA, MS, PhD, University of California, San Diego.

LEE ALSTON, professor. BA, Indiana University; MA, PhD, University of Washington.

FRANCISCA ANTMAN, assistant professor. BA, Harvard University; MA, PhD, Stanford University.

TANIA BARHAM, assistant professor. BA, McGill University; MA, University of British Columbia; PhD, University of California, Berkeley.

MARTIN BOILEAU, associate professor. BS, MS, Université du Québec à Montréal; PhD, Queen's University at Kingston.

BRIAN CADENA, assistant professor. BA, Northwestern University; MA, PhD, University of Michigan.

ANN M. CARLOS, professor. BA, MA, University College Dublin; PhD, University of Western Ontario.

YONGMIN CHEN, professor. BS, Zhejiang Institute of Technology; MA, People's University of China; PhD, Boston University.

CHARLES de BARTOLOMÉ, professor. BA, Cambridge University; MBA, Wharton Graduate School, University of Pennsylvania; PhD, University of Pennsylvania.

UFUK DEVRIM DEMIREL, assistant professor. BA, Bilkent University; MA, PhD, University of Virginia.

JAMES E. DUGAN, professor emeritus.

THIBAUT FALLY, assistant professor. BA, Ecole Supérieure; MA, PhD, EHESS, Paris School of Economics.

FRED R. GLAHE, professor emeritus.

PHILIP E. GRAVES, professor. BA, Indiana University; MA, PhD, Northwestern University.

MICHAEL J. GREENWOOD, professor. BA, De Paul University; MA, PhD, Northwestern University.

CHARLES W. HOWE, professor emeritus.

FRANK S. T. HSIAO, professor emeritus.

JONATHAN HUGHES, assistant professor. BS, Duke University; MS, Cornell University; PhD, University of California, Davis.

MURAT F. IYIGUN, professor. BS, Hacettepe University, Turkey; MBA, Boston University; MA, PhD, Brown University.

WILLIAM H. KAEMPFER, vice provost and associate vice chancellor for academic affairs, budget, and planning; professor. BA, College of Wooster; MA, PhD, Duke University.

JULES KAPLAN, senior instructor. BS, University of Maryland; MA, PhD, University of Colorado Boulder.

WOLFGANG KELLER, professor. Diploma in Economics, University of Freiburg, Germany; PhD, Yale University.

JANE LILLYDAHL, professor emerita.

XIAODONG LIU, assistant professor. BA, Fudan University; MA, PhD, Ohio State University.

JAMES R. MARKUSEN, university distinguished professor. BA, PhD, Boston College.

CARLOS MARTINS-FILHO, professor. BS, Federal University of Ceará, Brazil; MA, PhD, University of Tennessee.

KEITH E. MASKUS, associate dean for the social sciences, College of Arts and Sciences, professor. BA, Knox College; MA, PhD, University of Michigan.

TERRA G. MCKINNISH, associate professor. BA, University of Richmond; MS, PhD, Carnegie Mellon University.

ROBERT F. McNOWN, professor. BA, University of California, Los Angeles; PhD, University of California, San Diego.

WILLIAM MERTENS, instructor. BA, University of Michigan; MA, PhD, University of Colorado Boulder.

EDWARD R. MOREY, professor. BA, University of Denver; MA, University of Arizona; PhD, University of British Columbia.

WYN F. OWEN, professor emeritus.

DON E. ROPER, professor emeritus.

SCOTT SAVAGE, associate professor. BB, PhD, Curtin University of Technology, Australia; MEd, University of Western Australia.

CAROL SHIUE, associate professor. BS, Massachusetts Institute of Technology; PhD, Yale University.

LARRY D. SINGELL, professor emeritus.

BERNARD UDIS, professor emeritus.

DONALD M. WALDMAN, associate chair for graduate studies; professor. BA, Cornell University; MA, PhD, University of Wisconsin.

JEFFREY S. ZAX, associate chair for undergraduate studies; professor. BA, PhD, Harvard University.

English

WILLIAM KUSKIN, department chair; associate professor. BA, Vassar College; MA, PhD, University of Wisconsin–Madison.

DONALD C. BAKER, professor emeritus.

BRUCE BASSOFF, professor emeritus.

MARTIN E. BICKMAN, professor. AB, Amherst College; MAT, Harvard University; MA, PhD, University of Pennsylvania.

RONALD BILLINGSLEY, associate professor emeritus.

ARTHUR M. BOARDMAN, professor emeritus.

SCARLET K. BOWEN, assistant professor. BA, University of West Florida; MA, University of Miami; PhD, University of Texas at Austin.

ADAM BRADLEY, associate professor. BA, Lewis and Clark College; AM, PhD, Harvard University.

DOUGLAS A. BURGER, associate professor emeritus.

JULIE CARR, assistant professor. BA, Barnard College; MFA, New York University; PhD, University of California, Berkeley.

JEFFREY COX, associate vice chancellor for faculty affairs; professor (joint, with Department of Humanities). BA, Wesleyan University; PhD, University of Virginia.

JEFFREY DESHELL, associate professor. BA, MA, University of Colorado Boulder; PhD, State University of New York at Buffalo.

MARCIA DOUGLAS, associate professor. BA, Oakwood College; MFA, Ohio State University; PhD, State University of New York at Binghamton.

KATHERINE EGGERT, associate professor. BA, Rice University; MA, PhD, University of California, Berkeley.

LORI EMERSON, assistant professor. BA, University of Alberta, Edmonton; MA, University of Victoria, British Columbia; MA, PhD, State University of New York at Buffalo.

JOHN ESCOBEDO, assistant professor. BA, University of California, Riverside; MA, PhD, Rice University.

VALERIE FORMAN, associate professor. BS, University of Pennsylvania; MA, University of California at Berkeley; PhD, University of California, Santa Cruz.

JANE GARRITY, associate professor. AB, MA, PhD, University of California, Berkeley; MA, Queens Mary College, University of London.

DAVID GLIMP, associate professor; BS, Texas A&M University; MA, University of Colorado; PhD, Johns Hopkins University.

SIDNEY GOLDFARB, professor emeritus.

NAN GOODMAN, associate professor. BA, Princeton University; MA, University of California, Berkeley; JD, Stanford University; PhD, Harvard University.

NOAH ELI GORDON, assistant professor. BA, MFA, University of Massachusetts, Amherst.

JEREMY F. GREEN, associate professor. BA, Wadham College, Oxford University; PhD, Cambridge University.

RAZA ALI HASAN, instructor. BA, MA, University of Texas at Austin; MFA, Syracuse University.

JILLIAN HEYDT-STEVENSON, associate professor. BA, University of Colorado; MA, University of Iowa; Ph.D., University of Colorado.

CHERYL HIGASHIDA, assistant professor. BA, University of California, Berkeley; MA, PhD, Cornell University.

JANICE CHIEW LING HO, assistant professor. BA, University of Queensland, Australia; MA, PhD, Cornell University.

LINDA HOGAN, professor emerita.

KELLY K. HURLEY, associate professor. BA, Reed College; PhD, Stanford University.

KAREN JACOBS, associate professor. BA, Washington University; PhD, University of California, Berkeley.

STEPHEN GRAHAM JONES, professor. BA, Texas Tech University; MA, University of North Texas; PhD, Florida State University.

SUZANNE H. JUHASZ, professor emerita.

STEVEN KATZ, professor emeritus.

BRUCE F. KAWIN, professor (joint, with the Department of Film Studies). AB, Columbia University; MFA, PhD, Cornell University.

PENELOPE KELSEY, associate professor. BA, Manchester College; PhD, University of Minnesota.

ANN KIBBEY, associate professor. BA, Cornell University; PhD, University of Pennsylvania.

GERALD B. KINNEAVY, professor emeritus.

MARY KLAGES, associate professor. AB, Dartmouth College; MA, PhD, Stanford University.

RUTH ELLEN KOCHER, associate professor. BA, Pennsylvania State University; MFA, PhD, Arizona State University.

PHILIP L. KRAUTH, professor emeritus.

MARILYN D. KRYSL, professor emerita.

CATHERINE LABIO, associate professor. Candidature, Facultés Universitaires Saint-Louis, Brussels; Licence, Université Libre de Bruxelles; MPhil, PhD, New York University.

STEVEN J. LAMOS, assistant professor. BA, MEd, PhD, University of Illinois.

PAUL M. LEVITT, professor. BA, MA, University of Colorado; MA, PhD, University of California, Los Angeles.

PETER F. MICHELSON, professor emeritus.

LEONARD MOSKOVIT, professor emeritus.

RICHELLE MUNKHOFF, assistant professor. BA, University of Maryland Baltimore County; MA, PhD, University of Wisconsin–Madison.

JOHN LEO MURPHY, professor emeritus.

CATHY LYNN PRESTON, senior instructor. BA, PhD, University of Colorado.

MICHAEL J. PRESTON, professor. AB, Gonzaga University; MA, University of Virginia; MA, PhD, University of Colorado.

CHARLES L. PROUDFIT, professor emeritus.

PADMA RANGARAJAN, assistant professor. BA, Pomona College; PhD, University of California, Berkeley.

JOHN-MICHAEL RIVERA, associate professor. BA, University of California, Berkeley; MA, University of Houston; PhD, University of Texas at Austin.

JULIUS E. RIVERS JR., professor. AB, Davidson College; MS, PhD, University of Oregon.

BENJAMIN J. ROBINSON, instructor. BA, Pace University; MA, Montclair State University; PhD, State University of New York at Buffalo.

JEFFREY C. ROBINSON, professor emeritus.

REGINALD A. SANER, professor emeritus.

LEWIS SAWIN, professor emeritus.

ELISABETH SHEFFIELD, associate professor. BA, State University of New York at Purchase; MA, State University of New York at Buffalo; MFA, University of California, Irvine; PhD, State University of New York at Buffalo.

CHARLES LABARGE SQUIER, professor emeritus.

JORDAN ALEXANDER STEIN, assistant professor. BA, University of California, Santa Cruz; MA, PhD, Johns Hopkins University.

JOHN ALLEN STEVENSON, interim dean of the Graduate School; professor. BA, Duke University; PhD, University of Virginia.

PATRICIA SULLIVAN, professor (joint, with Program for Writing and Rhetoric). BA, University of Utah; MA, PhD, Ohio State University.

TERESA TOULOUSE, professor. AB, Oberlin College; AM, PhD, Harvard University.

ERIC WHITE, associate professor. BA, Columbia University; MA, Cambridge University; MA, PhD, University of California, Berkeley.

R L WIDMANN, associate professor. BA, University of Wisconsin; AM, PhD, University of Illinois.

LAURA WINKIEL, professor. BBA, PhD, University of Notre Dame; MA, New York University.

MARK WINOKUR, associate professor. BA, Brandeis University; MA, PhD, University of California, Berkeley.

JOHN H. WRENN, professor emeritus.

CONSTANCE WRIGHT, professor emerita.

PAUL YOUNGQUIST, professor. BA, University of Colorado; MA, PhD, University of Virginia.

SUE A. ZEMKA, associate professor. BA, Saint Louis University; PhD, Stanford University.

Environmental Studies

ALAN TOWNSEND, director; professor of ecology and evolutionary biology. BA, Amherst; PhD, Stanford University.

KRISTER ANDERSSON, associate professor (joint with the Department of Political Science). BA, Point Loma Nazarene University; MA, Schiller International University; PhD, Indiana University.

PETER BLANKEN, associate professor (joint with the Department of Geography). BS, MS, McMaster University; PhD, University of British Columbia.

MAXWELL BOYKOFF, assistant professor (joint with CIRES). BS, The Ohio State University; PhD, University of California, Santa Cruz.

SHARON COLLINGE, professor (joint with the Department of Ecology and Evolutionary Biology). BA, Kansas State University; MS, University of Nebraska at Lincoln; PhD, Harvard University.

LISA DILLING, assistant professor. BA, Harvard University; PhD, University of California, Santa Barbara.

BENJAMIN HALE, assistant professor. BS, Kalamazoo College; MPA, University of Arizona; PhD, State University of New York at Stony Brook.

JILL LITT, assistant professor (joint with the Department of Preventative Medicine and Biometrics, University of Colorado Health Sciences Center). BA, Johns Hopkins University; PhD, Johns Hopkins School of Public Health.

DALE MILLER, senior instructor. BA, MA, University of Colorado Denver.

JASON NEFF, associate professor (joint with Department of Geology). BA, University of Colorado Boulder; PhD, Stanford University.

DIANA NEMERGUT, assistant professor (joint with the Institute of Arctic and Alpine Research). BS, University of New Orleans; PhD, University of Colorado Boulder.

ROGER PIELKE JR., professor (joint with CIRES). BA, MA, PhD, University of Colorado Boulder.

JAMES W. C. WHITE, professor of geological sciences (joint with Environmental Studies). BS, Florida State University; MA, MPhil, PhD, Columbia University.

Ethnic Studies

EMMA PEREZ, department chair; professor. BA, MA, PhD, University of California, Los Angeles.

ARTURO J. ALDAMA, associate chair; associate professor. BA, Evergreen State College; MA, PhD, University of California, Berkeley.

ELISA FACIO, associate professor. BS, University of Santa Clara; MA, PhD, University of California, Berkeley.

WILLIAM M. KING, professor. BA, Kent State University; MA, University of Akron; PhD, Syracuse University.

BRIAN LOCKE, instructor. BA, Whitman College; MPA, University of Washington; MA, PhD, Brown University.

DARYL MAEDA, associate professor. BS, Harvey Mudd College; MA, San Francisco University; MA, University of Michigan; PhD, University of Michigan.

DOREEN E. MARTINEZ, assistant professor. BS, Mansfield University; MS, West Virginia University; CAS, PhD, Syracuse University.

DANIKA F. MEDAK-SALTZMAN, assistant professor. BA, University of Massachusetts, Amherst; MA, PhD, University of California, Berkeley.

REILAND RABAKA, associate professor. BFA, University of the Arts; MA, PhD, Temple University.

BIANCA WILLIAMS ROBINSON, assistant professor. BA, MA, PhD, Duke University.

SEEMA SOHI, assistant professor. BA, University of California, Santa Cruz; MA, University of Vermont; PhD, University of Washington.

DEWARD WALKER, professor. BA, PhD, University of Oregon.

Film Studies

ERNESTO ACEVEDO-MUÑOZ, director; associate professor. BA, University of Puerto Rico; MA, PhD, University of Iowa.

MELINDA BARLOW, associate professor. BA, University of Toronto; PhD, New York University.

CHRISTINA BATTLE, assistant professor. BS, University of Alberta; MFA, San Francisco Art Institute.

DANIEL BOORD, professor. BFA, University of Oklahoma; MFA, University of California, San Diego.

SURANJAN GANGULY, associate professor. BA, University of Calcutta; MA, Jadavpur University; PhD, Purdue University.

JEANNE LIOTTA, assistant professor. BFA, New York University.

JAMES PALMER, director of World Affairs Conference; professor. BA, Dartmouth College; MA, PhD, Claremont Graduate School.

JENNIFER PETERSON, assistant professor. BA, University of California, Berkeley; MA, PhD, University of Chicago.

PHILIP SOLOMON, professor. BA, State University of New York at Binghamton; MFA, Massachusetts College of Art.

DONALD YANNACITO, senior instructor. BA, University of Colorado Boulder; MA, University of Colorado Denver.

French and Italian

French

ELISABETH ARNOULD-BLOOMFIELD, associate professor. License ès Lettres, Maîtrise ès Lettres, University of Paris (Sorbonne); PhD, University of California, San Diego.

JACQUES BARCHILON, professor emeritus.

CHRISTOPHER BRAIDER, professor. BA, PhD, Trinity College, Dublin.

ANDREW COWELL, professor. BA, Harvard University; MA, PhD, University of California, Berkeley.

JULIA B. FREY, professor emerita.

MAXIME GOERGEN, assistant professor. License ès Lettres, University of Neuchatel; DPhil, University of Oxford.

FREDE JENSEN, professor emeritus.

SAMUEL JUNOD, associate professor. License ès Lettres, Diplôme d'Etudes Supérieures, University of Geneva; PhD, Johns Hopkins University.

EDGAR N. MAYER, professor emeritus.

MILDRED P. MORTIMER, professor emerita.

WARREN F. MOTTE JR., professor. M. ès L., University of Bordeaux; BA, MA, PhD, University of Pennsylvania.

MASANO YAMASHITA, assistant professor. BA, Kings College; MA, PhD, New York University.

Italian

VALERIO FERME, department chair; associate professor. BA, Brown University; MA, Indiana University; PhD, University of California, Berkeley.

MICHELA ARDIZZONI, assistant professor. BA, MA, University of Cagliari; MA, University of Iowa; PhD, Indiana University.

GRAZIANA G. LAZZARINO, professor. Laurea, University of Genoa, Italy.

SUZANNE MAGNANINI, associate professor. BA, Washington University; MA, PhD, University of Chicago.

COSETTA SENO REED, assistant professor. Laurea, University of Macerata, Italy; MA, University of Virginia; PhD, University of California, Berkeley.

Geography

PETER BLANKEN, department chair; professor (joint with Environmental Studies program). BSc, MSc, McMaster University; PhD, University of British Columbia.

WALEED ABDALATI, director, Center for the Study of Earth from Space; associate professor. BS, Syracuse University; MS, PhD, University of Colorado Boulder.

SUZANNE P. ANDERSON, assistant professor. BS, University of Puget Sound; MS, University of Washington; PhD, University of California, Berkeley.

HOLLY BARNARD, assistant professor. BS, University of Washington; MS, Colorado State University; PhD, Oregon State University.

ROGER G. BARRY, distinguished professor. BA, University of Liverpool, England; MSc, McGill University, Canada; PhD, University of Southampton, England.

SUSAN W. BEATTY, associate dean for the natural sciences, College of Arts and Sciences; professor. BS, Emory University; PhD, Cornell University.

JOSEPH H. BRYAN, assistant professor. BA, University of California, Santa Cruz; MA, PhD, University of California, Berkeley.

BARBARA P. BUTTENFIELD, professor. BA, Clark University; MA, University of Kansas; PhD, University of Washington.

T. NELSON CAINE, professor emeritus.

ELIZABETH DUNN, assistant professor. BA, University of Rochester; MA, University of Chicago; PhD, Johns Hopkins University.

KENNETH A. ERICKSON, professor emeritus.

KENNETH E. FOOTE, professor. BA, University of Wisconsin; MA, PhD, University of Chicago.

MARA GOLDMAN, assistant professor. BA, Clark University; MA, University of California, Los Angeles; MS, PhD, University of Wisconsin–Madison.

NICHOLAS HELBURN, professor emeritus.

A. DAVID HILL, professor emeritus.

NAJEEB JAN, assistant professor. BA, Rhodes College; MA, PhD, University of Michigan.

STEFAN LEYK, assistant professor. BS, MS, Technical University of Dresden; PhD; University of Zurich.

NOAH P. MOLOTCH, assistant professor. BA, University of Colorado; MS, University of California, Santa Barbara; PhD, University of Arizona.

TIMOTHY S. OAKES, associate professor. BA, Colby College; MA, PhD, University of Washington.

JOHN V. O'LOUGHLIN, professor. BA, National University of Ireland; MS, PhD, Pennsylvania State University.

JOHN PITLICK, associate professor. BSc, University of Washington; MSc, PhD, Colorado State University.

FERNANDO RIOSMENA, assistant professor. Licenciado en Mercadotecnica, ITESM; MA, PhD, University of Pennsylvania.

ANDREI ROGERS, professor emeritus.

ELISABETH D. ROOT, assistant professor. BA, Pomona College; MA, University of Maryland; PhD, University of North Carolina.

MARK C. SERREZE, professor. BA, MS, University of Massachusetts; PhD, University of Colorado.

SETH E. SPIELMAN, assistant professor. BA, Macalester College; MA, Columbia University; PhD, State University of New York at Buffalo.

KONRAD STEFFEN, professor. MA, PhD, Swiss Federal Institute of Technology (ETH), Zurich.

WILLIAM E. TRAVIS, associate professor. BS, Florida State University; MS, University of Utah; PhD, Clark University.

THOMAS T. VELEN, professor. AB, MA, PhD, University of California, Berkeley.

MARK W. WILLIAMS, professor. BA, PhD, University of California, Santa Barbara.

EMILY YEH, assistant professor. BS, MS, Massachusetts Institute of Technology; PhD, University of California, Berkeley.

Geological Sciences

G. LANG FARMER, department chair; professor. BA, University of California, San Diego; PhD, University of California, Los Angeles.

LON ABBOTT, senior instructor. PhD, University of California.

ROBERT S. ANDERSON, professor. BS, Williams College; MS, Stanford University; PhD, University of Washington.

JOHN T. ANDREWS, professor emeritus.

WILLIAM W. ATKINSON JR., associate professor emeritus.

ROGER G. BILHAM, professor. BS, University of Wales; PhD, Cambridge University.

PETER W. BIRKELAND, professor emeritus.

WILLIAM C. BRADLEY, professor emeritus.

DAVID A. BUDD, professor. BS, College of Wooster; MS, Duke University; PhD, University of Texas at Austin.

KAREN CHIN, associate professor. BA, University of California; MS, Montana State University; PhD, University of California, Santa Barbara

BRUCE F. CURTIS, professor emeritus.

JOHN DREXLER, associate professor attendant rank. BS, Western Illinois University; MS, PhD, Michigan Technological University.

JAELYN EBERLE, associate professor, BS, University of Saskatchewan; PhD, University of Wyoming.

DON L. EICHER, professor emeritus.

REBECCA M. FLOWERS, assistant professor. BS, College of William and Mary; MS, University of Utah; PhD, Massachusetts Institute of Technology.

SHEMIN GE, professor. BSc, Wuhan University of Technology, China; MASc., The University of British Columbia, Canada; MA, PhD, Johns Hopkins University.

ALEXANDER F. H. GOETZ, professor emeritus.

BRIAN M. HYNEK, assistant professor. PhD, Washington University.

BRUCE M. JAKOSKY, professor. BS, University of California, Los Angeles; MS, PhD, California Institute of Technology.

CRAIG JONES, associate professor. BS, California Institute of Technology; PhD, Massachusetts Institute of Technology.

MARY J. KRAUS, professor. BS, Yale University; MS, University of Wyoming; PhD, University of Colorado.

EDWIN E. LARSON, professor emeritus.

KEVIN MAHAN, assistant professor. BSc, Auburn University; MSc, University of Utah; PhD, University of Massachusetts Amherst.

THOMAS M. MARCHITTO JR, associate professor. BS, Yale University; PhD, Massachusetts Institute of Technology/Woods Hole Oceanographic Institute Joint Program.

MARK F. MEIER, professor emeritus.

GIFFORD H. MILLER, professor. BA, PhD, University of Colorado.

STEPHEN J. MOJZSIS, associate professor. BA, MA, Boston University; PhD, Scripps Institute of Oceanography.

PETER MOLNAR, professor. BA, Oberlin College; PhD, Columbia University.

KARL J. MUELLER, associate professor. BS, MS, San Diego State University; PhD, University of Wyoming.

JAMES L. MUNOZ, professor emeritus.

JASON C. NEFF, associate professor. BA, University of Colorado; PhD, Stanford University.

MATTHEW J. PRANTER, associate professor. BS, Oklahoma State University; BS, Colorado School of Mines; MS, Baylor University; PhD, Colorado School of Mines.

PETER ROBINSON, professor emeritus.

DON RUNNELLS, professor emeritus.

ANNE SHEEHAN, professor. BS, University of Kansas; PhD, Massachusetts Institute of Technology.

DENA M. SMITH, associate professor. BA, University of California, Santa Cruz; PhD, University of Arizona.

JOSEPH R. SMYTH, professor. BS, Virginia Polytechnic Institute; MS, PhD, University of Chicago.

HARTMUT A. W. SPETZLER, professor emeritus.

CHARLES R. STERN, professor. BS, MS, PhD, University of Chicago.

JAMES P. M. SYVITSKI, professor. BSc, HBSc, Lakehead University; PhD, University of British Columbia.

ALEXIS S. TEMPLETON, assistant professor. BA, MS, Dartmouth College; PhD, Stanford University.

ERIC TILTON, associate professor. BA, Williams College; PhD, University of California at Santa Cruz.

GREGORY E. TUCKER, associate professor. BA, Brown University; PhD, Pennsylvania State University.

THEODORE R. WALKER, professor emeritus.

PAUL WEIMER, director of EMARC; Bruce D. Benson professor of petroleum geology. BA, Pomona College; MS, University of Colorado Boulder; PhD, University of Texas at Austin.

JAMES W. C. WHITE, professor. BS, Florida State University; MA, MPhil, PhD, Columbia University.

Germanic and Slavic Languages and Literatures

Germanic

ANN C. SCHMIESING, department chair; associate professor. BA, Willamette University; MA, University of Washington; PhD, Cambridge University.

WESLEY V. BLOMSTER, professor emeritus.

ROBERT FIRESTONE, assistant professor emeritus.

INGER-JOHANNE GERWIG, senior instructor emerita.

PATRICK GREANEY, associate professor. BA, Yale College; MA, PhD, Johns Hopkins University.

SASKIA B. HINTZ, senior instructor. Erstes Staatsexamen (MA equivalent) Pädagogische Hochschule, Flensburg; PhD, New York University.

THOMAS A. HOLLWECK, associate professor. MA equiv., University of Munich; PhD, Emory University.

HELMUT MULLER-SIEVERS, professor. BA equiv., University of Düsseldorf; MA, Free University of Berlin; PhD, Stanford University.

HENRY PICKFORD, assistant professor. BA, Dartmouth College; MA, Stanford University; PhD, Yale University.

PATRICIA A. SCHINDLER, senior instructor. BA, University of Michigan; MA, University of Colorado Boulder.

DAVIDE STIMILLI, associate professor. BA, Laurea, University of Pisa; MPhil, PhD, Yale University.

BEVERLY M. WEBER, assistant professor. BA, Gustavus Adolphus College; MA, Pennsylvania State University; PhD, University of Massachusetts Amherst.

European Jewish Studies

ROBERT ADLER PECKERAR, assistant professor. BA, Brandeis University; PhD, University of California, Berkeley.

Hebrew

ZILLA GOODMAN, senior instructor. BA, MA, PhD, University of Capetown.

Nordic

HELGA H. LÚTHERS, senior instructor. BA, University of Iceland; Reykjavik; BFA equivalent, Icelandic College, Reykjavik; MA, PhD, University of Colorado Boulder.

Slavic

VICKI GROVE, senior instructor. BA, Lake Forest College; MA, PhD, University of Colorado Boulder.

ELENA Y. KOSTOGLODOVA, senior instructor. BA, Uppsala College; MA, PhD, University of Colorado.

C. NICHOLAS LEE, professor emeritus.

MARK N. LEIDERMAN, associate professor. BA, MA, PhD, Ural State University.

TATIANA MIKHAILOVA, instructor. BA, MA, Ural State University.

LAURA J. OSTERMAN, associate professor. BA, State University of New York; MA, Indiana University; PhD, Yale University.

D. L. PLANK, professor emeritus.

ARTEMI ROMANOV, associate professor. BA, MA, PhD, Leningrad University.

RIMGAILA SALYS, professor. BA, University of Pennsylvania; MA, PhD, Harvard University.

EARL D. SAMPSON, associate professor emeritus.

History

SUSAN K. KENT, department chair; professor. BS, Suffolk University; MA, PhD, Brandeis University.

FRED W. ANDERSON, professor. BA, Colorado State University; AM, PhD, Harvard University.

VIRGINIA D. ANDERSON, professor. BA, University of Connecticut; MA, University of East Anglia; AM, PhD, Harvard University.

FRANCISCO J. BARBOSA, assistant professor. BA, University of California, Los Angeles; MA, California State University, Los Angeles; PhD, Indiana University.

SCOTT G. BRUCE, associate professor. BA, York University; MA, PhD, Princeton University.

LEE V. CHAMBERS, associate professor. BA, Wellesley College; MA, PhD, University of Michigan.

LUCY CHESTER, assistant professor of history and international affairs. BA, MA, PhD, Yale University.

CARL C. CHRISTENSEN, professor emeritus.

CELINE DAUVERD, assistant professor. BA, Hawaii Pacific University; MA, University of Hawaii, Manoa; PhD, University of California, Los Angeles.

BARBARA A. ENGEL, professor. BA, City College of New York; MA, Harvard University; PhD, Columbia University.

ROBERT J. FERRY, associate professor. BA, University of Colorado; MA, PhD, University of Minnesota.

STEPHEN FISCHER-GALATI, distinguished professor emeritus.

SANJAY KUMAR GAUTAM, assistant professor. BA, Ramjaf College of Delhi University; MA, Jawaharlal Nehru University; PhD, University of Chicago.

MATTHEW D. GERBER, assistant professor. BA, Yale University; MA, PhD, University of California, Berkeley.

DAVID L. GROSS, professor. BA, St. Ambrose College; MA, PhD, University of Wisconsin.

PAUL E. J. HAMMER, professor. BA, University of Auckland; PhD, Selwyn College, University of Cambridge, UK.

MARTHA HANNA, professor. BA, University of Winnipeg; MA, University of Toronto; PhD, Georgetown University.

BOYD H. HILL JR., professor emeritus.

ROBERT HOHLFELDER, professor emeritus.

JAMES P. JANKOWSKI, professor emeritus.

KWANGMIN KIM, assistant professor. BA, MA, Sogang University, South Korea; PhD, University of California, Berkeley.

MIRIAM KINGSBERG, assistant professor. BA, MA, Brandeis University. PhD, University of California, Berkeley.

JOYCE CHAPMAN LEBRA, professor emerita.

ANNE E. LESTER, assistant professor. BA, Brown University; MA, PhD, Princeton University.

PATRICIA NELSON LIMERICK, professor. BA, University of California, Santa Cruz; MA, M.Phil., PhD, Yale University.

GLORIA L. MAIN, professor emerita.

RALPH MANN, associate professor. BA, Duke University; MA, PhD, Stanford University.

MARJORIE K. McINTOSH, distinguished professor emerita.

MITHI MUKHERJEE, assistant professor. BA, Presidency College, Calcutta; MA, Jawaharlal Nehru University; PhD, University of Chicago.

MYLES OSBORNE, assistant professor. BA, Columbia University; MA, PhD, Harvard University.

GEORGE H. PHILLIPS, professor emeritus.

MARK A. PITTENGER, associate professor. BA, Denison University; MA, PhD, University of Michigan.

EDWARD G. RUESTOW, associate professor emeritus.

HOWARD LEE SCAMEHORN, professor emeritus.

ROBERT D. SCHULZINGER, professor. BA, Columbia University; M.Phil., PhD, Yale University.

DAVID SHNEER, associate professor and director of Jewish Studies. BA, MA, PhD, University of California, Berkeley.

DAVID N. SPIRES, senior instructor emeritus.

PAUL S. SUTTER, associate professor. BA, Hamilton College. PhD, University of Kansas.

MARY ANN VILLAREAL, assistant professor. BA, Mount Holyoke College; PhD, Arizona State University.

WILLIAM WEI, professor. BA, Marquette University; MA, PhD, University of Michigan.

TIMOTHY WESTON, associate professor. BA, University of Wisconsin–Madison; MA, PhD, University of California, Berkeley.

JOHN WILLIS, assistant professor. BA, University of Louisville; MA, Georgetown University; PhD, New York University.

MARCIA A. YONEMOTO, associate professor. BA, MA, PhD, University of California, Berkeley.

PHOEBE S. K. YOUNG, assistant professor. BA, Bryn Mawr College; MA, PhD, University of California, San Diego.

THOMAS W. ZEILER, professor. BA, Emory University; MA, PhD, University of Massachusetts.

Honors

FRED W. ANDERSON, director of honors; professor of history. BA, Colorado State University; AM, PhD, Harvard University.

DANIEL C. L. JONES, senior instructor. BA, Sonoma State University; MM, PhD, University of Colorado.

E. CHRISTIAN KOPFF, associate professor. BA, Haverford College; PhD, University of North Carolina.

NINA L. MOLINARO, associate director of honors; associate professor of Spanish. BA, Scripps College; MA, PhD, University of Kansas.

PAUL STROM, associate director of Honors Residential Academic Program; senior instructor. BA, University of Colorado; MDiv, Austin Presbyterian Theological Seminary; PhD, University of Denver.

CLAUDIA VAN GERVEN, senior instructor. BA, University of Massachusetts Amherst; MA, University of Kentucky; PhD, University of Colorado.

Humanities

GIULIA BERNARDINI, instructor. BA, Mount Holyoke College; Post-graduate diploma, Courtauld Institute, London; MA, University of Colorado Boulder.

SHIRLEY CARNAHAN, senior instructor; undergraduate advisor. BA, University of California, Santa Barbara; MA, California State University; PhD, University of Colorado Boulder.

JEFFREY COX, associate vice chancellor for faculty affairs; professor of humanities and English. BA, Wesleyan University; PhD, University of Virginia.

DAVID FERRIS, professor. BA, University of Leeds, England; PhD, State University of New York at Buffalo.

PAUL GORDON, professor. BA, State University of New York at Buffalo; PhD, Yale University.

DAVIDE STIMILLI, associate professor of humanities and German literature. BA, Laurea, University of Pisa; MA, PhD, Yale University.

Integrative Physiology

ROGER M. ENOKA, department chair; professor. Diploma PE, University of Otago, New Zealand; MS, PhD, University of Washington.

DAVID L. ALLEN, assistant professor. BS, PhD, University of California, Los Angeles

ALAA AHMED, assistant professor. BS, American University, Cairo; PhD, University of Michigan.

ANNE C. BEKOFF, professor. BA, Smith College; PhD, Washington University.

MARIEE. BOYKO, senior instructor. BA, Cornell University; MA, University of Colorado.

WILLIAM C. BYRNES, associate professor. BS, Manhattan College; MA, Appalachian State University; PhD, University of Wisconsin.

CYNTHIA CAREY, professor. AB, MA, Occidental College; PhD, University of Michigan.

JANET CASAGRAND, instructor. BA, Drew University; PhD, Case Western Reserve University.

CHRISTOPHER DeSOUZA, professor. BPHE, University of Toronto; MA, George Washington University; PhD, University of Maryland.

ARTHUR L. DICKINSON, professor emeritus.

ROBERT EATON, professor emeritus.

MARISSA EHRINGER, associate professor. BS, BA, Indiana University; PhD, University of Colorado Denver.

MONIKA R. FLESHNER, professor. BS, Iowa State University; MA, PhD, University of Colorado Boulder.

JOHN S. FOWLER, associate professor emeritus.

TODD T. GLEESON, dean of the College of Arts and Sciences; professor. BS, University of California, Riverside; PhD, University of California, Irvine.

BENJAMIN N. GREENWOOD, assistant research professor. BA, MS, PhD, University of Colorado Boulder.

RUTH E. HEISLER, senior instructor. BS, University of Minnesota; MA, University of Colorado.

ROBERT B. HERMANSON II, instructor. BA, Carleton College; MA, University of Colorado Boulder.

STEVEN HOBBS, instructor. BS, University of California, San Diego; PhD, University of Colorado Boulder.

THOMAS E. JOHNSON, professor. BSc, Massachusetts Institute of Technology; PhD, University of Washington.

RODGER KRAM, associate professor. BA, Northwestern University; MS, Penn State University; PhD, Harvard University.

MONIQUE K. LEBOURGEOIS, assistant professor. BS, MS, MA, PhD, University of Southern Mississippi.

CHRISTOPHER D. LINK, associate research professor. BS, Brooklyn College; PhD, University of Massachusetts.

CHRISTOPHER A. LOWRY, assistant professor. BA, University of Wyoming; PhD, Oregon State University.

G. ROBERT LYNCH, professor emeritus.

ROBERT S. MAZZEO, graduate coordinator; associate professor. BS, North Carolina State University; MA, Wake Forest University; PhD, University of California, Berkeley.

JASHASHREE MOHAPATRA, instructor. BA, MS, University of Colorado Boulder.

DALE P. MOOD, professor. BS, MA, PhD, University of Iowa.

RUSSELL L. MOORE, provost; professor. BS, University of California, Davis; MS, PhD, Washington State University.

OWEN MURPHY, instructor. BS, California State University, Chico; MS, Montana State University.

DAVID O. NORRIS, professor. BS, Baldwin-Wallace College; PhD, University of Washington.

WALDEAN ROBICHAUX, professor emerita.

LEIF SAUL, instructor. BS, University of Texas at Austin; PhD, University of California, Berkeley.

DOUGLAS R. SEALS, college professor of distinction. BS, William Jewell College; MS, PhD, University of Wisconsin–Madison.

DAVID E. SHERWOOD, undergraduate coordinator; associate professor. AB, MA, San Diego State University; PhD, University of Southern California.

JERRY STITZEL, associate professor. BA, University of Colorado Boulder; PhD, Johns Hopkins University.

PEI-SAN TSAI, associate professor. BS, Texas A&M University; MA, PhD, University of California, Berkeley.

KENNETH P. WRIGHT JR., associate professor. BS, University of Arizona; MA, PhD, Bowling Green State University.

International Affairs

ROBERT McNOWN, program director; professor of economics. BA, University of California, Los Angeles; PhD, University of California, San Diego.

DAVID BEARCE, associate professor (joint with Department of Political Science). BA, Davidson College; PhD, Ohio State University.

LUCY CHESTER, associate professor (joint with Department of History). BA, MPhil, PhD, Yale University.

ELIZABETH DUNN, associate professor (joint with the Department of Geography). BA, University of Rochester; MA, University of Chicago; PhD, Johns Hopkins University.

VICTORIA A. HUNTER, senior instructor. BA, Mount Holyoke College; PhD, University of Colorado Boulder.

HALE UTAR, assistant professor (joint with the Department of Economics). BA, Bogazici University, Istanbul; PhD, Pennsylvania State University.

INVST Community Studies

SABRINA SIDERIS, program director. BA, University of Colorado Boulder; MA, University for Peace, Costa Rica.

TIMOTHY KUHN, faculty director, INVST; associate professor, Department of Communication. BS, MA, University of Minnesota–Twin Cities; PhD, Arizona State University.

DAVID MEENS, instructor. BA, University of Colorado Boulder; MA, University of Colorado Anschutz Medical Campus.

ELAINA VERVEER, lecturer. BA, Miami University; MA, University of Colorado.

Jewish Studies

DAVID SHNEER, director, Program in Jewish Studies; associate professor of history; BA, MA, PhD, University of California, Berkeley.

CARYN AVIV, senior instructor in secular Jewish society and civilization. BA, The New School for Social Research; MA, PhD, Loyola University of Chicago.

BRIAN A. CATLOS, associate professor of religious studies; BA, University of Toronto; MA, PhD, Centre for Medieval Studies.

ZILLA GOODMAN, senior instructor of Hebrew; BA, MA, PhD, University of Cape Town.

JULIE LIEBER, lecturer in Jewish intellectual history. BA, MA, PhD, University of Pennsylvania.

ROBERT ADLER PECKERAR, assistant professor of German and Slavic languages and literature, specializing in Jewish literature and culture; BA, Brandeis University; MA, PhD, University of California, Berkeley.

PAUL SHANKMAN, professor of anthropology; BA, University of California, Santa Barbara; PhD, Harvard University.

DAVID E. STIMILLI, assistant professor of German literature and comparative literature; BA, Laurea, University of Pisa; MA, PhD, Yale University.

Linguistics

ZYGMUNT FRAJZYNGIER, department chair; professor. MA, PhD, University of Warsaw; MA, University of Ghana.

ALAN BELL, associate professor emeritus.

ANDREW COWELL, associate professor, joint with Department of French and Italian. BA, Harvard University; PhD, University of California, Berkeley.

BARBARA A. FOX, professor. BA, MA, PhD, University of California, Los Angeles.

KIRA HALL, associate professor. BA, Auburn University; MA, PhD, University of California, Berkeley.

DANIEL JURAFSKY, adjunct associate professor. BA, PhD, University of California, Berkeley.

LISE MENN, adjunct professor. BA, Swarthmore College; MA, Brandeis University; MA, PhD, University of Illinois.

LAURA A. MICHAELIS-CUMMINGS, associate professor. BA, MA, PhD, University of California, Berkeley.

BHUVANA NARASIMHAN, assistant professor. PhD, Boston University.

MARTHA PALMER, professor. BA, MA, University of Texas; PhD, University of Edinburgh.

DAVID S. ROOD, professor. AB, Cornell University; MA, PhD, University of California, Berkeley.

REBECCA SCARBOROUGH, assistant professor. BA, Stanford University; MA, PhD, University of California, Los Angeles.

ERIN SHAY, research assistant professor. BS, MA, PhD, University of Colorado.

ALLAN R. TAYLOR, professor emeritus.

Mathematics

JUDITH A. PACKER, department chair; professor. BA, MA, Wesleyan University; PhD, Harvard University.

LAWRENCE W. BAGGETT, professor emeritus.

GORDON E. BROWN, associate professor emeritus.

SEBASTIAN CASALAINA-MARTIN, assistant professor. PhD, Columbia University.

JEANNE CLELLAND, associate professor. BS, MA, PhD, Duke University.

GEORGE F. CLEMENTS, professor emeritus.

ROBERT W. ELLINGWOOD, professor emeritus.

PETER D. ELLIOTT, professor. BS, University of Bristol; PhD, University of Cambridge.

HOMER G. ELLIS, associate professor. BA, MA, PhD, University of Texas.

JANOS ENGLANDER, associate professor. DSc, Technion-ITT.

CARLA FARSI, associate professor. Laurea, University of Florence; PhD, University of Maryland.

JEAN GILLET FERRIS, professor emerita.

JEFFREY S. FOX, professor. BA, Massachusetts Institute of Technology; PhD, University of California, Berkeley.

ROBERT K. GOODRICH, professor. BA, PhD, University of Utah.

ALEXANDER GOROKHOVSKY, associate professor. PhD, Ohio State University.

DAVID R. GRANT, professor. AB, Princeton University; PhD, Massachusetts Institute of Technology.

RICHARD M. GREEN, associate professor. MA, Oxford University; MSc, PhD, University of Warwick.

KARLE E. GUSTAFSON, professor. BS, BS, University of Colorado; PhD, University of Maryland.

HENRY G. HERMES, professor emeritus.

JOHN H. HODGES, professor emeritus.

W. CHARLES HOLLAND, professor adjunct. BS, MS, PhD, Tulane University.

RICHARD A. HOLLEY, professor emeritus.

SU-ION IH, assistant professor. PhD, Brown University.

WILLIAM B. JONES, professor emeritus.

BART KASTERMANS, assistant professor. PhD, University of Michigan.

KEITH A. KEARNES, professor. BS, MS, University of California, Riverside; PhD, University of California, Berkeley.

SERGEI KUZNETSOV, associate professor. Diploma, Moscow State University; PhD, Institute of Mathematics of Ukrainian Academy of Sciences, Kiev, Mathematics and Physics; Doctor of Physics and Mathematics, Vilnius State University, Lithuania.

RICHARD JOSEPH LAVER, professor emeritus.

ALBERT T. LUNDELL, professor emeritus.

ROBERT EUGENE MACRAE, professor emeritus.

JEROME I. MALITZ, professor emeritus.

JAMES DONALD MONK, professor. AB, University of Chicago; BS, University of New Mexico; MA, PhD, University of California, Berkeley.

CARRIE MUIR, instructor. BA, Graceland College; MA, University of Colorado Boulder.

JAN MYCIELSKI, professor emeritus.

ALAN L.T. PATERSON, professor adjunct. BSc, MSc, PhD, University of Edinburgh.

MARKUS PFLAUM, associate professor. PhD, Universität München.

STEPHEN PRESTON, assistant professor. BS, Pennsylvania State University; PhD, State University of New York at Stony Brook.

EVELYN PUAA, instructor. MEd, University of Southern California.

ARLAN RAMSAY, professor emeritus.

DAVID F. REARICK, professor emeritus.

BRIAN C. RIDER, associate professor. BS, Massachusetts Institute of Technology; PhD, Courant Institute of Mathematical Sciences.

RICHARD L. ROTH, professor emeritus.

DUANE P. SATHER, professor emeritus.

WOLFGANG SCHMIDT, distinguished professor emeritus.

DELPHY T. SHAULIS, senior instructor. BA, San Diego State University; PhD, University of Colorado Boulder.

ALEJANDRO SPINA, senior instructor. PhD, La Plata National University; PhD, University of Colorado Boulder.

ERIC STADE, professor. BA, MA, PhD, Columbia University.

DANIEL STROOCK, professor adjunct. PhD, Rockefeller University.

RUTH REBEKKA STRUIK, professor emerita.

AGNES SZENDREI, professor. MSc, University of Szeged; PhD, Hungarian Academy of Sciences.

WALTER F. TAYLOR, professor emeritus.

NATHANIEL THIEM, assistant professor. PhD, University of Wisconsin–Madison.

ROBERT TUBBS, associate professor. BA, University of South Florida; MA, Columbia University; PhD, Pennsylvania State University.

MARTIN E. WALTER, professor. BS, University of Redlands; MA, PhD, University of California, Irvine.

IRVING WEISS, professor emeritus.

GRAEME WILKIN, Burnett Meyer Instructor. PhD, Brown University.

JAY H. WOLKOWISKY, professor emeritus.

Medieval and Early Modern Studies

PAUL E. J. HAMMER, program director; professor of history. BA, MA (Hons.), Auckland University; PhD, University of Cambridge.

Molecular, Cellular, and Developmental Biology

TOM BLUMENTHAL, department chair; professor. BA, Antioch College; PhD, Johns Hopkins University.

LOIS A. ABBOTT, senior instructor emerita.

ROBERT E. BOSWELL, professor. BA, Marietta College; PhD, University of Colorado.

THOMAS R. CECH, distinguished professor (joint appointment with Chemistry and Biochemistry). BA, Grinnell College; PhD, University of California, Berkeley.

ZHE CHEN, assistant research professor. BS, Peking University; PhD, University of Colorado Boulder.

SHELLEY D. COPLEY, professor. AB, Radcliffe College; PhD, Harvard University.

BRIAN DeDECKER, assistant research professor. BS, University of Illinois, Urbana; PhD, Yale University.

CORRELLA S. DETWEILER, associate professor. AB, Bowdoin College; PhD, University of California, San Francisco.

ROBIN DOWELL-DEEN, assistant professor. BS, Texas A&M, College Station; DSc, Washington University, St. Louis.

MARK W. DUBIN, professor emeritus.

JOAQUIN M. ESPINOSA, assistant professor. BS, MS, National University of Mar del Plata, Argentina; PhD, University of Buenos Aires.

CHRISTY L. FILLMAN, instructor. BS, Colorado State University; PhD, University of Colorado.

MIRCEA FOTINO, professor attendant rank. Licence-es-Sciences, University of Paris; PhD, University of California, Berkeley.

ROBERT GARCEA, professor. BA, Harvard; MD, University of California, San Francisco.

LAWRENCE GOLD, professor. BS, Yale University; PhD, University of Connecticut.

NANCY A. GUILD, associate professor attendant rank. BA, Colorado College; PhD, University of Colorado.

RICHARD G. HAM, professor emeritus.

MIN HAN, professor. BS, Peking University; PhD, University of California, Los Angeles.

ANDREAS HOENGER, associate professor. Diploma in Biology II, PhD, University of Basel, Switzerland.

KEVIN R. JONES, associate professor. BS, University of Illinois, Urbana; PhD, University of California, Berkeley.

HARALD JUNGE, assistant professor. BS, MS, Philipps University, Germany; PhD, Max Planck Institute and Philipps University, Germany.

MICHAEL W. KLYMKOWSKY, professor. BS, Pennsylvania State University; PhD, California Institute of Technology.

JENNIFER K. KNIGHT, senior instructor. BA, Cornell University; PhD, University of Michigan.

KENNETH S. KRAUTER, professor. BS, State University of New York at Stony Brook; PhD, Albert Einstein College of Medicine.

PETER L. KUEMPEL, professor emeritus.

LESLIE A. LEINWAND, professor. BS, Cornell University; PhD, Yale University.

JENNIFER M. MARTIN, assistant professor. BA, University of California, Davis; PhD, University of Washington.

DAVID N. MASTRONARDE, professor attendant rank. BA, Amherst College; PhD, University of Colorado.

EDWIN H. McCONKEY, professor emeritus.

J. RICHARD McINTOSH, distinguished professor emeritus.

TIMOTHY A. McKINSEY, assistant professor adjunct. BS, University of Missouri; PhD, Vanderbilt University.

GREG ODORIZZI, associate professor. BS, Texas Tech University; PhD, University of California, San Diego.

BRADLEY B. OLWIN, professor. BA, University of California, San Diego; PhD, University of Washington.

NORMAN R. PACE, professor. BA, Indiana University; PhD, University of Illinois.

THOMAS T. PERKINS, assistant professor adjunct, JILA Fellow. AB, Harvard University; PhD, Stanford University.

ROBERT O. POYTON, professor. AB, Brown University; PhD, University of California, Berkeley.

DAVID M. PRESCOTT, distinguished professor emeritus.

MEREDITH RUNNER, professor emeritus.

JINGSHI SHEN, assistant professor. BS, Tsinghua University; PhD, Columbia University.

RAVINDER SINGH, associate professor. BSc HAU, Hisar, India; PhD, Baylor College of Medicine.

L. ANDREW STAEHELIN, professor emeritus.

GRETCHEN H. STEIN, lecturer. AB, Brown University; PhD, Stanford University.

MICHAEL STOWELL, associate professor. BA, Reed College; PhD, California Institute of Technology.

TIN TIN SU, associate professor. BA, Mount Holyoke College; PhD, Carnegie Mellon University.

NOBORU SUEOKA, professor emeritus.

JONATHAN VAN BLERKOM, research professor. BS, City College of New York; PhD, University of Colorado.

GIA VOELTZ, assistant professor. BA, University of California, Santa Cruz; PhD, Yale University.

MARK WINEY, professor. BS, Syracuse University; PhD, University of Wisconsin–Madison.

WILLIAM B. WOOD, III, distinguished professor emeritus.

DING XUE, professor. BS, University of Science and Technology of China; PhD, Columbia University.

MICHAEL J. YARUS, professor emeritus.

RUI YI, assistant professor. BS, College of Life Science; PhD, Peking University.

Museum and Field Studies

J. PATRICK KOCIOLEK, director, University Museum; professor of ecology and evolutionary biology; curator of diatoms. BS, St. Mary's College, Maryland; MS, Bowling Green State University; PhD, University of Michigan.

M. DEANE BOWERS, curator of entomology; professor of ecology and evolutionary biology. BA, Smith College; PhD, University of Massachusetts.

CHRISTINA M. CAIN, collections manager of anthropology. MS, University of Colorado.

KAREN CHIN, curator of vertebrate paleontology; associate professor of geological sciences. BA, University of California, San Diego; MS, Montana State University; PhD, University of California, Santa Barbara

LINDA S. CORDELL, professor emerita.

CHARLES COUNTER, exhibits coordinator; senior instructor adjunct. MA, Otis/Parsons School of Design.

TONI CULVER, collections manager of paleontology. MS, South Dakota School of Mines & Technology.

JAELYN J. EBERLE, curator of vertebrate paleontology; associate professor geological sciences; BSc, University of Saskatchewan; PhD, University of Wyoming.

ROBERT GURALNIK, curator of invertebrate zoology; associate professor of ecology and evolutionary biology. BA, PhD, University of California, Berkeley.

JAMES S. H. HAKALA, senior educator of the University Museum; senior instructor. BS, Western Michigan University; MAT, George Washington University.

WESLEY EUGENE HALL, collections manager of invertebrate zoology and paleontology. MS, University of Arizona, Tucson.

JUDITH A. HARRIS, associate professor emerita.

MARIKO KAGEYAMA, collections manager of vertebrate zoology. MA, Texas Tech University.

TALIA KARIM, collections manager of invertebrate paleontology. PhD, University of Iowa.

STEVE LEKSON, curator of anthropology; professor of anthropology. BA, Case Western Reserve; MA, Eastern New Mexico University; PhD, University of New Mexico.

CHRISTY McCAIN, curator of vertebrates, assistant professor of ecology and evolutionary biology. BS, Humboldt State University, California; PhD, University of Kansas.

CATHY REGAN, education coordinator; PhD, University of Colorado Boulder.

PETER ROBINSON, professor emeritus.

JOHN R. ROHNER, professor emeritus.

VIRGINIA L. SCOTT, collections manager of entomology. MS, Michigan State University.

JENNIFER SHANNON, curator of anthropology; assistant professor of anthropology. BA, Bowdoin College; MA, University of Chicago; PhD, Cornell University.

DENA M. SMITH, curator of invertebrate paleontology, associate professor of geology. BA, University of California, Santa Cruz; PhD, University of Arizona.

WILLIAM A. WEBER, professor emeritus.

SHI-KUEI WU, professor emeritus.

Philosophy

GRAEME FORBES, department chair; professor. BA, Balliol College, Oxford University; MA, University of Glasgow; PhD, New College, Oxford University.

DOMINIC BAILEY, assistant professor. BA, PhD, Trinity College, Cambridge University.

DAVID BARNETT, associate professor. BA, Emory University; PhD, New York University.

DAVID BOONIN, associate dean for arts and humanities; professor. BA, Yale University; PhD, University of Pittsburgh.

LEONARD G. BOONIN, professor emeritus.

SHERALEE BRINDELL, senior instructor. BA, University of California, Los Angeles; PhD, University of Colorado Boulder.

JOHN ROBB CARNES, professor emeritus.

ERIC CHWANG, assistant professor. BA, Cornell University; PhD, Princeton University; MD, Baylor College of Medicine.

CAROL E. CLELAND, professor. BA, University of California, Santa Barbara; PhD, Brown University.

LAWSON CROWE, professor emeritus.

JOHN ANDREW FISHER, professor emeritus.

ROBERT HANNA, professor. BA, Victoria College, University of Toronto; MPhil, PhD, Yale University.

CHRISTOPHER HEATHWOOD, assistant professor. BA, University of California, San Diego; PhD, University of Massachusetts Amherst.

ADAM OMAR HOSEIN, assistant professor. BA, University of Oxford; PhD, Massachusetts Institute of Technology.

MICHAEL HUEMER, associate professor. BA, University of California, Berkeley; PhD, Rutgers University.

ALISON M. JAGGAR, professor. BA, University of London; MLitt, University of Edinburgh; PhD, State University of New York at Buffalo.

DAN KAUFMAN, associate professor. BA, University of Connecticut; PhD, University of Massachusetts Amherst.

PHYLLIS KENEVAN, professor emerita.

KATHRIN KOSLICKI, associate professor, BA, State University of New York at Stony Brook; PhD, Massachusetts Institute of Technology.

MI-KYOUNG (MITZI) LEE, associate professor. BA, Columbia University; PhD, Harvard University.

EDWARD J. MACHLE, professor emeritus.

DIANE MAYER, senior instructor. BA, Smith College; PhD, University of Colorado Boulder.

ED L. MILLER, director of Theology Forum; professor emeritus.

PAUL JOHN WILLIAM MILLER, professor emeritus.

CLAUDIA MILLS, associate professor. BA, Wellesley College; PhD, Princeton University.

BRADLEY MONTON, associate professor. BA, Rice University; PhD, Princeton University.

WESLEY MORRISTON, professor. BA, Queen's University of Belfast; PhD, Northwestern University.

ALASTAIR NORCROSS, associate professor. BA, Christ Church College, Oxford University; PhD, Syracuse University.

GRAHAM JAMES ODDIE, professor. BA, University of Otago, New Zealand; PhD, University of London.

ROBERT PASNAU, professor. BA, University of Pennsylvania; PhD, Cornell University.

ROBERT ROGERS, professor emeritus.

ROBERT RUPERT, associate professor. BA, University of Washington, Seattle; MA, PhD, University of Illinois, Chicago.

DANIEL STURGIS, senior instructor. BA, Northwestern University; PhD, University of Colorado Boulder.

BRIAN TALBOT, instructor. BA, JD, University of California, Berkeley; PhD, University of Southern California.

MICHAEL TOOLEY, professor. BA, University of Toronto; PhD, Princeton University.

FORREST WILLIAMS, professor emeritus.

AJUME WINGO, associate professor. BA, University of California, Berkeley; PhD, University of Wisconsin–Madison.

MICHAEL ZIMMERMAN, professor. BA, Louisiana State University; MA, PhD, Tulane University.

Physics

PAUL BEALE, department chair; professor. BS, University of North Carolina; PhD, Cornell University.

DANA Z. ANDERSON, professor. BSEE, Cornell University; PhD, University of Arizona.

NEIL ASHBY, professor emeritus.

ALBERT ALLEN BARTLETT, professor emeritus.

DAVID BARTLETT, professor emeritus.

ANDREAS BECKER, associate professor; Dr. rer. Nat., University of Bielefeld, Germany.

MEREDITH BETTERTON, assistant professor. BA, Princeton University; MA, PhD, Harvard University.

DEBRA BIASCA, instructor. PhD, University of Colorado Boulder.

JOHN L. BOHN, research professor. BS, PhD, University of Chicago.

JOHN R. CARY, professor. BA, University of California, Irvine; MA, PhD, University of California, Berkeley.

NOEL A. CLARK, professor. BS, MS, John Carroll University; PhD, Massachusetts Institute of Technology.

JOHN COOPER, professor emeritus.

ERIC A. CORNELL, professor adjoint. BSc, Stanford; PhD, Massachusetts Institute of Technology.

JOHN P. CUMALAT, professor. BA, MA, PhD, University of California, Santa Barbara.

STEVEN T. CUNDIFF, professor adjoint. BA, Rutgers University; MS, PhD, University of Michigan.

SENARATH P. de ALWIS, professor. BSc, University of London; PhD, University of Cambridge.

THOMAS A. DEGRAND, professor. BS, University of Tennessee; PhD, Massachusetts Institute of Technology.

DANIEL DESSAU, associate chair of graduate studies; professor. BS, Rice University; PhD, Stanford University.

OLIVER DeWOLFE, assistant professor. BA, Wesleyan University; PhD, Massachusetts Institute of Technology.

JOSEPH DREITLEIN, professor emeritus.

MICHAEL DUBSON, associate chair of undergraduate studies; senior instructor. BS, University of Illinois, Urbana; PhD, Cornell University.

JAMES FALLER, professor adjoint. AB, Indiana University; MA, PhD, Princeton University.

WILLIAM T. FORD, professor. BA, Carleton College; PhD, Princeton University.

NOAH FINKELSTEIN, associate professor. BA, Yale University; PhD, Princeton University.

ALLAN D. FRANKLIN, professor. AB, Columbia College; PhD, Cornell University.

MATTHEW A. GLASER, associate professor attendant rank. BSc, Michigan State University; MS, University of Nevada, Reno; PhD, University of Colorado Boulder.

MARTIN V. GOLDMAN, professor. BA, Princeton University; MS, PhD, Harvard University.

CHRIS H. GREENE, professor. BS, University of Nebraska; MS, PhD, University of Chicago.

VICTOR GURARIE, assistant professor. BA, Moscow Institute of Physics and Technology; MA, PhD, Princeton University.

JOHN HALL, professor adjoint. PhD, Carnegie Institute of Technology.

ANNA HASENFRATZ, professor. MS, PhD, L. Eötvös University, Budapest.

ALLEN M. HERMANN, professor emeritus.

MICHAEL HERMELE, assistant professor. AB, Harvard University; MS; PhD, University of California, Santa Barbara.

MURRAY J. HOLLAND, associate professor. BSc, MSc, Auckland University; PhD, Oxford University.

MIHALY HORANYI, professor. MS, PhD, L. Eötvös University, Budapest.

DEBORAH S. JIN, associate professor adjoint. AB, Princeton University; PhD, University of Chicago.

HENRY KAPTEYN, professor. BS, Harvey Mudd; MA, Princeton University; PhD, University of California, Berkeley.

EDWARD R. KINNEY, professor. SB, PhD, Massachusetts Institute of Technology.

EMANUEL KNILL, professor adjoint. BS, MS, University of Massachusetts at Boston; PhD, University of Colorado.

JACK J. KRAUSHAAR, professor emeritus.

MINHYEA LEE, assistant professor. BS, MS, Pohang University of Science and Technology, South Korea; PhD, University of Chicago.

KONRAD LEHNERT, assistant professor adjoint. BS, Harvey Mudd College; PhD, University of California, Santa Barbara.

JUDAH LEVINE, professor adjoint. AB, Yeshiva College; MS, PhD, New York University.

HEATHER LEWANDOWSKI, assistant professor. BS, Michigan Tech; MS, PhD, University of Colorado.

DAVID A. LIND, professor emeritus.

JOSEPH E. MACLENNAN, associate professor attendant rank. BS, Rhodes University; MS, PhD, University of Colorado Boulder.

K.T. MAHANTHAPPA, professor. BSc, Central College at Bangalore; MSc, Delhi University; PhD, Harvard University.

ALYSIA MARINO, associate professor. PhD, University of California, Berkeley.

KYLE McELROY, assistant professor. BA, PhD, University of California, Berkeley.

MASATAKA MIZUSHIMA, professor emeritus.

TOBIN L. MUNSAT, assistant professor. BS, University of North Carolina; MA, PhD, Princeton University.

MARGARET MURNANE, professor. BS, MS, University College, Cork, Ireland; PhD, University of California, Berkeley.

JAMES NAGLE, associate professor. MS, MPhil, PhD, Yale University.

URIEL NAUENBERG, professor. BS, PhD, Columbia University.

WILLIAM J. O'SULLIVAN, professor emeritus.

SCOTT E. PARKER, professor. BS, University of Wisconsin–Madison; PhD, University of California, Berkeley.

KATHERINE PERKINS, assistant professor attendant rank. AB, AM, PhD, Harvard University.

R. JEROME PETERSON, professor. BS, PhD, University of Washington.

PAUL E. PHILLIPSON, professor emeritus.

STEVEN J. POLLOCK, professor. BS, Massachusetts Institute of Technology; MS, PhD, Stanford University.

JOHN C. PRICE, professor. BS, Yale University; PhD, Stanford University.

LEO RADZIHOVSKY, professor. BS, MS, Rensselaer Polytechnic Institute; MA, PhD, Harvard University.

PATRICIA RANKIN, professor. BSc, PhD, Imperial College, London University.

MARCUS RASCHKE, associate professor. BS, Universität Bayreuth, Germany; MS, Rutgers University; PhD, Technische Universität, Munich.

CINDY REGAL, assistant professor. BA, Lawrence University; PhD, University of Colorado Boulder.

ANA MARIA REY, assistant professor, PhD, University of Maryland.

DMITRY REZNIK, associate professor. BA, Cornell University; PhD, University of Illinois at Urbana-Champaign.

MICHAEL H. RITZWOLLER, professor. AB, Marquette University; MA, University of Illinois; MS, University of Wisconsin; PhD, University of California, San Diego.

SCOTT H. ROBERTSON, professor. BS, PhD, Cornell University.

CHARLES T. ROGERS, professor. BSc, PhD, Cornell University.

JAMES R. SHEPARD, professor. BS, Yale University; PhD, University of Colorado.

THOMAS SCHIBLI, assistant professor. PhD, University of Karlsruhe, Germany.

IVAN SMALYUKH, assistant professor. BS, MS, Lviv Polytechnic National University; PhD, Kent State University.

JAMES G. SMITH, professor attendant rank. BS, Massachusetts Institute of Technology; PhD, University of California, San Diego.

RODMAN SMYTHE, professor emeritus.

KEVIN STENSON, assistant professor. BS, Bates College; PhD, University of Wisconsin–Madison.

JAMES THOMPSON, assistant professor adjoint. PhD, Massachusetts Institute of Technology.

DMITRI UZDENSKY, assistant professor. MS, Moscow Institute of Physics and Technology; PhD, Princeton University.

STEPHEN WAGNER, associate professor attendant rank. BS, University of Arizona; PhD, Johns Hopkins University.

JOHN M. WAHR, professor. BS, University of Michigan; MS, PhD, University of Colorado.

CARLE E. WIEMAN, distinguished professor. BS, Massachusetts Institute of Technology; PhD, Stanford University.

WALTER WYSS, professor emeritus.

JUN YE, professor adjoint. BS, Jiao Tong University at Shanghai; MS, University of New Mexico; PhD, University of Colorado Boulder.

SHIJIE ZHONG, associate professor. BS, University of Science and Technology of China, Hefei; MS, Chinese Academy of Sciences, Peking; PhD, University of Michigan, Ann Arbor.

ERIC ZIMMERMAN, associate professor. SB, Massachusetts Institute of Technology; PhD, University of Chicago.

Political Science

KENNETH BICKERS, department chair; professor. BA, Texas Christian University; MA, PhD, University of Wisconsin–Madison.

E. SCOTT ADLER, associate professor. BA, University of Michigan; MA, MPhil., PhD, Columbia University.

KRISTER ANDERSSON, associate professor (joint appointment with the Environmental Studies Program). BA, Point Loma Nazarene University; MA, Schiller International University; PhD, Indiana University.

AYSEGUL AYDIN, assistant professor. BA, Istanbul University; MA, Bogazici University, Istanbul; MA, PhD, Binghamton University.

VANESSA BAIRD, associate professor. BA, PhD, University of Houston.

ANDY BAKER, associate professor. BA, Valparaiso University; MA, PhD, University of Wisconsin–Madison.

DAVID H. BEARCE, associate professor. BA, Davidson College; PhD, Ohio State University.

FRANCIS A. BEER, professor emeritus.

CAREW BOULDING, assistant professor; BA, University of Washington, Seattle; MA, PhD, University of California, San Diego.

DAVID BROWN, associate professor. BA, Doane College; MA, PhD University of California, Los Angeles.

HANK BROWN, professor and president emeritus.

RONALD D. BRUNNER, professor emeritus.

STEVE CHAN, professor. BA, Tulane University; MA, PhD, University of Minnesota.

SUSAN E. CLARKE, professor. BA, California State College at Fullerton; MA, University of Southern California; PhD, University of North Carolina.

ANNE N. COSTAIN, professor. AB, Brown University; MA, PhD, Johns Hopkins University.

W. DOUGLAS COSTAIN, senior instructor. BA (HONS), University of British Columbia; MA, PhD, Johns Hopkins University.

JANET L. DONAVAN, senior instructor. BA, Kent State University; MA, PhD, University of Wisconsin–Madison.

DENNIS R. ECKART, associate professor emeritus.

MICHAEL L. FERGUSON, assistant professor. AB, Bryn Mawr College; PhD, Harvard University.

J. SAMUEL FITCH, professor. BA, Randolph-Macon College; MA, MPh, PhD, Yale University.

JENNIFER FITZGERALD, assistant professor. BA, Indiana University; MA, University of Chicago; PhD, Brown University.

EDWARD S. GREENBERG, professor. BA, MA, Miami University, Ohio; PhD, University of Wisconsin.

JOSEPH JUPILLE, associate professor. BA, University of California, Santa Barbara; MA, Monterey Institute of International Studies; MA, PhD, University of Washington.

MOONHAWK KIM, assistant professor. BA, University of California, Berkeley; MA, PhD, Stanford University.

ZDENEK KRISTUFEK, professor emeritus.

STÉPHANE LAVERTU, assistant professor. BA, Ohio State University; MA, Stanford University; MA, PhD, University of Wisconsin–Madison.

AMY LIU, assistant professor. BA, Smith College; PhD, Emory University.

DAVID R. MAPEL, associate professor. BA, Colorado College; MSc, London School of Economics; MA, PhD, Johns Hopkins University.

CONRAD L. McBRIDE, professor emeritus.

JOHN P. McIVER, associate professor. AB, Cornell University; MA, PhD, Indiana University.

LAURI McNOWN, senior instructor. BA, MA, PhD, University of Colorado Boulder.

HORST MEWES, associate professor. BA, Beloit College; MA, PhD, University of Chicago.

WILLIAM SAFRAN, professor emeritus.

JAMES R. SCARRITT, professor emeritus.

ROYAL DANIEL SLOAN JR., associate professor emeritus.

ANAND EDWARD SOKHEY, assistant professor. BA, Denison University; PhD, Ohio State University.

SARAH SOKHEY, assistant professor. BA, The Catholic University of America; MA, PhD, Ohio State University.

SVEN H. STEINMO, professor. BA, University of California, Santa Cruz; MA, MPH, PhD, University of California, Berkeley.

THADDEUS J. TECZA, senior instructor emeritus.

STEPHEN J. VANDERHEIDEN, associate professor. BA, Willamette University; MA, University of Utah; PhD, University of Wisconsin–Madison.

WILLIAM O. WINTER, professor emeritus.

JENNIFER WOLAK, assistant professor. BS, East Michigan University; MA, PhD, University of North Carolina at Chapel Hill.

MICHAEL SCOTT WOLFORD, assistant professor. BA, Transylvania University; MA, PhD, Emory University.

Psychology and Neuroscience

LEWIS O. HARVEY JR., department chair; professor. BA, Williams College; MS, PhD, Pennsylvania State University.

BERNADETTE M. PARK, associate chair; professor. BS, University of Oregon; MA, PhD, Northwestern University.

DONALD A. WEATHERLEY, associate chair; associate professor. BS, MA, Northwestern University; PhD, Stanford University.

HERBERT P. ALPERN, professor emeritus.

JOANNA ARCH, assistant professor. BA, Wellesley College; PhD, University of California, Los Angeles.

RYAN K. BACHTTELL, assistant professor. BA, Bloomsburg University; MS, Central Washington University; PhD, Oregon Health and Science University.

MARIE T. BANICH, professor. BA, MA, Tufts University; PhD, University of Chicago.

DANIEL S. BARTH, professor. BA, Boston University; MA, PhD, University of California, Los Angeles.

JOSEPH E. BERTA, senior instructor. BA, MA, University of Toledo; PhD, University of Colorado.

IRENE V. BLAIR, associate professor. BA, Loma Linda University; MS, M.Phil., PhD, Yale University.

ELAINE A. BLECHMAN, professor emerita.

BERNARD L. BLOOM, professor emeritus.

LYLE E. BOURNE JR., professor emeritus.

SERGE CAMPEAU, associate professor. BS, McGill University; MS, PhD, Yale University.

GREGORY CAREY, associate professor. BA, Duquesne University; MA, Graduate Faculty, New School for Social Research; PhD, University of Minnesota.

DESMOND S. CARTWRIGHT, professor emeritus.

DAVID A. CHISZAR, professor. BA, MS, PhD, Rutgers University.

ALLAN C. COLLINS, professor. BS, MS, PhD, University of Wisconsin.

ELIANA COLUNGA, assistant professor. BS, MS, Institute of Technology, Monterrey (ITESM); PhD, Indiana University.

DONALD COOPER, associate professor, BA, University of Colorado Boulder; PhD, Chicago Medical School.

EDWARD J. CROTHERS, associate professor emeritus.

TIM CURRAN, professor. BA, MA, PhD, University of Oregon.

HEIDI E. W. DAY, assistant research professor. BSc, University of Bath, U.K.; MPhil, PhD, University of Cambridge, U.K.

JOHN C. DeFRIES, professor. BS, MS, PhD, University of Illinois.

SONA A. DIMIDJIAN, assistant professor. BA, University of Chicago; MSW, University of Pittsburg; PhD, University of Washington.

JOHN R. FORWARD, associate professor emeritus.

EUGENE S. GOLLIN, professor emeritus.

KENNETH R. HAMMOND, professor emeritus.

O. J. HARVEY, professor emeritus.

ALICE F. HEALY, professor. AB, Vassar College; PhD, Rockefeller University.

THERESA D. HERNÁNDEZ, associate professor. BA, PhD, University of Texas, Austin.

JOHN K. HEWITT, professor. BSc, MSc, University of Birmingham, England; PhD, University of London.

TIFFANY A. ITO, associate professor. BA, University of California, Los Angeles; PhD, University of Southern California.

RICHARD JESSOR, professor emeritus.

MATTHEW C. JONES, assistant professor. BA, University of California, Santa Barbara; MA, PhD, University of Michigan.

CHARLES M. JUDD, professor. BA, Yale University; MDiv, Union Theological Seminary; MA, PhD, Columbia University.

MATTHEW C. KELLER, assistant professor. BA, University of Texas; MA, PhD, University of Michigan.

ALBERT E. KIM, assistant professor. BS, University of Illinois, Urbana-Champaign; MSc, University of Edinburgh; PhD, University of Pennsylvania.

D. BRETT KING, senior instructor. BS, MS, PhD, Colorado State University.

WALTER KINTSCH, professor emeritus.

THOMAS K. LANDAUER, research professor emeritus.

STEVEN F. MAIER, distinguished professor. BA, New York University; MA, PhD, University of Pennsylvania.

DIANE K. MARTICHUSKI, senior instructor. BS, Lamar University; MS, PhD, Colorado State University.

GARY H. McCLELLAND, professor. BA, University of Kansas; MA, PhD, University of Michigan.

DAVID J. MIKLOWITZ, professor. BA, Brandeis University; MA, PhD, University of California, Los Angeles.

VIJAY MITTAL, assistant professor. BA, University of California, Santa Barbara; PhD, University of California, Los Angeles.

AKIRA MIYAKE, professor. BA, Osaka University; MS, PhD, Carnegie Mellon University.

YUKO MUNAKATA, professor. BA/BS, Stanford University; MA, PhD, Carnegie Mellon University.

RICHARD K. OLSON, professor. BA, Macaf College; MA, PhD, University of Oregon.

RANDALL C. O'REILLY, professor. BA, Harvard University; PhD, Carnegie Mellon University.

SUSAN L. PATTERSON, assistant professor. BS, MS, University of California, Davis; PhD, University of Washington.

TINA PITTMAN WAGERS, instructor. BA, University of Virginia; MSW, PsyD, University of Denver.

PETER G. POLSON, professor emeritus.

ALBERT RAMIREZ, associate professor emeritus.

SOO H. RHEE, assistant professor. BA, Washington University; MA, PhD, Emory University.

EMILY D. RICHARDSON, assistant research professor. BS, Northern Illinois University; MA, PhD, University of Iowa.

JERRY W. RUDY, professor of distinction. BA, George Washington University; MA, University of Richmond; PhD, University of Virginia.

VICTOR L. RYAN, assistant professor emeritus.

SETH K. SHARPLESS, professor emeritus.

LOUISE E. SILVERN, associate professor. BA, University of California, Berkeley; MA, PhD, University of California, Los Angeles.

NATALIE D. SMUTZLER, senior instructor. BA, University of Oregon; PhD, Indiana University.

ROBERT L. SPENCER, professor. BA, Oral Roberts University; MA, PhD, University of Arizona.

MICHAEL C. STALLINGS, associate professor. BA, California State University, Fullerton; PhD, University of Southern California, Los Angeles.

RONALD G. TAYLOR, professor emeritus

DAVID R. THOMAS, professor emeritus.

LEAF D. VAN BOVEN, associate professor. BS, University of Washington; PhD, Cornell University.

LINDA R. WATKINS, distinguished professor. BS, Virginia Polytechnic Institute and State University; PhD, Medical College of Virginia.

JEANNE M. WEHNER, professor emerita.

MICHAEL WERTHEIMER, professor emeritus.

MARK A. WHISMAN, professor. BS, Colorado State University; MS, PhD, University of Washington.

ERIK G. WILLCUTT, associate professor. BS, University of California, Irvine; MA, PhD, University of Denver.

JAMES R. WILSON, professor emeritus.

Religious Studies

GREG JOHNSON, department chair; associate professor. BA, University of Colorado; MA, PhD, Divinity School, University of Chicago.

LORILIAI BIERNACKI, associate professor. BA, Princeton University; PhD, University of Pennsylvania.

BRIAN CATLOS, associate professor. BA, University of Toronto, University College; MA, PhD, University of Toronto, Centre for Medieval Studies.

IRA CHERNUS, professor. BA, Rutgers College; MA, PhD, Temple University.

FREDERICK M. DENNY, professor emeritus.

HOLLY GAYLEY, assistant professor. BA, Brown University; MA, Naropa University; PhD, Harvard University.

SAM D. GILL, professor. BS, MS, Wichita State University; MA, PhD, University of Chicago.

STEWART HOOVER, professor of journalism and mass communication. AB, McPherson College; MA, PhD, Annenberg School of Communications, University of Pennsylvania.

ROBERT C. LESTER, professor emeritus.

RUTH MAS, assistant professor. BA, MA, Concordia University; PhD, University of Toronto.

LYNN ROSS-BRYANT, associate professor emerita.

RODNEY L. TAYLOR, professor. BA, University of Southern California; MA, University of Washington; PhD, Columbia University.

DEBORAH WHITEHEAD, assistant professor. BA, MA, Florida State University; ThD, Harvard University, The Divinity School.

Sociology

RICHARD G. ROGERS, department chair; director, Population Program, IBS; professor. BA, University of New Mexico; MA, PhD, University of Texas.

PATRICIA A. ADLER, professor. BA, Washington University; MA, PhD, University of California, San Diego.

JENNIFER BAIR, assistant professor. BA, Johns Hopkins University; MA, PhD, Duke University.

OTOMAR J. BARTOS, professor emeritus.

JOANNE BELKNAP, professor. BA, University of Colorado; MA, PhD, Michigan State University.

JASON BOARDMAN, associate professor. BA, University of California, Berkeley; PhD, University of Texas at Austin.

MATTHEW C. BROWN, instructor. BA, Miami University, Oxford, Ohio; MA, University of Cincinnati; PhD, University of Colorado Boulder.

LIAM C. DOWNEY, associate professor. BA, Oberlin College; MA, PhD, University of Arizona.

JAMES V. DOWNTON, professor emeritus.

DELBERT S. ELLIOTT, distinguished professor emeritus.

MARTHA E. GIMENEZ, professor emerita.

MIKE HAFNEY, instructor. BA, MA, University of Kentucky; PhD, University of Colorado.

ELEANOR HUBBARD, senior instructor emerita.

LORI M. HUNTER, director of undergraduate studies; associate professor. BA, University of Washington; MA, PhD, Brown University.

LESLIE IRVINE, director of graduate studies; associate professor. BA, MA, Florida Atlantic University; PhD, State University of New York, Stony Brook.

J. ROLF KJOLSETH, associate professor emeritus.

JANE MENKEN, director, IBS; distinguished professor. AB, University of Pennsylvania; MS, Harvard University; PhD, Princeton University.

DENNIS S. MILETI, professor emeritus.

SANYU MOJOLA, assistant professor. BA, University of Durham; PhD, University of Chicago.

STEFANIE MOLLBORN, assistant professor. BA, Harvard University; MA, PhD, Stanford University.

JOYCE M. NIELSEN, professor. BA, University of Colorado; MA, PhD, University of Washington.

FRED PAMPEL, professor. BA, MA, PhD, University of Illinois.

LEONARD J. PINTO, associate professor emeritus.

ADELE PLATTER, senior instructor emerita.

HILLARY POTTER, assistant professor. MA, John Jay College of Criminal Justice; BA, PhD, University of Colorado.

MICHAEL L. RADELET, professor. BA, Michigan State University; MA, Eastern Michigan University; PhD, Purdue University.

ISAAC REED, assistant professor. BA, Swarthmore College; MPhil, PhD, Yale University.

ROBERT M. REGOLI, professor. BS, MA, PhD, Washington State University.

SARA STEEN, associate professor. BA, Oberlin College; MA, PhD, University of Washington.

CHRISTINA A. SUE, assistant professor. ABA, University of Washington; MA, PhD, University of California, Los Angeles.

KATHLEEN J. TIERNEY, director, Natural Hazards Center, IBS; professor. BA, Youngstown State University; MA, PhD, Ohio State University.

TIM WADSWORTH, assistant professor. BA, University of California, Santa Cruz; MA, PhD, University of Washington.

GLENDAL WALDEN, instructor. BSc, MA, Northern Arizona University; PhD, University of Colorado Boulder.

JULES J. WANDERER, professor emeritus.

PAUL E. WEHR, associate professor emeritus

AMY C. WILKINS, assistant professor. BA, Mount Holyoke College; MA, PhD, University of Massachusetts Amherst.

Spanish and Portuguese

RICARDO LANDEIRA, department chair; professor. BA, MA, Arizona State University; PhD, Indiana University.

JULIO BAENA, professor. Licenciatura, Universidad Católica Andrés Bello; MS, PhD, Georgetown University.

YVONNE GUILLON BARRETT, associate professor emerita.

ANNE H. BECHER, senior instructor. BA, Carleton College; MA, University of Colorado, Boulder.

ESTHER L. BROWN, assistant professor. MA, Pennsylvania State University; PhD, University of New Mexico.

JUAN PABLO DABOVE, associate chair for graduate studies; associate professor. MA, PhD, University of Pittsburgh.

PETER ELMORE, professor. Licenciatura, Pontificia Universidad Católica del Perú; PhD, University of Texas, Austin.

VIVIAN ELMORE, instructor. BA, Pontificia Universidad Católica del Perú.

LEILA G. GÓMEZ, associate professor. Licenciatura, Universidad Nacional de Tucumán, Argentina; MA, PhD, Johns Hopkins University.

ANTONIA GREEN, instructor. BA, MA, University of Missouri.

SUSAN R. HALLSTEAD, senior instructor. BAS, MA, PhD, University of Pittsburgh.

JUAN HERRERO-SENÉS, assistant professor. MA, PhD, Universitat Pompeu Fabra, Spain.

ASUNCIÓN HORNO-DELGADO, associate professor. Licenciatura, Universidad Complutense de Madrid; MA, University of New Hampshire; PhD, University of Massachusetts Amherst.

CHARLES L. KING, professor emeritus.

CARMEN KOPEN, instructor. BA, Grand Valley State University; MA, University of Colorado Boulder.

JAVIER KRAUEL, assistant professor, MA, University of North Carolina at Chapel Hill; PhD, Duke University.

MARY K. LONG, senior instructor. BA, Colorado State University; MA, PhD, Princeton University.

ANTHONY GIRARD LOZANO, professor emeritus.

KAREN MALCOLM, instructor. BA, University of Arkansas; MA, University of Nebraska.

TANIA A. MARTUSCELLI, assistant professor. BA, MA, Universidade Estadual de Campinas-Unicamp; PhD, University of Massachusetts, Amherst.

NINA L. MOLINARO, associate professor. BA, Scripps College; MA, PhD, University of Kansas.

ISIDORA MONTIEL, professor emerita.

MARIA MORENO, instructor. BA, MA, Eastern Michigan University.

SUSANNA PÉREZ PAMIES, instructor. BA, Universitat Pompeu Fabra; MA, University of Barcelona, International University of Catalonia, Universitat Pompeu Fabra.

CRISTINA PIRAS, instructor. BA, Richard Palma University; MA, University of Colorado, Boulder.

ANDRÉS I. PRIETO, associate chair for undergraduate studies; assistant professor. MA, PhD, University of Connecticut.

JOSÉ JAVIER RIVAS-RODRÍGUEZ, assistant professor. BA, MA, PhD, Universidade de Santiago de Compostela, Spain.

MARCELO T. SCHINCARIOL, instructor. BA, MA, PhD, Universidade Estadual de Campinas.

NÚRIA SILLERAS-FERNÁNDEZ, assistant professor. MA, PhD, Universitat Autònoma de Barcelona.

JOHN SLATER, assistant professor. BA, Earlham College, Indiana; PhD, Brandeis University.

ALICIA TABLER, instructor. BA, MA, University of Wyoming.

Speech, Language, and Hearing Sciences

GAIL RAMSBERGER, department chair; associate professor. BS, MA, University of Colorado; ScD, Boston University.

KATHRYN H. AREHART, associate professor. BS, Stanford University; MS, PhD, University of Washington.

NED W. BOWLER, professor emeritus.

ARLENE STREDLER BROWN, adjunct instructor. BA, The American University; MA, University of Denver.

JEFFREY COADY, associate professor. BA, University of Rhode Island; MA, PhD, University of Rochester.

TAMMY FREDRICKSON, lecturer. BS, MS, University of Wisconsin–Stevens Point; PhD, University of Colorado Boulder.

SANDRA GABBARD, adjunct associate professor. BS, Purdue University; MA, University of Northern Colorado, PhD, University of Colorado Boulder.

PHILLIP GILLEY, assistant professor. BS, University of Texas at Austin; MS, PhD, University of Texas at Dallas.

KATHRYN HARDIN, adjunct lecturer. BA, St. Olaf College; MA, University of Colorado Boulder.

DEBORAH HAYES, adjunct professor. BS, MA, Northwestern University; PhD, Baylor College of Medicine.

NATALIE L. HEDBERG, professor emerita.

YOSHIYUKI HORII, professor emeritus.

CYNTHIA HUNNICUTT, instructor. BA, University of Virginia; MS, Arizona State University.

ANNE HYDE-SMITH, professional research assistant. BS, The College of New Jersey; MA, University of Colorado Anschutz Medical Campus.

ELIZABETH G. JANCOSSEK, senior instructor emerita.

CHERYL DECONDE JOHNSON, adjunct lecturer. BA, University of California, Santa Barbara; MA, EdD, University of Northern Colorado.

PUI FONG KAN, assistant professor. BA, National Taiwan Normal University; MA, University of Leeds and University of Minnesota; PhD, University of Minnesota.

JAMES KATES, adjoint faculty. BS, MS, Massachusetts Institute of Technology.

LAURA JENNINGS KEPLER, adjunct instructor. BS, MS, Purdue University; PhD, University of Colorado Boulder.

THERESE KOVACH, adjunct instructor. BA, MA, PhD, University of Colorado Boulder.

JEN LEWON, lecturer. BS, Colorado State University; MS, Arizona State University; MA, Northern Arizona University.

WILLARD MOERS, instructor. BA, MA, Gallaudet University.

SUSAN M. MOORE, director of clinical education and services; clinical professor. BA, College of New Rochelle; MA, JD, University of Denver.

LORRAINE OLSON RAMIG, professor. BS, University of Wisconsin–Oshkosh; MS, University of Wisconsin–Madison; PhD, Purdue University.

PETER R. RAMIG, professor. BS, MS, University of Wisconsin; PhD, Purdue University.

BARBARA RENDE, instructor. BS, Seton Hall University; MS, University of Arizona; PhD, University of Colorado Boulder.

NEERAJA SADAGOPAN, assistant professor. BSc, All India Institute of Speech and Hearing; MS, PhD, Purdue University.

BRENDA SCHICK, professor. BS, Purdue University; MS, Washington University; PhD, Purdue University.

SCOTT SCHWARTZ, adjunct instructor. BA, State University of New York at New Paltz; MA, Ohio University, Athens; PhD, University of Wisconsin–Madison.

ANU SHARMA, professor. BSc, University of Bombay; MA, PhD, Northwestern University.

CHRISTINE SNYDER, lecturer. BA, MA, Kent State University.

LYNN SNYDER, professor emerita.

RICHARD H. SWEETMAN, professor emeritus.

AMY THRASHER, clinical assistant professor. BA, Williams College; MA, University of Colorado Boulder.

ROBERT TRAYNOR, adjunct instructor. BA, MA, EdD, University of Northern Colorado.

KRISTIN UHLER, adjunct lecturer. BA, University of Northern Colorado; MA, PhD, University of Colorado Boulder.

RITA S. WEISS, professor emerita.

ANNE WHITNEY, clinical professor. BS, MS, Colorado State University; EdD, University of Northern Colorado.

CHRISTINE YOSHINAGA-ITANO, professor. BA, University of Southern California; MA., PhD, Northwestern University.

Theatre and Dance

BUD COLEMAN, department chair; associate professor. BFA, Texas Christian University; MFA, University of Utah; PhD, University of Texas at Austin.

BRUCE BERGNER, associate chair; associate professor. BA, University of Minnesota; MFA, University of Illinois.

MARTIN T. COBIN, professor emeritus.

KERRY M. CRIPE, senior instructor. BFA, University of Evansville; MFA, Florida State University.

RICHARD DEVIN, professor emeritus.

NADA DIACHENKO, professor. BS, University of Maryland; MA, New York University.

MICHELLE ELLSWORTH, assistant professor. BA, New York University; MFA, University of Colorado Boulder.

OLIVER GERLAND, associate professor. BA, Swarthmore College; PhD, Stanford University.

ROBIN HAIG, senior instructor emerita.

TOBY R. HANKIN, professor emeritus.

MARKAS HENRY, assistant professor. BS, Ball State University; MFA, University of Connecticut.

CHARLOTTE YORK IREY, professor emerita.

MERRILL J. LESSLEY, professor. BFA, University of Utah; MA, University of Minnesota; PhD, University of Utah.

JESSE MANNO, senior instructor, BA, University of Colorado.

GABRIEL MASSON, assistant professor. BFA, University of Southern Mississippi; MFA, NYU/Tisch School of the Arts.

TAMARA MENEHINI, assistant professor. BA, St. Mary's College; MFA, Northern Illinois University.

LYNN NICHOLS, general manager of Colorado Shakespeare Festival; senior instructor. BA, University of the South; MA, Emporia State College; PhD, University of Colorado Boulder.

BETH OSNES, assistant professor. BA, Marquette University; MA, PhD, University of Colorado Boulder.

ONYE OZUZU, director of dance; associate chair; associate professor. BA, MFA, Florida State University.

CECILIA J. PANG, associate professor. BA, University of Guelph, Ontario, Canada; MA, San Francisco State University; PhD, University of California, Berkeley.

CHIP PERSONS, assistant professor. BFA, University of California, Santa Barbara; MFA, Columbia University.

MARGARET LEE POTTS, associate professor emerita.

ERIKA RANDALL, assistant professor. BA, University of Washington at Seattle; MFA, Ohio State University.

ROBERT J. SHANNON, senior instructor.

NII ARMAH SOWAH, instructor. BA, University of Ghana; MA, Lesley College.

NANCY L. SPANIER, professor emerita.

THEODORE STARK, senior instructor. BA, College of William and Mary; MFA, Boston University.

JAMES M. SYMONS, professor emeritus.

LETITIA S. WILLIAMS, senior instructor emerita.

DANIEL YANG, professor emeritus.

Western American Studies

PATRICIA NELSON LIMERICK, faculty director, Center of the American West; professor of history. BA, University of California, Santa Cruz; MA, MPhil, PhD, Yale University.

Women and Gender Studies

ANNE N. COSTAIN, director; professor. AB, Brown University; MA, PhD, Johns Hopkins University.

LORRAINE BAYARD de VOLO, associate professor. BA, University of California, Santa Barbara; PhD, University of Michigan.

ROBERT BUFFINGTON, associate professor. BA, Colorado College; PhD, University of Arizona.

ALISON M. JAGGAR, professor. BA, University of London; MLitt, University of Edinburgh; PhD, State University of New York at Buffalo.

DEEPTI MISRI, assistant professor. BA, University of Mumbai; MA, PhD, University of Illinois, Urbana.

CELESTE MONTOYA, assistant professor. BS, Bradley University; MA, PhD, Washington University, St. Louis.

ANNE MARIE POIS, senior instructor emerita.

MARCIA C. WESKOTT, professor emerita.

Writing and Rhetoric, Program for

JOHN ACKERMAN, director; associate professor. BA, MA, University of Missouri; PhD, Carnegie Mellon University.

STEVEN LAMOS, associate director; assistant professor. BA, MA, PhD, University of Illinois.

PATRICIA MALESH, associate director; assistant professor. BA, MA, Salisbury State University; PhD, University of Arizona.

VERONICA HOUSE, associate director; instructor. BA, Wellesley College; MFA University of Maryland at College Park; PhD, University of Texas at Austin.

ERIC KLINGER, associate director; instructor. BA, MA, New Mexico State University.

ROLF NORGAARD, associate director; senior instructor. BA, Wesleyan University; MA, PhD, Stanford University.

LONNI PEARCE, associate director; instructor. BA, William Jewell College; MA, University of Missouri, Kansas City; PhD, University of Arizona.

PATRICIA SULLIVAN, professor. BA, MA, University of Utah; PhD, Ohio State University.

MICHELLE ALBERT, instructor. BA, Towson State University; MFA, Naropa University; MA, University of Colorado Denver.

ERIC BURGER, instructor. BA, Colby College; MFA, University of Arizona; PhD, University of Utah.

SIGMAN BYRD, instructor. BA, Sarah Lawrence College; MFA, University of Iowa, Iowa Writer's Workshop; PhD, University of Utah.

FRANCES CHARTERIS, senior instructor. BFA, School of Visual Arts, New York; MFA University of California, San Diego.

AMBER DAHLIN, instructor. BA, MA, University of Wyoming; PhD, University of New Hampshire.

DIANE DEBELLA, instructor. BA, James Madison University; MA, California State, San Diego.

REBECCA J. DICKSON, senior instructor. BA, Colorado State University; MA, PhD, University of Colorado Boulder.

CHARLES DOERSCH, instructor. BA, University of Nebraska; MFA, Columbia University.

DAMIAN DOYLE, senior instructor. BA, Central Connecticut State University; MA, University College Dublin; PhD, University of Colorado Boulder.

JAY ELLIS, senior instructor. BA, Berklee College of Music; MA, University of Texas; PhD, New York University.

DON ERON, senior instructor. BA, University of Colorado Boulder; MFA, University of Iowa.

ANDREA FELDMAN, senior instructor. BA, Cornell University; MA, PhD, University of Colorado Boulder.

TRACY FERRELL, instructor. BA, College of William and Mary; MA, PhD, University of Colorado Boulder.

H. LYNN GINGRASS, senior instructor. BA, New York University; MA, Temple University.

AMY GOODLOE, instructor. BA, Agnes Scott College; MEd, University of Virginia; MA, Virginia Polytechnic Institute and State University.

SALLY GREEN, instructor. BA, University of Illinois, Urbana-Champaign; MA, University of Colorado Boulder.

JOAN LORD HALL, senior instructor. BA, University College, London; MLitt, Girton College, Cambridge.

MICHÉL HENDRY, instructor. BS, Grand Valley State University; MS, Colorado State University.

ORLY HERSH, instructor. BA, Mount Holyoke College; MA, Northern Arizona University.

NANCY HIGHTOWER, instructor. BA, Ft. Lewis College; MA, PhD, University of Denver.

SUZANNE HUDSON, instructor. BA, MA, University of Colorado Boulder.

ELIZA KLINGER, instructor. BA, Richard Stockton College of New Jersey; MA, New Mexico State University.

GINGER KNOWLTON, senior instructor. BA, Kenyon College; MA, University of Colorado Boulder; PhD, University of Denver.

PETER KRATZKE, senior instructor. BA, MA, University of Washington; PhD, University of Kentucky.

CATHERINE KUNCE, senior instructor. BA, Colorado College; MA, PhD, University of Denver.

CATHERINE LASSWELL, instructor. BA, Michigan State University; MEd, University of Vermont.

JUDITH LAVINSKY, senior instructor. BA, MA, University of Chicago.

MOLLY LECLAIR, instructor. BA, MA, University of Colorado.

TIM LYONS, instructor. BA, Occidental College; MA, Johns Hopkins University.

ANNA MACBRIAR, instructor. BA, Humboldt State University; MA, PhD, University of Southern Mississippi.

CHRISTINE MACDONALD, senior instructor. BA, Pomona College; MA, PhD, University of Colorado Boulder.

NANCY D. MANN, senior instructor. BA, Eckerd College; MA, PhD, Stanford University.

SUSAN McARTHUR, instructor. BA, San Jose State University; MA, University of Colorado Boulder.

ROBERT McBREARTY, instructor. BA, Instituto Allende/University of Guanajuato; MFA, University of Iowa.

NONA OLIVIA, instructor. BA, University of Santa Cruz; AM, PhD, Brown University.

KATHRYN PIEFLOW, senior instructor. BA, Augustana College; JD, University of South Dakota.

ESTHER QUINLAN, instructor. BA, Simmons College; MA, University of Colorado Boulder.

KERRY REILLY, instructor. BA, Providence College; MA, University of New Hampshire; PhD, University of Iowa.

PETGER SCHABERG, senior instructor. BA, DePaul University; MA, University of Colorado Boulder.

ERIKA SCHRECK, instructor. BA, University of Wisconsin–Green Bay, MA, University of Wisconsin–Milwaukee.

TORY TUTTLE, instructor. BA, University of Colorado; MEd, University of Hartford; MA, University of Colorado Boulder.

TOBIN VON DER NUELLE, instructor. BA, San Diego State University; MA, University of Colorado Boulder.

JAMES WALKER, instructor. BA, University of California, Riverside; MA, PhD, University of Colorado Boulder.

PAULA WENGER, senior instructor. BA, University of Northern Colorado; MA, University of Denver; MA, Miami University.

DONALD H. WILKERSON, senior instructor. BA, MA, University of Colorado Boulder.

MATTHEW O. WILSEY-CLEVELAND, instructor. BA, BA Hons, PhD, University of New South Wales, Sydney.

STEVEN WINGATE, instructor. BA, University of Massachusetts; MFA, Florida State University.

ROSALYN ZIGMOND, instructor. BA, University of Michigan; MA, PhD, University of Colorado Denver.

Leeds School of Business

David L. Ikenberry, dean

419 UCB • phone: 303-492-1809 • fax: 303-492-7676
school website: leeds.colorado.edu

THE LEEDS SCHOOL OF BUSINESS develops people who are knowledgeable in best business practices, well-versed in sustainability, entrepreneurial in their outlook, have knowledge of the whole person, think critically and creatively, communicate effectively, adapt to and lead change, act ethically, value diversity, and are competitive in the global economy. The school promotes academic excellence, fosters strong relationships with the surrounding business community, and emphasizes ongoing business research.

The Leeds School holds accreditation by the Association to Advance Collegiate Schools of Business (AACSB-International). Leeds awards four types of degrees: the bachelor of science (BS), the master of science (MS), the master of business administration (MBA), and the doctor of philosophy (PhD). Students can specialize in accounting, finance, management and entrepreneurship, and marketing.

Strong ties to the business community provide students with a practical educational experience during their academic careers. The board is composed of high-level executives who provide advice, counsel, and an outside perspective to the dean and his administration while advocating for the school within the external community. Board members spearhead major parts of development programs, strengthen the school's nationwide network in business and political arenas, and provide significant input to curriculum design.

Each year, nationally recognized business executives visit the school to share their working-world experience, their expertise, and often their reflections on life outside of business. Visiting executives are present in classroom settings, informal luncheons, and after-hours meetings, and often hold office hours to meet with students individually. Students enjoy conversations with these professionals, which cover a range of subjects including: the types of courses students are taking, career planning, steps to success, their own successes and failures, and corporate and personal strategies.

The faculty of the school is made up of talented individuals who offer a diverse range of expertise and research activities. The faculty publishes frequently and is internationally recognized for the quality of its research. In addition, many maintain strong ties within the business community and bring a current business perspective to the classroom. Business faculty members strive to deliver the most effective teaching in management theory and real-world applications to ensure a quality learning experience for business graduates.

Facilities and Research Activities

The Leeds School houses resources for the specific needs of business students. The facilities include: the Burridge Center for Securities Analysis and Valuation, the Business Research Division,

Career Connections, the Center for Education on Social Responsibility, the Center for Research on Consumer Financial Decision Making, Eurest Dining, the MBA Business Center, the Office of Diversity Affairs, the Real Estate Center, the Robert H. and Beverly A. Deming Center for Entrepreneurship, smart classrooms, student lounges, Trep Café, Undergraduate Student Services, William M. White Business Library and Information Commons, and other amenities.

The William M. White Business Library (ucblibraries.colorado.edu/business) and Information Commons provides students with a wealth of information pertaining to the business world. Students have access to the business and other libraries via the university libraries online catalog. Many databases are accessible through the wireless network and off campus. These databases, both CD- and web-based, contain a myriad of full-text magazines and journals; business periodical indexes; corporate annual, 10-K, and proxy reports of all the public companies in the United States; short profiles of both American and international companies; demographic and business statistics; industry and market information; and investment reports written by Wall Street analysts. Over 50 computers provide access to the databases and the Internet, and technology-outfitted team rooms are available for group study. Knowledgeable librarians are always available to help navigate the search for information. The Information Commons is open 24 hours, seven day per week and contains 30 of the 50 computers with a full suite of software. These are accessible to students, faculty, and staff of the university. In addition, Leeds has 25 technology equipped team rooms. These rooms support group study and project work. They are available for reservation at leeds.colorado.edu/teamrooms.

The White Business Library is part of the University of Colorado library system, which includes more than two million volumes, more than five million microforms, and more than 24,000 periodicals and serials. The system is also a full depository for United States government, international, and state documents.

All classrooms in the Leeds School of Business are equipped up to campus "smart" classroom technology standards. Technologies in a typical Leeds classroom include: a desktop computer loaded with Microsoft Office Suite applications, video projection system, ceiling speakers for audio, DVD/VCR, iClicker base station, campus cable, and both wired and wireless Internet connections. All classrooms have the flexibility to support a personal laptop with connectivity in place to integrate with the video projection and sound system.

Business Research Division

Established in 1915, the Business Research Division is one of the earliest organized state service-oriented bureaus in the country.

The Business Research Division conducts business, economic, and market research that contributes to the efficient use of Colo-

rado's resources and increases interest in and awareness of the Leeds School of Business. It also is the umbrella organization for the Rocky Mountain Trade Adjustment Assistance Center (RMTAAC) and the Colorado Association of Manufacturing and Technology (CAMT). Through its annual Colorado Business Economic Outlook Forum, held in December, the division has established a base of knowledge that adds value to its work in other areas. In addition to providing companies and state agencies with information to help them make better-informed business and policy decisions, the division conducts research in a variety of areas, including government policy, technology, and real estate. It also prepares a Colorado leading economic indicator series, the Leeds Business Confidence Index, and collects local economic data for various city and county organizations. Research results are distributed through presentations and reports; a quarterly newsletter, the *Colorado Business Review*; and the division's website.

Funding for center activities comes from the Leeds School of Business, the university, state agencies, the federal government, state and local business firms, and from the sale of research products and services.

The centers offer a variety of services, including contract research and support for faculty research, both theoretical and applied. In addition, the centers provide outreach and community service activities and consulting support to small and medium-sized businesses in Colorado.

RMTAAC is one of 12 centers across the nation funded by the Department of Commerce to assist U.S. manufacturers that have been hurt by foreign competition. The assistance is provided on a cost-share basis where RMTAAC typically pays more than 50 percent of the cost.

The purpose of the Trade Adjustment Assistance program is to retain and create U.S. manufacturing jobs. From its location in Boulder, RMTAAC assists manufacturers in the Rocky Mountain region. A typical client has \$10 million in annual sales and 100 employees.

Once a firm has been certified as eligible for assistance, a strategic business plan is developed to improve the firm's competitiveness. Necessary technical expertise is then brought in to implement the recommendations in the plan. Assistance, which normally takes two to three years, can be provided in all the functional areas.

CAMT is a not-for-profit organization designed to help manufacturers improve quality, productivity, and marketing while reducing costs. CAMT's mission is to provide business solutions that give manufacturers a competitive edge. Partial funding is provided by the NIST Manufacturing Extension Partnership and state resources, and some services are available at no cost. Assistance includes hands-on consulting, project management, seminars, industry roundtables, and equipment demonstrations. CAMT professionals have expertise in business and engineering, and also provide access to a network of service providers.

Academic Centers

In addition to the Business Research Division, the school has five centers linking academic programs and the business community—the endowed Robert H. and Beverly A. Deming Center for Entrepreneurship, the Center for Real Estate, the Burridge Center for Securities and Valuation, the Curriculum Emphasis on Social Responsibility (CESR), and the Center for Business Integration.

The Robert H. and Beverly A. Deming Center for Entrepreneurship

The Deming Center for Entrepreneurship starts with a rich academic program led by thought leaders in entrepreneurship. The program is designed to help students develop the intellectual framework necessary for successful entrepreneurial decision making. The in-class experience is enhanced by a beyond-the-classroom experience that provides relevant, hands-on learning.

At the Deming Center, students have an opportunity to be among the pioneers exploring the future of entrepreneurship—sustainable venturing. More than just “greentech” or “cleantech,” sustainable venturing is about harnessing the knowledge, power, and passion of entrepreneurs to create a new generation of businesses that strengthen rather than deplete the environmental and economic resources of our planet.

Through Deming Center activities and the entrepreneurship curriculum, students get a head start, building a strong foundation in accounting, finance, management, marketing, operations, and systems. They study each of these subjects in the context of entrepreneurial decision making. Some of those activities include:

RASEI Student Alliance, or CU Energy Club (cuenergyclub.org), connects the energy and imagination of students at the University of Colorado Boulder to the emerging industries of renewable energy and clean technology. Open to CU students from all departments, CU Energy emphasizes interdisciplinary connections between the arenas of finance, technology, policy, science, and law. In support of the RASEI, and for the benefit of the renewable energy community of Colorado, they focus on six action areas: events, cross-campus collaboration, curriculum development, industry connections, and Web and media development.

CU Energy is an initiative of the Renewable and Sustainable Energy Institute, a joint institute of the University of Colorado Boulder and the National Renewable Energy Laboratory. RASEI has partnered with the Deming Center and other institutions on and off campus to create a hub for cleantech commercialization and start-ups.

CIMB, Colorado Initiative in Molecular Biotechnology—The Deming Center and the Leeds School are currently assessing opportunities to partner with the new Colorado Initiative in Molecular Biotechnology, CU's Biotech Initiative. Led by Nobel Laureate Tom Cech and Leslie Leinwand, the Biotech Initiative will focus on key research priorities, as well as seeking to address the gap in education between “the bench and the bedside.” Traditionally, the gap has been the business skills and expertise that help bring transformational scientific research and medical breakthroughs through the process of regulatory approval and commercialization

TREP Café—This specialty coffee and food service is sponsored by the Deming Center and is run and managed by undergraduates.

The CU New Venture Challenge (cu.nvc.org) is a campuswide initiative connecting students and faculty with teammates in a broad range of disciplines and with mentors from the business community. The goal is to provide knowledge and experience making entrepreneurship accessible to anyone on the CU-Boulder campus with the enthusiasm and creativity required to start a new business.

The Organic Business Initiative is a program of the Deming Center for Entrepreneurship in the Leeds School of Business at CU-Boulder. Its mission is to foster entrepreneurial leaders, world-class scholarship, and research in natural and organic business to create sustainable business models and innovations

that inspire transformation in all sectors. The initiative achieves its mission by acting as a learning laboratory for the industry, and by connecting Leeds students with the natural and organic business community through course work and field projects.

Continued national recognitions affirm the quality of the Deming Center for Entrepreneurship's program and its success creating innovative new areas of entrepreneurial opportunity. The undergraduate and graduate program has been ranked among the top 20 nationally in *U.S. News and World Report's* rankings in Business Specialties Entrepreneurship for the last 10 years.

The center's work in sustainable venturing, natural and organic products, and renewable energy keep it at the forefront of entrepreneurship education. Collaborations across campus, in the business community, and with national government labs have established a model for the intersection of entrepreneurial creativity, technology, and innovation.

Successful collaborations include CU-Boulder's Technology Transfer Office, Renewable Energy Initiative, Entrepreneurial Law Clinic, Music Entrepreneurship Program, Silicon Flatirons Telecommunications Program, and College of Engineering & Applied Science. Partnerships with entrepreneurial incubators, innovation centers, and government agencies include: CTEK Venture Centers, Boulder Innovation Center, Naturally Boulder Products Task Force, the National Renewable Energy Laboratory (NREL), and the National Center for Atmospheric Research (NCAR).

The center's internal business plan competitions and existing programs continue to grow and thrive. Included among those are the undergraduate Certificate in Entrepreneurial Studies, the Collegiate Entrepreneurs Organization, and the TREP Café. At the MBA level, the Graduate Entrepreneurs Association supports activities to encourage and promote student activity in entrepreneurship including Learn from the Best Speaker Series, and the annual Entrepreneurship Retreat. MBAs also continue the legacy of Entrepreneurial Solutions, a for-profit, student-run consulting firm staffed by a select group of MBA students. It serves the business community by providing high value solutions that rely on the expertise of each year's team.

Real Estate Center

The Real Estate Center, founded in 1995, is supported by an industry council with the goal of advancing academic excellence in real estate education and scholarship. The center oversees the school's real estate teaching programs and advises the faculty in designing an integrated curriculum at both the graduate and undergraduate levels. Course work is drawn from the law school, the colleges of architecture and engineering, construction management, and others.

The center creates real-world experiences for students by providing project course work and being a resource for securing internships, mentors, and jobs. It also provides support for faculty teaching and research activities in real estate and, through the Real Estate Foundation, assists the university with its real estate portfolio.

Burridge Center for Securities Analysis and Valuation

The Burridge Center for Securities Analysis and Valuation is dedicated to encouraging and supporting the creation and dissemination of new knowledge about the world financial markets with an emphasis on the U.S. financial markets by:

- facilitating the exchange of ideas and knowledge between professional investment managers, finance scholars, policy makers, and the investing public;

- identifying critical research issues in the theory and practice of security analysis and valuation; and
- encouraging and supporting rigorous qualitative and quantitative research on topics relevant and useful to money managers, valuation experts, and finance academics.

Center for Education on Social Responsibility (CESR)

CESR's goal is to help students become outstanding business leaders of tomorrow by preparing them to meet the ethical challenges posed by a highly competitive, globally connected business world. Accordingly, CESR oversees the inculcation of values and social responsibility discussions in classes throughout the undergraduate and graduate curricula at the Leeds School of Business.

CESR is directly responsible for course development, staffing, and coordination of the required courses: Introduction to Business (freshman level) and Business Applications of Social Responsibility (junior level). CESR offers cutting edge electives such as Leadership Challenges: Exercises in Moral Courage, Business Solutions to Global Poverty: Learning through Service, and Sustainable Operations. Undergraduates wishing to focus on CESR-related topics may earn the Certificate in Socially Responsible Enterprise (SRE). At the MBA level, CESR is responsible for the required Socially Responsible Enterprise course, and electives such as Social Entrepreneurship in Developing Markets and Topics in Sustainable Business, two of the four options for MBAs to acquire the Sustainability Portfolio. CESR developed and administers the Professional Mentorship Program and the annual Conscious Capitalism Conference.

Career Opportunities

Leeds School of Business graduates are prepared for positions in the following fields:

- Accounting—public, private, nonprofit, and governmental
- Banking and other financial institutions
- Consulting
- Corporate financial management
- Entrepreneurship and small business management
- Financial analysis
- Human resources management
- Information systems
- International business
- Investment management
- Management consulting and organization management
- Marketing and sales management
- Nonprofit management
- Operations management
- Real estate
- Recreation and tourism management
- Retailing
- Taxation
- Technology management
- Transportation
- Venture capital

Other graduates hold positions in fields as diverse as business journalism, public relations, city planning, chamber of commerce and trade association management, college administration, and government. The entrepreneurial area of application prepares students to start their own business ventures to take positions in emerging growth companies and the venture capital industry.

Study Abroad

Study abroad programs are available for students interested in international business or in cultural experiences abroad. The

college-sponsored London Seminar in International Finance and Business is a five-week-long program held each summer in the financial district of London and is open to juniors, seniors, and graduate students.

Student Organizations

Listed below are organizations that promote professional interests and provide recognition of scholastic attainment:

- AIESEC, international business association
- Alpha Kappa Psi, professional business society
- AYI (Academy of Young Investors)
- Beta Alpha Psi, national honorary and professional accounting society
- Beta Gamma Sigma, national honorary scholastic society in business
- BizChicks, undergraduate women in business organization
- CEO (Collegiate Entrepreneurs Organization)
- CUAMA, student chapter of the American Marketing Association
- CU Entrepreneurship Organization
- CUFMA (CU Financial Management Association)
- Delta Nu Alpha, honorary transportation society
- Delta Sigma Pi, professional business society
- Doctoral Business Student Association
- Graduate Entrepreneurs Association
- Graduate Women in Business
- IBC (International Business Club)
- ISO (Information Systems Organization)
- Leadership Council
- MBA Association
- MBA Entrepreneurial Solutions LLC
- MBSA (Minority Business Students Association)
- Phi Chi Theta, professional business and economics society
- Real Estate Club
- RMIM (Rocky Mountain Investment)
- SAM (Student Association of Management)
- SHRM (Society for Human Resource Management)
- Sigma Iota Epsilon, professional and honorary management society
- Student Business Board

Leeds School of Business Student Government

As the student governing body of the Leeds School of Business, the Business Board functions as a liaison between the students and the administration. The board helps formulate policies and represents students' interests in many different areas. Thirteen representatives are elected from the student body and serve for two semesters. Three board members, usually officers, are required to serve on the Leeds School of Business Academic Ethics Committee.

Graduation Recognition Ceremony

Every December and May, the Office of the Dean and the Leeds Business Student Government sponsor a recognition ceremony honoring the graduating class, in addition to the university-wide commencement. Graduates and their families are invited to attend.

Undergraduate Academic Excellence

Honors

In recognition of high scholastic achievement, upon recommendation of the faculty, the designation "With High Distinction" or "With Distinction" will be awarded at graduation. To qualify for the "With High Distinction" designation, the student's cumulative University of Colorado GPA must be at least 3.90. For the "With Distinction" designation, the student's cumulative GPA must be at least 3.75 but less than 3.90. In addition, for

these designations, at least 60 semester hours must have been earned at CU-Boulder.

In addition to the distinction of honors, Leeds School of Business students also may participate in the Latin honors granted by the College of Arts and Sciences. Qualified students are encouraged to participate in this program, which coordinates the offering of a variety of honors seminars as well as the granting of Latin honors (cum laude, magna cum laude, summa cum laude) at graduation. Granting of these honors is determined by the Honors Council based on several criteria, including the quality of original scholarly work (generally reported in the form of a thesis). Latin honors are not conferred on a graduate entering in the summer of 1995 and thereafter simply by virtue of high grades. Interested students should consult the Honors Program listing in the College of Arts and Sciences section or contact the Honors Program in Norlin Library.

Dean's List

Students in the Leeds School of Business who have completed at least 12 semester hours of CU-Boulder course work for a letter grade in any single semester with a term GPA of 3.600 or better are included on the dean's list and receive a notation on their transcript.

Beta Gamma Sigma

Membership in Beta Gamma Sigma is an honor that must be earned through outstanding scholastic achievement. Such membership is the highest scholastic honor that a student in a school of business or management can attain.

To be eligible for Beta Gamma Sigma membership, students must rank in the top ten percent of their junior class, the top 10 percent of their senior class, or be among the top 20 percent of those students receiving master's degrees. Also, students completing all requirements for the doctoral degree conferred by a business school are eligible for Beta Gamma Sigma. It should be noted that Beta Gamma Sigma chapters may be chartered only in those schools of business and management accredited by AACSB, the International Association for Management Education.

Scholarships

Each year the college awards a number of divisional and general scholarships. Business scholarships are for students who have completed business course work at the university. The amount and number of the awards vary each year.

Undergraduate Academic Standards

Academic Ethics

Students are expected to conduct themselves in accordance with the highest standards of honesty and integrity. Cheating, plagiarism, illegitimate possession and disposition of examinations, alteration, forgery or falsification of official records, and similar acts or the attempt to engage in such acts are grounds for suspension or expulsion from the university. Reported acts of academic dishonesty must be referred to the Honor Council.

Students are advised that plagiarism consists of any act involving the offering of someone else's work as the student's own. It is recommended that students consult with instructors as to the proper preparation of reports, papers, etc., in order to avoid this and similar offenses. Official college procedures concerning academic ethics are maintained in the Office of Undergraduate Studies.

Standards of Performance

Students are held to basic standards of performance with respect to attendance, active participation in course work, promptness of assignments, correct English usage both in writing and speech, accuracy in calculations, and general quality of scholastic workmanship.

In general, examinations are required in all courses and for all students, including seniors.

Good Academic Standing

To be in good standing, students must have an overall grade point average of C (2.000) or better for all course work taken, and a 2.000 or better for all business courses taken. Students must earn a passing grade for all required courses. Grades earned at another institution are not used in calculating the grade point average at the University of Colorado. This requirement applies to work taken at all university campuses. Physical education activity courses are not included in the overall grade point average.

Any student earning all, or nearly all, failing grades or no academic credit for a semester will not be permitted to register without the dean's approval.

Official double-degree students must maintain required academic standards for the Leeds School as well as their other college.

When semester grades become available, students below the acceptable standard will be placed on probation or suspension. Students are responsible for being aware of their academic status at all times, and late grades and/or late notification do not waive this responsibility. College rules governing probation and suspension are as follows:

Probation. Students whose cumulative grade point average or cumulative business grade point average falls below 2.000 will immediately be placed on probation for one semester. Those students who enroll in any term in the calendar year, excluding summers, after being placed on probation, are expected to raise their cumulative and business grade point average to at least a 2.000.

Scholastic Suspension. Students who still have a cumulative overall and/or business GPA below 2.000 after one semester of probation, will be suspended and will not be able to register for University of Colorado daytime courses on any campus for one academic year, not including summer. Suspended students may choose one of the following four options:

1. They may attend summer session at any campus of the University of Colorado and take classes in order to improve their grade point average in the area of deficiency.
2. They may take Continuing Education Independent Learning courses, and/or Boulder Evening credit classes.
3. They may choose to attend another educational institution and apply for readmission only when they have overcome their grade deficiencies by means of averaging the grades from CU with the grades from the other institution. These transfer grades are used only for the purpose of readmission and do not remain in the University of Colorado grade point average. If they choose this option, upon readmission, students will have two semesters to raise their CU cumulative or business GPA to the required 2.000, provided they make academic progress. If their GPA falls after the first semester, they will again be suspended for another academic year.

In order to attend another university, students must have their proposed course work approved by the Office of Undergraduate Studies of the Leeds School of Business.

4. Students who have been under suspension for one calendar year and elected none of the above may still apply for read-

mission. They will have two semesters to raise their cumulative or business grade point average to at least a 2.000, provided they make academic progress and earn no grade less than C. If their GPA falls after the first semester, they will again be suspended for another academic year or until the grade deficiency has been made up.

Students who make up their grade deficiencies prior to the expiration of the one-year suspension by pursuing any of the above options, and desire to be readmitted, may reapply by following the process outlined below.

Suspended Leeds School students who transfer into another school or college of the university will not be eligible to register for business courses and will be subject to administrative drops.

Readmission. Readmission is subject to enrollment limitations. To be readmitted, students must request readmission by contacting the Office of Undergraduate Student Services at UCB 419, Boulder, CO 80303, **303-492-6515**. They must then provide undergraduate student services with a written request to return. After doing so, they must reapply by submitting an application through the Office of Admissions.

Undergraduate Admission and Enrollment Policies

All students are responsible for knowing and following the provisions set forth below. Any questions concerning these provisions should be directed to the college. The college cannot assume responsibility for problems resulting from a student's failure to follow the policies stated here or from incorrect advice given by those outside the Office of Undergraduate Studies. Similarly, students are responsible for all deadlines, rules, and regulations stated in the General Information section of this catalog. All rules and regulations are subject to change. Any questions should be directed to the Leeds School of Business, Office of Undergraduate Studies, room 227, **303-492-6515**.

Admission to the Business Program

Prospective freshman students are encouraged to complete strong academic programs in high school. A minimum of four academic units should be completed each year with special emphasis given to writing, mathematics, and science skills. For a detailed explanation of the high school preparation desired, see Undergraduate Admission in the General Information section.

Transfer students are expected to demonstrate proficiency in economics, writing, and mathematics. Prospective transfer students should complete courses equivalent to those taken by University of Colorado business freshmen and sophomores.

Intrauniversity Transfer

An undergraduate student who is enrolled on the Boulder campus and wishes to transfer to the Leeds School of Business and Administration may submit a completed application for the fall or spring semester. A cumulative university GPA of 3.300 and a cumulative GPA of 2.000 in business courses is necessary to be considered for admission. In addition, students must have 24 completed semester hours, 12 of which must be graded work at CU-Boulder; 6 credit hours of math, including MATH 1071 or ECON 1078, and MATH 1081 or ECON 1088 or a calculus course; and microeconomics and macroeconomics. Students must earn a grade of B- or better in ECON and MATH to be considered for admission. Intrauniversity transfer students must take a minimum of 30 hours of business courses, including their

area of emphasis, in residence after admission to the college. The deadline is October 1 for spring admission and March 1 for fall admission. Students must view and complete the IUT presentation and quiz. For more information on intrauniversity transfer, see leeds.colorado.edu. Current Leeds students should see “Frequently Asked Questions.”

Registration Stops

A service indicator stop will be placed on students’ records when they have earned 60 credit hours, if they have not yet declared their area of emphasis.

Registration for Business Courses

Business students may register only for those courses for which they have the stated prerequisites.

Administrative Drops

Instructors may recommend to the Office of Undergraduate Studies that students who fail to meet expected course attendance or prerequisites be dropped from their courses at any time during the semester.

Attendance Regulations

Classroom attendance is left to the discretion of the instructor. Students are responsible for understanding each instructor’s policy on attendance.

Students who are unavoidably absent should make arrangements with instructors to make up the work missed. Failure to attend regularly may result in receipt of an *F* in a course. Students who, for illness or other legitimate reasons, miss a final examination must notify the instructor no later than the end of the day on which the examination is given. Failure to do so may result in receipt of an *F* in the course.

Concurrent Registration

Concurrent registration is for graduating seniors who must be enrolled on two campuses of the University of Colorado at the same time in order to fulfill graduation requirements.

Students enrolled in the Leeds School of Business may exercise the concurrent registration option if they are in their graduating semester or are two semesters from graduating and cannot obtain a course necessary to complete a prerequisite sequence. The course must be required for graduation and must not be offered on the Boulder campus, or the course must conflict with another required course in which the student is enrolled. Students from other colleges and schools who wish to take business courses must have the approval of their own college or school before submitting the concurrent registration form.

Scholastic Load

The normal scholastic load of an undergraduate student in the college is 15 semester hours, with a maximum of 18 hours during the fall and spring semesters. A maximum of 3 semester hours may be taken during Maymester. A maximum of 6 hours may be taken during a five-week summer term, with no more than 12 hours total during the 10-week summer session.

Credit Policies

To receive credit, all courses must be listed on the student’s official transcript by the Office of the Registrar. Credit is then evaluated by the Leeds School of Business to determine degree acceptability.

Cooperative Education Credit

No credit is given for work experience or cooperative education programs.

Correspondence Credit

All correspondence courses must have prior approval and be evaluated to determine their acceptability.

Credit by Examination

Advanced Placement (College Board). For students who earn scores of 3, 4, or 5 on Advanced Placement exams, college credit will be given where appropriate. See the General Information section for a comprehensive chart on AP credit.

College-Level Examination Program (CLEP). College credit for approved CLEP subject examinations may be considered, providing the scores are at the 67th percentile or above. Specific information is available in the Office of the Dean.

CLEP credit is only appropriate for nonbusiness requirements and nonbusiness electives. A maximum of 6 hours of credit in any one course area is allowed. CLEP may not be used in course areas where credit has already been allowed. General examinations are not acceptable. CLEP credit is not transferable.

Before a CLEP examination can be taken, students must have prior approval in writing by the Office of Undergraduate Studies.

No Credit

Because of enrollment limitations, business classes may not be taken on a no-credit basis.

Special Sources of Credit

The college reserves the right to accept or reject all special sources of credit that do not have prior approval of the dean.

Independent Study

A maximum of 6 hours of independent study will be accepted as degree credit. Prior approval is required if the work is to be applied as degree credit. A maximum of 3 hours may be taken in any one semester.

Study Abroad Credit

Transfer credit from study abroad programs may be applied to the business degree. Students planning to attend study abroad programs must meet with an undergraduate advisor and have their course selections approved prior to leaving campus.

More specific information about these opportunities is available from the Office of International Education.

Transfer Credit

The school reserves the right to disallow any credit that it deems inappropriate degree credit.

Credits in business subjects transferred from other institutions will be limited to the number of credit hours given for equivalent work in the regular offerings of the university. Only work from regionally accredited institutions will transfer to the college. A maximum of 60 semester hours of credit may be accepted from a two-year school.

Actual equivalent courses may be substituted for required courses. Students must submit a carefully checked catalog description and course syllabus for course equivalency determination.

Business students desiring to apply course work from another institution or University of Colorado campus toward the BS degree in business administration must have prior approval of the

Leeds School of Business. Only nonbusiness requirements or elective credit is acceptable in transfer from other institutions once the student has enrolled.

All courses in the area of emphasis must be taken at the University of Colorado Boulder unless written approval is given by the associate dean of undergraduate studies. Transfer students must take a minimum of 30 hours of business courses, including the area of emphasis, in residence after admission to the college. For more information on transfer of credit policies, see Transfer of College-Level Credit in the Admission section.

Grading Policies

In addition to the campuswide grading system and *pass/fail* policy listed under Registration in the General Information section, the Leeds School of Business enforces the following policies.

Pass/Fail

Students in the Leeds School of Business may not use the *pass/fail* option for courses taken to fulfill General Education Core Requirements, courses used to satisfy the **Minimum Academic Preparation Standards (MAPS)**, **business core requirements**, **business major requirements**, or **business electives**. A grade of *F* when earned in a course taken *pass/fail* will calculate into the GPA as a failing grade. Only nonbusiness electives may be taken on a *pass/fail* basis. A maximum of 6 hours of *pass/fail* credit may be applied toward the BS degree in business administration. *Pass/fail* determination must be made within the first two weeks of the semester and is irreversible. A maximum of 6 hours designated *pass/fail* may be taken in any one semester.

Failed Courses. Failed courses may be repeated, but the *F* will be included in the GPA.

Incomplete Grades

The only incomplete grade given in the college is *I*. An *I* grade is given only when documented circumstances clearly beyond the student's control prevent the student from completing the course. Generally, students should make up the missing work and not retake the entire course. Students should not register for the class a second time, unless directed by the instructor. All *I* grades must be made up within one year or the *I* will be changed to a grade of *F*.

Grade Changes

Final grades as reported by instructors are considered permanent and final. Grade changes will be considered only in cases of documented clerical errors, and must be approved by the associate dean.

Withdrawal

Students may withdraw from the university any time before the beginning of the final examination period.

Students who withdraw during the semester are not assured admission the following semester but will be considered on an individual basis, if space is available.

Undergraduate Degree Requirements

Knowledge and Abilities of Business Students

The following areas of knowledge are central to the undergraduate degree in business administration:

- knowledge of core business concepts that provides students with a comprehensive understanding of the basic functional areas of the discipline;
- knowledge in one or more of the four areas of emphasis, in which students are exposed to in-depth study that provides them with the tools necessary to solve complex business problems;
- awareness of the interrelations between academic theory and practice in order for students to be fully equipped to make effective decisions;
- strong verbal and written communication skills, proficiency in business computer applications, and knowledge of international business environments;
- knowledge of mathematics sufficient to facilitate the application of quantitative principles; and
- awareness of the importance of academic fields in the area of arts and sciences, with special emphasis placed on the study of economics, political science, and other related fields.

In addition, students completing a degree in business administration are expected to acquire:

- the ability to apply basic business principles to solve problems in new and recurring situations;
- the ability to conceptualize and analyze decision-making situations to facilitate solutions in an effective and timely manner; and
- the ability to effectively communicate the results of problem-solving situations, both verbally and in writing.

Having acquired these skills and knowledge, students are able to conceptualize and analyze the concept of business and problem solving as a system. They have the ability to present solutions to business problems in an understandable and useful form. Their education provides them with excellent working knowledge, not only in the field of business, but also in related academic disciplines.

Advising and Records

Business students receive academic counseling from a staff of advisors in the Office of Undergraduate Student Services. During the semester, advisors are available Monday through Friday from 9:00 A.M. to noon and 1:00 P.M. to 4:00 P.M., and by appointment.

Faculty advisors are available to discuss the various areas of emphasis as well as career opportunities. Faculty advising hours will vary each semester.

Students are expected to assume responsibility for planning their program in accordance with college rules and policies.

Students are encouraged to discuss the various emphases available as well as career opportunities with the faculty of the college.

Requirements for the BS (Business Administration) Degree

The bachelor of science degree requires:

Skills Assessment. These requirements are designed to ensure that each student has attained a minimum level of competency in the areas of finite math and Excel.

Total Credits. A minimum of 120 acceptable semester hours of credit, as follows:

Required Courses	Semester Hours
Business core requirements	28
Business area of emphasis requirements	18
Business electives	15
General education nonbusiness requirements	42
Nonbusiness electives	17

The school reserves the right to disallow any credit that it determines is not appropriate academic credit.

Residence. Students must complete 30 hours of business courses in residence on the Boulder campus after admission to the college, including the 18 hours in the area of emphasis and the 9 hours in the area of application (included in the business electives). Students must be in residence at CU-Boulder, and must be registered as business degree students during the term of graduation.

Minimum Grade Point Average.

- A cumulative grade point average of 2.000 in the area of emphasis *and all grades* in the 18 credit hours must have a grade of C- or higher (no *pass/fail* credits can be applied to the area).
- A minimum scholastic cumulative GPA of 2.000 is required for all courses attempted at the university.
- A cumulative 2.000 is required for all business courses attempted at the university.
- A cumulative grade point average of 2.000 is required in the area of application courses.

General Requirements

Business Core Requirements (28 semester hours)

Required Courses	Semester Hours
BCOR 1010 Introduction to Business	3
BCOR 1020 Business Statistics	3
BCOR 2000 Accounting and Financial Analysis	4
BCOR 2200 Introductory Finance	3
BCOR 2300 Adding Value with Management	3
BCOR 2400 Fundamentals of Marketing	3
BCOR 2500 Operations and Information Management	3
BCOR 3000 Business Law, Ethics, and Public Policy	3
BCOR 3010 Business Applications of Social Responsibility	3
Business Area of Emphasis (18 semester hours)	
Students must choose an area of emphasis in accounting, finance, management, or marketing. Areas of emphasis consist of 18 semester hours beyond any business core courses.	

Business Electives (15 semester hours)

Business courses required by specific areas in excess of the 18 hours listed under areas of emphasis may count as business electives.

Nonbusiness Requirements (42 semester hours)

Mathematical skills (Note 1)	6
Written communication (3 hours upper-division)	6
Historical context	3
Cultural and gender diversity	3
United States context	3
Literature and the arts (3 semester hours must be upper-division)	6
Natural sciences	6
Contemporary societies (Note 2)	6
Ideals and values	3

A list of courses that fulfill specific requirements for each area can be found on the CU website at www.colorado.edu/artssciences/students/undergraduate/core.html.

Curriculum Notes

1. Students may complete the math requirements by taking MATH 1071 and 1081. A college-level calculus course may be substituted for MATH 1081. Passing an assessment test for MATH 1071 will exempt a student from the course but carries no credit (a maximum of two attempts).

Two semesters of college calculus will satisfy the 6 hours of math.

2. A minimum of 3 semester hours each of microeconomics and macroeconomics is required.

Nonbusiness Electives (17 semester hours)

Not all classes are accepted as elective credits. Generally, to be acceptable, electives must have a form of assessment such as a term paper and/or examinations, and must be regular classroom-type courses. Course coverage must be college level, must not be repetitious of other work applied toward the degree, must be academic as opposed to vocational or technical, and must be part of the regular university offerings.

Specifically, the college will accept:

- A maximum of 12 hours of nontraditional credit. However, only 6 hours maximum from each of the following categories will apply as a part of the 12 hours: 6 hours of independent study, 6 hours of performance classes (choir, band, guitar, etc.), 6 hours of fine arts (painting, drawing, etc.), and 6 hours of physical education theory and dance. The college will not accept workshops, orientations, practica, certain teacher education classes, or certain classes offered by the College of Arts and Sciences.
- The only approved exceptions to the 6-hour limit in each category are 12 hours of ROTC credit, and 12 hours of PRLC credit.

The previous examples are not exclusive but are intended to be guidelines.

The Leeds School of Business reserves the right to disallow any credit that it determines is not appropriate academic credit. For more information, contact the Office of Undergraduate Student Services.

Senior Audit

Prospective graduates must sign up for a senior audit with the Office of Undergraduate Studies and the Office of Career Development the semester before they plan to graduate. Students planning to graduate in May must request a senior audit by the previous October 1; August graduates must request a senior audit by the previous October 1; and December graduates must request a senior audit by the previous March 1. Failure to do so will delay graduation.

Students desiring to change their area of emphasis after completing the senior audit must request the change through their advisor no later than the first week of class of their final semester. Changes after that time will delay graduation.

Double-Degree Programs

Numerous career opportunities exist for graduates trained in both a specialized field and business. For this reason students may be interested in a double-degree program leading to completion of degree requirements concurrently in two fields. Such double-degree programs have been arranged for engineering, environmental design, journalism, and music, and may be arranged for other professional combinations as well.

The two programs of study proceed concurrently, terminating together with the awarding of two degrees. Normally, at least five years will be needed to complete a double-degree program. No substitutions are allowed, and a minimum of 150 semester hours is required for all double-degree programs.

Students desiring to transfer from double-degree programs to the Leeds School of Business must submit an application to the Office of Undergraduate Studies.

For further information contact the Office of Undergraduate Studies.

Summer Program: Minor in Business

A minor in business consists of 22 semester hours successfully completed in addition to any prerequisite courses.

<i>Required Courses</i>	<i>Semester Hours</i>
BCOR 1010 Intro to Business	3
BCOR 1020 Business Statistics	3
BCOR 2000 Accounting and Financial Analysis	4
BCOR 2200 Introductory Finance	3
BCOR 2300 Adding Value with Management	3
BCOR 2400 Fundamentals of Marketing	3
BCOR 2500 Operations and Information Management	3

In addition to the required 22 semester hours of course work, the following requirements apply to the minor program in business:

- No *pass/fail* work may be applied toward the minor.
- The cumulative GPA for all minor degree course work must equal 2.000 or higher.
- Students will be allowed to apply no more than 9 credit hours of transfer work to BCOR requirements.
- Students must complete prerequisite courses as stated in the course descriptions.
- Successful completion of a computing skills course or successful completion of the Excel assessment exam.

Areas of Emphasis: Leeds School of Business Programs

All business students pursuing a bachelor's degree in business administration must complete the prescribed courses in at least one area of emphasis. The school offers programs in four areas of emphasis: accounting, finance, management, and marketing. An area of emphasis consists of a minimum of 18 semester hours taken at the University of Colorado Boulder. A cumulative grade point average of 2.000 is mandatory for the required area of emphasis courses and all courses must have a grade of C- or higher.

In addition to the area of emphasis, students also may complete an area of application. The school offers the following areas of application: entrepreneurship and small business management, international business, and real estate. An area of application consists of a minimum of 9 semester hours taken at the University of Colorado Boulder. A 2.000 cumulative GPA is required for the required area of application courses. Successful completion of additional requirements in some of these areas of application entitles students to a certificate issued by the dean of the college.

The school also offers a minor program in business for nonbusiness students.

Accounting

The accounting area of emphasis prepares students for careers in which they will develop, analyze, and interpret complex financial data. Accounting majors become experts in "the language of business." This expertise prepares them for careers in CPA firms, business consulting, industry (from Fortune 500 companies to small entrepreneurial enterprises), not-for-profit enterprises, or government. Accountants who develop careers in public accounting may become partners in public accounting and consulting firms. Those who make their careers in industry may have positions as a chief executive officer (CEO), chief financial officer (CFO), chief accounting officer (CAO) or

controller, tax specialist, internal auditor, accounting systems analyst, financial analyst, or managerial accountant. Many students begin their careers in CPA firms and move to industry or government after several years of experience. Employers seek students with skills in communication, interpersonal interactions, analytical thinking, problem solving, and integrity.

The major areas of study in the accounting area of emphasis are 1) Financial Accounting Analysis and Audit and 2) Tax Planning and Compliance. Basic course work in accounting focuses on developing a comprehensive understanding of the theory and concepts underlying the presentation of financial and operating information about an enterprise to external and internal users. Additional course work exposes the student to income taxation of business enterprises and individuals, the practice and principles of auditing and assurance services, and cost management. Specialization is available through graduate work.

Most accounting students from the University of Colorado earn professional credentials within a year of completing their degrees. The two major types of professional certification are certified public accountant [CPA] and certified management accountant [CMA]. The CPA's expertise focuses on presentation and analysis of financial information for an external user. The CMA's primary focus is improving information for the internal user. Professional accountants' expertise in financial matters and their understanding of company operations through financial information prepare them to become key players and critical decision makers for all aspects of business creation, operation, and transformation.

Requirements for the CPA license vary significantly by state. Every state requires that the candidate pass the Uniform CPA Examination (a standard national exam), but the requirements regarding educational background and work experience are state-specific. All states, including Colorado, have passed rules requiring 150 hours of university education. All states write their own rules about the number of hours, specific courses, and experience required for becoming a CPA in that state. **It is very important that the accounting student obtain the guidelines for the relevant state to ensure proper development of his or her degree plan (see NASBA.org).**

The degree options are:

1. The bachelor of science in business administration with an emphasis in accounting. This degree may be earned by a student who takes 18 hours of accounting beyond the core. The 18-hour requirement for the degree does not qualify the student to sit for the CPA exam in any state. This option may be chosen by a student who does not want to become professionally certified but who seeks a career involving accounting and financial analysis in industry, government, or not-for-profit enterprises.

The undergraduate area of emphasis in accounting consists of at least 18 semester hours of course work beyond the undergraduate core requirements.

<i>Required Courses</i>	<i>Semester Hours</i>
ACCT 3220 Corporate Financial Reporting 1	3
ACCT 3230 Corporate Financial Reporting 2	3
ACCT 3320 Cost Management	3
ACCT 4850 Senior Seminar in Accounting	3
Plus 6 credit hours from the following courses:	
ACCT 4250 Financial Statement Analysis	3
ACCT 4440/Income Taxation	3
ACCT 4540 Accounting Information Systems	3
ACCT 4820 Special Topics	3

2. The bachelor of science in business administration with an emphasis in accounting, enhanced by additional course work required to sit for the CPA exam in various states. The student who aspires to earn the CPA credential must always go beyond the basic college requirements for earning an area of emphasis. These requirements vary by state, but always include significantly more hours in accounting. Each student is responsible for determining the relevant requirements for the desired state of residence following graduation (see NASBA.org). These undergraduate courses may not be available at the University of Colorado Boulder.

3. The concurrent bachelor of science/master of science degree in business administration with a concentration in accounting or taxation. The program allows the student to earn both a bachelor's and a master's degree concurrently. Both concurrent degrees may be in accounting, but many students who choose the concurrent degree option plan their programs so that they are awarded a bachelor's degree emphasizing finance or systems and a master's degree in accounting. The program includes an optional (but highly recommended) for-pay/for-credit internship. The degree plan best prepares the student for becoming a CPA. Details on this program are provided under the Graduate Degree Programs section.

Finance

The finance area of emphasis is designed to provide students with in-depth exposure to the theoretical concepts and applied tools and techniques necessary for entry-level positions in various areas of financial management. The principal areas of study include business financial management, investments and derivative securities, and financial markets and institutions.

Finance is an applied discipline with an analytical orientation. Effort is made to develop students' ability to think logically about financial problems and to formulate sound financial decisions and policies. Although the emphasis is on financial management of profit-oriented organizations, the principles and concepts developed are also applicable to not-for-profit and governmental organizations.

It is strongly recommended that finance students take additional accounting courses.

<i>Required Courses</i>	<i>Semester Hours</i>
FNCE 3010 Corporate Finance	3
ACCT 3220 Corporate Financial Reporting I.	3
FNCE 4030 Investment and Portfolio Management	3
FNCE 4850 Senior Seminar in Finance.	3
Plus any three of the following courses:	
FNCE 4000 Financial Institutions Management.	3
FNCE 4040 Derivative Securities.	3
FNCE 4050 Capital Investment Analysis.	3
FNCE 4060 London Seminar in International Finance and Business (3 credit hours can be applied toward the finance area of emphasis).	variable credit
FNCE 4070 Financial Markets and Institutions	3
FNCE 4820 Experimental Course (only one FNCE 4820 course can be applied to meet the finance area of emphasis requirements)	3
In addition, one of the following non-FNCE prefix elective courses can be substituted for one of the above FNCE elective courses to meet finance area of emphasis requirements.	
APPM 4720 Mathematical Finance	3
ESBM 4570 Entrepreneurial Finance	3
INBU 4200 International Financial Management.	3
REAL 4100 Real Estate Finance and Investment Analysis.	3

Quantitative Finance Certificate

The Quantitative Finance Track is one of two tracks that make up the Actuarial Studies and Quantitative Finance Certificate Program and is co-sponsored by the Leeds School of Business and the College of Arts and Sciences. The program is interdisciplinary and rigorous. The goal of the program is to augment the financial education provided by the Leeds School with a more extensive mathematical base.

The analytical demands of business are increasing rapidly and constantly. This program is designed to prepare students for the increased requirements of the most attractive financial analyst positions. In addition, the program provides a solid base for success in graduate studies.

Program requirements are extensive and challenging. Students must meet two separate GPA requirements. First, the overall GPA for all courses applied to certificate requirements must be at least 3.000. In addition, students must meet a requirement specifically for mathematics and statistics courses applied to certificate requirements. This requirement can be met one of two ways, either by achieving a GPA of 2.920 or greater in calculus courses or a GPA of 3.000 or greater in the six mathematics and statistics courses required for the certificate. Most students will begin study during the freshman year and continue throughout their undergraduate career. A brief summary of course requirements is presented below. For a complete list of requirements and further information regarding the quantitative finance track and the related actuarial studies track, see the Actuarial Studies Program website. The certificate program is also described in the College of Arts and Sciences section. Interested students should contact the Chair, Finance Division, Leeds School of Business.

<i>Area of Study</i>	<i>Credit Hours*</i>
Finance and Accounting	25
Mathematics and Statistics	23
Economics	14
Computer Programming.	3

* Number of credit hours may vary according to the specific courses completed.

Management

The Management Area of Emphasis addresses the effective management of people, organizations, operations, information, and technology to improve the performance of diverse private and public organizations. A management emphasis provides students with the managerial skills necessary for success in entry-level positions, and builds foundations for success in management positions of greater responsibility, authority, and leadership. Students completing the management area of emphasis are viewed by potential employers as having the broad-gauged education required in the team-oriented, horizontally organized, and globally competitive environments of the 21st century. The management area of emphasis prepares students for careers managing people, operations, information, and technology, and can serve as a strong complement to a second area of emphasis.

Management students must choose one of three tracks: the first emphasizes human resource management; the second focuses on the management of operations; and the third emphasizes the management of information.

Human Resource Management Track

The human resource management track provides students with the knowledge and skills necessary to earn certification in human resources from the Society of Human Resources, the principal professional society in the field. Graduates are qualified to act as

human resource generalists in small, medium, and large companies; specialists in organizations with focused human resource units; or well-rounded general managers in any organization. There are three required courses in the HR Management track:

<i>Required Courses</i>	<i>Semester Hours</i>
MGMT 3030 Critical Leadership Skills	3
ESBM 3700 Entrepreneurship	3
MGMT 4850 Senior Seminar in Management	3

In addition, students in the HR Management track must complete three of the following elective courses:

MGMT 4010 Redefining the Employee-Employer Relationship	3
MGMT 4020 Hiring and Retaining Critical Human Resources	3
MGMT 4030 Managing Employee Reward Systems	3
MGMT 4040 Individual, Team, and Organizational Development	3

Students focusing on HR are also encouraged to take INBU 4300 International Management.

Operations Management Track

The principal function of any organization is the efficient creation and delivery of products and services to its customers (operations). The operations management track focuses on this creative process and identifies how organizations use productivity, quality, flexibility, timeliness, and technology to compete and prevail in their markets. Students graduating from the operations management track will have a broad understanding of the importance of operations in the success of any organization, and will be qualified to serve in entry-level line management positions and as general managers later in their careers. There are three required courses in the Operations Management track:

<i>Required Courses</i>	<i>Semester Hours</i>
MGMT 3030 Critical Leadership Skills	3
MGMT 3100 Managing Service Operations	3
MGMT 4850 Senior Seminar in Management	3

In addition, students in the Operations Management track must complete three of the following elective courses:

MGMT 4110 Supply Chain Management	3
MGMT 4120 Managing Business Processes	3
MGMT 4130 Sustainable Operations	3
MGMT 4140 Project Management	3

Students focusing on Operations are also encouraged to take MGMT 4150 International Operations.

Information Management Track

Advances in business knowledge and technology have radically changed business systems and processes. As a result, critical to today’s businesses is the ability to get the right information to the right people at the right time, so that both strategic and operational decisions are made properly and quickly. Students majoring in information management will learn to recognize the pivotal roles that information systems play in the business world and to use their knowledge to increase business competitiveness. They are exposed to a range of tools, methods, and techniques for addressing issues such as the selection and implementation of new technologies, and the creation of processes that effectively connect with customers, suppliers, and distributor channels. Students are prepared to be leaders in the effective utilization of information in business. There are three required courses in the Information Management track:

<i>Required Courses</i>	<i>Semester Hours</i>
MGMT 3030 Critical Leadership Skills	3
MGMT 3200 Business Intelligence	3
MGMT 4850 Senior Seminar in Management	3

In addition, students in the Information Management track must complete three of the following elective courses:

MGMT 4210 Systems Thinking	3
MGMT 4220 Business Technologies	3
MGMT 4230 Usable Systems	3
MGMT 4140 Project Management	3

IM students inclined toward careers in technical information systems are encouraged to take programming courses as business electives (OPIM 2010 Visual-language Programming) or as non-business electives (such as CSCI 1300 Programming or ATLS 3519 Applied Java Programming).

Marketing

The marketing area of emphasis hones skills in analysis and decision-making for a wide spectrum of marketing careers in fields such as advertising, market research, brand management, e-business, selling and sales management, distribution, industrial and business-to-business marketing, international marketing, the marketing of services, and marketing for not-for-profit organizations.

Marketing strategies are essential to the communication and sale of both products and services. They are applied across consumer and business markets, across domestic and global boundaries, and across traditional and electronic business environments. Key concepts focus on identifying customer needs and wants, developing products and/or services to satisfy these needs and wants, establishing channels and communications to move products and services through intermediaries to end users, and monitoring transactions and customer responses to guide future activities.

Students should choose from one of the following two plans for taking required marketing courses. Students with a marketing emphasis must take 18 hours of marketing courses beyond BCOR 2400. These students should select Plan A. Plan B is intended for those students wishing to take marketing courses as part of their business electives.

Students pursuing a marketing emphasis (Plan A) will need three semesters to complete the required course work (beyond BCOR 2400).

Plan A

For students with marketing as their area of emphasis

<i>Required Courses</i>	<i>Semester Hours</i>
MKTG 3250 Buyer Behavior	3
MKTG 3350 Marketing Research	3
MKTG 4850 Senior Seminar in Marketing	3

At least two of the following three courses must be taken as prerequisite to MKTG 4850. The remaining course (if not taken as a prerequisite) must be taken as a corequisite to MKTG 4850.

MKTG 4250 Product Strategy	3
MKTG 4550 Advertising and Promotion Management	3
MKTG 4825 Pricing and Channels of Distribution	3

Plan B

The following marketing courses are offered as business elective only:

<i>Required Courses</i>	<i>Semester Hours</i>
MKTG 3150 Sales Management	3
MKTG 3250 Buyer Behavior	3
MKTG 3450 International Marketing	3
(Prerequisite course for marketing 3000 level courses BCOR 2400 Fundamentals of Marketing)	

Prerequisite courses for marketing 4000 level courses:

MKTG 3250 Buyer Behavior	3
MKTG 3350 Marketing Research	3

OPIM Certificate

To prepare students outside of the Management Division with a background in operations and information management, the division offers the OPIM Certificate, obtained by completing any three operations and information management courses (3 credits each, a total of 9 credits) and either a faculty-supervised OPIM project (MGMT 4900 Independent Study) or OPIM internship (MGMT 4910 Academic Internship in Management). In addition, students are required to maintain an overall GPA of 3.000 or higher for the selected course sequence and receive a letter grade of B- or higher in each course. Successful completion of the certificate program will appear on the student's transcript.

Recommended Course Sequences Semester Hours

Accounting Students

MGMT 4210 Systems Thinking	3
ACCT 4540 Accounting Information Systems	3
ACCT 4820 Accounting Information Systems II	3

Finance Students

MGMT 4210 Systems Thinking	3
MGMT 3200 Business Intelligence	3
MGMT 4140 Project Management	3

Management Students (students who declare the IM track are not eligible for the OPIM certificate)

MGMT 4210 Systems Thinking	3
MGMT 3200 Business Intelligence	3
MGMT 4851 Strategy & IT	3

Marketing Students

MGMT 4210 Systems Thinking	3
MGMT 3200 Business Intelligence	3
MGMT 4230 Usable Systems	3

Students must contact the faculty advisor of MGMT to pursue the certificate. The advisor will assist in setting up an independent study or internship. Upon completion of all courses and requirements, students must contact the faculty advisor, who will notify the undergraduate office that the certificate requirements have been completed.

BS/MS Program

The Leeds School of Business also offers a unique program that allows undergraduates the opportunity to earn a bachelor's and master's degree simultaneously. The joint program graduates students with a bachelor's degree from the Leeds School of Business and a master's degree from the College of Engineering in telecommunications. For more information, see itp.colorado.edu.

Career Possibilities

A student completing the OPIM curriculum will be prepared for challenging careers as a business analyst, systems designer, management consultant, project manager, systems integration specialist, and outsourcing coordinator, among others. Career opportunities exist in financial operations, health care, management consulting, retail operations, manufacturing, transportation and logistics, service operations, and government. Organizations rely on people with an OPIM background to provide solutions to important problems of productivity, profitability, and competitiveness for a variety of business systems. When combined with a second area of emphasis in accounting, finance, management, or marketing, additional opportunities exist for analytic positions within these other business areas. Completing the OPIM curriculum also will help students to earn a Supply Chain Management certificate from the Association of

Operations Management (APICS), and a Project Management certificate from the Project Management Institute (PMI).

Areas of Application

Entrepreneurship and Small Business Management

The entrepreneurship and small business management area of application reflects that practically all new job creation in the United States is produced by new ventures and small- to medium-sized emerging growth businesses. In addition, Boulder and the Leeds School of Business are highly recognized for a unique entrepreneurship climate. This application area provides the knowledge, understanding, and skills to create, organize, and manage new ventures or small- to medium-sized and emerging growth businesses as independent entities, or within corporate structures.

Students examine theory and research, but the fundamental thrust of this application area is to experience entrepreneurial cultures through professional experiences such as field projects, meeting entrepreneurs in the classroom, internships, writing feasibility and business plans, and developing other practical skills.

After completing the required lower-division core courses, students may begin the study of entrepreneurial environments in their junior year. Entrepreneurial finance, business plan preparation, and an internship may be taken in the junior and/or senior year.

Students who complete the three required entrepreneurship courses with a 3.300 GPA or better, and who complete an approved 60-hour internship, will qualify to sit for the entrepreneurship honors oral exam. Those who pass the exam will be awarded the Certificate of Excellence in Entrepreneurial Studies.

Required Courses Semester Hours

ESBM 3700 Entrepreneurial Environments	3
ESBM 4570 Entrepreneurial Finance	3
ESBM 4830 Business Plan Preparation	3

NOTE: Students seeking internships should have completed ESBM 3700 by the end of their junior year.

International Business

The globalization of the marketplace has created a need for managers who can function effectively in the international business environment. Despite this movement toward globalization, there remains significant environmental differences (cultural, economic, and political) between countries and/or regions. Managers in an international business must be sensitive to these differences and also must adopt the appropriate policies and strategies for dealing with them.

To address these issues, the Leeds School of Business offers an area of application in international business. In addition to this area of application, students can complete additional requirements that result in an international business certificate. The area of application and certificate program build on the student's understanding of the functional areas of business and provide her or him with an appreciation of the international environment and a framework for developing policies and strategies appropriate for this environment.

Required Courses Semester Hours

INBU 4200 International Financial Management	3
INBU 4300 International Business Management	3
MKTG 3400 International Marketing	3

In addition, the certificate program requires completion of the following:

1. Six hours of economics, geography, or political science beyond arts and sciences course requirements. Courses must be selected from an approved list (students should see the advising office for details).
2. Three hours of foreign language beyond MAPS requirements.
3. Six hours of an international experience. This requirement can be satisfied through either study abroad programs or academic internships of an international business nature.

Finally, it is recommended that students in the international business area of application or the certificate program consider additional electives from the following courses: MGMT 4070 International Operations Management and ACCT 4700 International Accounting.

Real Estate

The real estate area of application is designed to provide students with exposure to the concepts, tools, and techniques necessary for entry-level positions. A career in real estate provides an opportunity for individuals to operate as entrepreneurs whether they are brokers, appraisers, developers, property managers, consultants, or investors. An integrated process is followed in the three application area courses to prepare students for real estate careers.

Area of Application

<i>Required Courses</i>	<i>Semester Hours</i>
REAL 3000 Principles of Real Estate Practice	3
REAL 4000 Real Estate Law and Financing Instruments.	3
REAL 4100 Real Estate Finance and Investment Analysis.	3

The real estate certificate program allows students to broaden their knowledge and understanding of real estate through a multidisciplinary focus, whereby courses are taken outside of the Leeds School of Business. For this program, students must complete the courses listed above (REAL 3000, 4000, and 4100), 9 credits of nonbusiness electives listed below, and an academic internship. See the Real Estate center for a list of the approved electives and internships.

Certificate

<i>Required Courses</i>	<i>Semester Hours</i>
Area of application courses listed above	9
College of Architecture and Planning courses.	6
Construction management course in the Department of Civil, Environmental, and Architectural Engineering.	3
Academic internship in real estate practice or related area	3

Graduate Degree Programs

The Leeds School of Business offers programs leading to the master of business administration (MBA), master of science (MS) emphasis in accounting, and doctor of philosophy in business administration (PhD) degrees. The Leeds School also offers a part-time MBA program called the Evening MBA that leads to the same degree as the full-time MBA program. Dual degree options available in the MBA program include juris doctor/master of business administration (JD/MBA), master of business administration/master of arts (MBA/MA) in fine arts, master of business administration/master of arts (MBA/MA) in anthropology, mas-

ter of business administration/master of arts (MBA/MA) in Germanic and Slavic Languages, master of business administration/master of arts (MBA/MA) in theatre and dance, master of business administration/master of science (MBA/MS) in environmental studies, master of business administration/master of science (MBA/MS) in computer science, master of business administration/master of science (MBA/MS TLEN) in telecommunications. Dual degree options are not available in the Evening MBA program.

These programs are open to qualified individuals who hold a bachelor's degree from a regionally accredited college or university, or a recognized international university, without regard to their undergraduate major. The Leeds School of Business also offers a concurrent BS/MS program in accounting that awards the bachelor's and master's degrees simultaneously.

Master of Business Administration

The breadth of training that master of business administration graduates receive prepares them to become high-level managers or become involved in new business ventures in a challenging and evolving business environment.

The MBA program is rigorous and comprehensive, and demands student commitment. The core curriculum provides a set of broad-based, integrative skills, rather than narrowly focused, highly specialized skills. Core courses provide a solid foundation in both business management and analytical disciplines, a foundation that fosters continued career growth. In addition to core courses stressing key functional areas of business, students can choose electives specific to their chosen area of concentration.

The case study method and student field projects are used broadly throughout all courses, and common areas of study such as ethics, technology, communications, and international issues are integrated throughout much of the curriculum. Students learn about management theory and its practical applications in "real-world" situations. Lectures, seminars, team teaching, team projects, and guest lectures are various approaches taken by the faculty to generate new ideas and encourage student input.

Requirements for Admission to MBA Programs

For all MBA programs, the admissions committee reviews the applicant's complete application, with consideration given to the following:

- An applicant's academic record.
- An applicant's score on the Graduate Management Admission Test (GMAT). The GMAT must be retaken if the test date was more than five years ago.
- International students must provide a test showing proof of English language proficiency.
- An applicant's work experience.
- Written essays.
- Personal interviews.
- Letters of recommendation.

In addition, a nonrefundable application fee is required of all applicants. See the specific MBA application for more information. The online application is on the MBA program website at mbaep.colorado.edu/fulltime/index.html.

The mailing address for additional materials is Leeds School of Business, University of Colorado Boulder, 419 UCB, Boulder, CO 80309-0419, or call 303-492-8397.

Diversity

The Leeds School of Business encourages qualified individuals to apply regardless of gender, race, religion, national origin, age, physical limitation, or sexual orientation.

MBA Policies and Requirements

For current, detailed information regarding the MBA program, contact the Leeds School of Business.

Advising. All graduate students are required to check in with an advisor during the first semester of study to ascertain degree requirements. MBA students should check in with the student services manager for the MBA program.

Minimum Hours Required. Students entering the MBA program take a prescribed sequence of classes before beginning elective courses. A minimum of 55 credit hours is needed to graduate. Students entering the MBA program are expected to complete the degree in two years. Transferred course work is not accepted into the MBA program.

Core Course Waiver. Students may not waive core courses.

Courses Taken Outside the Leeds School of Business (limits). MBA students may enroll in up to 12 hours of elective course work outside the Leeds School of Business provided the remaining 15 hours of electives are taken within the MBA program with approval from the MBA programs office. Course work taken outside the Leeds School of Business must be at the graduate program level. Students may not take courses outside the University of Colorado Boulder and count them toward the degree. Students should contact individual departments for course listings and registration requirements for nonbusiness courses.

Grades and Quality of Work. All courses applied toward the 55 credit hours must be taken for a grade. Courses in which a C- or below is received are not accepted for credit toward the 55 credit hours and may have to be retaken. In this case, both grades are factored into the GPA. To withdraw from an elective course and receive a grade of W, a student must be earning a passing grade in that course. Students normally are not permitted to withdraw from courses after the sixth week of the semester. Students in the MBA program may not withdraw from specified, lock-step course work. An *I* is an incomplete grade. Use of the *I* is at the discretion of the course instructor and/or the dean. Students must ask for an incomplete grade. An *I* is given only when students, for reasons beyond their control, have been unable to complete course requirements. A substantial amount of work must have been satisfactorily completed before approval for such a grade is given.

Calculating GPAs. For the purpose of calculating GPAs for MBA student rankings and probation, only course work taken within the business school is counted.

Withdrawal. Students who choose to leave the program must formally withdraw. Failure to do so will result in assessment of full tuition and fees. Students who withdraw must reapply to the program if they wish to continue their studies. Applicants who reapply are evaluated with current applicants to the program. Students who are granted re-admission must complete the requirements of the current program. Course work taken more than five years earlier must be validated by examination in order to count toward the degree and may be considered elective credit.

Probation. A student whose cumulative GPA falls between a 2.500 and 3.000 is placed on academic probation. The student is allowed to remain on probation for one semester as long as reasonable progress is made to improve the GPA. The MBA director for academic programs determines whether reasonable progress is being made and whether the student can graduate with a 3.000 in the stated time limit.

Suspension. A student whose cumulative GPA falls below 2.500 at any time is automatically suspended from the program. A suspended student is eligible to petition for readmission after one year.

Juris Doctor/Master of Business Administration Degree

The purpose of this dual-degree program is to allow students admitted to both the School of Law and the Leeds School of Business to obtain the juris doctor (JD) and the master of business administration (MBA) degrees in four (or fewer) years of full-time study. The program is designed to train students for careers in which business administration and law overlap.

Admission

To be eligible for the JD/MBA dual-degree program of the School of Law and the Leeds School of Business, a student must apply separately to and be admitted by each of the two schools under their respective admission procedures and standards.

Students may elect the dual-degree program at the time of initial application to both schools, or they may apply for the dual-degree program during their first year of study in the degree program of either school.

Course of Study

A student enrolled in the JD/MBA program may commence studies under the program in either the School of Law or the Leeds School of Business. Dual-degree students are strongly encouraged to begin their course of study at the School of Law. However, a student must take the first year of the JD curriculum as a unit exclusively in the School of Law. Likewise, a student must take the first year of the MBA curriculum as a unit exclusively in the Leeds School of Business. Students can then take additional courses necessary to meet the requirements of the degree programs of the two schools.

No student in the dual-degree program shall be allowed to take fewer than 9 semester hours or more than 16 semester hours during any term (excluding summer terms) without receiving the consent of the program advisor in each school in which courses are being taken.

Credit for Law Courses in the JD/MBA Program

The Leeds School of Business grants credit toward the MBA degree for up to 12 semester hours of acceptable performance in law courses taken by a JD/MBA student at the School of Law. Core courses required in the law school program cannot be counted toward the 12 hours. A student must earn at least a 77 grade in a law school course to be accepted for Leeds School of Business credit. For credit to be granted, the law school courses must be approved before enrollment by an MBA advisor. Only courses taken after admission into the MBA program are credited toward the degree.

Grading in the Dual-Degree Program

Leeds School of Business credit for courses completed in the School of Law as part of the joint degree program is recorded on a *pass/fail* basis and is not included in the required MBA 3.00 cumulative average.

Master of Business Administration/ Master of Science—Telecommunications

The Leeds School of Business, in conjunction with the College of Engineering and Applied Science, offers a dual-degree program

resulting in a master of business administration (MBA) and master of science in telecommunications (MS/TLEN). The dual-degree program combines broad-based business management study with an in-depth understanding of telecommunications technology. This program prepares students to be competent, effective managers in the telecommunications industry.

Admission

An individual must apply separately and be admitted to both programs under each school's or college's admission procedures and standards. Applicants are encouraged to apply to the programs concurrently.

Course of Study

Students in the MBA/MS in telecommunications spend the first year of the dual-degree program exclusively in either the business school or the telecommunications program. In the second year, courses are taken exclusively in the other department. In the third year students will take both MBA and telecommunications elective courses to complete both master's degrees.

Credit for Courses

Dual degree students are required to complete 43 hours of MBA course work and 36 hours of telecommunications course work. A minimum of 79 approved credits must be completed to earn both degrees.

Master of Business Administration/ Master of Fine Arts

The Leeds School of Business, in conjunction with the Department of Art and Art History, offers students the ability to earn an MBA and an MA in fine arts through a three-year dual-degree program. Students in the MBA/MA dual-degree program pursue careers in digital marketing, web design, e-commerce, gallery/museum administration, and private art consulting.

Admission

Applicants must apply to both programs and must meet the application requirements for each program separately. Students may apply simultaneously to both programs or may apply to the second program after starting the first master's program, provided they do so during the first year of study.

Course of Study

Students in the MBA/MA in fine arts spend the first year of their dual-degree program exclusively in either the business school or the fine arts program. In the second year, courses are taken exclusively in the other department. The third year offers students the opportunity to take both MBA and fine arts elective courses.

Credit for Fine Arts Courses in the MBA/MA Fine Arts Program

Dual-degree students in studio arts are required to complete 43 hours of MBA course work and 45 hours of fine arts course work. Dual-degree students in art history are required to complete 43 hours of MBA course work and 30 hours of fine arts course work.

Master of Business Administration/ Master of Arts Theater and Dance

The Leeds School of Business, in conjunction with the Department of Theatre and Dance, offers students the ability to earn an MBA and an MA in theatre or dance through a three-year

dual-degree program. Students in the MBA/MA dual-degree program pursue careers in a wide variety of fields and jobs in the world of the performing arts. Types of organizations include theatre companies, dance companies, opera companies, symphonies, arts councils, performing arts complexes, civic auditoriums, and arts presenters.

Admission

Applicants must apply to both programs and must meet the application requirements for each program separately. Students may apply simultaneously to both programs or may apply to the second program after starting the first master's program, provided they do so during the first year of study.

Course of Study

Students in the MBA/MA in theatre and dance spend the first year of their dual-degree program exclusively in either the business school or the theatre/dance program. In the second year, courses are taken exclusively in the other department. The third year offers students the opportunity to take both MBA and theatre/dance elective courses.

Credit for Courses

Dual degree students are required to complete 43 hours of MBA course work and 24 hours of theatre/dance course work. A minimum of 67 approved credits must be completed to earn both degrees.

Master of Business Administration/ Master of Environmental Studies

The MBA/MS in environmental studies enables students to earn an MBA and an MS in environmental studies over three or four years. Students in the MBA/MA program have career interests that combine corporate business and environmental protection, the management of renewal energy, water conservation, or environmental programs.

Admission

Applicants must apply to both programs and must meet the application requirements for each program separately. Students may apply simultaneously to both programs or may apply to the second program after starting the first master's program, provided they do so during the first year of study.

Course of Study

Students in the MBA/MS in environmental studies spend the first year of the dual-degree program exclusively in either the business school or the environmental studies department. In the second year, courses are taken exclusively in the other department. The remaining year(s) students may take both MBA and environmental studies electives.

Master of Business Administration/ Master of Computer Science

The MBA/MS in computer science enables students to earn an MBA and an MS in computer science over three or four years. Students in this MBA/MS program have career interests that combine corporate business and technology.

Admission

Applicants must apply to both programs and must meet the application requirements for each program separately. Students may apply simultaneously to both programs or may apply to

the second program after starting the first master's program, provided they do so during the first year of study.

Course of Study

Students in the MBA/MS in computer science spend the first year of the dual-degree program exclusively in either the business school or the computer science department. In the second year, courses are taken exclusively in the other department. The remaining year(s) students may take both MBA and computer science electives.

Master of Business Administration/Master of Anthropology

The MBA/MA in anthropology dual-degree program enables students to earn an MBA and an MA in anthropology simultaneously over three or four years depending on the student's sub-discipline in anthropology. Students in this MBA/MA program pursue careers in managing the business aspects of archaeological projects, working in the growing field of corporate cultural anthropology, and ethnography or museum management.

Admission

Applicants must apply to both programs and must meet the application requirements for each program separately. Students may apply simultaneously to both programs or may apply to the second program after starting the first master's program, provided they do so during the first year of study.

Course of Study

Students in the MBA/MA in anthropology spend the first year of their dual-degree program exclusively in either the business school or the department of anthropology. In the second year, courses are taken exclusively in the other department. The remaining year(s) offers students the opportunity to take both MBA and anthropology elective courses.

Master of Business Administration/ Master of Germanic and Slavic Languages

The MBA/MA in Germanic and Slavic languages dual-degree program enables students to earn an MBA and an MA in Germanic and Slavic languages simultaneously over three or four years. Students in this MBA/MA program pursue careers in international business.

Admission

Applicants must apply to both programs and must meet the application requirements for each program separately. Students may apply simultaneously to both programs or may apply to the second program after starting the first master's program, provided they do so during the first year of study.

Course of Study

Students in the MBA/MA in Germanic and Slavic languages spend the first year of their dual-degree program exclusively in either the business school or the department of Germanic and Slavic languages. In the second year, courses are taken exclusively in the other department. The remaining year(s) offers students the opportunity to take both MBA and Germanic and Slavic languages elective courses.

Master of Science in Business Administration

There are two paths to the master of science in business administration (MS) degree with an emphasis in accounting or taxation. The first is the concurrent bachelor's and master's degree program. In this program, both the bachelor's and master's degrees are awarded following the completion of 150 specified hours of course credit. An academic internship is a highly recommended option within this requirement. The program is designed for students pursuing the 150-hour educational background requirement for CPAs (required by most states) and is a carefully integrated and challenging program of study. Upon completion of 90 credit hours, undergraduate students in the Leeds School of Business may apply to the program and begin taking graduate courses and an internship during their senior year. This program provides an excellent foundation for careers in professional accounting.

The second path is an independent "stand alone" master's degree program. Students with undergraduate degrees other than accounting or business may also be admitted to the program, but may have to fulfill deficiency requirements in addition to the regular program requirements.

Students in both programs choose an area of study that focuses on financial accounting or taxation.

Note that stand alone MS students are required to complete all degree requirements within four years. Graduate students are not given preferential enrollment in undergraduate courses needed for the deficiency requirements.

Minimum Requirements

Accounting and taxation students must complete a minimum of 30 semester hours of graduate-level work. The newly accepted student should consult with the faculty advisor for the program to develop an individualized degree plan. No thesis is required.

Students in the Master of Science in Business Administration programs are governed by the rules of the Graduate School. See that section of this catalog.

Emphasis in Financial Accounting/Audit

The expanding role and increased breadth of knowledge expected of accountants make graduate study in accounting highly desirable. Courses offered for the accounting area of emphasis prepare students for high-level, professional careers in the field. The graduate programs in accounting are designed to provide a broad understanding of accounting issues as well as to enhance an undergraduate degree in accounting. They also provide the opportunity to develop knowledge in a related minor area, such as economics, finance, information systems, management, marketing, taxation, or telecommunications. Note that these supporting fields may require some undergraduate level course work beyond core requirements.

Emphasis in Taxation

The master of science in business administration that emphasizes taxation integrates accounting and law school courses. Some of the tax and law courses are strictly tax-related while others include related legal aspects of a particular subject area. The combination of courses is designed to give exposure to taxation from the accounting and law faculty perspectives.

The purpose of this program is to prepare students for professional careers as Certified Public Accountants (CPAs) specialized in taxation. Therefore, the student will:

- develop a refined ability to recognize tax problems and understand tax issues in a broad economic framework;
- research and present well-developed strategies or solutions to tax problems; and
- develop creative tax planning opportunities in a variety of contexts.

Doctor of Philosophy in Business Administration

A PhD degree recognizes scholarly achievement and is the highest academic honor that CU-Boulder bestows. The PhD in business administration prepares scholars to be preeminent in their field of expertise. The program focuses on developing the necessary skills for the design and execution of original, innovative research and for the dissemination of knowledge through teaching and writing.

Requirements for Admission

To preserve the individualized character of the PhD program and its quality, the number of students is limited and the application process is very competitive. Students are admitted for study in a specific area for doctoral work. The Leeds School of Business currently offers the following areas of study: accounting; finance; marketing; information management; operations management; and strategic, organizational, and entrepreneurial studies.

For more information on the application requirements and process, write Leeds School of Business, PhD Program, University of Colorado Boulder, 419 UCB, Boulder, CO 80309-0419; call 303-492-4984; or visit leeds.colorado.edu/phdprogram.

Background, Prerequisites, and Deficiencies

Each student must have a background in mathematics at or beyond calculus. Based on experience, background, and at the discretion of the academic advisor and/or division chair and/or the doctoral program director, additional prerequisites may be required of the PhD student.

Requirements for the Degree

Most curriculum and program requirements are decided by the division. Consult the PhD program advisor of the appropriate division for information regarding course selection, graduate teaching program certification, research internships, and other division requirements. Students must complete all Graduate School, Leeds School of Business, and division requirements to be conferred the PhD in business administration.

The newly accepted PhD student should consult with the division chair and/or academic advisor to develop an individualized degree plan. Students are required to become proficient in their primary area of study. In addition, all students are required to complete course work in a field outside their division. These “second fields” are governed by the departments offering the course work but typically require 6 to 12 credit hours. The second field may also require an additional comprehensive exam.

Course Work

All doctoral students are required to complete at least 30 hours of course work and 30 hours of dissertation credit at CU-Boulder. Additional course work may be required as determined by the academic advisor. To comply with this 30-hour requirement, a course must have been taught by a member of the university’s graduate faculty, must be at the 5000 level or above, and the student must achieve a grade of B- or better.

Courses must be approved by the student’s academic advisor before registration. Most students are required to complete 7000- and 8000-level doctoral seminars.

For full-time status, the Leeds School of Business requires successful completion of 5 credit hours of course work each semester. During and after comprehensive exams, full-time status requires completion of a minimum of 5 dissertation hours each semester.

Transfer of Credit

A maximum of 9 semester hours of courses taken at other schools (this includes other University of Colorado campuses) or taken as a special student at the university may be transferred into the doctoral program. Course work must be recent and of doctoral-level quality. A doctoral student must establish a satisfactory record of residence in the doctoral program before the course work is eligible for transfer. The transfer of credit must be approved by the division, the doctoral program director, and the Graduate School. There is no guarantee any course work will be accepted for transfer.

Residency

The Leeds School of Business adheres to the Graduate School rules regarding residency. All students in the doctoral program are expected to be full-time students on the Boulder campus (at least during residency and prior to completing the comprehensive examinations). Doctoral students are expected to be available to participate in colloquia and other informal academic discussions. Full-time employment outside the university is prohibited during the residency period. Any off-campus status must be approved by the division and the doctoral program director.

Time Limit

Doctoral students have six years from the commencement of course work to complete all requirements of the degree, but most students complete their program within five years.

Comprehensive Examination

Before admission to candidacy, a doctoral student must pass a comprehensive examination in the field of concentration. The examination may be oral, written, or both, and will test the student’s mastery of a broad field of knowledge, not merely the formal course work completed. Each division will determine the required content, length, and standards of evaluation for the exam. Check with the division as to the specific requirements for the comprehensive exam.

Admission to Candidacy

Students are admitted to candidacy according to Graduate School procedures and requirements. Students shall complete all course work and any other requirements listed on their degree plans, earn at least four semesters of residence, and successfully pass the comprehensive exams before admission to candidacy is approved by the Graduate School. In addition, requirements related to academic quality of work, graduate-level course work, the minimum number of course hours, and graduate faculty membership must be met before admission to candidacy is approved.

Dissertation

A dissertation based upon original investigation showing mature scholarship and critical judgment, as well as competence with research tools and methods, must be written on a subject approved by the candidate’s dissertation committee. To be ac-

ceptable, the dissertation must be a significant contribution to knowledge in the candidate's primary field.

Final Examination (Defense)

Upon recommendation of the candidate's doctoral dissertation committee, a final oral examination shall be given. This examination covers both the dissertation and the primary field of study. The oral examination is open to the public.

Filing the Dissertation

The dissertation must comply in mechanical features with the University of Colorado Graduate School Thesis and Dissertation Specifications. The dissertation must be filed with the Graduate School by the posted deadline for the semester in which the degree is to be conferred.

Faculty— Leeds School of Business

MANUEL LAGUNA, interim dean of the Leeds School of Business; associate dean for faculty; professor of operations management. BS, Monterrey Technologie at Queretaro, Mexico; MS, PhD, University of Texas at Austin.

WILLIAM S. APPENZELLER, assistant professor of recreation emeritus.

DAVID B. BALKIN, professor of strategy and organization management. BA, University of California, Los Angeles; MA, PhD, University of Minnesota.

JOHN JAY BALLANTINE, senior instructor of business law. BS, Purdue University; MBA, Indiana University; JD, University of Colorado.

F. KENDRICK BANGS, professor of business and administration emeritus.

WILLIAM BAUGHN, professor of finance emeritus.

CHAUNCEY M. BEAGLE, associate professor of accounting emeritus.

WILMAR F. BERNTHAL, professor of management and organization emeritus.

SANJAI BHAGAT, professor of finance. BTech, Indian Institute of Technology; MBA, University of Rochester; PhD, University of Washington.

R. WAYNE BOSS, professor of strategy and organization management. BS, MPA, Brigham Young University; DPA, University of Georgia.

THOMAS A. BUCHMAN, associate professor of accounting. BS, MS, PhD, University of Illinois.

CATHLEEN S. BURNS, director of executive education; senior instructor of accounting. BS, Miami University; MBA, Xavier University; PhD, New Mexico State University.

MEG CAMPBELL, associate professor of marketing. AB, PhD, Stanford University.

PHILIP R. CATEORA, professor of marketing emeritus.

HUI CHEN, assistant professor of accounting. BA, MA, Northeast Normal University, China; MBA, Stuttgart Institute of Management and Technology; PhD, University of Tennessee.

ZEYUN (JEFF) CHEN, assistant professor of accounting. BBA, Fudan University; MBA, University of Louisiana; PhD, University of Houston.

MARK R. CORRELL, senior instructor of business economics emeritus.

JEROME C. DARNELL, professor of finance emeritus.

JOHN D. DEMAREE, associate professor of management science and information systems emeritus.

ROBERT DONCHEZ, instructor of finance. BS, Lehigh University; MBA, Fordham University.

CALVIN P. DUNCAN, associate dean for undergraduate program; associate professor of marketing. BS, MBA, University of Colorado; PhD, Indiana University.

GARLAND DURHAM, assistant professor of finance. BS, University of Kentucky; MS, University of Illinois; PhD, University of North Carolina.

STEVEN ENGEL, senior instructor of marketing. BA, University of Colorado; MBA, University of Oregon.

MAW DER FOO, assistant professor of management. BA, National University of Singapore; PhD, Massachusetts Institute of Technology.

DAVID M. FREDERICK, associate professor of accounting. BS, University of Colorado; PhD, University of Michigan.

BRET FUND, assistant professor of management. BA, MA, Brigham Young University; PhD, Penn State University.

H. LEE FUSILIER, professor of business law emeritus.

JOHN J. GARNAND, senior instructor of business economics emeritus.

FRED W. GLOVER, professor of management science and operations research emeritus.

CHARLES R. GOELDNER, professor of marketing emeritus.

KENNETH R. GORDON, senior instructor of operations management. BA, University of Iowa; MS, PhD, Northwestern University.

SUE JUNG GRANT, assistant professor of marketing. BA, University of Pennsylvania; MBA, PhD, Northwestern University.

DAVID GROSS, instructor of finance. BA, New York University; MBA, Fordham University; PhD, University of Colorado.

KATHERINE A. GUNNY, assistant professor of accounting. BS, MS, University of California, Davis; PhD, University of California, Berkeley.

RENÉE HALL, senior instructor of accounting; director of MS program in accounting. BA, Whitman College; MA, University of Chicago; MS, PhD, Texas A&M University.

MATHEW HAYWARD, assistant professor of management. BC, University of Melbourne; PhD, Columbia University.

CHUAN HE, assistant professor of marketing. BA, Memorial University of Newfoundland; MA, University of Toronto; PhD, Washington University.

KISHEN IYENGAR, instructor of operations and information management. BS, MBA, Osmania University; MS, University of Texas–Dallas; PhD, University of Texas–Arlington.

BETTY R. JACKSON, professor of accounting emerita.

ALAN JAGOLINZER, associate professor of accounting. BS, Pennsylvania State University; MBA, Syracuse University; PhD, Pennsylvania State University.

PAUL E. JEDAMUS, professor of management science and information systems emeritus.

TRACY JENNINGS, instructor of management. BA, Williams College; MBA, PhD, University of Denver.

HOWARD G. JENSEN, associate professor of accounting emeritus.

RANDY JOHNSTON, senior instructor of accounting. BS, MS, Clarkson University; MEd, St. Lawrence University.

BJORN JØRGENSEN, Tisone Chair of Accounting; associate professor of accounting. MS, University of Aarhus; PhD, Northwestern University.

MATTHIAS KAHL, assistant professor of finance. M Phil, University of Cambridge; MA, PhD, University of Pennsylvania.

JOHN B. KLINE, professor of management and organization emeritus.

CHRISTINE S. KOBERG, associate professor of strategy and organization management emerita.

BURTON A. KOLB, professor of finance emeritus.

LAURA KORNISH, assistant professor of marketing. BA, Harvard University; MS, PhD, Stanford University.

KENNETH A. KOZAR, professor of information systems. BS, MS, PhD, University of Minnesota.

KAI LARSEN, associate professor of information systems. PhD, Nelson A. Rockefeller College, University of Albany, State University of New York.

STEPHEN R. LAWRENCE, faculty director, Deming Center for Entrepreneurship; associate professor of operations management. BS, MS, Purdue University; MS, PhD, Carnegie Mellon University.

JOSEPH LAZAR, professor of business law emeritus.

J. CHRIS LEACH, professor of finance. BS, Oral Roberts University; MBA University of New Mexico; PhD, Cornell University.

JINTAE LEE, associate professor of information management. BA, University of Chicago; MA, Harvard University; MPhil, University of Cambridge, England; PhD, Massachusetts Institute of Technology.

BARRY L. LEWIS, professor of accounting emeritus.

DONALD R. LICHTENSTEIN, professor of marketing. BS, University of Alabama; PhD, University of South Carolina.

A. JAMES LoPRESTI, senior instructor of management. BA, King's College; MS, PhD, University of Denver.

P. JOHN LYMBERPOULOS, professor of finance emeritus.

JOHN G. LYNCH, JR., Ted G. Anderson Professor of Free Enterprise; professor of marketing. BA, MA, PhD, University of Illinois.

JANET MABON, instructor of accounting. BS, University of Arizona; MS, New Mexico State University.

RAYMOND D. MACFEE JR., senior instructor in accounting. BS, Saint Francis College; MBA, Pennsylvania State University; CPA.

JAMES MARLATT, senior instructor of systems. BS, University of Tennessee; MS, Georgia State University.

STANLEY MARTIN, senior instructor of finance emeritus.

SHARON MATUSIK, associate professor of strategic management. BA, Colby College; PhD, University of Washington.

A. PETER MCGRAW, assistant professor of marketing. BA, MEd, Rutgers University; MA, PhD, Ohio State University.

RONALDW. MELICHER, President's Teaching Scholar; William H. Baughn Distinguished Scholar; professor of finance. BS, MBA, DBA, Washington University, St. Louis.

G. DALE MEYER, professor of strategy and organization management emeritus.

RAMIRO MONTEALEGRE, director, international management program; associate professor of information systems. BSI, Universidad Francisco Marroquin; MS, Carleton University; DBA, Harvard University.

REX MOODY, senior instructor of marketing. BA, Colorado State University; MBA, University of New Mexico; PhD, University of Colorado.

PAGE MOREAU, associate professor of marketing. BA, Davidson College; MBA, Tulane University; PhD, Columbia University.

SUSAN MORLEY, senior instructor of accounting. BA, University of Kentucky; MS, JD, University of Colorado.

EDWARD J. MORRISON, professor of strategy and organization management emeritus.

NATALIE MOYEN, associate professor of finance. BSc, Université de Moncton; MA, Queen's University of Kingston; PhD, University of British Columbia.

FRANK MOYES, distinguished executive in residence; senior instructor of entrepreneurship. BA, Pennsylvania State University; MBA, University of Pennsylvania.

JAMES E. NELSON, associate professor of marketing emeritus.

THOMAS NELSON, senior instructor of finance. BA, MBA, PhD, University of Colorado.

MATTHIAS NILSSON, assistant professor of finance. MS, PhD, Stockholm School of Economics.

IULIAN OBREJA, assistant professor of finance. BA, MS, University of Bucharest; MA, University of Rochester; MSIA, PhD, Carnegie Mellon University.

MICHAEL PALMER, professor of finance. BS, MS, San Diego State University; PhD, University of Washington.

DON PARKIN, professor of marketing emeritus.

LIANG PENG, assistant professor of real estate. BS, MS, Renmin University; MPhil, MA, PhD, Yale University.

ROBERTO PINHEIRO, assistant professor of finance. BA, University of Sao Paulo; MA, Pontifical Catholic University of Rio de Janeiro; PhD, University of Pennsylvania.

CLYDE W. RICHEY, professor of real estate emeritus.

RALPH G. RINGGENBERG, associate professor of finance emeritus.

STEVEN K. ROCK, associate professor of accounting. BS, MBA, Shippensburg University; PhD, Pennsylvania State University.

JOSEPH G. ROSSE, professor of strategy and organization management. BS, Loyola University of Los Angeles; PhD, University of Illinois.

DAVID F. RUSH, professor of finance emeritus.

STACY SATURAY, instructor of management. BS, Arizona State University.

RUDOLPH SCHATTKE, professor of accounting emeritus.

FRANK SELTO, professor of accounting. BSME, Gonzaga University; MSME, University of Utah; MBA, PhD, University of Washington.

LORI SEWARD, senior instructor of management. BA, MSci, PhD, Virginia Tech.

PHILIP SHANE, professor of accounting. BS, University of Illinois; PhD, University of Oregon.

ATANU R. SINHA, associate professor of marketing. BStA, MStat, Indian Statistical Institute; PhD, New York University.

DONNA SOCKELL, director, Curriculum Emphasis on Social Responsibility; senior instructor. BA, Union College; MILR, PhD, Cornell University.

NAOMI SODERSTROM, associate professor of accounting. BA, Reed College; MS, PhD, Northwestern University.

RALPH Z. SORENSON, professor of management emeritus.

RICHARD D. SPINETTO, associate professor of operations management emeritus.

WILLIAM J. STANTON, professor of marketing emeritus.

MICHAEL STUTZER, Director, Burrige Center, professor of finance. BA, PhD, University of Minnesota.

YACHENG SUN, assistant professor of marketing. BS, Huazhong University; MA, PhD, Indiana University.

THOMAS THIBODEAU, director of real estate, professor of finance. BS, University of Hartford; MA, MS, PhD, State University of New York at Stony Brook.

ROBERT H. TAYLOR, professor of marketing emeritus.

TONY TONG, assistant professor of management. BA, Shanghai Institute of Foreign Trade; MSC, National University of Singapore; MA, PhD, Ohio State University.

JOHN A. TRACY, professor of accounting emeritus.

MENKES VAN DEN BRIEL, instructor of operations and information management. MS, Maastricht University; PhD, Arizona State University.

THOMAS VOSSSEN, associate professor of systems. MS, Eindhoven University; PhD, University of Maryland.

LAWRENCE WILLIAMS, assistant professor of marketing. AB, Harvard University; MPh, PhD, Yale University.

DARYL WINN, associate professor of business economics emeritus.

ERIC WISEMAN, senior instructor of management. BA, McGill University; MBA, PhD, Harvard University.

RICHARD WOBBEKIND, associate dean for external relations; director of the business research division; associate professor of business economics. BA, Bucknell University; MA, PhD, University of Colorado.

XIN (EVA) YAO, assistant professor of management and entrepreneurship. BA, Renmin University of China; PhD, University of Washington.

JEFFREY YORK, assistant professor of management and entrepreneurship. BA, University of Georgia; MBA University of Tennessee; PhD, University of Virginia.

JAIME ZENDER, professor of finance. BA, University of Colorado; MA, MPhil, PhD, Yale University.

School of Education

Lorrie A. Shepard, dean

249 UCB • phone: 303-492-6937 • fax: 303-492-7090
school website: www.colorado.edu/education

THE SCHOOL OF EDUCATION provides teacher licensure programs that ensure rigorous content preparation and extensive field-based practicum experiences. Its graduate programs emphasize research that focuses on educational policy and practice.

Accreditation

The licensure programs, both undergraduate and graduate, are fully accredited by the North Central Association of Colleges and Schools, the National Council for Accreditation of Teacher Education, the Colorado Department of Education, and the Colorado Commission on Higher Education.

Mission

The mission of the School of Education includes several interconnected elements. Faculty conduct research to improve educational policies and classroom practice, prepare researchers at the doctoral level, educate teachers at the undergraduate and master's levels in high quality programs, and provide exceptional outreach services to our partner school districts and Colorado. The School of Education has adopted the following priorities:

- to promote the distinctive identity of the school by building on the already visible contributions of individual faculty members and by emphasizing our shared commitment to evidence-based policy and practice and to democracy, diversity, and social justice;
- to produce research that makes a difference by bringing rigorous research methods and analytic tools to bear in addressing the most pressing questions affecting educational policy and practice;
- to prepare teachers who display a passionate commitment to ensuring every student learns, who embrace and demonstrate ethical behaviors and democratic dispositions, and who excel in their knowledge of subject matter, how people learn, the socio-cultural world of learners, standards-based curriculum design, learner-centered pedagogies and assessments, and the democratic context of schools;
- to prepare graduate candidates who are well-trained in research methodology, expert in their area of specialization, and broadly knowledgeable about psychological, sociological, philosophical, and historical research affecting education;
- to encourage candidates of color into teaching and research professions through recruitment and support; and
- to enhance the effectiveness of our partnership and outreach activities by fostering closer connections among teaching, research, and outreach commitments.

Programs of Special Interest

Graduate Student Organizations

The Student Association of Graduate Education (SAGE) sponsors special events for graduate students. Its officers are selected in the fall.

Educational Diversity Scholars Program

The Education Diversity Scholars (EDS) program works with the University of Colorado's LEAD Alliance Neighborhood to provide students of color and first-generation college students with social and academic support, as well as advising on financial support and career preparation. The goal of the program is to offer students a welcoming environment and a strong support network in order to help them excel in their chosen fields. By participating in the Diversity Scholars neighborhood, students have access to the personal contact and support of a small community while still being able to take advantage of the benefits of a large university.

CU Teach

The CU Teach program is a four-year degree/licensure program that allows students to complete a rigorous education in a mathematics or science major and fulfill the requirements for a Colorado initial teaching license in Secondary Mathematics or Secondary Science. It is a unique collaborative program between the College of Arts and Sciences and the School of Education. CU Teach prepares outstanding secondary mathematics and science teachers ready to teach right after earning a bachelor's degree. CU Teach students get immediate hands-on K-12 teaching experience by enrolling in the first course of the CU Teach program: Step 1 (EDUC 2020). Students can enroll in the Step 1 course as early as their freshmen year at CU. In addition to taking courses from research faculty in the School of Education and the College of Arts and Sciences, CU Teach students get support from experienced Mentor Teachers (current K-12 teachers) and Master Teachers (CU faculty who are veteran 6th-12th grade teachers). WE-Teach is the program's student organization.

Academic Excellence

Scholarships and Awards

A limited number of scholarships and awards are available for second- and third-year candidates within the School of Education to support study at the master's and undergraduate levels. Each year a combination of teaching assistantships (TAs), research assistantships (RAs), other forms of graduate assistantships (GAs), and fellowships are available in the School of Education to support full-time doctoral study. The strongest doctoral applicants are nominated by the school for fellowships awarded by

the Graduate School. Candidates apply in the spring semester for scholarships and awards for the following school year. Application procedures and deadlines are publicized. All materials are turned into the Office of Student Services (Education 151).

Students are eligible to apply for university-wide financial assistance through the Office of Financial Aid. State and federal programs are available for loan cancellation or forgiveness for Colorado teachers of certain subjects or who teach in designated schools serving students from low-income families. Information about these opportunities may be found at www.colorado.edu/education.

Academic Standards

Upon enrollment in the Teacher Education Program, a student who fails to maintain a 2.75 GPA (3.00 for graduate students) will be placed on probation or may be suspended. Readmission is subject to program requirements in effect at the time of reapplication. The same conditions apply to students in other colleges and schools who have been admitted to the teacher education program.

Teacher Licensure Programs

The School of Education offers course work leading to initial Colorado licensure to undergraduate, postbaccalaureate, and master's degree students. Colorado requires public school teachers to be licensed by its state department of education. Students who successfully complete all School of Education requirements will be recommended for a Colorado provisional (initial) teaching license, the license issued to all new teachers in Colorado. Licensure requirements vary from state to state and from teaching area to area. Students who are interested in teaching in other states should familiarize themselves with the requirements of those states so they may plan an appropriate degree program.

Undergraduate and Postbaccalaureate (Nonmaster's Degree) Licensure Programs

Elementary (grades K–6) education

Secondary education (grades 7–12) fields:

English

World language (French, German, Japanese, Latin, Russian, or Spanish)

Mathematics

Science

Social studies

Music (grades K–12)

Secondary Master's Degree Plus Licensure Program

(see Graduate Study section for additional program information)

Secondary education (grades 7–12) fields:

English

Mathematics

Science

Social studies

Program Goals

Teacher education programs focus on the preparation of novice teachers in three interdependent areas:

- knowledge of subject matter and pedagogy,
- education of students in a diverse society, and
- professional obligations and dispositions of teachers in a democracy.

To meet these goals teacher education students engage in a planned sequence of courses and accompanying field experiences in community and school sites.

Performance-Based Standards for Colorado Teachers

In addition to program goals, the teacher education programs address eight performance-based standards for Colorado teachers, as adopted by the Colorado Department of Education in January 2000.

1. **Knowledge of Literacy.** The teacher shall be knowledgeable about student literacy development in reading, writing, speaking, viewing, and listening.
2. **Knowledge of Mathematics.** The teacher shall be knowledgeable about mathematics and mathematics instruction.
3. **Knowledge of Standards and Assessment.** The teacher shall be knowledgeable about strategies, planning practices, assessment techniques, and appropriate accommodations to ensure student learning in a standards-based curriculum.
4. **Knowledge of Content.** The elementary teacher is knowledgeable, in addition to literacy and mathematics, in the following content areas: civics, economics, foreign language, geography, history, science, music, visual arts, and physical education. Middle school and secondary content teachers shall be knowledgeable in literacy and mathematics and expert in their content endorsement area(s).
5. **Knowledge of Classroom and Instruction Management.** The teacher is knowledgeable about classroom practice in order to successfully manage time, communications, and record keeping procedures that will support and enhance student learning.
6. **Knowledge of Individualization of Instruction.** The teacher is responsive to the needs and experiences children bring to the classroom, including those based on culture, community, ethnicity, economics, linguistics, and innate learning abilities. The teacher is knowledgeable about learning exceptionalities and conditions that affect the rate and extent of student learning, and is able to adapt instruction for all learners.
7. **Knowledge of Technology.** The teacher is skilled in technology and is knowledgeable about using technology to support instruction and enhance student learning.
8. **Democracy, Educational Governance, and Careers in Teaching.** The teacher recognizes the school's role in teaching and perpetuating our democratic system. The teacher knows the relationships among the various governmental entities that create laws, rules, regulations, and policies that determine educational practices.

The objectives of the university relative to teacher education are the following:

1. Provide programs of undergraduate and graduate studies designed to develop outstanding teachers, supervisors, college teachers, administrators, and researchers.
2. Conduct and direct educational research and to engage in writing and related creative endeavors.
3. Identify and attract future outstanding teachers into the teacher education program.
4. Cooperate with other state, regional, and federal agencies to improve educational programs.

Teacher education at the University of Colorado, while administered by the School of Education, is a university-wide function. Many academic departments provide course work that supports the teacher in training. Undergraduate students follow a prescribed set of arts and sciences core courses that meet state content preparation standards, complete a major, and satisfy professional education requirements concurrently. The program involves a combination of courses at the university and K–12 school placements.

Academic Majors

Undergraduate Students. Undergraduate students enrolled at the University of Colorado Boulder seeking both a bachelor's degree and teacher licensure must complete a major approved for prospective teachers by the Colorado Department of Higher Education. With careful planning beginning freshman year, these programs may be completed in four years. A list of these approved majors is available on the School of Education website, www.colorado.edu/education. No professional education course work taken before the implementation of the Colorado Model Content Standards and Performance-Based Standards for Colorado Teachers may count for teacher education requirements.

The major selected is determined by the student's interest in teaching a certain subject or instructional level. Before selecting a particular major, students may see the School of Education advisor. **Students interested in teaching at the secondary level should be aware that in many subject areas the teaching program requires additional courses or more hours than the academic major.** Course requirements for all programs are explained in the program checklists available in Education 151.

Arts and Sciences Core Requirements for Teacher Candidates

Arts and sciences students must complete college core curriculum requirements (see College of Arts and Sciences Undergraduate Degree Requirements section). Teacher licensure students must take specified courses within some categories of this core curriculum.

The arts and sciences core is listed below; courses specified in each area for students seeking teaching licensure are in **bold italic** type.

Elementary Licensure

Foreign Language: Third semester proficiency in a single modern or classical foreign language.

Quantitative Reasoning and Mathematical Skills: 3–6 semester hours.

MATH 1110 and 1120 Spirit and Uses of Mathematics 1 and 2 or MATH 1300 Calculus 1

Written Communication: 3 lower-division and 3 upper-division semester hours.

Historical Context: 3 semester hours.

HIST 1010 Western Civilization 1 or HIST 1020 Western Civilization 2

Human Diversity: 3 semester hours.

EDUC 3013 School and Society

United States Context: 3 semester hours.

HIST 1015 History of the United States to 1865 or HIST 1025

History of the United States since 1865

Literature and the Arts: 6 semester hours, 3 upper-division semester hours.

Natural Science: 13 semester hours, including a 2-course sequence and a laboratory or field experience.

Physical science required (ASTR, ATOC, CHEM, GEOG, GEOL, PHYS)

Biological science required (EBIO, MCDB, or IPHY 3420)

Contemporary Societies: 3 semester hours.

PSCI 1101 American Political Systems

Ideals and Values: 3 semester hours.

Additional liberal arts requirement:

Human/Cultural Geography: 3 semester hours

Secondary Licensure

Foreign Language: Third semester proficiency in a single modern or classical foreign language.

Quantitative Reasoning and Mathematical Skills: 3–6 semester hours.

MATH 1410 Mathematics for Secondary Teachers or MATH 1300 Calculus 1

Written Communication: 3 lower-division and 3 upper-division semester hours.

Historical Context: 3 semester hours.

Human Diversity: 3 semester hours.

Course from major or EDUC 3013 School and Society

United States Context: 3 semester hours.

Literature and the Arts: 6 semester hours, 3 upper-division semester hours.

Natural Science: 13 semester hours, including a 2-course sequence and a laboratory or field experience.

Contemporary Societies: 3 semester hours.

Course from major or EDUC 3013 School and Society

Ideals and Values: 3 semester hours.

Postbaccalaureate Students. Postbaccalaureate students are not required to have a degree in one of the majors approved by the Colorado Department of Higher Education. *However, students who have graduated with a nonapproved major often must take additional arts and sciences and major course work to fulfill state teacher licensure requirements.*

Admission

Admission to all School of Education programs is selective. Satisfying minimal admission criteria does not guarantee admission.

Students Entering or Currently Enrolled at the University of Colorado

Undergraduate students seeking to complete the School of Education teacher education program must be enrolled in an approved degree program in one of the colleges or schools of the university. All undergraduates interested in teaching may seek teacher education advising at the time they enter the university. Freshman and sophomore students are encouraged to satisfy as many of the arts and sciences core requirements, liberal arts requirements for the appropriate licensure program, and major field requirements as possible before applying for admission to the teacher education program. Some education courses may be taken prior to admission to the teacher education program. Students should pick up advising materials in Education 151 and attend all education information sessions, including freshman orientation.

Transfer Students

Undergraduate students who seek to transfer to the University of Colorado from another accredited institution must apply for admission through the Office of Admissions. They must enroll in a degree program in one of the undergraduate degree-granting colleges or schools of the university and also apply for admission to the teacher education program in the School of Education. At least 30 hours of course work for licensure must be taken while the student is officially enrolled as a student in the university. Credit in student teaching will not transfer to the University of Colorado Boulder. Please see Undergraduate Admission in the General Information section for specific requirements.

Former Students

Former students who have not completed an undergraduate degree may reenter the university according to general university policies; however, subsequent to that readmission, they must apply separately for entry into the teacher education program.

Undergraduate students who anticipate that they will graduate prior to completing the teacher education program must see the School of Education advisor. All admitted students who remain continuously enrolled will be expected to complete the program in effect at the time of their admission to the program unless state accrediting changes dictate otherwise.

Postbaccalaureate and Master's Degree Students Seeking Teacher Training

Students who already hold a bachelor's degree and wish to pursue licensure should apply directly to the School of Education. Students desiring institutional recommendation for licensure must complete at least 30 semester hours of work at the University of Colorado and also must fulfill the same academic area requirements as undergraduate students. The actual number of required hours will depend on courses already completed.

Application Requirements

Students may apply to one of the teacher education programs if the following requirements have been fulfilled:

- 1. GPA.** Elementary and secondary students must have and maintain a 2.75 (on a 4.00 scale) cumulative GPA, 2.75 at CU-Boulder, 2.75 in their subject area (secondary teacher fields), and 2.75 in education. Music students must have and maintain a 3.00 overall and in their subject area. Students applying to Master's Plus (MA+) programs must have and maintain a 3.00 cumulative GPA.
- 2. Prior Degrees.** Students applying to Postbaccalaureate and Master's Plus (MA+) programs must have a bachelor's degree from an accredited institution.
- 3. Youth Experience.** Students must provide written verification of 25 clock hours of satisfactory experiences with elementary, middle/junior high, or senior high school-aged youth (appropriate to the desired program) in the past five years. Forms for this purpose are available in the Office of Student Services, Education 151, or online at www.colorado.edu/education/prospective/teachereducation.html. Students in the CU Teach program meet this requirement through school experiences in Step 1 and 2 courses.
- 4. Basic Skills.** All teacher education students must demonstrate basic skills competence in mathematics and literacy. This may be done through acceptable grades in appropriate college course work, or by acceptable standardized test scores. Contact the Office of Student Services in Education 151 for more information.
- 5. Letters of Recommendation.** See the Application Materials section.
- 6. Personal Statement.** See the Application Materials section.
- 7. Fee.** The appropriate application fee should be submitted with application materials. Fees vary by program.
- 8. Deadlines.** Deadlines for undergraduate and postbaccalaureate admission are February 1 for fall and September 15 for spring. The deadline for MA+ is January 1.

Application Materials

Individuals interested in completing the teacher education program at the University of Colorado Boulder should request application materials from the Office of Student Services, Education 151 or online at www.colorado.edu/education/prospective. Students currently enrolled in a degree program at Boulder will need to complete an application and submit official transcripts from all previous colleges to the Office of Student Services, Education 151. Transcripts must be mailed directly to the School of Education from the previous college to be considered official.

Individuals who have completed a baccalaureate degree at an accredited institution and are not currently enrolled at the university must complete a program application, a university application, and submit official transcripts from all previous colleges directly to the School of Education. Applications will

not be processed until all materials are received in the Office of Student Services.

Advising

Students are responsible for obtaining a student handbook and program checklist in Education 151, available online at www.colorado.edu/education/students/teachereducation.html. These materials include specific information for all teaching fields and information on how to seek advising.

Off-campus students may obtain advising materials online at www.colorado.edu/education/students/teachereducation.html or by calling 303-492-6555.

At CU-Boulder, degree requirements vary among the schools and colleges. Students seeking a degree at the University of Colorado should consult, as soon as possible, with an advisor in the college or school from which they expect to graduate and with the School of Education advisor.

Students are encouraged to become familiar with the teacher education requirements by comparing their own transcripts to the published advising materials. Students can then talk with an advisor before applying to the program or they may wait until after their applications are processed. Students seeking teacher training in French, German, Japanese, Latin, Russian, Spanish, or music should see the designated advisor for that teaching field in addition to the School of Education advisor.

Advising also may be obtained by e-mail through **EdAdvise @colorado.edu**. When requesting e-mail advising, students should make questions as specific as possible.

Graduate Study

Graduate study in education at the University of Colorado is administered through the Office of Student Services, School of Education, and all inquiries regarding programs should be directed to the following address:

Office of Student Services
School of Education
University of Colorado Boulder
249 UCB
Boulder, CO 80309-0249

Detailed program materials and *The School of Education Graduate Student Handbook* are available from the School of Education Student Services office, Education 151 and online at www.colorado.edu/education/prospective/gradprograms.html. The degrees available in the various areas of graduate study are listed below:

Curriculum and Instruction (K–12 humanities education; K–12 mathematics and science education; K–12 literacy education)

Master of arts
Doctor of philosophy
Secondary Master's Plus (MA+) Licensure Programs
CU-Boulder offers special programs for prospective secondary teachers that combine a master of arts degree in instruction and curriculum in a content area and teacher licensure to qualified students already holding bachelor's degrees. Admission is highly competitive, and program completion requires a two-year commitment of course work and school placements. Students in the MA+ programs become eligible for a Colorado teaching license after three semesters; they complete remaining course work for the master's degree in the fourth semester. Applicants must meet all graduate requirements listed below and undergo an extensive screening process. This program admits students for fall semester only. Complete program information is available in the Office of Student Services, Education 151 or by calling 303-492-6555.

Educational-Psychological Studies (educational psychology)

Master of arts
Doctor of philosophy

Research and Evaluation Methodology (methods of educational research and evaluation, including statistics, measurement, and qualitative methods)

Doctor of philosophy

Social and Multicultural Bilingual Foundations (bilingual and multicultural education; bilingual/special education; education and cultural diversity; English as a second language; cultural, historical, social, and philosophical foundations; educational policy)

Master of arts
Doctor of philosophy

CU-Boulder does not offer programs in early childhood education, physical education, art education, counseling, school administration, higher education, school psychology, or educational technology.

Teaching Endorsements at the Graduate Level

Through the School of Education (and in conjunction with other departments), the University of Colorado Boulder offers advanced course work leading to graduate level teaching and special services training in the following areas:

- Linguistically diverse education (grades K–12)
- Linguistically diverse education specialist: bilingual education (grades K–12)
- Reading teacher (grades K–12)
- Special education generalist (grades K–12)
- Special education specialist (grades K–12)
- Special services (offered through SLHS):
 - Audiologist (ages 0–21)
 - Speech/language pathologist (ages 0–21)

All of the above programs have degree, licensure, or experience requirements that must be fulfilled before admission. Please check with the department before applying.

Admission

Prospective students seeking admission to a graduate degree program should request application forms from the University of Colorado Boulder, Office of Student Services, 249 UCB, Boulder, CO, 80309-0249, or visit online at www.colorado.edu/education/prospective/gradprograms.html. The completed forms should be returned to that office. Prospective graduate students should also read the Graduate School section for additional admission information. If test scores are required for admission to the desired program, applicants should request that the Educational Testing Service send their scores on the verbal reasoning, quantitative reasoning, and analytical writing sections of the Graduate Record Examination (GRE) to the Office of Student Services. A doctoral applicant who has not taken the GRE should arrange to do so.

Admission to all programs and degrees in the School of Education is selective. Meeting minimal admission requirements does not guarantee admission.

Application papers and all supporting documents, including GRE or Miller's Analogy Test (MAT) scores, if these scores are required for admission to the desired program, must be in the school's Office of Student Services by the admission deadline. Master's deadlines are September 1 for spring semester and February 1 for summer session and fall semester. The PhD deadline

is January 1. The PhD program only has one admission cycle each year. The international student deadline for PhD students is December 1. Students should visit the International Student Admission website for additional forms and information, www.colorado.edu/prospective/international. The Secondary Master's Plus (MA+) deadline is January 1. Note that some program areas (MA+ and PhD) admit students for fall semester only.

Advising

Graduate students are assigned an individual faculty advisor after admission and are required to submit a formal plan of study, approved by their advisor, before the end of the first full year of study. Graduate students may obtain program information from the School of Education, Office of Student Services, Education 151, or from their faculty advisors.

General Information**Maximum Load and Part-Time Study**

A maximum of 15 semester hours in any one semester may be applied toward degree requirements. During the summer, 9 semester hours is the maximum that will be counted toward education graduate degrees. Within this limit, students may take up to 6 semester hours in a five-week summer term, and/or 3 semester hours in a three-week term. During the academic year for financial aid purposes, students will be regarded as having a full load if they are registered for 5 or more semester hours in courses numbered 5000 or above, or are registered in a minimum of 5 thesis hours. At least four semesters of residence credit, two of which must be consecutive in one academic year, must be earned for work taken at CU-Boulder. See the Graduate School section for clarification.

Quality of Work

A grade average of *B* (3.00) or better is required for all work taken for any graduate degree. Transferred credits are not included when calculating grade averages.

A mark below *B-* will not be credited toward the PhD program; a mark below *C* is not acceptable for MA students. Any graduate course in which a mark of *D* or *F* is reported as failed and must be repeated and passed if it is required in a student's degree program. Students who do not maintain at least a *B* (3.00) average or better may be suspended by the dean of the Graduate School upon the recommendation of the associate dean of graduate studies in the School of Education. Students may also be suspended from the Graduate School for continued failure to maintain satisfactory progress toward the degree sought.

Master of Arts in Education

The master of arts degree is available, comprising one academic year or more of graduate work beyond the bachelor's degree.

The master's degree must be completed within four years of initial enrollment. The MA plan II (nonthesis) degree requires a minimum of 30 semester hours. *See the Graduate School section for discussion of plan I and plan II.* Students may transfer no more than 9 semester hours of work taken at another institution or as a nondegree student at CU-Boulder.

All program areas have outlined a recommended or required program of study, and students pursuing a degree are expected to follow that program unless they have appropriate substitutions arranged in advance with their advisors and the director of graduate studies. Pamphlets outlining the programs of study in education are available in the Office of Student Services.

At the beginning of the final term of study, each student must submit a form titled, “An application for admission to candidacy for an advanced degree.” These forms are available in the Office of Student Services. If a minor is included, the form must first be signed by a representative of the student’s minor department or program area. The form must be signed by the student and the student’s advisor, and then submitted to the school’s Office of Student Services for School of Education approval and then to the Graduate School for final approval. All students are required to pass a comprehensive-final examination or its equivalent, as determined by the program’s faculty committee. (For time limits and other information, see the Graduate School section under Master’s Degree.)

Education as a Minor Field

In MA programs for majors outside the School of Education, students may include education as a minor if both their major department and the associate dean for graduate studies in the School of Education approve. For master’s degrees, a minor in education consists of at least 9 hours of study in related courses. Not more than 2 semester hours may be transferred from another institution. A minor in education alone will not meet Colorado licensure requirements.

Students who propose to minor in education must have had sufficient undergraduate work in education to prepare them for graduate study in the field. Appraisal of undergraduate preparation will be made by the director of graduate studies.

Doctoral Study in Education

In addition to the information included here, prospective PhD students should see the Graduate School section, and obtain a current copy of the *School of Education Graduate Handbook*.

The School of Education offers the doctor of philosophy (PhD) in education. Most students take four to six years to complete the course work, examinations, and dissertation required for the doctoral degree.

The school requires at least two semesters of full-time study in residence (one semester must be during the first two years of doctoral study). The School of Education expects that students will not hold a full-time job during their two semesters of residence.

In addition to course work requirements, doctoral students should be immersed in ongoing research with the faculty as early in their program as possible. All doctoral students in the school will be required to complete, at a minimum, one scholarly product; other research endeavors prior to the dissertation are desirable. Each of the program committees has established a structure for implementing this requirement. For example, in some programs students work individually with their faculty advisors; in other programs students make the research product an extra course requirement attached to a professional seminar.

Admission Requirements

Applicants for admission to doctoral study are expected to have a strong liberal arts background. A minimum undergraduate grade point average of 2.75 is required, but applicants are judged competitively so that most admitted applicants have GPAs of 3.00 or higher. A GPA of 3.00 or above is expected on all graduate work completed. PhD applicants are not required in all cases to have a master’s degree; the decision rests with the program area faculty. At least two years of professional teaching experience relevant to the applicant’s proposed area of study is strongly encouraged and recommended for programs in curriculum and instruction.

The Graduate Record Examination (GRE) (verbal and quantitative reasoning) is required for admission; there is no established minimum score. Faculty consider the GRE score as one factor among many in making admission decisions. An interview with a faculty admissions committee may be required.

Degree Requirements

Incoming doctoral students are required to complete a one-year introductory sequence as a cohort. The sequence is comprised of courses in Perspectives on Classrooms, Learning, and Teaching (EDUC 8210); Introduction to Educational Research and Policy (EDUC 8220); Quantitative Research Methods (EDUC 8230/8240); and Qualitative Research Methods (EDUC 8250/8260). In the second year, students also enroll in the Doctoral Seminar in Multiculturalism and Education (EDUC 8014). All other required course work is determined by the student’s program area.

Fifty-six semester hours of course work beyond the master’s degree is the normal requirement for the PhD. All program areas committees have outlined a program appropriate for individuals pursuing study in their area, and students are expected to follow that program unless they have arranged appropriate substitutions in advance with their advisor and the director of graduate studies. Pamphlets outlining the recommended programs of study in education are available from faculty or the Office of Student Services.

No continuing education work is accepted for the PhD.

Culture/Language Requirement

The culture/language requirement consists of two components: the Multiculturalism seminar (EDUC 8014) and a language component. The Multiculturalism seminar is scheduled every fall semester, is a doctoral-level course, and should be taken in the third semester of the student’s course sequence (first semester of second year). Introductory language courses (see item #1 below) are recorded on the Degree Plan form as having satisfied the language requirement but may not be listed as doctoral course work. To fulfill the language component one of three options are possible:

1. Satisfactory completion of two semesters of college-level conversational language course taken at an accredited institution within the three years preceding admission with a grade of C- or better. The conversational language requirement also can be met by:
 - a. Conversational courses offered through Continuing Education. If the courses are taken for no credit, the instructor must provide written documentation of second-semester oral proficiency. Students should inform instructors before the start of the courses that such certification is sought.
 - b. Introductory Boulder campus courses such as SPAN 1010, ITAL 1010, FREN 1010, GRMN 1010, etc. These traditional courses meet the conversational requirement because instruction is conducted in the language and substantial language labs are part of the course expectations. Courses taken at another institution must be equivalent to the above courses to count toward this requirement.
 - c. Satisfactory performance on an oral proficiency examination indicating sufficient mastery to complete a second-semester college course. (Given a specific request, arrangements can be made for such exams to be available through language department faculty or from Continuing Education instructors on a case-by-case basis.)

2. The BUENO Puebla experience or a similar alternative experience to be approved by an EECED faculty member.
3. Course on Language Issues in Educational Research.

Comprehensive Examination

Before taking the comprehensive examination, students must submit the “Application for Admission to Candidacy for an Advanced Degree,” available in the school’s Office of Student Services.

Near the end of the term when students complete their course work and if their advisor approves, they take a comprehensive examination given by program area faculty that covers foundational knowledge in the program area. Students who fail this examination may repeat it once, at a time to be determined by the examining committee.

Dissertation

In addition to course work, a doctoral dissertation for 30 semester hours of credit is required. A student registers for EDUC 8994 Doctoral Dissertation for three or more terms, but not more than 10 semester hours in any term. Not more than 10 dissertation credit hours taken in semesters prior to the semester in which the comprehensive examination is passed may be counted in the required 30 dissertation hours. After satisfactory completion of the comprehensive examination, the student must continuously register for a minimum of 5 dissertation hours during fall and spring semesters until the final defense. Off-campus students may register for 3 dissertation credit hours. On- and off-campus students must be registered for 5 hours during the semester the defense is completed.

When the student and the chair of the dissertation committee agree on a dissertation subject, they work with the director of graduate studies to identify a five-person committee. Then the student prepares a detailed prospectus and arranges for a meeting with the committee. After committee approval, the student may proceed with the research. Research involving human subjects must also have the approval of the university committee on human research. During the research for and the writing of a dissertation, a grade of *IP* (in progress) is reported for the credit hours taken; if the dissertation is completed and accepted as satisfactory, a grade is reported for the student’s record.

Time Limits

Time limits for the PhD in education are the same as time limits for all Boulder PhD programs; see the Graduate School section for PhD time limits.

When students have passed the comprehensive examination, they must register each semester until the degree is attained, and pay the standard fee as announced by the Graduate School.

Progress toward a Degree

Doctoral study entails a long period of scholarly endeavor, which requires a time schedule. Students are responsible for meeting the deadlines involved.

Opportunities for Assistantships

The School of Education has a limited number of assistantships administered by the dean on the recommendations of faculty and the associate dean for teacher education or associate dean for graduate studies. Some assistantships involve the supervision of student teachers; others involve helping professors in their teaching or research. Taxable stipends in amounts set by the university are paid for all assistantships. Appointments are usually made in terms of one-fourth time (10 hours a week) or one-half time (20 hours a week). Inquiries should be directed to the associate dean for graduate studies.

Faculty—School of Education

LORRIE A. SHEPARD, dean; distinguished professor. BA, Pomona College; MA, PhD, University of Colorado.

LORENZO ARAGON, assistant research professor. BA, University of Northern Colorado; MA, University of Colorado Boulder; PhD, University of Colorado Denver.

LEONARD M. BACA, professor. STB, Catholic University of America; MA, University of New Mexico; EDD, University of Northern Colorado.

KANESHA BAYNARD, senior instructor. BA, Cornell College; MA, National Louis University, Governors State University.

DONNA MCCLURE BEGLEY, senior instructor. BS, University of Southern Oregon and University of Alaska; MEd, College of William and Mary; PhD; Southern Illinois University.

DEREK BRIGGS, associate professor. BA, Carleton College; PhD, University of California, Berkeley.

GREGORY CAMILLI, professor. BA, MA, PhD, University of Colorado.

GINA CERVETTI, assistant professor. BA, Loyola Marymount University; MS, Rensselaer Polytechnic Institute; PhD, Michigan State University.

ANNE DiPARDO, professor. BA, California State University; MA, University of California, Los Angeles; EDD, University of California, Berkeley.

PHILIP DiSTEFANO, chancellor; professor. MA, West Virginia University; BS, PhD, Ohio State University.

RUBEN DONATO, professor. BA, University of California, Santa Cruz; MA, PhD, Stanford University.

ELIZABETH DUTRO, associate professor. BS, La Sierra University; MA, San Francisco State University; PhD, University of Michigan.

MARGARET A. EISENHART, distinguished professor. BA, Emory University; MA, PhD, University of North Carolina.

KATHY C. ESCAMILLA, professor. BA, University of Colorado Boulder; MS, University of Kansas; PhD, University of California, Los Angeles.

JEFFREY A. FRYKHOLM, associate professor. BA, MS, Whitworth College; PhD, University of Wisconsin—Madison.

ERIN FURTAK, assistant professor. BA, University of Colorado Boulder; MA, University of Denver; PhD, Stanford University.

KRIS DIANE GUTIERREZ, professor. MA, Arizona State University; PhD, University of Colorado.

VICTORIA HAND, assistant professor. BA, University of California, San Diego; MA, PhD, Stanford University.

KENNETH R. HOWE, professor. BA, MA, PhD, Michigan State University.

COLLINUS NEWSOME HUTT, senior instructor. BA, University of Illinois, Champaign-Urbana; MA, University of Colorado.

A. SUSAN JUROW, assistant professor. BA, New York University; MA, PhD, University of California, Berkeley.

BENJAMIN R. KIRSHNER, assistant professor. BA, Brown University; MA, Harvard University; PhD, Stanford University.

JANETTE KETTMANN KLINGNER, professor. BA, San Jose State University; MS, PhD, University of Miami.

PHILIP LANGER, professor emeritus.

MARGARET D. LeCOMPTE, professor. BA, Northwestern University; MA, PhD, University of Chicago.

ROBERT L. LINN, distinguished professor emeritus.

DANIEL P. LISTON, professor. BA, Earlham College; PhD, University of Wisconsin.

WILLIAM J MATHIS, senior instructor. BA, MA, University of Tennessee; PhD, University of Texas–Austin.

WILLIAM McGINLEY, associate professor. AB, Western Kentucky University; MEd, Idaho State University; PhD, University of Illinois.

MONETTE McIVER, assistant professor. BA, Spellman College; MA, PhD, University of Colorado Boulder.

LINDA MIZELL, assistant professor. BA, MA, Mount Holyoke College; EdD, Harvard Graduate School of Education.

MICHELE MOSES, associate dean for graduate studies; associate professor. BA, University of Virginia; MEd, University of Vermont; MA, PhD, University of Colorado Boulder.

KEVIN O'CONNOR, assistant professor. BA, St. Joseph's University; PhD, Clark University.

VALERIE K. OTERO, associate professor. BS, University of New Mexico; MS, PhD, University of California, San Diego.

CRAIG ALLEN SCHNEIDER, senior instructor. BA, MA, University of California, Santa Barbara; PhD, University of Colorado.

FINBARR C. SLOANE, associate dean for research; associate professor. BA, National University of Ireland; MA, California State University, Chico; MBA, Lake Forest Graduate School of Management; PhD, University of Chicago.

GUILLERMO SOLANO-FLORES, associate professor. BA, MA, National University of Mexico; PhD, University of California, Santa Barbara.

LUCINDA SOLTERO-GONZALEZ, assistant professor. BA, Universidad Panamerica; MA, PhD, University of Arizona.

DAVID WEBB, assistant professor. BS, University of California, Los Angeles; MA, University of California, Santa Barbara; PhD, University Wisconsin–Madison.

KEVIN G. WELNER, professor. BA, University of California, Santa Barbara; JD, PhD, University of California, Los Angeles.

JENNIFER WHITCOMB, associate dean of teacher education and administrative services; senior instructor. BA, PhD, Stanford University.

EDWARD WILEY, assistant professor. BA, MA, University of Nebraska; MS, PhD, Stanford University.

SHELBY ANNE WOLF, professor. BA, University of Richmond; BA, MS, University of Utah; PhD, Stanford University.

College of Engineering & Applied Science

Robert H. Davis, dean

422 UCB • phone: 303-492-5071 • fax: 303-492-2199
college website: engineering.colorado.edu

THE COLLEGE OF ENGINEERING AND APPLIED SCIENCE offers the bachelor of science degree in aerospace engineering sciences, architectural engineering, chemical engineering, chemical and biological engineering, civil engineering, electrical engineering, electrical and computer engineering, environmental engineering, mechanical engineering, computer science, applied mathematics, and engineering physics. The first nine of the programs are accredited by the Engineering Accreditation Commission of ABET, www.abet.org. The tenth is accredited by the Computing Accreditation Commission of ABET, www.abet.org. The two remaining programs are applied sciences; accreditation by ABET is not usually sought in these areas. The CU-Boulder campus is accredited by the Higher Learning Commission of the North Central Association of Colleges and Schools. Degrees in applied mathematics and engineering physics are offered in cooperation with the Departments of Applied Mathematics and Physics in the College of Arts and Sciences.

Mission

The mission of the College of Engineering and Applied Science is to generate new knowledge in engineering and related fields and to equip students from diverse backgrounds as future leaders and responsible citizens in these fields for the betterment of individuals and society. Its vision is to be a world leader in engineering research and education, with an emphasis on *integrated and discovery learning* and on *engineering for global society*.

The college embraces the following core values:

- Innovative research, creating knowledge to improve the global society
- Integrated learning, where students learn through team-based projects and other hands-on experiences integrated with traditional theory-based curricula
- Discovery, professional, and service learning, where students learn by undertaking research, internships, international experiences, and campus or community projects
- Inclusive excellence of diverse faculty, staff, and students, with high ethical standards of integrity, responsibility, honesty, and respect for others from differing backgrounds

The college seeks the following outcomes in their graduates:

- Technical excellence and knowledge in modern engineering, mathematics, and science
- Ability to communicate effectively with diverse peoples and other cultures
- Ability to think critically, analyze data, and formulate and solve complex problems

- Ability to contribute effectively as individuals and in multidisciplinary teams
- Knowledge of contemporary issues and preparation for societal leadership and world citizenship
- Desire and skills for lifelong learning and personal and professional development
- Passion for serving others and commitment to sustainability

Additional information about the academic programs, services, and faculty of the College of Engineering and Applied Science is found at engineering.colorado.edu.

Facilities

Students have an opportunity to study engineering with about 200 faculty members of national and international reputation. They have access to the superb facilities of the College of Engineering and Applied Science, including the ITL Laboratory, a unique, award-winning facility that provides hands-on design experience to undergraduate students, and the Discovery Learning Center, which promotes undergraduate involvement in research with faculty, graduate students, and sponsoring organizations. Each engineering department has laboratories suitable for undergraduate and graduate instruction and experimental research through the doctoral or postdoctoral level. Specific information on these facilities may be obtained from the departments concerned.

Computing

Many courses offered by the college place strong emphasis on the use of computers. Entering freshmen receive instruction and undertake academic projects involving computers. While most students choose to obtain personal computers, several hundred computers are available in laboratories in the Engineering Center, and over 1,000 are located throughout the campus for student use.

More computing information may be found under Campus Facilities in the General Information section, in engineering department summaries, and under Laboratories and Special Equipment in the Graduate School. Information Technology Services provides its computer recommendations at www.colorado.edu/its/recommendations.

Degree Programs

In most departments of this college, several academic options are offered within each degree program. Some programs of study are oriented toward graduate work, and others toward engineering practice.

Engineers work in a wide variety of disciplines, with the college's 12 undergraduate and eight graduate degree programs reflecting this diversity. The following descriptions summarize these areas.

Aerospace engineering sciences prepare students for successful and rewarding careers in aerospace and other high-tech industries, national research laboratories, government services, and academia. Their program provides students unique opportunities to develop in-depth technical knowledge, effective communication skills, and a systems engineering perspective that enables them to develop creative solutions to complex problems. The curriculum encompasses core aerospace subjects including fluids, thermodynamics, dynamics, orbital mechanics, structures, and systems; design of air and space vehicles; and exciting multidisciplinary applications including bioastronautics, unmanned systems, remote sensing, and GPS.

Applied mathematicians have the expertise and mathematical sophistication necessary to make contributions in a wide variety of fields, including scientific computation, actuarial science, financial modeling, and most areas of science and engineering that have a mathematical basis.

A professional applied mathematician may work with engineers, scientists, programmers, and other specialists. The curriculum at CU-Boulder is designed to have the breadth for such an interdisciplinary career.

Course offerings at the undergraduate level focus on providing students with mathematical tools, problem-solving strategies, and expertise useful in science and engineering. To fulfill requirements, a concentrated area of engineering courses (or approved natural science courses) must be completed. The college has formulated several recommended options within the discipline.

Architectural engineering prepares students for leadership careers in the building design, management, and construction industry and for research at the graduate level on building-related topics. This course of study fulfills the academic requirements for registration as a professional engineer.

The architectural engineering curriculum is recommended for those wishing to specialize within the building industry in engineering design (heating, cooling, illumination, electrical, solar, and structures) or construction and contracting (facilities management). The architectural engineering student may select any one of several areas of specialization offered: HVAC (heating, ventilating, and air conditioning), illumination, electrical, building energy, structures, or construction.

Chemical engineering prepares students for careers in a range of industries including energy, consumer products, petrochemicals, semiconductors, medicine, environment, and materials. Modern industry depends on chemical engineers to tailor manufacturing technology to the requirements of its products, and chemical engineers play a central role in development of new polymeric materials, alternative energy sources, and safe, efficient processes for chemical synthesis.

The undergraduate program in chemical engineering includes curricular options in environmental, materials, microelectronics, computing, bioengineering, and a premedicine curriculum track. There are active and exciting research and educational programs in biotechnology, pollution control, novel membrane separations, and advanced polymeric and ceramic materials.

Chemical and biological engineering prepares students for careers in biotechnology, pharmaceuticals, medicine, and materials. This degree program adapts a core chemical engineering curriculum to allow for greater depth in biological aspects of chemical engineering. Exploring the structure of protein molecules, the functioning of cells, and the growth and regeneration of tissues are among the new frontiers that chemical and biological engineering students will address.

In addition to the standard curriculum, a premedicine curriculum is also offered. The chemical and biological engineering department has active research and educational programs in the exciting field of biotechnology, which involves the use of individual cells and their components for producing pharmaceuticals and other important products. The department is also active in biomedical engineering, which involves medical devices, tissues, and biomaterials. A formal cooperative education (co-op) program is offered by the department and its industry partners.

Civil engineering offers a wide range of challenging careers for students interested in the planning, design, and supervision of the construction of facilities essential to modern life in both the public and private sectors. Varying widely in nature, size, and scope, such facilities include buildings, bridges, tunnels, highways, transit systems, dams, airports, irrigation projects, water treatment and distribution facilities, collection and treatment of water waste, structures for space exploration, and offshore engineering designs.

In the coming decades, almost two billion more people will populate Earth in both developed and developing countries. This growth will create unprecedented demands and opportunities for new methods and innovations in energy production, food supply, land development, water treatment, transportation systems, materials processing, waste disposal, healthcare delivery, environmental preservation, and structural designs. Civil engineers play both direct and indirect roles in meeting many of these needs, with the goal of providing and improving the quality and infrastructure of life in general.

Computer science offers study in the fields of computer architecture, operating systems, networking, mobile computing, computer security, computational biology, robotics, algorithm design, artificial intelligence, software and web engineering, programming languages, database design and data mining, human-computer interaction, computer-supported cooperative work, machine learning, lifelong learning and design, numerical and parallel computation, speech and language processing, scientific computing, and theoretical computer science.

Graduates typically take positions as software engineers for computer manufacturers or software firms, advanced applications programmers in scientific research firms, or technically oriented usability experts or systems designers in commercial or government settings.

Electrical engineering offers study of the basic science and technology of information and energy. Its areas of knowledge include information theory and communications systems, computers and digital systems, signal processing and instrumentation, feedback systems and automatic control, electrical and electronic devices and systems, energy conversion and power systems, renewable energy, and electromagnetics and microwave devices. Students learn how this basic knowledge is applied to such modern technologies as computers, telecommunications, biomedical systems, and remote sensing. The curriculum accommodates a variety of student interests including design, production, testing, consulting services, research, teaching, and management. Graduates pursue careers in a large variety

of fields in the computer industry, telecommunications, instruments, the biomedical industry, aerospace, and academia. Some go on to careers in other professions such as law or medicine.

Electrical and computer engineering offers the same curriculum as electrical engineering except that required courses in computer hardware and software replace some upper-division electives. Like electrical engineering, it accommodates broad student interests from design to service and from research to management. Its graduates take positions in fields as diverse as those listed above for electrical engineering.

Engineering management equips individuals with technical management expertise, preparing them to be leaders in high technology organizations. The program provides a comprehensive graduate master's degree program and numerous professional graduate certificates for working engineers and technical professionals that can be taken on campus or through distance education. Areas of technical management concentration are in managing innovation, project management, performance excellence, engineering entrepreneurship, quality systems, research and development, and Six Sigma certifications.

Engineering physics provides students with a broad exposure to the basic physical theories and mathematical techniques underlying engineering. The program may be specialized to meet the student's interests through engineering electives. Most students become involved in laboratory research, and graduates find opportunities in optics, electronics, magnetics, and other hardware-based job markets. The program also provides excellent preparation for graduate study in physics, applied physics, and other areas of the natural sciences and engineering.

Environmental engineering plays a vital role in maintaining the quality of both human environmental systems and the natural environment. Environmental engineering encompasses the scientific assessment and development of engineering solutions to environmental problems impacting the biosphere and land, water, and air quality. Environmental issues affect almost all commercial and industrial sectors, and are a central concern for the public, for all levels of government, and in international relations.

The degree in environmental engineering includes course work in advanced mathematics, biology, chemistry, and physics. In common with other engineering fields, courses in solid mechanics, fluid dynamics, and thermal sciences are central to the environmental engineering degree. Course work specific to environmental engineering includes water and wastewater treatment, hazardous waste storage and treatment, and air pollution control.

Mechanical engineering prepares students for careers in a variety of industrial sectors including transportation, energy, manufacturing, medical, and environmental. Based on their education in the fundamentals of mathematics, physics, and chemistry, mechanical engineers deal with diverse components and systems such as engines and motors, automobiles, computers, power plants, aircraft, medical instruments, robotics, space platforms, and pollution control devices. Career opportunities include work in basic and applied research and development, design, manufacturing, project management, consulting, and teaching. They are employed by a wide variety of industrial, governmental, and educational organizations. A mechanical engineering background also provides a firm foundation for other professional careers such as engineering management, law, and medicine.

Open Option Program. The College of Engineering and Applied Science provides the opportunity for new first-year undergraduate students to delay their selection of an engineering major by enrolling in the open option program. This program is available only to new first-year students; students in the program are

required to select a specific engineering degree program no later than the end of the spring semester, regardless of when they entered the open option program. This provides students with one or two semesters to explore the variety of engineering degree programs before selecting a major.

A first-year experience coordinator in the college provides advising for all engineering open option students. This advising is supplemented with advisors in each engineering degree program. Students selecting the open option program are subject to all College of Engineering and Applied Science academic rules and policies. They are also required to satisfy any remaining minimum academic preparation standards (MAPS) required for graduation. For more information, see engineering.colorado.edu/students/advising.htm (open option).

Telecommunications prepares students for careers in the complex technology, business, and policy environment of modern communication networks. The graduate program provides an interdisciplinary master's degree program with professional certificates in Internet protocol networks, wireless systems, telecommunications policy, network security, and smart-grid technology. Courses are available on campus and online so that students may earn a degree or certificate from anywhere. A PhD enables students to address the key challenges of our society's communication and networking infrastructure.

Programs of Special Interest

Professional Registration

The need for professional registration depends on the field of engineering and the nature of practice in that field. Engineers in private professional practice generally need to be registered. Currently, registration is required in all states for the legal right to practice professional engineering. Although there are variations in state laws, graduation from an accredited curriculum in engineering, subscription to a code of ethics, and four years of qualifying experience are minimum requirements for registration. Two days of examinations covering the engineering sciences and the applicant's practical experience are also required in most states and territories. A student begins this professional registration process by taking the Fundamentals of Engineering (FE) eight-hour examination during senior year in this college.

Active Learning

The College of Engineering and Applied Science defines active learning as "enhancing knowledge, skills, and understanding through practical experience." The college's goal is to provide all students with the opportunity to participate in enrichment experiences and partnerships with individual faculty and professionals in discovery, service, and professional learning. Several programs are in place to financially support students engaged in undergraduate research or "discovery learning" with faculty, graduate students, and research sponsors. Students seeking professional learning experiences such as internships and co-op assignments with a participating employer also typically earn hourly wages, while those pursuing service learning opportunities in the college, community, or beyond could earn wages or course credit.

International active learning opportunities include assisting developing communities through Engineers Without Borders, a national nonprofit organization started at CU-Boulder; and arranging an international internship through the International Engineering Certificate Program. For more information about active learning programs and opportunities, visit engineering.colorado.edu/activelearning.

In addition, the college offers a First Year Engineering Projects course as a general engineering elective, which provides students with collaborative, hands-on experience in designing and building engineering devices early in the engineering curriculum, and most undergraduate majors in the college require completion of a senior capstone design course.

Integrated Teaching and Learning Program

The Integrated Teaching and Learning (ITL) Program emphasizes hands-on, inquiry-based learning experiences throughout the κ-16 engineering curriculum. The ITL Program encompasses college-wide curricular initiatives and has created a unique learning environment to enable and support them—the Integrated Teaching and Learning Laboratory (ITLL).

The interdisciplinary ITL Laboratory is a 34,000 sq. ft. hands-on learning environment that features interactive laboratory plazas and supports hands-on experimentation, pervasive data acquisition and analysis capability, design studies, team work areas, active learning spaces, and state-of-the-art manufacturing and electronics fabrication capability. It is heavily used by engineering students of all disciplines and is supported by a dedicated team with an unwavering focus on outstanding service.

The ITL Program features an innovative interdisciplinary undergraduate curriculum that includes a First-Year Engineering Projects course that engages student teams to experience the design process in a hands-on way, culminating in a public design expo each semester. The nationally recognized κ-12 ITL engineering program focuses on attracting and preparing more diverse and well-prepared youth to careers in engineering and technology. Visit itll.colorado.edu.

Study Abroad

In today's international environment, engineers frequently work and travel in foreign nations or with foreign engineers. Therefore, it is desirable that engineering students familiarize themselves with foreign cultures by selecting appropriate courses or by studying abroad. The University of Colorado has over 50 programs that enable students to undertake course work in engineering. These include programs at the Universities of New South Wales, Wollongong, and Murdoch in Australia; the Universidad de Costa Rica in the Americas; the Universities of East Anglia, Lancaster, and Sussex in England; Uppsala University in Sweden; the American University of Cairo in Egypt; the University of Ghana; the Universidad Politecnica de Madrid; the Instituto Tecnológico y de Estudios Superiores de Monterrey in Mexico, and others. All participants in the university study abroad programs remain enrolled at the university; the *pass/fail* grade option is used by this college for course work taken during study abroad (but is exempt from college and major department *pass/fail* limitations). Financial aid from the university can be applied to the program costs in some cases, and special study abroad scholarships may be available for program participants. More information about studying abroad is available at the Office of International Education, University of Colorado Boulder, 123 UCB, Boulder, CO 80309-0123, 303-492-7741, or studyabroad.colorado.edu.

Engineering departments may also assist students wishing to study engineering at the Ecole National des Ponts et Chaussées in Paris; the Ecole Polytechnique Feminine in Paris; the University of Oviedo in Spain; and the University of Regensburg; plus new engineering exchanges in TU Darmstadt, Germany; University of Newcastle, England; ESTP in Paris; and Catholic University in Santiago, Chile. As of fall 2009, the college participates in the Global Engineering Exchange Program (Global

E³). Please contact the engineering dean's office for more information or visit engineering.colorado.edu/international.

With the proper preparation, students may complete one or two semesters of engineering education during study abroad. All students preparing for study abroad must petition their major department about specific courses planned away from CU and ensure that the college residency requirement is satisfied.

Certificates

Engineering Entrepreneurship Certificate

This certificate is offered in partnership with the nationally renowned Deming Center for Entrepreneurship in Colorado. It provides the student with the essential knowledge, understanding, and skills to successfully practice entrepreneurship in a start-up venture or within a larger corporation (intrepreneurship). The focus is on how to launch, lead, and manage a viable business starting with concept validation to commercialization and business formation. The program culminates with the development of a business plan for a project that the student chooses and then pitches to business community leaders and venture capitalists.

EMEN 5050 Leadership or EMEN 5020 Finance and Accounting for Engineering Managers
EMEN 5710 Business Simulation
EMEN 5090 High-Technology Marketing
EMEN 5825 Business Plan Development

More information is available at emp.colorado.edu/certificates.

Engineering for Developing Communities Certificate

This graduate-level certificate prepares engineering students who have basic competencies in issues that are critical to the understanding of developing communities, whether they are located in industrialized or less-industrialized (“developing world”) countries. Some relevant topics include sustainability, renewable energy, international education and development, stakeholder empowerment, business, and public health. Obtaining the certificate in EDC indicates to employers that an individual is both technically competent (as evidenced by the student's earned degree in engineering) and has experience evaluating the wide range of social impacts caused by engineering solutions.

For more information, see engineering.colorado.edu/academics.

Engineering, Science, and Society Certificate

The certificate in engineering, science, and society leads students into courses that will help them to become engaged with contemporary issues regarding the promotion, use, and possible risks of engineering and applied science. For more information, see engineering.colorado.edu/academics/ess.htm.

International Engineering Certificate

The purpose of the certificate is to provide engineering students training in language and culture to help them succeed in today's global marketplace. The college offers certificates in Chinese, French, German, Italian, Japanese, and Spanish. After successful completion of courses, students may complete an internship at a European company or university lab. For more information, see engineering.colorado.edu/academics/international.htm.

Technology Ventures and Product Management Certificate

Technology venture management and product development is key to the sustained success of any high-technology business in today's intensely competitive and global marketplace. This cer-

tificate is designed for the engineer in any size company (Fortune 500 to start-up) who wants to embrace the challenge of managing the strategy and implementation of a new technology product development. Using case studies and realistic business simulation exercises, the student will gain an understanding and practice the skills required to evaluate a technology, consider its viability as a product, and manage the development effort required to deliver a product that provides an exceptional customer experience.

EMEN 5050 Leadership or EMEN 5020 Finance and Accounting for Engineering Managers
 EMEN 5090 High-Technology Marketing
 EMEN 5710 Business Simulation
 EMEN 5400 Principles of Product Management or EMEN 5043 Software Product Management

More information is available at emp.colorado.edu/certificates.

Student Organizations

The following honorary engineering societies have active student chapters in the College of Engineering and Applied Science:

Chi Epsilon, civil and architectural engineering society
 Eta Kappa Nu, electrical engineering society
 Omega Chi Epsilon, chemical engineering society
 Pi Tau Sigma, mechanical engineering society
 Sigma Gamma Tau, aerospace engineering society
 Tau Beta Pi, engineering society

Student chapters of the following professional or social societies meet frequently to present papers, speakers, films, and other programs of technical interest:

American Indian Science and Engineering Society
 American Institute of Aeronautics and Astronautics
 American Institute of Chemical Engineers
 American Society of Civil Engineers
 American Society of Heating, Refrigerating, and Air Conditioning Engineers
 American Society of Mechanical Engineers

 Structural Engineers Council

A student organization, the University of Colorado Engineering Council (UCEC), represents students in the College of Engineering and Applied Science. UCEC supervises matters of interest to all undergraduate students through the control board, its legislative body. Students in this college also publish the *Colorado Engineer Magazine*, first published in 1904.

The BOLD Center

The college-wide BOLD (Broadening Opportunity through Leadership and Diversity) Center focuses the college's inclusion-focused integrated access, retention, and performance initiatives.

Through BOLD-inspired and -led initiatives, the college is dedicated to becoming a leader in attracting, preparing, and expanding opportunities for students historically underrepresented in engineering, including students from low-income families and those who are the first in their family to attend college.

The BOLD Center creates a vibrant and inclusive community of students from a wide range of backgrounds, preparing engineers with diverse perspectives to be innovative leaders in a global society. The BOLD Center team thinks broadly and focuses deeply on measurable outcomes to significantly improve upon historical student access, retention, and performance results.

BOLDly Moving Forward—The BOLD Center is achieving breakthroughs in attracting, preparing, and expanding opportunities for historically underrepresented students in engineering through the development and provision of curriculum and support to ensure academic successes. Building strong community among students who might otherwise feel isolated in a majority population-dominated environment is a BOLD key to student success. Thus BOLD nurtures student engagement, academic achievement, and retention through a focus on community building, leadership, and professional development activities, coupled with strong academics and support.

Why be BOLD?—Students succeed by becoming part of the inclusive BOLD community and finding out about engineering student societies, mentoring, effective study habits, career services, internships, volunteer opportunities, and participation scholarships. And, the BOLD Center offers free tutoring for all engineering students in the Student Success Center. Visit engineering.colorado.edu/bold.

Engineering Honors Program

The Engineering Honors Program provides an educational experience that transcends the classroom and is designed to match the unique abilities, needs, and ambitions of the college's best students. The program is for students who want to belong to and contribute to an honors culture that cares more about learning than grades; more about maximizing their opportunities than meeting minimum requirements; more about being thoughtful, critical, engaged, and intentional than passively defined by the vague expectations of others. Central to fulfilling this mission is the Engineering Honors Program Residential College in Andrews Hall, which includes a residential faculty member, classrooms, special study spaces, and the highest percentage of upper-division students living on campus.

Being part of the Engineering Honors Program will mean all of the following:

- being part of a community of talented and dedicated students
- participating in special honors courses
- having the opportunity to do advanced research
- having a faculty mentor
- having exposure to industry leaders
- having greater access to internships
- completing an Honors Portfolio

There will be a combination of college-wide and department-specific honors experiences beginning in the student's very first semester. Incoming first-year students are selected to participate

in the Engineering Honors Program via an online application process (www.cuhonorsengineering.com). For those who want to join the program after their first year, each department will have its own application process either at the end of the second or beginning of the third year.

Herbst Program of Humanities

The Herbst Program of Humanities enriches and broadens the technical education offered in the College of Engineering and Applied Science through discussion-based classes and seminars on the great works in literature, art, history, and political and social thought. As a program of applied humanities, Herbst encourages students to engage in immediately relevant and significant conversations about our world.

The Herbst Program offers courses at all undergraduate levels, but its centerpiece is a two-semester, 6 credit-hour sequence open to juniors and seniors. These seminars, HUEN 3100 and 3200, are limited to 12 students and are devoted almost entirely to roundtable discussions of original texts, primarily in literature and philosophy, but with secondary attention given to art, music, and architecture. These seminars endeavor to help students improve their writing skills, gain confidence and skill in civil discourse on controversial issues, see more clearly the inadequacy of dogmatic responses to complex questions, and develop intellectual rigor on non-technical issues. Students must apply to participate in the Junior Seminars, one or both of which may also satisfy the university's writing requirement.

The Herbst Program offers several different courses for students in their first or second year. HUEN 1010, Introduction to the Humanities, explores such diverse forms of humanistic expression as short novels, poems, visual art, music, drama, and philosophy. HUEN 2010, Tradition and Identity, examines—through ancient epics, modern novels, children's literature, poetry, short stories, drama, film, and philosophy—what it means for you to be you while belonging to a world of others. HUEN 2100, 2120, and 2130 span invention and discovery from the Stone Age through the 20th century. HUEN 2210 Engineering Science and Society explores the ethics and social implications of engineering work. A variety of HUEN 2843 and 3843 Special Topics classes are offered each semester, on such issues as The Meaning of Information Technology, Leonardo da Vinci, The Journey in Literature and Film, and Leadership in Literature. The Herbst Program also offers summer term, study abroad, and Maymester courses.

The Herbst Program was initially funded by an endowment established by Clarence Herbst in 1989, and is sustained by the generous support of a variety of donors, including Linda Vitti Herbst, and by the College of Engineering and Applied Science. See engineering.colorado.edu/herbst.

Quadrangle Engineering and Sciences Living & Learning Community

Offered in cooperation with the College of Engineering and Applied Science and Housing & Dining Services, the Quadrangle Community is comprised of four small residence halls: Aden, Brackett, Cockerell, and Crosman. This community offers on-site tutoring, access to a computer lab configured to match that in engineering computer labs, enhanced academic support services, wireless computer access, and calculus work groups in residence. There is a minimal fee for this Living & Learning Community. Interested students should contact Housing & Dining Services for application information.

Academic Excellence

Dean's List

A student in the College of Engineering and Applied Science who completes at least 12 credit hours of course work for a letter grade during the fall or spring semester on the Boulder campus, and who earns a semester grade point average (GPA) of at least 3.600, will be included on the college dean's list for that semester. Notation of "Dean's List" is also placed on the student's transcript by the Office of the Registrar.

Honors at Graduation

In recognition of high scholastic achievement by a student, the designations "Summa Cum Laude," "Magna Cum Laude," and "Cum Laude" will be awarded at graduation, and will be recorded on the diploma. The specific qualifications to achieve these designations are reviewed and set by the Undergraduate Education Council, with any changes requiring approval by a majority vote of the faculty representatives on this council. At least 45 semester hours must have been earned on the Boulder campus for the student to secure these designations. Beginning with August 2008 graduates, grades from all CU course work are taken into consideration.

Scholarships

Undergraduate scholarships are provided by public funds and private donations by alumni, corporations, and friends of the college through gifts to the University of Colorado Foundation, Inc. In some cases, endowments have been established; other scholarships are based on annual gifts. Some companies provide matching funds for gifts from their employees who are alumni. More than 800 scholarships have been made available to qualified students.

For additional information about college-based scholarships, contact the dean's office at **303-735-2440** or see engineering.colorado.edu/students/advising.htm (Undergraduate Scholarships). Students may also contact the Office of Financial Aid at **303-492-5091**.

Anyone interested in providing an undergraduate scholarship or contributing to the scholarship fund may contact the Engineering Development Office, University of Colorado Boulder, 422 UCB, Boulder, CO 80309-0422, **303-492-7899**.

Academic Standards

Academic Policies

Students in the College of Engineering and Applied Science must abide by all college policies and procedures as outlined at engineering.colorado.edu/students/advising.htm. Students should refer to this website often since policies, advising guides, and forms may be updated throughout the academic year.

Ethics

As members of the academic community, students have a responsibility to conduct themselves with the highest standards of honesty and integrity. These qualities are also vital to the profession of engineering.

Academic and non-academic sanctions, which may include suspension or expulsion, are imposed for the following acts, or intent to engage in such acts: plagiarism; illegal possession and distribution of examinations or answers to specific questions; the presentation of another student's work as one's own; performing work or taking an examination for another student; or the alteration, forging, or falsification of official records. This list-

ing is not complete and includes only some types of academic dishonesty. Any student accused by a course instructor of academic dishonesty will be allowed to remain in the course until such time the student acknowledges an act of academic dishonesty or until a hearing has determined that an act of academic dishonesty has been committed. For additional information, see engineering.colorado.edu/students/advising.htm (Academic Honesty) and the Student Honor Code Policy at www.colorado.edu/academics/honorcode. See also Academic Integrity and Student Conduct under Campus Policies in the General Information section.

Academic Standing

To remain in good academic standing in the College of Engineering and Applied Science, a student must maintain satisfactory academic performance as measured by GPA criteria, and satisfactory academic progress toward completion of a bachelor of science degree in the college. For students matriculating in the college fall 2011 semester or later, CU cumulative, semester, and major GPAs should all be at or greater than 2.250 (2.000 for students matriculating in the college prior to fall 2011). Failure to meet these requirements results in the student being placed on academic probation and, if not corrected, on academic suspension. A student may be directly placed on academic suspension if retroactive grade changes lower their cumulative or prior semester GPA, or if their cumulative CU GPA falls below 1.000. Academic progress in this college is determined by grades and averages as reported and calculated by the Office of the Registrar.

Academic Probation

Academic probation is normally the first step taken by the college to express concern that a student is not maintaining satisfactory academic performance. Academic probation is an official warning that the student's academic performance must improve or the student will be subject to academic suspension from the college. Once placed on academic probation, a student remains in that status the following **two semesters** (summer term not included) of enrollment as an undergraduate student in the College of Engineering and Applied Science.

Students Matriculating in the College Fall 2011 Semester or Later

- Probation by the **cumulative grade point average rule** occurs if the student's cumulative University of Colorado GPA is less than 2.250 but above 1.000. For the first semester of academic probation, the student must attain a semester GPA of at least 2.250. For the second semester of academic probation, the student must attain a semester GPA, and cumulative GPA, of at least 2.250. Summer term is not included.
- Probation by the **consecutive semester grade point average rule** occurs if the student has two consecutive semesters (summer term not included) at the University of Colorado with semester GPA less than 2.250. For the first semester of academic probation, the student must attain a semester GPA, and cumulative GPA, of at least 2.250. For the second semester of academic probation, the student must attain a semester GPA, and cumulative GPA, of at least 2.250. Summer term is not included.
- If probation is due to both cumulative and consecutive semester grade point average rules, the student will be placed under the cumulative grade point average rule requirements.

Students Matriculating in the College Prior to the Fall 2011 Semester

- Probation by the **cumulative grade point average rule** occurs if the student's cumulative University of Colorado grade point average is less than 2.000 but above 1.000. For the

first semester of academic probation, the student must attain a semester GPA of at least 2.000. For the second semester of academic probation, the student must attain a semester GPA, and cumulative GPA, of at least 2.000. Summer term is not included.

- Probation by the **consecutive semester grade point average rule** occurs if the student has two consecutive semesters (summer term not included) at the University of Colorado with semester grade point averages less than 2.000. For the first semester of academic probation, the student must attain a semester GPA, and cumulative GPA, of at least 2.000. For the second semester of academic probation, the student must attain a semester GPA, and cumulative GPA, of at least 2.000. Summer term is not included.
- If probation is due to both cumulative and consecutive semester grade point average rules, the student will be placed under the cumulative grade point average rule requirements.

While on academic probation, the student is required to enroll in and complete at least 12 credit hours per fall or spring semester in approved course work that meets engineering degree requirements. Course work taken beyond degree requirements in humanities, social sciences, and ROTC does not count toward this minimum course load requirement, and no courses may be elected with the *pass/fail* grade option. This requirement may be petitioned for exceptional circumstances; approval will lengthen the period of academic probation.

Academic Suspension

Students will be placed on academic suspension if, while on probation, they fail to meet the academic requirements associated with academic probation. A student will be placed directly on academic suspension if: (1) retroactive grade changes lower the cumulative or prior semester grade point averages, or if (2) the cumulative grade point average is below a 1.000. The College of Engineering and Applied Science takes the action of academic suspension on the premise that the student is currently unable to make academic progress toward a bachelor of science degree. Academic suspension occurs when the college withdraws the student for failing to maintain satisfactory academic progress.

NOTE: If a new student at CU-Boulder achieves a cumulative GPA below 1.000 following his or her first semester of enrollment at the Boulder campus, this student will be placed on academic probation rather than directly on academic suspension. This exemption is only available to students following their first semester at CU-Boulder. A cumulative GPA below 1.000 at any other time will be cause for immediate academic suspension without a period of academic probation.

The conditions of academic suspension are:

- The period of suspension is indefinite, but must be at least one academic semester (summer term not included) if it is the first suspension and two semesters (summer term not included) for the second academic suspension. College faculty expect the student to reflect upon, and address, any issue(s) prohibiting academic success during the period of academic suspension. **NOTE:** A third academic suspension is permanent and the student may not return to this college.
- If the student needs to improve his or her CU GPA in order to be eligible to return to this college, the following two options are available:
 1. On-campus courses offered during summer sessions on any campus of the University of Colorado (excluding Maymester), and

2. Courses offered through CU-Boulder Continuing Education and Professional Studies (CEPS).
- Students on academic suspension may not be enrolled in more than 16 credit hours at a time.

NOTE: Course work completed at institutions other than the University of Colorado will NOT affect the CU GPA.

Returning to the College from Academic Suspension

A student seeking to return to the college from academic suspension must have attained a cumulative University of Colorado grade point average of at least 2.250 (2.000 for students matriculating in the college prior to fall 2011). (NOTE: Students may elect to complete course work at institutions other than the University of Colorado, but these grades will NOT be used in computing a student's GPA.) Once the required CU GPA has been obtained, the student then needs to contact the college's Assistant Dean for Students by e-mail or letter, requesting to return from academic suspension. The student must present convincing evidence of his or her ability to continue successfully and complete an engineering undergraduate degree program. The student also needs to let the college know the semester he or she wishes to return.

A suspended student, upon return to the College of Engineering and Applied Science, returns on academic probation for two semesters (summer term not included). If the student fails to fulfill the terms of that academic probation (cumulative GPA rule or the consecutive semester GPA rule), the student will be suspended once again. While a student may be suspended more than once, a third academic suspension is permanent. A student who has been permanently suspended may not return to the CU-Boulder College of Engineering and Applied Science.

Returning to a Different CU-Boulder College or School

If a student, while on academic probation or suspension, is considering transferring to another CU-Boulder college or school, he or she should follow that college's Intra-University Transfer (IUT) policy and procedures (typically detailed on that college's advising website). If the student elects to leave engineering, this college considers that the student has permanently changed his or her choice of academic major to one offered by the other school or college. Therefore, the student is not permitted to enroll in any courses taught by this college that apply only toward engineering degree requirements. If, at a later date, the student attempts to transfer back to engineering, the current college policy governing Intra-University Transfer (IUT) admission will apply. If an academically suspended engineering student is also a double degree student with another school or college at CU-Boulder, the student must drop engineering as a degree program if he or she will be enrolling in the other degree program while on academic suspension. The student may attempt to return to engineering in the future if desired; the current college policy governing Intra-University Transfer (IUT) admission will apply.

Admission and Enrollment Policies

Freshman Applicants

Prospective engineering students must have a mathematical aptitude and keen interest in science and its methods. Curiosity about the natural principles governing the behavior of forces and materials and the ability to visualize structures and concepts are prerequisites. Strong skills are also essential in written and oral communications.

The college seeks applicants who demonstrate a high probability of completing their designated engineering degree program. Admission is based on the evaluation of many criteria; among the most important are the general level of academic performance prior to admission, performance on standardized tests, and other evidence of motivation, potential, academic ability, and accomplishment. These factors are indicated by academic records, test scores, letters of recommendation, and personal accomplishments.

Specific admission requirements are detailed in Undergraduate Admission in the General Information section of this catalog. All students are expected to be enrolled as full-time students and must petition to be enrolled part time.

For more information, see www.colorado.edu/prospective.

Confirming Your Choice of Major

When students apply to the College of Engineering and Applied Science from high school, they may indicate to enter the college as "open option" (unsure of engineering major), or they may select a preliminary engineering major. Sometime after completion of the first semester, and by March 15 at the latest, all students should finalize their choice of major in the college. For details regarding this process, see engineering.colorado.edu/students/advising.htm (Confirming Your Choice of Major).

Transfer Students

Students desiring to transfer from other accredited collegiate institutions are considered for admission on an individual basis if they meet the transfer student competitive admissions requirements outlined in Undergraduate Admission in the General Information section. All transfer students are expected to be enrolled as full-time students and must be admitted to the college prior to the last 45 semester credit hours of their degree program.

For more information, see www.colorado.edu/prospective.

Intercampus Transfer Students

Admission criteria for students at other CU campuses are the same as for other transfer students.

The student is advised that the engineering degree requirements differ from one campus to another in the number of credit hours required for the degree, specific course content and titles, and residency required in the college. Where there is a difference in credit hours between courses listed as equivalent, the College of Engineering and Applied Science at CU-Boulder applies the smaller number of credit hours. To ensure the maximum acceptance of credit toward degree requirements and minimize the length of time required to complete the degree, the student planning an intercampus transfer must contact the destination major department as soon as possible once deciding to complete an engineering degree at another University of Colorado campus.

Generally, an intercampus transfer should be accomplished at the end of the first year, with some course selection coordination required between the student and the degree-granting major department during that year. With increased course selection coordination, some students may be able to delay their transfer until the middle or end of the sophomore year. Beyond that point, the student is most likely to lose substantial course credit and time in completing degree requirements.

For additional information, see engineering.colorado.edu/students/advising.htm (Intercampus Transfer).

University Of Colorado System Course Equivalencies

The following course-by-course equivalency table should assist in advising students anticipating an intercampus transfer between the Colleges of Engineering and Applied Science within the University of Colorado system. Note there may be credit hour differences between equivalencies, thus students should inquire about credit hours applicable toward degree requirements with their destination major department at the appropriate campus.

Intrauniversity Transfer Students

Undergraduate intrauniversity transfers (IUTs) on the Boulder campus of the University of Colorado to the College of Engineering and Applied Science are considered on designated criteria. The applicant's academic record must fulfill the IUT admissions requirements of the College of Engineering and Applied Science. Specific admission criteria and application details may be found at engineering.colorado.edu/students/advising.htm (Intra-University Transfer).

Former Students

A former student is expected to meet the current requirements outlined in Undergraduate Admissions in the General Information section and must reapply to the university. Courses taken at other collegiate institutions are not necessarily a determining factor in the student's readmission to the University of Colorado, but transcripts on all such work must be submitted.

Interruption of studies may require completion of current degree work in addition to repetition of course work for new degree requirements.

A former student returning to the college after a break in attendance must have course work reevaluated by the major department if it is older than 10 years from the date of his or her return.

Minimum Academic Preparation Standards (MAPS)

All students entering the University of Colorado who finished high school in the spring of 1988 or after must meet Minimum Academic Preparation Standards (MAPS) specified by each school or college. The College of Engineering and Applied Science has adopted the following standards for students. These standards are defined in high school units; a unit is one full year of high school course work:

English—4 units

Mathematics—4 units (includes at least 2 of algebra, 1 of geometry, and 1 of college preparatory math such as trigonometry, analytic geometry, or elementary functions)

Natural Science—3 units (includes 1 of physics AND 1 of biology or chemistry; or 2 of chemistry AND 1 of physics or biology; or 2 of biology AND 1 of chemistry or physics)

Social Science—3 units

Foreign Language—3 of the same foreign language or 2 years in each of two different foreign languages

Students are strongly encouraged to fulfill MAPS requirements prior to entering the College of Engineering and Applied Science. In some cases, students may be admitted even though they have not met all MAPS. If you have a MAPS deficiency, you are required to complete the appropriate MAPS courses prior to your graduation from college through courses taken at CU, other institutions of higher education, or approved credit-by-examination programs. It is the student's responsibility to be aware of any MAPS deficiencies and complete them in a timely manner. The major department has the responsibility to advise the student on which courses must be taken to satisfy any MAPS deficiencies.

For additional information, see engineering.colorado.edu/students/advising.htm (Advanced Placement and MAPS).

Attendance

Successful work in the College of Engineering and Applied Science is dependent upon uninterrupted attendance in all classes. Students who are unavoidably absent should make arrangements with instructors to make up the work missed. *If students stop attending a course in which they are enrolled, they will receive a failing grade (F) if their overall academic performance, including missed work, is at a failing level.*

If a student misses a final examination because of illness or other valid personal emergency, the student must notify the instructor and the dean's office no later than the end of the day on which the final examination is given. Failure to properly notify these officials may result in an *F* in the course.

Changing Majors

The form necessary for transferring from one undergraduate engineering major to another, or to add an additional engineering major, is available in the dean's office (ECAD 100) and at engineering.colorado.edu/students/advising.htm (Change of Major).

Class Standing

To be classified as a sophomore in the college, a student must have completed 30 semester credit hours; to be classified as a junior, 60 hours; and to be classified as a senior, 90 hours. A student with more than 120 hours is classified as a fifth-year senior. All transfer students are classified on this basis according to their hours of credit accepted at the University of Colorado. This class standing does not necessarily reflect the academic standing of a student in a degree program.

Credit Policies

Advanced Placement

Advanced placement (AP) and college credit may be granted on the basis of the College Entrance Examination Board's (CEEB) Advanced Placement tests. For students who have taken an advanced placement course in high school and who make the required score in the CEEB's Advanced Placement examination, advanced placement and college credit are granted. All advanced placement credit must be validated by satisfactory achievement in subsequent courses, in accordance with the transfer credit policies of the college. For additional information, see engineering.colorado.edu/students/advising.htm (Advanced Placement and MAPS).

College-Level Examination Program Credit

Prospective students may earn college credit on select College-Level Examination Program (CLEP) examinations, provided that they score at the 67th percentile or above. A list of subjects in which CLEP examinations are accepted may be obtained in the College of Engineering and Applied Science dean's office. All CLEP credit must be validated by satisfactory achievement in subsequent courses, in accordance with the transfer credit policies of the college.

Credit for Reserve Officers Training Corps (ROTC)

Up to 6 semester hours of credit of approved ROTC courses may be counted toward a student's degree requirements in the humanities/social sciences. These approved courses may be found at engineering.colorado.edu/hss. With written approval from the student's major department, additional ROTC credit hours may be applied as free electives and/or technical professional electives.

Final Grade Appeal

The college's grade appeal policy may be found at engineering.colorado.edu/students/advising.htm (Appealing a Grade).

Incompletes

The grade of *I* (incomplete) may be given by an engineering faculty member when requested and only with documented circumstances beyond a student's control. A substantial amount of work must have been satisfactorily completed before approval for such a grade is given. If an incomplete grade is given, the instructor is required to document both the conditions precedent to the removal of the incomplete and the time limit for the fulfillment of these conditions. The specified time shall not exceed a one-year period. A copy of the "Incomplete Grade Form" is filed with the dean's office, the student's major department, the instructor, and the student involved.

Course work to complete a grade of *I* must be taken on the same campus on which the grade of *I* was awarded. Credit for a course similar to the course in which the grade of *I* was awarded may not be used to substitute for the incomplete course or be used to remove the grade of *I*.

If the I grade is not resolved within one year, it reverts to an F.

No Credit Restrictions

In the College of Engineering and Applied Science, courses required for fulfillment of graduation requirements *cannot be taken for no credit (NC)*. Once a course has been taken for no credit, the course cannot be repeated for credit. Engineering students must petition for approval before enrolling for any course *NC*.

Pass/Fail Option

The primary purpose for offering courses on a *pass/fail* grading option is to encourage students to broaden their educational experience by selecting elective courses with this grade option without serious risk to their academic record. Individual departments may have rules that should be checked before registering for the *pass/fail* option. The college *pass/fail* policy is:

1. The maximum number of credit hours a student may elect with the *pass/fail* option shall be designated by the student's major department, but no more than 16 semester hours of *pass/fail* credit can be applied toward degree requirements. (Study abroad *pass/fail* credit is exempt from this limitation.)
2. Students should obtain advance approval via petition prior to selecting the *pass/fail* option. Course work taken *pass/fail* without appropriate approval may be reverted to the letter grade earned.
3. All students who wish to register for the *pass/fail* option must do so during the university registration or schedule adjustment period.
4. Students on academic probation may not elect the *pass/fail* grade option.

Transfer Credit

After a prospective transfer student has applied and submitted transcripts to the University of Colorado, the Office of Admissions issues a transfer credit evaluation listing those courses acceptable for transfer by University of Colorado Boulder standards. A copy of this evaluation is made a part of the student's college record. The student's major department will then indicate which of those courses are acceptable in meeting engineering degree requirements. It is the responsibility of the transfer student to request final validation of the transfer credit hours by the major department and confirm that this validation is noted in the student's college file.

If at any time a student wishes to have a course not previously accepted reconsidered for transfer, the student should consult with the faculty transfer credit evaluator in the major department and petition the dean through the department for approval of the course.

Nontransferable Credit Hours. Students desiring to transfer credit hours from engineering technology programs should note that such credit hours are accepted only upon submission of evidence that the work involved was fully equivalent to that offered in this college.

Some technology courses are taught with titles and textbooks identical to those in similar engineering courses. These courses may still not be equivalent to engineering courses because the areas of academic emphasis are divergent.

In order to assist engineering technology students with transfer problems, the following guidelines have been established:

1. Courses on basic subjects such as mathematics, physics, foreign languages, literature, or history may be acceptable for transfer credit if they were taught as part of an accredited program for all students and were not specifically designated for technology students.
2. Students who have taken courses with technology designations that may be valid equivalents for engineering courses have these options:
 - a. They may petition for permission to waive the course requirement. The course requirement can be waived if students demonstrate that, by previous course work, in-

dividual study, or work experience, they have acquired the background and training normally provided by the course. No credit is given for a waived course, but students may benefit from the waiver by being able to include more advanced work in their curriculum. Other students may profit by repeating the course at this college and thus establishing a fully sound basis for what follows.

- b. The appropriate University of Colorado academic department may recommend to the dean's office that credit be transferred to count toward the requirements for a related course in its curriculum. Credit cannot be given for vocational/technical or remedial courses under rules of the university.
- c. The student may seek credit for the course by examination.

For more information on transfer of credit policies, see Transfer of College-Level Credit in the Undergraduate Admission section.

Work Experience

It is the academic policy of the College of Engineering and Applied Science that credits accrued in the official records of a student that were awarded for work or co-op experience do not apply toward degree requirements.

Petition Policy

A student desiring a waiver of college or departmental policies must request and secure approval for this waiver through a petition procedure. Petitions are first presented to the student's major department for review, followed by review at the dean's office. It is the student's responsibility to obtain official notification of the petition decision from the dean's office. Petition forms and information on the petition procedure are available in the dean's office, in the academic department office, or at engineering.colorado.edu/students/advising.htm (Petition Form).

Registration and Enrollment

To ensure the prompt completion of degree requirements and satisfaction of the four-year guarantee, the undergraduate student is expected to register for, and complete each semester, a full-time course load as outlined in the approved departmental curriculum guide. All students are expected to be enrolled full time and must petition to be enrolled part time. Part-time enrollment (less than 12 credit hours) will negatively impact the student's financial aid and scholarships, and is likely to negatively impact student health insurance, on-campus housing, and the four-year graduation guarantee. Student must also petition to be enrolled in more than 19 credit hours in any given semester.

Sequence of Courses

Students are expected to follow the curriculum recommended by their major department.

A student who receives a grade of D+ or lower in a course that is prerequisite to another may not enroll in the succeeding course without an approved petition from the student's major department, the instructor of the succeeding course, and the dean's office. (Check with the major department for more stringent requirements on prerequisite course grades.)

All courses are not necessarily offered each semester. According to college policy, undergraduate courses having an enrollment of fewer than 20 students may be cancelled. Students can minimize scheduling problems by closely following the curricular sequence recommended by their major department.

If a course is unavailable, a student may petition to enroll for equivalent study.

Grading System, Pass/Fail, and Drop/Add Procedures

See Registration in the General Information section for the University of Colorado uniform grading system and for additional *pass/fail* option information and drop/add procedures. Specific dates and procedures may be found at registrar.colorado.edu.

Only under circumstances beyond the student's control are petitions for dropping courses approved after the drop deadline. Students in their first semester at CU-Boulder may be approved to drop a course through the 10th week of the semester.

Repetition of Courses

Students are not to register for credit in courses in which they already have received a final grade of C- or higher, unless the major department requires a higher grade in the course. When students take a course for credit more than once, all grades are used in determining their University of Colorado GPA (unless the Course Repetition Program had been utilized). A final grade of F in a required course necessitates that the course be repeated and a satisfactory final grade attained. Students may not register for credit in any course they have previously completed for no credit (NC).

A student may not enroll more than three times in a course that applies toward degree requirements; furthermore, after the third attempt, a student may not substitute an equivalent course.

Summer Courses

An expanded selection of summer session courses is offered for new and continuing students and for those who must remove academic deficiencies. For information about courses, see www.colorado.edu/summer. Students on academic suspension may not register for Maymester courses.

Withdrawal from the University

Engineering undergraduate students may withdraw only during the first six weeks of the semester. After this time, withdrawals are permitted by this college only upon presentation of evidence to verify that the withdrawal is necessary because of documented conditions clearly beyond the student's control (medical, psychiatric, or extended family emergency).

If a student withdraws, college permission may be required for reenrollment. Students who interrupt their course of study may be required to complete all current degree requirements and to repeat courses previously completed.

Undergraduate Degree Requirements

Fundamentals taught in the freshman year are of prime importance in the more advanced classes, and every effort is made to place all freshman students in appropriate courses.

It is strongly recommended that students avoid the likelihood of later scheduling problems by carefully following the recommended curriculum in their major or in the open option program.

Each freshman is exposed to a broad university background, completing course work outside the College of Engineering and Applied Science in science, mathematics, social science, and the humanities.

Advising

All students are advised by faculty and staff from their respective major department or program. Students are encouraged to meet with an advisor at least once a semester.

Advising information is available at the administrative offices of the College of Engineering and Applied Science, ECAD 100, telephone 303-492-5071, directly through the major departments, or at engineering.colorado.edu/students/advising.htm.

Advisors are readily available to assist students with academic, vocational, or personal concerns. Students are assigned departmental advisors for academic planning and should consult with the department chair or designated faculty or staff representative if there is uncertainty over who is the student's advisor or if the student wants a change in advisor.

Four-Year Graduation Guarantee

The College of Engineering and Applied Science at the University of Colorado Boulder is committed to providing an undergraduate educational experience among the best offered by any comprehensive research university in the country.

The College of Engineering and Applied Science offers 12 bachelor of science degree programs, each of which may be completed within eight full-time semesters. Many students elect to extend their studies at the University of Colorado beyond eight semesters to take advantage of research and employment opportunities, add minor programs, complete double-degree programs, and/or to pursue specialized plans of study.

For new freshmen who do not wish to extend their studies beyond eight semesters, the University of Colorado extends a guarantee that required or essential courses, or acceptable alternative courses, will be available so each student can complete all course work required for a bachelor of science degree from the College of Engineering and Applied Science no later than the end of the eighth consecutive semester of enrollment, when the student follows the degree plan recommended by the major department. In the event the University of Colorado is not successful in meeting the terms of this guarantee, the university will reimburse the student all tuition and course fees for those courses remaining to successfully complete the previously designated bachelor of science degree.

Full details regarding the guarantee and qualifications may be found at engineering.colorado.edu/students/advising.htm (Four Year Guarantee).

Degree Requirements

1. The BS degree requires that no fewer than 128 semester hours in an acceptable curriculum be completed to the satisfaction of the major department.

The last 45 hours must be earned after admission and matriculation in the college as an undergraduate engineering degree student at the University of Colorado Boulder campus. Some students will need to present more than the minimum number of credit hours because they may have enrolled in courses that do not apply toward degree requirements.

A student is awarded a degree by the recommendation of the faculty of the College of Engineering and Applied Science after the student's major academic department determines that all degree requirements have been successfully completed.

The diploma indicates the University of Colorado campus from which the department recommending the student for the degree is located. Consideration will generally be given

to designating the campus where the majority of the course work was completed. However, the final decision on the campus designation is made by the designated faculty representative from the student's major academic department.

2. The cumulative GPA of an engineering student includes all academic courses attempted at the University of Colorado (unless the Course Repetition Program has been utilized). A cumulative GPA of 2.250 (2.000 for students matriculating in the college prior to fall 2011 semester) is required in courses used to fulfill degree requirements. In addition, a separately computed GPA of 2.250 (2.000 for students matriculating in the college prior to fall 2011 semester) must be attained in those courses taken from the student's major department. For students in the applied mathematics program, the major department is the applied mathematics department; for students in the engineering physics program, the major department is the physics department. For students majoring in environmental engineering, all chemical, civil, environmental, and mechanical engineering courses will be considered in lieu of those from a single department.
3. Humanities and social sciences degree requirements may be found at engineering.colorado.edu/hss. All electives should be selected with the approval of an academic advisor and from the lists of approved courses.
4. Students who graduated from high school in the spring of 1988 and thereafter must complete any minimum academic preparation standards (MAPS) deficiencies prior to graduation. Students should refer to engineering.colorado.edu/students/advising.htm (Advanced Placement and MAPS) and consult with an academic advisor or the dean's office (ECAD 100) to determine any MAPS deficiencies and how to satisfy these deficiencies.
5. Some majors require successful completion of an educational outcome measurement prior to graduation. Students should contact their major department to determine whether an outcome measurement is required and when it must be taken.

Graduation

It is the student's responsibility to be certain that all degree requirements are fulfilled, to notify the major department upon completion of 100 semester hours applicable to BS degree requirements, to fill out the Application for Diploma form at the beginning of the next-to-last semester before graduation, and to keep the departmental advisor and the dean's office informed of any change in graduation plans.

All incompletes must be completed and all Independent Learning course grades must be officially received no later than three weeks prior to the graduation ceremony. It is the student's responsibility to contact the appropriate instructor concerning the removal of incomplete grades. Graduation periods are in December, May, and August.

Double Degrees

A student in the College of Engineering and Applied Science may be able to major in two engineering disciplines or obtain one degree in engineering and obtain one in another field, such as business, music, or one of the arts and sciences disciplines. Full degree requirements must be met for each college/major. The degrees are awarded concurrently.

Double Degrees from Engineering and Another College

Students may obtain bachelor's degrees in engineering and in the academic program of another college, with the approval of the relevant colleges/major departments.

Double Majors within the College of Engineering and Applied Science

It is possible for an undergraduate student to complete degree requirements for two or more majors within the College of Engineering and Applied Science, with the approval of the relevant major departments. Students must complete at least 15 additional credit hours for each additional major. The decision to earn more than one major in the college should be carefully weighed, since qualified students may be able to obtain a master's degree for a similar number of credit hours.

Minors

The college offers minors in applied mathematics, computer science, computer engineering, electrical engineering, signals and systems, and electrical renewable systems.

More information is available at engineering.colorado.edu/students/advising.htm (Minor Programs).

Premedical Option

Several engineering departments have an option by which a student may meet all requirements for entry into medical or other health professions schools while earning a degree in engineering. Engineering departments with this option will approve inclusion of appropriate biological and bioengineering courses in the student's program of technical electives. The courses listed below are usually prescribed by medical and dental schools and must be completed with superior grades.

<i>Required Courses</i>	<i>Semesters</i>
General chemistry	2 (with labs)
Organic chemistry	2 (with labs)
General or introductory biology	2 (with labs)
English composition and literature (one of each)	2
Physics	2 (with labs)
Calculus (required or recommended)	1
Statistics (strongly recommended)	1
Biochemistry (required or strongly recommended)	1

Students can typically meet these requirements by carefully substituting electives in their engineering curriculum. Interested students should consult with the prehealth advisor on the Boulder campus early in their undergraduate career in order to accomplish the other elements of preparation for applying to a health professional school. Assistance with requirements for clinical experience and specialized letters of recommendation can be obtained from this office.

Concurrent BS and MS Degree Program in Engineering

Students with strong academic records who plan to continue in the Graduate School usually find it advantageous to apply for admission to the concurrent BS/MS degree program. Excellent students plan a graduate program beginning in their junior year. Many departments allow up to 6 credit hours of graduate course work to be applied to the BS degree. This program also provides opportunities to work with faculty on independent study or research projects.

Application is made to the Graduate School through the appropriate academic department. Application and admission may

occur during the junior year; consult individual departments for their exact timing. The college requires a minimum GPA of 3.250 for admission to this program; some departments may have higher requirements. Requirements for the two degrees are the same as those for two degrees taken separately: 128 credit hours for the BS degree and 24–30 hours including thesis (Plan I) or 30 credit hours (Plan II) for the MS degree. Up to 6 credit hours of graduate course work may be double counted (i.e., applied toward the BS degree as well as applied toward the MS degree).

All students choose or are assigned a faculty advisor to help them develop a program of study best suited to their interests. Students in each program are encouraged to pursue independent study on research programs or in areas of specialization beyond those offered in formal courses. Students are allowed to structure their senior and graduate years in an order that is optimal for their program, as long as all requirements for both the BS and MS degrees are completed by the end of the concurrent BS/MS program. The BS and MS degrees must be awarded concurrently at the completion of both degree programs.

A minimum GPA of 3.000 must be maintained for continuation in the program; if the GPA falls below 3.000, all hours completed with a passing grade while in the program count only towards fulfillment of the BS degree.

Tuition rates for resident students in this program are at the undergraduate rate until students accumulate a certain number of credit hours. Students are then considered to be graduate students for purposes of tuition and financial aid. For additional details on this program, contact the appropriate engineering academic department or the Graduate School.

Concurrent BS and MS Degree Program in Engineering Physics

The concurrent BS/MS program in engineering physics enables well-qualified and motivated students to experience graduate-level course work earlier in their education and to obtain an MS degree in a reduced time period. Engineering physics majors may apply for this program during their junior year. Applicants should have a minimum GPA of 3.000 at the time of application. The application should be accompanied by recommendation letters from two professors with whom the applicant has taken upper-division physics courses. The applicant should also produce a letter of acceptance from a faculty sponsor/advisor willing to supervise at least 6 credit hours of research. Students interested in this program are encouraged to consult with an engineering physics faculty advisor early in their undergraduate career. Details on course requirements may be found at www.colorado.edu/physics.

Graduate Study in Engineering

The College of Engineering and Applied Science offers degree programs for the master of engineering (ME), master of science (MS), and doctor of philosophy (PhD) degrees. There are degree programs in each of the following departments or fields:

- aerospace engineering sciences
- chemical and biological engineering
- civil engineering
- computer science
- electrical, computer, and energy engineering
- engineering management
- mechanical engineering
- telecommunications

The master of science in applied mathematics is offered through the Department of Applied Mathematics in the College of Arts and Sciences.

Graduate programs within each engineering department offer a variety of options, providing a number of alternative careers.

The **aerospace program** has a strong emphasis on astrodynamics and satellite navigation systems; bioastronautics; remote sensing, earth, and space science; structural and material systems; and aerospace engineering systems, including aerodynamics, systems, and control, structures, and mechanics of materials.

Key activities in **chemical and biological engineering** include membrane and thin-film science, biomedical engineering and biotechnology, surface science, biofuels and biorefining, polymeric and ceramic materials engineering, microelectronics, nanomaterials, and fluids.

Fields emphasized in **civil engineering** include geotechnical engineering and geomechanics, structural mechanics and engineering, building systems engineering, construction management and engineering, environmental and geoenvironmental engineering, hydrology, environmental fluid mechanics, civil engineering systems, and engineering science.

Strengths in **computer science** include computer architecture, operating systems, networking, mobile computing, computer security, computational biology, robotics, algorithm design, artificial intelligence, software and web engineering, programming languages, database design and data mining, human-computer interaction, computer-supported cooperative work, machine learning, lifelong learning and design, numerical and parallel computation, speech and language processing, scientific computing, and theoretical computer science.

Areas of focus in **electrical, computer, and energy engineering** include photovoltaic, wind, and renewable energy systems, power machines and systems, electromagnetic theory, microwave and optical guided wave devices, antennas, remote sensing, biomedical engineering, communications and signal processing, medical imaging, computer architecture and software optimization, optical devices, optoelectronics, nanomaterials and nanodevices, biophotonics, robotics, man/machine interfaces, high-performance autonomous vehicles, and computer aided design for VLSI.

Engineering management offers a core management curriculum in leadership, project management, quality, and finance. Areas of concentration are available in managing innovation, project management, performance excellence, engineering entrepreneurship, quality systems, software management, research and development, and Six Sigma methodologies. These courses are designed for engineers and technical professionals preparing for management assignments in high-technology fields.

Mechanical engineering core areas of concentration include air quality, bioengineering, design, energy and environment, materials, mechanical engineering fundamentals (e.g., heat transfer, fluid mechanics), mechanics of materials, microsystems, and simulation-based mechanical engineering sciences. Within these core areas specific expertise includes biomedical devices, electronic packaging, mechatronics and robotics, pollution prevention, membrane sciences, combustion sciences, energy conversion, nondestructive structural evaluation, micro-electro-mechanical systems, nanotechnology, computational fluid dynamics, and engineering education.

Telecommunications offers an interdisciplinary master's degree and doctoral program that integrates courses in electrical engineering, computer science, business, economics, policy, and law. Through such an approach, and access to its world-class telecommunications laboratory, students are equipped to de-

sign, plan, analyze, and manage telecommunications systems, such as the Internet and wireless networks. Students enter the program from a wide variety of technical or liberal arts undergraduate degrees and expand their knowledge through an individually tailored combination of courses on telecommunication technologies and the business and policy framework in which they operate. This ensures balanced, specialized capabilities necessary for a comprehensive understanding of networking, wireless systems, network security, and smart grids.

Graduate Degree for Science Majors

Science graduates who have good academic records and strong backgrounds in mathematics and science may be eligible for admission as graduate students in engineering or may be able to qualify with some extra course work. Information may be obtained from the appropriate academic department office.

Distance Learning and Professional Development Programs

The Center for Advanced Engineering and Technology Education (CAETE) is the distance learning and professional studies arm of the College of Engineering and Applied Science. CAETE provides convenient and flexible education for working professionals. Courses are delivered in the campus classroom and via the Internet to students across the country and abroad.

Graduate credit courses are available in the areas of aerospace engineering; computer science; electrical, computer, and energy engineering; civil, environmental, and architectural engineering; engineering management; and telecommunications. Course sequences may lead to a graduate certificate or master's degree.

Noncredit courses are available in such fields as networking, project management, and other engineering and technical areas.

Students may enroll in credit courses before being accepted to the Graduate School, but they should apply for admission before finishing a third course. Courses taken before admission are considered transfer credit. Nine transfer credit hours will be accepted toward a graduate degree program. All applicable courses taken after admission will count toward the degree. Nondegree students may register for credit or noncredit courses for professional development.

CAETE also provides ongoing access to over 100 pre-recorded courses via a virtual library. These courses are available for academic course work or purchase by companies and individuals for in-house training.

For more information, visit the CAETE website at cuengineeringonline.colorado.edu, call 303-492-6331, e-mail caete@colorado.edu, or write to CAETE, University of Colorado Boulder, 435 UCB, Boulder, CO, 80309-0435.

Master of Engineering, Master of Science, and Doctor of Philosophy

Students wishing to pursue graduate work in engineering leading to candidacy for advanced degrees should read carefully the requirements for advanced degrees in the Graduate School section. Some departments also have available explanatory material on their advanced degree programs.

Prerequisites. To enroll for an advanced degree in any department of the College of Engineering and Applied Science and the interdisciplinary telecommunications program, candidates either must have previously earned a bachelor's degree in a curriculum that includes the necessary prerequisites for that branch of engineering or must qualify for the concurrent BS and MS

program. If the candidate's preliminary education was taken at some other institution, the degree of qualification for advanced work is determined by the department concerned and by the dean of the Graduate School.

Graduates of engineering technology programs should note that the equivalent of a BS degree in an appropriate engineering field is required for entry into the Graduate School. Because the goals and orientation of engineering programs differ from those of technology programs, technology graduates should expect to make up deficiencies before being admitted to graduate study in engineering. Students may not be admitted to the Graduate School while making up deficiencies, but can enroll as non-degree students.

For admission as a regular degree student, an undergraduate GPA of at least 3.000 is normally required.

Language Requirement. PhD candidates should note that some engineering departments have foreign language requirements.

Course Work. Graduate work in each department of the College of Engineering and Applied Science falls into two classes:

1. Courses that are offered for candidates who have chosen to major in the particular department
2. Courses that are offered for candidates who have chosen their major in some other department, but who are pursuing a certificate or other complementary course work

Graduate students majoring in any department may not use toward graduate degrees those courses listed as required undergraduate work in the same department. They may, however, use up to 6 hours taken at the 3000–4000 level toward a master's degree. These courses must be taken from an engineering department other than that in which they received their bachelor's degree, and must have the approval of the department granting the degree and the dean of the Graduate School.

Availability of Courses. All courses are not necessarily offered every year. They are available only if there is sufficient demand.

Qualifying Examinations. Graduate students who plan to become candidates for the MS or PhD degree may be required to take a qualifying examination in the appropriate field of specialization during the first semester in which they are registered as candidates for a graduate degree. Individual departments should be consulted concerning the timing or requirement of this examination. The purpose of this examination is to enable the advisor and student to plan a suitable program of study.

Teaching Assistant English Proficiency and Intelligibility

The College of Engineering and Applied Science requires that all graduate teaching assistants be proficient and intelligible in spoken English. In order to ensure that this is the case, all prospective teaching assistants whose native language is not English, or others for whom the department graduate program coordinator believes that spoken language intelligibility is a concern, regardless of native language, will be tested for spoken language intelligibility prior to or at the beginning of the semester in which the teaching assistantship is awarded. In the event that a prospective teaching assistant does not demonstrate a satisfactory level of proficiency, as determined by the Graduate Education Council of the college, that student will be required to participate in training designed to improve intelligibility.

Aerospace Engineering Sciences

The mission of Aerospace Engineering Sciences is to provide quality education, including hands-on learning, and to conduct foremost research in aerospace engineering sciences. These goals are accomplished through fundamental and multidisciplinary research and by preparing aerospace engineering students to meet the needs of 21st-century society through the conception, design, and application of aerial and spacecraft systems.

Educational Objectives

During their first three to five years after graduation, Aerospace Engineering Sciences graduates will have:

- established themselves in professional careers or received a graduate degree;
- demonstrated ethical leadership, project management, and/or innovation; and
- played significant roles in the research and development of engineering systems and products.

Desired Outcomes

Students completing the undergraduate degree in aerospace engineering will be knowledgeable in the following areas:

- the professional context of the practice of aerospace engineering and expectations of new graduates in aerospace engineering organizations, including an awareness of ethics issues, economics, and the business environment;
- the history of aerospace engineering, providing a perspective on current events;
- aerospace engineering as a highly multidisciplinary endeavor, requiring a systems perspective to integrate technologies and manage complexity; and
- major principles and scientific methods underlying the technologies comprising aerospace vehicles and systems.

Upon graduation, students will have developed the following general skills and abilities:

- written, oral, and graphical communication skills;
- an ability to quantitatively estimate, model, analyze, and compute;
- an ability to define and conduct experiments using modern laboratory instruments, and to interpret experimental results;
- an ability to seek out and gather information, enabling independent and lifelong learning;
- interpersonal and organizational skills that enable individuals to work effectively in teams and assume leadership positions;
- an ability to identify needs, requirements, and constraints, and to design appropriate reliable engineering solutions;
- an ability to formulate technical problems clearly, and to correctly apply appropriate methods and procedures for their solution;
- an ability to program computers, and skills in the use of modern engineering analysis, simulation software, and operating systems; and
- an ability to understand societal needs, business issues, and the ethical concerns and responsibility of the industry.

Bachelor's Degree Requirements

The undergraduate curriculum, Aerospace Curriculum 2000, is designed to prepare students to advance to a distinguished professional career in the aerospace industry or for graduate school, consistent with our stated Program Educational Objectives. In particular, this involves providing students with an interdisciplinary systems perspective of aerospace engineering. The curriculum accomplishes these goals by:

- providing a strong basis in mathematics, science, and engineering fundamentals;
- extending these fundamentals to advanced topics in aerospace engineering;
- complementing the engineering education with sufficient exposure to the humanities and social sciences; and
- beginning and ending in major design experiences that stress an interdisciplinary systems perspective.

AES students are also encouraged to consider a technical minor or double major in electrical engineering, computer science, applied math, engineering physics, astrophysical and planetary sciences, or atmospheric and oceanic sciences. In most cases, the junior- and senior-level courses required for the above-mentioned minors can be applied to the professional area elective requirements.

For students having sufficient ability and interest, planning for graduate study should begin by the start of the junior year. Such a plan should consider the foreign language requirements of appropriate graduate schools and an advanced mathematics program. Students who wish to combine the business and aerospace engineering sciences curricula are advised to consider obtaining the BS degree in aerospace and a master's degree in business rather than a combined BS degree. Space in the undergraduate aerospace engineering program is limited; some restrictions may apply.

Bioengineering Option/Premedical Curriculum

These courses have been specifically designed for students who wish either to attend medical school or to enter graduate work in bioengineering after receiving the BS degree. Students should consult their advisor regularly to assure the adequacy of their curricula.

Curriculum for BS, Aerospace Engineering Sciences

The BS curriculum in aerospace engineering sciences is revised annually to keep up with new advances in technology, to make use of new educational methodologies, and to satisfy updated program accreditation criteria. The following curriculum requirements are those in effect at the time this catalog was printed.

Required Courses *Semester Hours*

Freshman Year

Fall Semester

APPM 1350 Calculus 1 for Engineers	4
CHEM 1221 General Chemistry Lab for Engineers	2
CHEN 1211 Engineering General Chemistry	3
GEEN 1400 Engineering Projects.	3
Humanities or social science elective	3

Spring Semester

APPM 1360 Calculus 2 for Engineers	4
PHYS 1110 General Physics 1	4
Computing requirement (GEEN 1300 or equivalent)	3
Humanities or social science elective	3

Sophomore Year

Fall Semester

APPM 2350 Calculus 3 for Engineers	4
ASEN 2001 Aerospace 1: Introduction to Statics, Structures, and Materials	4
ASEN 2002 Aerospace 2: Introduction to Thermodynamics and Aerodynamics	4
ASEN 2012 Experimental and Computational Methods	2
Humanities or social science elective	3

Spring Semester

APPM 2360 Introduction to Differential Equations with Linear Algebra.	4
ASEN 2003 Aerospace 3: Introduction to Dynamics and Systems	5
ASEN 2004 Aerospace 4: Aerospace Vehicle Design and Performance	5
Humanities or social science elective (upper-division).	3

Junior Year

Fall Semester

ASEN 3111 Aerodynamics	4
ASEN 3112 Structures	4
ASEN 3113 Thermodynamics and Heat Transfer.	4
PHYS 1120 General Physics 2	4

Spring Semester

ASEN 3128 Aircraft Dynamics	4
ASEN 3200 Orbital Mechanics/Attitude Determination and Control.	4
ASEN 3300 Electronics and Communications	4
WRWG 3030 Writing on Science and Society (or WRWG 3035 or HUEN 3100)	3
Humanities or social science elective (upper-division).	3

Senior Year

Fall Semester

ASEN 4012 Aerospace Materials	3
ASEN 4018 Senior Projects 1: Design Synthesis	4
Free elective	3
Professional area electives.	6

Spring Semester

ASEN 4013 Foundations of Propulsion	3
ASEN 4028 Senior Projects 2: Design Practicum.	4
Free elective	2
Professional area elective	6

Humanities and Social Science Electives

Courses selected must meet humanities and social science requirements as detailed at engineering.colorado.edu/hss.

Professional Area Electives

1. Any ASEN course at the 3000 level or above that is not a required course can be used as a professional area elective.
2. A professional area elective is generally a course in math, engineering, or science at the 3000-level or above. Elective courses most likely to help an aerospace engineer's career development are ASEN, math, CSCI, ECEN, and physics courses. It is suggested that students secure advance approval for professional area elective courses from their advisor.
3. Independent study or undergraduate research is acceptable for up to 6 credit hours of professional area elective credit. The upper-division ROTC courses AIRR 3010, NAVR 3030, and NAVR 3040 are acceptable for 3 semester hours of professional area elective credit.

Prerequisites and Passing Grades

The minimum passing grade for a course that is a prerequisite for another required course is C. If a grade of C- or lower is received in a course which is a prerequisite to another, the student may not register for the subsequent course until the first grade has been raised to a C or higher.

The minimum passing grade for a course that is not specifically a prerequisite for another required course is D-.

The AES department reserves the right to drop students enrolled in ASEN courses that have not met the minimum prerequisite requirements. It is the student's responsibility to

communicate with the department if summer course work and/or transfer credit will be used to meet the prerequisite requirement.

Graduate Degree Programs

The Department of Aerospace Engineering Sciences at the University of Colorado is one of the top aerospace engineering departments in the nation with annual research expenditures that exceed \$10 million. Aerospace engineers work on Earth and in space not only to extend frontiers but also to understand more fully and to preserve our terrestrial environment. Few fields offer more exciting and diverse careers: becoming an astronaut (15 graduates to date have become astronauts), designing the next generation of aircraft and spacecraft, monitoring our global habitat via remote sensing from space, in situ sensing with unmanned vehicles, and helping to develop environmentally clean energy and transportation systems.

Aerospace graduate students often formulate degree plans on the basis of the student's interests and needs. Portions of the program are designed to promote the student's engineering and professional development. Graduate students are admitted into a specific focus area that provides research advising, financial support, and sets specialized admission and program requirements and recommendations for course work within and outside the department. The four focus areas are:

- Aerospace Engineering Systems
- Aerodynamics and Satellite Navigation Systems
- Bioastronautics
- Remote Sensing, Earth and Space Science

Each focus area has defined the required characteristics of its successful graduates at the MS and PhD level, and defined the required and elective courses that support its educational program.

Aerospace-related research centers in the college include the Colorado Center for Aerodynamics Research, the Center for Aerospace Structures, the Research and Engineering Center for Unmanned Vehicles, and Bioserve Space Technologies (a NASA Center for the Commercial Development of Space). Other research centers within the university that are involved in space-related research activities are the Center for the Study of Earth from Space, the Center for Astrophysics and Space Astronomy, the Laboratory for Atmospheric and Space Physics, JILA, and the Cooperative Institute for Research in Environmental Sciences.

Requirements for Advanced Degrees

Graduate students applying for admission to aerospace engineering sciences are required to submit the results of the analytical, quantitative, and verbal sections of the general examination, Graduate Record Examination (GRE).

The department offers graduate programs leading to the MS and PhD degrees in aerospace engineering sciences. Portions of the program are designed to promote the student's engineering and professional development.

Courses below the 5000 level in aerospace engineering cannot count toward graduate degree requirements; up to 6 credits at 4000 level relevant courses from approved departments outside aerospace may be accepted for master's degree credit if they fit with the student's degree plan. Such courses must have academic content consistent with graduate study in aerospace engineering sciences.

Advising. Once students have selected a research area for the thesis, academic advising is done by their thesis advisor.

Master of Science Degree

(Plan I/II)

A total of 30 semester hours (including both course and thesis hours), at least 24 semester hours of which must be completed at the 5000 level or above, and no more than 12 semester hours can be outside of ASEN.

Two to four required courses (6–12 semester hours) must be taken in the student's primary focus area and one course (3 semester hours) must be taken in a second focus or thrust area.

One graduate level math course (3 semester hours) in ASEN, APPM, or MATH. Students may take a 6000 level seminar for credit only once (1 semester hour). Students may take a 7000 level seminar (where they present research) once (2 semester hours).

Students must complete a project (6 semester hours) consisting of either (1) MS thesis (Plan I), (2) approved certificate or program (Plan II), or (3) a two-semester team projects course (Plan II). The Plan I project culminates with an oral presentation and or written report or oral examination (in the case of the MS thesis). A grade of B- or higher in all course work is required for successful completion of the MS.

Completion of all degree requirements within four years of the date of commencing course work, normally completed in one to two years.

Master's degree residence requirements can be met only by residence on the CU-Boulder campus for two semesters or three summer sessions, or a combination of at least one semester and two summer sessions.

Pass all ASEN courses with a grade of B- or better.

PhD Degree

Course Requirements. A minimum of 36 semester credit hours of courses numbered 5000 or above (at least 18 of these must be in ASEN) with a minimum of 3.250 GPA, and 30 credit hours of thesis credit are required for the degree. A maximum of 21 credit hours may be transferred from another accredited institution and applied toward a PhD degree if approved by the graduate committee of the department and the Graduate School. All courses taken for the master's degree at the 5000 level or above at the University of Colorado may be applied toward the doctoral degree at the university. The formal course work must include a minimum of 18 hours of courses or their equivalent in aerospace engineering sciences.

Preliminary Examination. Students must pass a preliminary examination by no later than the end of the third semester if the student already has an aerospace master's degree upon entry to the program, or the fifth semester if the student does not have an aerospace master's degree. The exam is administered by a committee consisting of three regular or research aerospace faculty members, two of whom must be from the student's main focus area and the third from a secondary focus or thrust area. The exam will include a written and an oral element, as determined, prepared, and evaluated by the exam committee.

Comprehensive Examination. By no later than the fifth semester, or seventh semester, students must also pass an oral examination before the student's doctoral committee of five or more graduate faculty members chosen by the student and approved by the department and the Graduate School. This should be preceded by individual examinations or interviews, either written or oral or both, by every committee member. The oral examination before the committee is based primarily on a written proposal for the thesis research provided by the student to committee members in advance.

PhD Thesis. Students must write a thesis based on original research conducted under the supervision of a graduate faculty member. The thesis must fulfill all Graduate School requirements. After the thesis is completed, an oral final examination on the thesis and related topics is conducted by the student's doctoral committee.

Applied Mathematics

The Department of Applied Mathematics in the College of Arts and Sciences offers a BS degree in applied mathematics through the College of Engineering and Applied Science. The BS degree is designed to prepare graduates for exciting and diverse professional careers, and for graduate study in a wide variety of disciplines. The department also offers both an MS degree and a PhD degree through the Graduate School.

The objectives of the Department of Applied Mathematics at CU-Boulder are summarized below:

- provide undergraduate and graduate students with high-quality education and training in applied mathematics, and prepare them for careers in industry, laboratories, and the academic professions;
- offer and monitor degree programs leading to BS, MS, and PhD degrees in applied mathematics;
- nourish and maintain a professional environment in which excellence in teaching, learning, scholarship, and creativity are of central importance;
- assure teaching and research expertise in a number of key areas of applied mathematics including the methodology of applied mathematics, computational mathematics and algorithms, industrial applications, mathematical biology, applied probability, and statistics.

Courses at the undergraduate level provide training in a broad range of mathematical techniques and problem-solving strategies. These courses teach the concepts and methods central to applications of linear algebra, ordinary and partial differential equations, numerical analysis, probability and statistics, complex variables, and nonlinear dynamics. Since applied mathematicians often are involved in interdisciplinary work, the BS degree requires an in-depth knowledge of some area of science or engineering where mathematics is used. This knowledge prepares graduates to successfully communicate and cooperate with engineers and scientists. The BS degree also requires knowledge of a programming language and skill in using the computer.

Desired Outcomes

The undergraduate degree in applied mathematics emphasizes knowledge and awareness of:

- differential and integral calculus in one and several variables;
- vector spaces and matrix algebra;
- ordinary and partial differential equations;
- at least one programming language;
- at least one application software package in either mathematics or statistics;
- methods of complex variables as used in applications; and
- numerical solutions of linear and nonlinear problems.

In addition, students completing a degree in applied mathematics acquire:

- an in-depth knowledge of an area of application (an engineering discipline or a natural science field or one of the quantitative areas of business and economics);
- knowledge of problem-formulation, problem-solving, and modeling techniques and strategies central to applications; and
- the ability to clearly and concisely, and in oral and written forms, communicate analytic arguments.

Minor Program

The department also offers a minor in applied mathematics that is available to engineering as well as to arts and sciences students. A minor in applied mathematics indicates that a student has received in-depth training in mathematical techniques and computational methods well beyond the training usually received by science and engineering majors.

Concurrent BS/MS Degree Program

The concurrent BS/MS program in applied mathematics enables well-qualified and motivated students to experience graduate-level course work earlier in their education and to obtain an MS degree in a reduced time period. Applied math majors may apply for this program during their junior year. Minimum requirements for admission include completion of at least two APPM courses numbered 3000 or higher, an overall GPA of 3.400 or higher, a minimum GPA of 3.400 in APPM and MATH courses, and two letters of recommendation from APPM faculty. Students interested in this program are encouraged to consult with an applied mathematics faculty advisor early in their undergraduate career.

Bachelor's Degree Requirements

The BS degree in applied mathematics requires the satisfactory completion of a minimum of 128 credit hours as follows:

1. Three semesters of calculus (APPM 1350, 1360, and 2350) with a minimum grade of C- in each course.
2. Computing experience (CSCI 1300 or GEEN 1300 or APPM 2750).
3. Science requirement: completion of PHYS 1110, 1120, and 1140. Completion of at least 5 additional credits of chemistry or biology (including 2 credits of laboratory science), chosen from one of the following: CHEM 1221 and CHEN 1211; CHEM 1151; EBIO 1210, 1220, 1230, and 1240; or MCDB 1150, 1151, 2150, and 2151.
4. Completion of the following required applied mathematics courses: APPM 2360; APPM 3310; APPM 4350 and 4360; APPM 4650; and APPM 4440 or MATH 3001 or 3140.
5. A two-semester course sequence of applied mathematics or mathematics courses numbered 4000 or above in addition to APPM 4350 and 4360 (for example, APPM 4380 and 4390, APPM 4440 and 4450, APPM 4570 and 4580, APPM 4560 and 4520, APPM 4650 and 4660, or APPM 3570 and either APPM 4520 or 4560). NOTE: APPM 3570 is the only 3000-level course that can be used to satisfy this requirement.
6. A minimum of 24 credit hours in applied mathematics or mathematics courses numbered 3000 or above (including the required courses). No more than 3 credits of APPM 4840 may count toward these 24. No more than 6 credits of independent study are allowed for credit toward the BS degree in applied mathematics.
7. A minimum of 24 credit hours in engineering courses (or approved courses with a significant mathematical content in arts and sciences or business) with at least 15 credit hours in courses numbered 2000 or above and at least 6 credit hours in courses numbered 3000 or above. These 24 credit hours are in addition to those required credit hours listed in numbers 2 and 3 (mentioned above). HUEN 3100, 3200, 4100, and 4200 may not be used to fulfill this requirement, although they may be used as social and humanistic electives. Several possible options are listed separately.

8. The general bachelor's degree requirements of the College of Engineering and Applied Science require 18 credit hours of social science/humanities/writing electives. See details at engineering.colorado.edu/hss.

Some Recommended Options for Applied Math Majors

Aerospace Engineering Sciences Option

Recommended courses (total of 20 credit hours):

ASEN 2001 Aero 1: Introduction to Statics, Structures, and Materials	5
ASEN 2002 Aero 2: Introduction to Thermodynamics and Aerodynamics	5
ASEN 2003 Aero 3: Introduction to Dynamics and Systems	5
ASEN 2004 Aero 4: Introduction to Vehicle Design and Performance.	5

At least two more ASEN courses at the 3000 level or above

Advising Note: Students seeking to enroll in ASEN courses must register through an aerospace advisor.

Chemical Engineering Option

CHEM 1221 and CHEN 1211	5
-----------------------------------	---

Recommended courses (total of 21 credit hours):

CHEN 2120 Material and Energy Balance.	3
CHEN 3200 Fluids.	3
CHEN 3210 Heat Transfer	3
CHEN 3220 Mass Transfer	3
CHEN 3320 Thermodynamics.	3
CHEN 4330 Reaction Kinetics.	3
CHEM 4511 Physical Chemistry	3

Also recommended:

APPM 4570 Statistical Methods	3
-----------------------------------------	---

Note: One additional courses is required to bring the total number of credits to at least 24.

Computer Science Option

Recommended courses (total of 4 credit hours):

CSCI 2270 Data Structures (prereq. CSCI 1300)	4
---------------------------------------------------------	---

Additional courses to bring the total number of credits to at least 24; at least two of these must be at the 3000 level. Possible choices include:

CSCI 3104 Algorithms	4
CSCI 3155 Principles of Programming Languages	4
CSCI 3287 Database Systems	3
CSCI 3753 Systems.	4
ECEN 2120 Computers as Components	5
ECEN 3100 Digital Logic	5

Advising Note: Students completing the computer science option should have a minor in computer science. Check with the computer science department.

Electrical and Computer Engineering Option

Students interested in this option should consult with an advisor as several areas are available (computer engineering, electrical engineering, signals and systems, and electrical renewable energy systems). A minimum of 24 credit hours is required.

Engineering Physics Option

Recommended courses after first-year physics (22 or 23 credit hours):

PHYS 2150 Experimental Physics	1
PHYS 2170 Foundations of Modern Physics	3
PHYS 2210 Classical Mechanics and Math Methods 1	3
PHYS 3210 Classical Mechanics and Math Methods 2	3
PHYS 3220 Quantum Mechanics and Atomic Physics.	3
PHYS 3310 Principles of Electricity and Magnetism 1.	3
PHYS 3320 Principles of Electricity and Magnetism 2.	3

Plus either of the following:

PHYS 3330 Junior Laboratory.	2
PHYS 4230 Thermodynamics and Statistical Mechanics	3

Note: Additional courses are required to bring the total number of physics credits to 24.

Also recommended:

APPM 3570 Applied Probability	3
-----------------------------------------	---

MATH 3140 Abstract Algebra 1	3
----------------------------------------	---

Advising Note: Students completing the physics option should have a minor in physics. Check with the physics department.

Mechanical Engineering Option

Recommended courses (total of 24 credit hours):

MCEN 2023 Statics and Structures	3
MCEN 2063 Mechanics of Solids	3
MCEN 3012 Thermodynamics	3
MCEN 3021 Fluid Mechanics.	3
MCEN 3022 Heat Transfer	3
MCEN 3025 Component Design	3
MCEN 3043 Dynamics	3
MCEN 4043 System Dynamics	3

Also recommended:

APPM 4570 Statistical Methods	3
-----------------------------------------	---

Civil, Environmental, and Architectural Engineering Option

Recommended basic courses (total of 12 credit hours):

AREN 2110 Thermodynamics.	3
CVEN 2121 Analytical Mechanics 1	3
CVEN 3161 Mechanics of Materials 1	3
CVEN 3313 Theoretical Fluid Mechanics	3

Students also take two courses from any one of the following groups:

a) AREN 2406 Introduction to Building Construction	3
AREN 3010 Mechanical Systems for Building	3
AREN 3540 Illumination 1	3
b) CVEN 3414 Introduction to Environmental Engineering	3
CVEN 4333 Engineering Hydrology	3
c) CVEN 3525 Structural Engineering 1.	3
CVEN 3708 Geotechnical Engineering 1.	3
CVEN 4555/4545 Reinforced Concrete Design/Steel Design	3

Actuarial Option

Recommended basic courses (23 credit hours):

BCOR 2000 Accounting and Financial Analysis 1	4
BCOR 2200 Accounting and Financial Analysis 2 (formerly 2100) (Note 1)	3
FNCE 3010 Corporate Finance	3
ECON 1000 Introduction to Economics	4
ECON 3070 Intermediate Microeconomics Theory	3
ECON 3080 Intermediate Macroeconomics Theory	3
ECON 4070 Topics in Microeconomics	3

Some of the following courses should also be taken:

ACCT 3220 Intermediate Financial Accounting 1.	3
ACCT 3230 Intermediate Financial Accounting 2.	3
BCOR 3000 Business Law, Ethics, and Public Policy	3
ECON 4818 Introduction to Econometrics.	3
FNCE 4040 Derivative Securities.	3
FNCE 4070 Financial Markets and Institutions	3

Curriculum Notes

1. *BCOR 1020 Business Statistics is a prerequisite for BCOR 2200 (formerly 2100). Students are advised to substitute an applied math probability/statistics course for this prerequisite.*
2. *ECON 1000 may not count toward the 24 credits of the option requirement; however, ECON 1000 can be used to meet the 18-credit social science/humanities requirement of the College of Engineering.*
3. *Students are advised, but not required, to take as many of the following courses as possible as part of their applied math requirement: APPM 3570, 4520, 4540, and 4560.*
4. *To assure admittance into Leeds School of Business courses, students should apply to the Actuarial Studies and Quantitative Finance Certificate Program.*

Finance Option

Recommended basic courses (14–16 credit hours):

BCOR 2000 Accounting and Financial Analysis 1	4
BCOR 2200 Accounting and Financial Analysis 2 (formerly 2100) (Note 1)	3

ECON 2010 Principles of Microeconomics and ECON 2020 Principles of Macroeconomics (Note 2) or ECON 1000 Introduction to Economics (Note 3), 3070 Intermediate Microeconomics Theory and 3080 Intermediate Macroeconomics Theory	6-9
FNCE 3010 Corporate Finance	3
Plus at least two of the following courses to meet the 24 credit-hour requirement of the option:	
FNCE 4000 Financial Institutions Management	3
FNCE 4030 Investment and Portfolio Management	3
FNCE 4040 Derivative Securities	3
FNCE 4050 Capital Investment Analysis	3
FNCE 4060 Special Topics in Finance	variable credit
FNCE 4070 Financial Markets and Institutions	3

Curriculum Notes

1. *BCOR 1020 Business Statistics is a prerequisite for BCOR 2200 (formerly 2100). Students are advised to substitute an applied math probability/statistics course for this prerequisite.*
2. *ECON 2010 and 2020 should be taken in either the first or the second year. They do not count toward the 24 credits of the option requirement, but they can be used to meet the 18-credit social science/humanities requirement of the College of Engineering.*
3. *ECON 1000 may not count toward the 24 credits of the option requirement; however, ECON 1000 can be used to meet the 18-credit social science/humanities requirement of the College of Engineering.*
4. *To assure admittance into Leeds School of Business courses, students should apply to the Actuarial Studies and Quantitative Finance Certificate Program.*

Computational Biology and Bioinformatics Option

The following concentration of selected courses from computer science, biology, and chemistry provide the foundation for work in mathematical biology, computational biology, and/or bioinformatics.

Required Courses	Semester Hours
CSCI 2270 Data Structures (Note: CSCI 1300 is a prerequisite for CSCI 2270.)	4
CHEM 331 and 3321 Organic Chemistry 1 and Lab	5
CSCI 4314 Algorithms for Molecular Biology	3
MCDB 1150 and 1151 Introduction to Cellular and Molecular Biology and Lab	4
MCDB 2150 and 2151 Principles of Genetics and Lab	4
MCDB 3120 and 3140 Cell Biology and Lab	5
MCDB 3500 Molecular Biology	3

Advising Note: Students selecting this option are advised to take APPM 3570, 4520, 4540, and 4390 as part of their applied math course work. Other recommended courses include CSCI 3104 Algorithms and CSCI 3287 Database and Information Systems.

Other areas of academic focus are also possible. Check with the applied mathematics office or more information.

Double Major with Civil Engineering

As an exceptional opportunity for talented students who are interested in analytical and computational methods related to civil engineering and general engineering science, the applied mathematics and civil engineering departments offer a streamlined track by which a student can earn a baccalaureate degree from both programs with a minimum of 15 extra credit hours. Consult faculty advisors in applied mathematics and civil engineering for information and admission.

Architectural Engineering

Architectural engineering has many elements in common with civil, mechanical, and electrical engineering, but is specifically directed toward the building industry. It focuses on building systems, which include design of systems such as heating, venti-

lating, and air conditioning (HVAC) systems; illumination and electrical systems; structural building systems; and construction methods applied to buildings. The program is administered by the Department of Civil, Environmental, and Architectural Engineering. Students also take courses in architectural history and architectural design from the College of Architecture and Planning.

Program Educational Objectives

The educational objective of the architectural engineering program is to develop graduates who acquire the broad knowledge and skills necessary to successfully begin and sustain a career, and to become leaders who advance the state-of-the art, in one of four core disciplines of the building industry:

- electrical and lighting systems
- heating, ventilating, and air conditioning (HVAC) systems
- structural systems
- construction engineering and management

Educational Outcomes

The outcomes that students are expected to have attained upon graduation with the bachelor of science degree in architectural engineering are:

- the ability to apply knowledge of mathematics, science, and engineering
- the ability to design and conduct experiments
- the ability to analyze and interpret data
- the ability to design a system or component to meet desired needs
- the ability to function on multidisciplinary teams
- the ability to identify, formulate, and solve engineering problems
- an understanding of professional and ethical responsibilities
- the ability to communicate effectively through writing and/or drawing
- the ability to communicate effectively through oral presentations
- an understanding of the impact of engineering on society
- an understanding of the necessity to engage in life-long learning
- a knowledge of contemporary issues in civil, environmental, and architectural engineering
- the ability to use modern engineering techniques, skills, and tools

Areas of Knowledge

The areas of knowledge that define these objectives include both technical and non-technical areas.

Technical areas are:

- elementary—the fundamentals for architectural engineering, including basic science and mathematics, building design and construction processes; overview of building systems; elementary principles and processes of architecture; and laboratory measurement and data analysis;
- intermediate—introduction to building systems and their components, with corresponding analysis of electrical, HVAC, and lighting systems as well as structural elements and components;

- proficiency—design, integration, and advanced analysis of electrical, HVAC, lighting, and structural systems; as well as the codes and recommended practices that govern these building systems; and
- specialization—advanced design, coupled with industry experience via internships, for building lighting and electrical system design, building HVAC systems design, building structural system design, and construction engineering and management.

Non-technical areas include:

- professional life, including methods of time and resource management, and professional ethics;
- processes and requirements of written and oral communication; and
- broad areas in the humanities and social sciences, including architectural history and language.

Bachelor’s Degree Requirements

There is a broad core of requirements for all students. Students are also expected to choose, in consultation with faculty advisors, elective courses to add depth in one or more specialty areas. Such specialty areas include structural analysis and design, construction engineering, building energy analysis, mechanical systems, and illumination. A list of recommended electives is available to help students select a coherent academic program that enhances one of these areas.

Curriculum for BS (Arch E)

<i>Required Courses</i>	<i>Semester Hours</i>
Freshman Year	
Fall Semester	
APPM 1350 Calculus 1 for Engineers	4
AREN 1027 Engineering Drawing	3
AREN 1316 Introduction to Architectural Engineering	1
CHEM 1221 Engineering Chemistry Lab	2
CHEN 1211 General Chemistry for Engineers.	3
Humanities or social science elective	3

Technical elective	6

Spring Semester

ARCH 3214 History and Theories of Architecture 2	3
AREN 4317 Architectural Engineering Design	5
Technical elective/Lab	6
Humanities or social science elective	3

Minimum hours for degree 128

Courses Available for Specialization

Upon consultation with their advisors, students are expected to select technical elective courses applicable to their areas of interest and specialization. The areas of specialization are construction engineering and management, mechanical systems, illumination, and structural engineering.

In addition to the courses listed below, other courses not listed may be proposed by a student and approved by the advisor if they are found to be applicable.

- AREN 3130 Building Energy Laboratory
- AREN 3140 Illumination Laboratory
- AREN 4315 Design of Masonry Structures
- AREN 4466 Construction Planning and Scheduling
- AREN 4540 Exterior Lighting Systems
- AREN 4560 Luminous Radiative Transfer
- AREN 4580 Daylighting
- AREN 4590 Computer Graphics in Lighting Engineering
- CVEN 3313 Theoretical Fluid Mechanics
- CVEN 3323 Hydraulic Engineering
- CVEN 3708 Geotechnical Engineering 1
- CVEN 3718 Geotechnical Engineering 2
- CVEN 4161 Advanced Mechanics of Materials 1
- CVEN 4525 Analysis of Framed Structures
- CVEN 4545 Steel Design
- CVEN 4555 Reinforced Concrete Design
- CVEN 4565 Timber Design
- CVEN 4087 Engineering Contracts
- CVEN 5010 HVAC System Controls 1
- CVEN 5020 Building Energy Audits
- CVEN 5030 Architectural Lighting Equipment Design
- CVEN 5040 Lighting Systems Engineering
- CVEN 5050 Advanced Solar Design
- CVEN 5060 Advanced Passive Solar Design
- CVEN 5070 Thermal Analysis of Buildings
- CVEN 5090 Building Systems Seminar
- CVEN 5110 HVAC System Design
- CVEN 5111 Introduction to Structural Dynamics*
- CVEN 5161 Advanced Mechanics of Materials 1*
- ECEN 4511 or 5511 Introduction to Finite Element Analysis*
- ECEN 5767 Power Distribution Systems
- MCEN 3022 Heat Transfer

*For well-qualified undergraduates.

Double Degree with Business

Students interested in pursuing a BS degree in business in addition to the BS degree in architectural engineering should be

prepared to spend at least three additional semesters in school. A faculty advisor should be consulted in the student's freshman year so that social sciences and humanities courses required of business students can be taken.

Academically qualified students may want to consider working toward the master of business administration degree upon completion of the baccalaureate in engineering as an alternative to a BS in business.

Graduate Study

Graduate credit is offered in the following courses:

CVEN 5010 HVAC System Controls
 CVEN 5020 Building Energy Measurements and Audits
 CVEN 5030 Architectural Lighting Equipment Design
 CVEN 5040 Lighting Systems Engineering
 CVEN 5050 Advanced Solar Design
 CVEN 5060 Advanced Passive Solar Design
 CVEN 5070 Thermal Analysis of Buildings
 CVEN 5080 Computer Simulation of Building Energy Systems
 CVEN 5090 Building Systems Seminar
 CVEN 5110 HVAC Systems Design 1
 CVEN 5111 Introduction to Structural Dynamics
 CVEN 5161 Advanced Mechanics of Materials
 CVEN 5206 Design Development
 CVEN 5217 Building Reuse and Retrofit
 CVEN 5218 Construction Accounting and Financial Management
 CVEN 5226 Quality and Safety
 CVEN 5236 Construction Planning and Scheduling
 CVEN 5246 Legal Aspect Construction
 CVEN 5256 Strategic Issues/Construction
 CVEN 5266 Project Administration
 CVEN 5276 Engineering Risk and Decision Analysis
 CVEN 5286 Design Construction Operations
 CVEN 5296 Construction Engineering 2
 CVEN 5326 Construction Project Controls
 CVEN 5511 Introduction to Finite Element Analysis
 CVEN 5525 Analysis of Framed Structures
 CVEN 5575 Advanced Topics in Steel Design
 CVEN 5585 Advanced Topics in Reinforced Concrete Design
 CVEN 5830 Special Topics in Energy
 CVEN 6161 Advanced Mechanics of Materials 2
 CVEN 6525 Finite Element Analysis of Structures
 CVEN 6595 Earthquake Engineering
 CVEN 7111 Dynamics of Structures
 CVEN 7131 Theory of Elasticity
 CVEN 7141 Plates and Shells
 CVEN 7161 Buckling in Structures
 CVEN 7511 Computational Mechanics of Solids and Structures
 CVEN 7545 Structural Optimization
 CVEN 7555 Structural Reliability

Chemical and Biological Engineering

The Department of Chemical and Biological Engineering offers degrees at the bachelor's, master's, and doctoral levels. The department offers two distinct BS degree programs, one in chemical engineering and one in chemical and biological engineering. The Regents of the University of Colorado and the Colorado Commission on Higher Education approved the new BS program in the combined fields of chemical and biological engineering during the summer of 2006. The first graduates of the new program graduated in the spring of 2009 and the program became ABET accredited in the summer of 2010.

Bachelor of Science in Chemical Engineering

Chemical engineers are responsible for producing products based on chemical processing and chemical transformations. They carry out basic research; they design, build, operate, and manage chemical processes and plants; and they supply petroleum products, renewable resources, plastics, detergents, agricultural chemicals, pharmaceuticals, biological compounds, photographic materials, microelectronic devices, and various food and other products. Today's processes must be energy efficient, nonpolluting, and profitable. Thus, students must master inorganic, organic, and physical chemistry, mathematics, statistics, computers, physics, and often biology and biochemistry. Students must learn to apply these fundamentals in the process industries. Paralleling the technical courses are studies in the humanities and the social sciences.

Program Educational Objectives

The department prepares its graduates to make significant contributions in many diverse areas. Specifically, within three to five years its graduates will:

- be recognized as academic and industrial leaders in a multitude of chemical engineering or related fields
- demonstrate the relevant technical, critical thinking, and problem solving skills and creativity required to solve challenging and open-ended problems
- work and communicate with a diverse group of individuals in interdisciplinary areas
- exhibit high ethical standards and moral responsibility necessary to safely protect public health and the environment and be knowledgeable of contemporary issues that face modern society
- demonstrate an interest in and the pursuit of lifelong learning and possess the versatility necessary to adapt to a rapidly changing professional environment by applying their skills to new and developing technologies.

Program Outcomes

At the time of graduation, graduates will demonstrate:

- an ability to apply knowledge of mathematics, science, and engineering
- an ability to design and conduct experiments, as well as to analyze and interpret data
- an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- an ability to function on multidisciplinary teams
- an ability to identify, formulate, and solve engineering problems
- an understanding of professional and ethical responsibility
- the appropriate written and verbal communication skills required to communicate effectively
- the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- a recognition of the need for, and an ability to engage in, lifelong learning

- a knowledge of contemporary issues
- an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice

Options in the Bachelor of Science in Chemical Engineering Curriculum

Curricular options have been established in fields of major importance and particular interest. To follow one of these options requires careful planning and course selection by student and advisor.

Bioengineering Option. Since all biological and medical systems involve complex chemical and physical processes, chemical engineering is a natural professional basis for biotechnology research. The department has a strong undergraduate program tailored to meeting the needs of students who are preparing for careers in biomedical engineering, biochemical engineering, or biotechnology. Modern biotechnology has been defined as “applied genetic engineering” and is of considerable importance due to recent advances in molecular biology and genetic engineering. The successful industrial application of these advances will, in large part, depend on new chemical engineering initiatives in the development of high-rate bioreactors, efficient separation and purification techniques for bioproducts, and computer-interfaced instrumentation for optimal bioprocess control.

The courses available for this option are Pharmaceutical Biotechnology, Bioprocess Engineering, and Biochemical Separations. In addition, bioengineering option students are required to complete two semesters of general biology and one semester of biochemistry.

The department also offers graduate bioengineering technology research programs at both the MS and PhD levels. These programs are oriented toward specialization in various aspects of biochemical engineering, biomedical engineering, biotechnology, and sensory physiology.

Environmental Option. Chemical engineers can make major contributions in the fields of pollution prevention and control, resource utilization, and environmental improvement. The environmental engineering option is designed to emphasize biological and environmental sciences, the effects of chemicals on the environment, and chemical engineering applications in environmental problems.

The courses taken by students following this option include electives in environmental science and engineering. A capstone course in environmental engineering processes or environmental separations is taken in the senior year.

Computer Option. Applications of computers in chemical engineering are widespread, and the chemical engineer who has solid preparation in computer science and engineering is in demand. Areas include computer architecture and interfacing; machine, assembly, and high-level language programming; and online real-time computing. Students in this option complete the core of the computer engineering degree program in the Department of Electrical and Computer Engineering.

Materials Option. The need to develop new materials for a rapidly broadening spectrum of applications is one of the major technological challenges confronting applied science. Chemical engineers have the required background in chemistry and transport theory to contribute significantly in this area. This option focuses on polymeric and ceramic materials by complementing the chemical engineering curriculum with elective courses stressing the interrelationship between materials fabrication, structure, properties, and performance.

Microelectronics Option. The manufacture of semiconductor microelectronic circuits or “chips” involves many chemical steps. In recent years, more and more chemical engineers are finding employment in the expanding microelectronics industry. Completion of this option, which includes courses in solid state and semiconductor physics and microstructure fabrication, provides specialization to help launch a successful career in microelectronics.

Premedicine Curriculum Track. This track is offered for students preparing for medical school. Since chemical engineering already requires most of the premed courses, it is a logical choice for students who desire an engineering degree and the opportunity to pursue a medical profession.

Curriculum for BS in Chemical Engineering (ChE)

Required Courses *Semester Hours*

Freshman Year

Fall Semester

APPM 1350 Calculus 1 for Engineers	4
CHEM 1211 General Chemistry for Engineers.	3
CHEM 1221 General Chemistry Laboratory for Engineers.	2
GEEN 1300 Introduction to Engineering Computing	3
Humanities or social science elective (Note 2)	3

Spring Semester

APPM 1360 Calculus 2 for Engineers	4
CHEM 1300 Introduction to Chemical Engineering (Note 1).	1
CHEM 2810 Biology for Engineers	3
PHYS 1110 General Physics 1	4
Humanities or social science elective (Note 2)	3

Sophomore Year

Fall Semester

APPM 2350 Calculus 3 for Engineers	4
CHEM 3311 Organic Chemistry 1	4
CHEM 3321 Laboratory in Organic Chemistry.	1
CHEM 2120 Material and Energy Balances	3
PHYS 1120 General Physics 2	4
PHYS 1140 Experimental Physics	1

Spring Semester

APPM 2360 Introduction to Differential Equations with Linear Algebra.	4
CHEM 3331 Organic Chemistry 2	4
CHEM 3341 Laboratory in Organic Chemistry 2.	1
CHEM 4521 Physical Chemistry for Engineers (Notes 1 and 4).	3
CHEM 3200 Chemical Engineering Fluid Mechanics (Note 1).	3
Humanities or social science elective (Note 2)	3

Junior Year

Fall Semester

CHEM 3320 Chemical Engineering Thermodynamics (Note 1)	3
CHEM 3010 Applied Data Analysis (Note 1).	3
CHEM 3210 Chemical Engineering Heat Transfer (Note 1)	3
WRTG 3030 Writing on Science and Society	3
Elective (Note 3)	4

Spring Semester

CHEM 3130 Chemical Engineering Laboratory 1 (Note 1)	2
Chemistry Elective (Note 5).	3
CHEM 4330 Chemical Engineering Reaction Kinetics (Note 1)	3
CHEM 3220 Chemical Engineering Separations and Mass Transfer (Note 1).	3
Elective (Note 3)	3
Humanities or social science elective (Note 2)	3

Senior Year

Fall Semester

CHEM 4130 Chemical Engineering Laboratory 2 (Note 1)	2
CHEM 4090 Undergraduate Seminar (Note 1).	1
CHEM 4520 Chemical Process Synthesis (Note 1)	3
Elective (Note 3)	3
Elective (Note 3)	3

Humanities or social science elective (Note 2)	3
Spring Semester	
CHEN 4530 Chemical Engineering Design Project (Note 1)	2
CHEN 4570 Instrumentation and Process Control (Note 1)	4
CHEN 4440 Chemical Engineering Materials (Notes 1 and 6)	3
Elective (Note 3)	3
Elective (Note 3)	3
Minimum total hours for degree	128

Curriculum Notes

1. Course offered only in semester indicated.
2. Courses must meet humanities and social science requirements. Students should consult their advisor, the current ChE Help Guide, and engineering.colorado.edu/hss.
3. Electives must meet specific requirements. See the current ChE Help Guide.
4. Students may take CHEM 4511 if during the fall semester.
5. Students should consult the current ChE Help Guide about chemistry electives.
6. Alternate is CHEN 4460 Polymer Engineering.

Bachelor of Science in Chemical and Biological Engineering

The chemical engineering field has traditionally had a natural affinity and synergy with the fields of molecular and cellular biology including biotechnology, pharmaceutical sciences, tissue engineering, and medicine. These synergies have led the Department of Chemical and Biological Engineering to establish this new degree track in the combined fields of chemical and biological engineering. Graduates of this new program will be trained in the traditional field of chemical engineering with foci on chemical transformations and separations; however, they will have further knowledge and ability in applying these skills to the emerging areas in biological engineering such as biotechnology, metabolic engineering, and pharmaceutical sciences. In contrast to the traditional BS in chemical engineering, students must master additional skills in biology, medicine, bioseparations, biological laboratory skills, and biological transformations.

Program Educational Objectives

The department prepares its graduates to make significant contributions in many diverse areas. Specifically, within three to five years, graduates will:

- be recognized as academic and industrial leaders in a multitude of chemical and biological engineering or related fields
- demonstrate the relevant technical, critical thinking, and problem solving skills and creativity required to solve challenging and open-ended problems
- work and communicate with a diverse group of individuals in interdisciplinary areas
- exhibit high ethical standards and moral responsibility necessary to safely protect public health and the environment and be knowledgeable of contemporary issues that face modern society
- demonstrate an interest in and the pursuit of lifelong learning and possess the versatility necessary to adapt to a rapidly changing professional environment by applying their skills to new and developing technologies

Program Outcomes

At the time of graduation, graduates will demonstrate:

- an ability to apply knowledge of mathematics, science, and engineering
- an ability to design and conduct experiments, as well as to analyze and interpret data

- an ability to design a system, component, or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability, and sustainability
- an ability to function on multidisciplinary teams
- an ability to identify, formulate, and solve engineering problems
- an understanding of professional and ethical responsibility
- the appropriate written and verbal communication skills required to communicate effectively
- the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental, and societal context
- a recognition of the need for, and an ability to engage in, lifelong learning
- a knowledge of contemporary issues
- an ability to use the techniques, skills, and modern engineering tools necessary for engineering practice
- an ability to apply engineering to biological systems
- a knowledge of advanced biological concepts

Options in the Bachelor of Science in Chemical and Biological Engineering Curriculum

Premedicine Curriculum Track. This track is offered for students preparing for medical school. Since chemical and biological engineering already requires most of the premed courses, it is a logical choice for students who desire an engineering degree and the opportunity to pursue a medical profession.

Curriculum for BS in Chemical and Biological Engineering (ChBE)

CHEN 4570 Instrumentation and Process Control (Note 1)	4
Elective (Note 3)	3
Focus Tech elective (Note 6)	3
Humanities or social science elective (Note 2)	3

Minimum total hours for degree **128**

Curriculum Notes

1. Course offered only in semester indicated.
2. Courses must meet humanities and social science requirements. Students should consult their advisor, the current ChE Help Guide, and engineering.colorado.edu/hss.
3. Electives must meet specific requirements. See the current ChE Help Guide.
4. Students may take CHEM 4511 if during the fall semester.
5. Alternate is CHEM 4711.
6. One of the following courses must be taken as the focus technical elective: CHEN 4801 (Pharmaceutical Biotechnology), CHEN 4802 (Tissue Engineering/Biomedical Devices), or CHEN 4803 (Metabolic Engineering). These courses will be taught in alternating years and should be taken in the junior or senior year as available.

Other Opportunities in the Department of Chemical and Biological Engineering.

At the BS, MS, and PhD levels, there are opportunities to specialize via electives, independent study, and research. The BS in chemical engineering also offers optional variations to the core curriculum that allow students to specialize in environmental, computer, microelectronic, and materials aspects of chemical engineering. If a student has an interest that is not included in the following information, special arrangements can usually be made.

Students may carry out part of their studies in another country (see the Office of International Education section), and are encouraged to consider this opportunity, given the international nature of most large chemical and engineering corporations and international cooperation in scientific and engineering research. Many faculty members have significant international experience.

Cooperative Education and Internships. The Department of Chemical and Biological Engineering offers a formal Co-Op Program, where students obtain a BS in chemical engineering or chemical and biological engineering and significant industrial experience in five years. A Biotechnology Internships program is also offered for summer internships with local companies.

Senior Thesis. The department offers this program for undergraduates with a strong interest in research. The student carries

out a year-long project under the direction of a faculty member in lieu of taking CHEN 4130 Chemical Engineering Laboratory 2 (for ChE students) or CHEN 4810 Biological Engineering Lab (for ChBE students). Students must apply at the end of their junior year.

Graduate Degree Programs

Major areas of current research interest in the chemical engineering department are applied mathematics and computers, biomedical and tissue engineering, biotechnology, ceramics processing, colloid science, environmental engineering, heterogeneous catalysis and kinetics, fluid dynamics, low gravity science, mass transfer, materials engineering, membrane and polymer science, particle technology, process control and optimization, separations, supercritical fluids, surface science and interfacial phenomena, transport in porous media, and thermodynamics.

Master of Science Degree Requirements

Admission. General criteria for regular admission to the master's program include a bachelor's degree with a 3.000 or better overall GPA from a college or university of recognized standing, equivalent to the degree given at this university (or college work equivalent to that required for such a degree, at least 96 semester hours of which must be acceptable toward a degree at this university); promise of ability to pursue advanced study and research, as judged by previous scholastic record or otherwise; and adequate preparation to begin graduate study in the chosen field.

A candidate for the master of science degree in chemical engineering must fulfill the following departmental requirements:

1. Thirty semester hours of graduate work, including a satisfactory thesis. Maximum credit of 6 semester hours is allowed for the completion of the master's thesis. A nonthesis master's degree is available and requires completion of 30 semester hours of course work.
2. A final examination as required by the Graduate School on the thesis.

It is expected that a qualified student can complete the master's degree in less than two calendar years. A graduate student with a bachelor's degree in a field related to chemical engineering can obtain the master's degree in chemical engineering but may be required to make up deficiencies in background. Programs are arranged on an individual basis.

Courses Requirements. The following courses are required for any MS degree plan:

CHEN 5090 Seminar in Chemical and Biological Engineering
CHEN 5210 Transport Phenomena
CHEN 5740 Analytical Methods

And one of the following:

CHEN 5370 Intermediate Chemical Engineering Thermodynamics
CHEN 5390 Chemical Reaction Engineering

Additionally, 15 of the total required credit hours must be chemical and biological engineering courses, and *pass/fail* courses do not count toward the degree.

A degree plan must be prepared at the beginning of the academic program in consultation with an advisory committee. The student is urged to maintain close contact with this advisory committee during the entire course of study.

The MS thesis committee must consist of three members, including at least two graduate faculty members from the Department of Chemical and Biological Engineering.

Master of Engineering Degree Requirements

Admission. (The standards of admission to the MS program also apply to ME degree applicants.) A 3.000 overall undergraduate GPA is required for regular admission.

ME Degree Advisor. All ME candidates should see the chemical engineering master of science degree advisor for counseling.

Requirements for Graduation. Students orally defend their written reports as specified in the ME degree description, and a comprehensive examination is administered by the student's advisory committee on the report and course work.

Doctor of Philosophy Admission Requirements

1. The applicant must have achieved academic competence equivalent to a master of science degree from an accredited college or university, with a GPA substantially above the minimum normally required for the degree.
2. The applicant must show the ability to perform independent research.
3. The applicant must indicate a field of specialization and obtain an advisor in the chemical engineering graduate faculty.
4. The applicant must pass the PhD preliminary examination administered by the Department of Chemical and Biological Engineering.

A candidate for the doctor of philosophy degree must meet the requirements as described under requirements for advanced degrees in the Graduate School chapter. A minimum of 30 semester hours of courses numbered 5000 or above is required for the degree, including those applied toward an MS degree. These must include all five core courses listed previously.

All PhD students in chemical engineering must satisfy a communication skills requirement. This includes performing an advanced teaching assistantship and demonstrating satisfactory communication skills on the PhD comprehensive examination. Students whose primary language is English may choose to demonstrate foreign language proficiency instead of being judged on their communications skills on the comprehensive exam.

The PhD dissertation committee must consist of five members, including at least three from the Department of Chemical and Biological Engineering and at least one from within CU-Boulder, but outside the department. A graduate faculty member of the department must serve as chair of the committee.

Research Facilities

Chemical and biological engineering research facilities are extensive and modern. Nearly all research equipment is interfaced to computers for automated data collection, monitoring, and control. A full description of chemical engineering research facilities can be found in the Graduate School section.

Civil Engineering

The curricula in civil engineering within the Department of Civil, Environmental, and Architectural Engineering have been designed to qualify students for entry-level positions in professional practice in the areas of civil and environmental engineering. These broad area designations may be separated into the subdisciplines of construction engineering and management; environmental engineering; geotechnical engineering and geomechanics; mechanical systems; structural engineering and structural mechanics; and water resource engineering and management. Through the regular curriculum, students will be ready to enter professional practice in the foregoing areas and

be equipped to progress to higher levels in many directions. An Engineering Science track is also available for undergraduates who want additional preparation for graduate study and careers in research and development.

Program Educational Objectives

The overall objectives of the bachelor of science program in civil engineering are:

- Graduates will be able to apply basic knowledge in mathematics, basic science, and engineering fundamentals throughout their careers to solving problems and making effective designs in areas encompassing a breadth of civil engineering professional practice in contemporary society.
- Graduates will successfully engage in professional practice in one or more of the sub-disciplines of civil engineering: construction, environmental, geotechnical, structural, and water resources engineering.
- Graduates will enhance their technical contributions to the public infrastructure with understanding of non-technical concerns, especially those that bear on civil engineering projects such as cost, public safety, and health.
- Graduates will fulfill the unique responsibility of civil engineers to uphold ethical relationships with both their clients and with the public at large.
- Graduates will extend their knowledge and skills in order to meet new technical challenges and continuously innovate in throughout their chosen professional careers.
- Graduates will build on their education in humanities and social sciences in order to sustain their informed participation in a democratic society.

Educational Outcomes

The outcomes that students are expected to have attained upon graduation with a bachelor of science degree in civil engineering are:

- the ability to apply knowledge of mathematics, science, and engineering
- the ability to design and conduct experiments
- the ability to analyze and interpret data
- the ability to design a system or component to meet desired needs
- the ability to function on multidisciplinary teams
- the ability to identify, formulate, and solve engineering problems
- an understanding of professional and ethical responsibilities
- the ability to communicate effectively through writing and/or drawing
- the ability to communicate effectively through oral presentations
- an understanding of the impact of engineering on society
- an understanding of the necessity to engage in lifelong learning
- a knowledge of contemporary issues in civil, environmental, and architectural engineering
- the ability to use modern engineering techniques, skills, and tools

- the ability to explain basic concepts in management, business, public policy, and leadership

Before their graduation, students in civil and environmental engineering will take a capstone design course in addition to training in structural and foundation design, civil engineering systems, construction, engineering geology, engineering materials, geotechnical engineering, soil mechanics, water quality, environmental engineering, fluid mechanics, computer-aided and manual engineering drawing, mechanics and dynamics, computer modeling, professional practice and ethics seminars, structural analysis and design, surveying, and transportation systems via required and elective courses.

Bachelor's Degree Requirements

The central curriculum requires students to obtain a background in the humanities, a broad knowledge of the basic engineering sciences of chemistry, mathematics (including differential equations), physics, mechanics (including fluid mechanics and soil mechanics), and thermodynamics. Social-humanistic hours may be devoted to the social sciences, the humanities, or to approved communication courses, with not more than 12 hours from any one of the three areas.

Advanced technical courses are selected in the senior year. Random selection is not allowed as the objective is to prepare a graduate to enter the engineering profession with a firm ground-work in fundamental engineering science as well as adequate technical fluency in selected areas. Students should consult with their advisors on their choices.

Curriculum for BS (CE)

Required Courses	Semester Hours
Freshman Year	
Fall Semester	
APPM 1350 Calculus 1 for Engineers	4
CHEM 1221 General Chemistry Laboratory for Engineers.	2
CHEN 1211 General Chemistry for Engineers.	3
CVEN 1317 Introduction to Civil and Environmental Engineering.	1
GEEN 1400 Engineering Projects or basic engineering elective	3
Humanities or social science elective	3
Spring Semester	
APPM 1360 Calculus 2 for Engineers	4
AREN 1027 Engineering Drawing	3
CVEN 2012 Introduction to Geomatics.	3
PHYS 1110 General Physics 1	4
Humanities or social science elective	3
Sophomore Year	
Fall Semester	
APPM 2350 Calculus 3 for Engineers	4
AREN 2110 Thermodynamics.	3
CVEN 2121 Analytical Mechanics 1	3
PHYS 1120 General Physics 2	4
PHYS 1140 Experimental Physics	1
Humanities or social science elective	3
Spring Semester	
APPM 2360 Introduction to Differential Equations with Linear Algebra.	4
GEEN 1300 Introduction to Engineering Computing	3
CVEN 3161 Mechanics of Materials 1.	3
CVEN 3313 Theoretical Fluid Mechanics	3
CVEN 3698 Engineering Geology.	3
Junior Year	
Fall Semester	
CVEN 3246 Introduction to Construction	3
CVEN 3323 Hydraulic Engineering	3
CVEN 3414 Fundamentals of Environmental Engineering	3

CVEN 3525 Structural Analysis	3
CVEN 3708 Geotechnical Engineering 1	3
Spring Semester	
CVEN 3111 Analytical Methods II	3
CVEN 3227 Probability, Statistics, and Decision for Engineers.	3
CVEN Proficiency I.	3
CVEN Proficiency II	3
WRTG 3030 Writing on Science and Society.	3

Senior Year

Fall Semester

CVEN Proficiency III.	3
CVEN 4899 Civil Engineering Senior Design Project.	4
CVEN 3602 Transportation Systems	3
Concentration I.	3
Humanities or social science elective (3000-level or above).	3

Spring Semester

CVEN Proficiency IV.	3
Concentration II	3
Technical electives	6
Humanities or social science elective (3000- level or above)	3

Minimum hours for degree 128

Curriculum Notes

1. Not more than 6 hours of technical electives may be taken outside the department, and then only for defensible reasons.
2. The capstone course requirement is satisfied by CVEN 4899 Civil Engineering Senior Design Project, to be taken in the year of graduation.

Double Major with Applied Mathematics

As an exceptional opportunity for talented students who are interested in analytical and computational methods related to civil engineering and general engineering science, the civil engineering and applied mathematics departments offer a streamlined track by which a student can earn a baccalaureate degree from both programs with a minimum of 15 extra credit hours. Consult faculty advisors in civil engineering and applied mathematics for information and admission.

Double Degree with Business

Students interested in pursuing a BS degree in business in addition to the BS degree in civil engineering should be prepared to spend at least three additional semesters in school. A faculty advisor should be consulted in the student's freshman year so that social sciences and humanities courses required of business students can be taken.

Academically qualified students may want to consider working toward the master of business administration degree upon completion of the baccalaureate in engineering as an alternative to a BS in business.

Graduate Degree Programs

A pamphlet on the requirements for graduate study in civil engineering is available from the departmental office. The Graduate Record Examination, consisting of the aptitude tests and advanced test in engineering, is used in the evaluation of candidates and competition for university and other fellowships. Therefore, students who wish to be considered for fellowships are advised to take this examination prior to their arrival on campus. There is no other qualifying examination required by the department for the master of science degree.

The department offers the master of science, master of engineering, and doctor of philosophy degrees with study emphasis in several major areas: building energy systems, construction engineering and management, environmental engineering, life cycle engineering, geotechnical engineering and geomechanics,

environmental fluid mechanics, geoenvironmental engineering, structural engineering and structural mechanics, water resources engineering, and general engineering science. A major in transportation and planning is possible through the Denver campus.

Master of Science Degree

Requirements for this master's degree can be fulfilled in two ways. Under Plan I, the candidate presents 30 semester hours of course work including thesis. Under Plan IIa, 30 credit hours of course work are required, with a minimum of 3 hours being Master's Report credit hours (maximum of 6 credit hours). Under Plan IIb, 30 credit hours are required.

Doctor of Philosophy Degree

This degree requires a minimum of 30 semester hours of graduate-level work (5000 level or above), the last 15 of which must be taken at this university. The doctoral dissertation likewise requires 30 semester hours. The applicant for this degree normally has completed a master's degree in civil engineering or a closely related field and must demonstrate the capability for both rigorous academic accomplishments and independent research.

Research Interests and Facilities

The department has a wide variety of research facilities, including a 15g-ton centrifuge for geotechnical and structural model studies and a large 440g-ton geotechnical centrifuge for use in model testing. Also available is an instructional computing facility, the Bechtel Laboratory, and the M.Y. Leung Computational Laboratory for Soils and Structures, both equipped with Windows and Linux high-performance workstations. In addition, extensive structural engineering, engineering mechanics, and geotechnical capabilities exist such as a one-million-pound universal testing machine and several cubical cells for multi-axial testing of materials. A 40 ft. by 80 ft. structural strong floor with associated equipment permits the testing of a wide variety of structural configurations under controlled, both static and dynamic loading. The hydraulics and water resources research laboratories include excellent facilities in water quality and environmental engineering. A unique workstation laboratory for advanced decision support systems is available. Programs in construction management and building energy are well supported. A state-of-the-art HVAC laboratory is capable of testing full-scale, commercial building HVAC systems and their controls using a one-of-a-kind data acquisition and experimental control system.

The Center for Advanced Decision Support for Water and Environmental Systems (CADSWES) is an interdisciplinary center of excellence, housed within the Department of Civil, Environmental, and Architectural Engineering. CADSWES focuses on applying advanced computing techniques to provide decision makers with decision support systems (DSSs) to help them more effectively manage water and environmental systems.

Current research covers such topics as water and wastewater treatment, surface and subsurface contaminant transport, decision support systems, hydraulic research, land treatment, rapid infiltration, and activated sludge processes. Cost prediction in construction, construction management, energy conservation in buildings, solar applications, and lighting systems are included. Advances in soil mechanics, rock mechanics, soil dynamics and geotechnical earthquake engineering, foundation engineering, computational geomechanics, centrifugal modeling, geosynthetics, and glacier flows have been produced. Research in structures includes stability, damage and fracture, material microstructures, durability, finite element modeling, reinforced

concrete, earthquake responses, reinforced masonry structures, prestressed concrete, and dynamic control.

Computer Science

Computer science is an exciting and challenging field that has impact on many parts of our lives. Computer scientists craft the technologies that enable the digital devices we use every day. They develop the large-scale software that powers business and industry, and advance the computational techniques and write the software that supports scientists in their study of the world around us. Many new applications of computing technology remain to be discovered. Indeed, computing will be at the heart of future revolutions in business, science, and society. Students who study computer science now will be at the forefront of those important advances.

Computer science is concerned with how computers are constructed, how they store and process data, how they are used in problem-solving, and how the quality of those solutions is assessed. It is about the science of creating software for a variety of users. It is about understanding how that software interacts with the hardware on which it is run. Computer science goes well beyond the machine to the study of how people interact with the technologies around them. Applications of computer science reach far and wide.

Computer science graduates from the University of Colorado Boulder are engaged in a wide variety of jobs with many different companies in locations all over the world. They produce the software and systems that touch lives every day in fields ranging from communications to finance to publishing. They are, of course, software developers, but also have become teachers, writers, doctors, lawyers, scientists, military leaders, and entrepreneurs. They work at some of the largest, most influential companies in the world, at research institutions, non-profits, and at the smallest start-ups of every type imaginable. And many lead highly successful companies that they themselves have founded.

Program Objectives

Within three to five years after graduation, computer science graduates:

- are prepared to be valued individual contributors in a software-oriented organization, to be programmers and designers in an entrepreneurial pursuit, to lead small projects and generally begin preparation for a management career, or to succeed in rigorous postgraduate programs.
- are able to focus their careers on pure computer science technology or to bring computer science expertise to a companion discipline.
- are prepared, where appropriate, to specialize in a broad spectrum of computer science sub-disciplines, ranging across formal computer science (e.g., computational science, bioinformatics, and theory), cognitive science (e.g., human/machine learning, human-computer interaction, collaborative work, and human language technologies), and core computing (e.g., systems, networks and software engineering).

Program Outcomes

Students completing the undergraduate degree in computer science will possess:

- an ability to apply knowledge of computing and mathematics appropriate to the discipline.

- an ability to analyze a problem, and identify and define the computing requirements appropriate to its solution.
- an ability to design, implement, and evaluate a computer-based system, process, component, or program to meet desired needs.
- an ability to function effectively on teams to accomplish shared computing design, evaluation, or implementation goals.
- an understanding of professional, ethical, legal, security, and social issues and responsibilities for the computing profession.
- an ability to communicate effectively about computing topics with a range of audiences.
- an ability to analyze impacts of computing on individuals, organizations, and society.
- a recognition of the need for and ability to engage in continuing professional development.
- an ability to use current techniques, skills, and tools necessary for computing practice.
- an ability to apply mathematical foundations, algorithm principles, and computer science theory in the modeling and design of computer-based systems in a way that demonstrates comprehension of the tradeoffs involved in design choices.
- an ability to apply design and development principles in the construction of software systems of varying complexity.

Bachelor's Degree Requirements

Requirements for the BS degree in computer science include course work in computer science, mathematics, natural science, and the humanities and social sciences, as well as free elective course work. The degree provides considerable freedom in the selection of specific courses to fulfill these requirements, allowing students to tailor the degree to their individual needs and interests.

The department's goal is to prepare students for an intriguing and satisfying career in computer science. The huge number of technical jobs and the shortage of people to fill them mean that opportunities are great for today's computer science graduates.

Tracks in the curriculum are geared toward a variety of specializations. These tracks reflect the fact that computer science is transforming such disciplines as medicine, the sciences, and social science. The tracks also illustrate various software and hardware themes within the field of computer science. In addition to the more general degree requirements for all computer science majors, majors need to complete the course requirements for one of the following tracks:

General Computing

The general computing track provides a broad-based background drawing from the entire spectrum of computing. Depending on the courses selected, students can be exposed to the design and architecture of computers, the development of software, and the theory and techniques used in designing efficient computer programs. Students can also learn about application of computers to problems in science, in human-computer interaction, and in data management. This track prepares students for careers in many different areas of computer science.

Computational Biology and Health Informatics

Computer science is rapidly becoming critical to many areas of biology, medicine, and health. This track's flexible requirements reflect the diverse fields of computer science that are applied to problems in biology or health, including human-computer interfaces, database design and data mining, algorithms, machine learning, and numerical computation. Students graduating from this track will be ready to work in teams to develop the software and systems for a variety of biomedical applications.

Computational Science and Engineering

Problems considered by computational scientists include climate and weather prediction, spacecraft design, video game construction, and the discovery of new medicines and treatments among many others. This track emphasizes courses in numerical computation, high-performance scientific computing, and supporting areas of science and computer science. It provides exposure to leading-edge computing systems.

Human-Centered Computing

Students in this track will learn how to design, build, and evaluate socio-technical systems of the future that will tie together technology with communication, collaboration, and other social processes to address the challenges and opportunities of our world. The learning opportunities in this track draw on and integrate research in human computer interaction, design of interactive systems, computer supported cooperative work, computer supported collaborative learning, educational technology, tools that support creativity, user-developed knowledge collections, and gaming.

Networked Devices and Systems

It is the role of networked systems professionals to select, design, deploy, integrate, evaluate, and administer network and communication infrastructures. This track emphasizes courses in deployment of networks with specific design and protocol requirements, applying networking to deploy services in multimedia, information storage and distribution, security, and services on the Internet such as the Web and e-mail, and operating systems analysis and management.

Software Engineering

Software permeates the very fabric of modern society. This track emphasizes courses in core software engineering concepts, methods, and tools, the understanding of user requirements and user interface design, the ability to design programming languages and software tools that support software development, and working in teams to achieve complex objectives. The position of software engineer was recently ranked as the "best job" in America.

Systems

Computers benefit almost every part of our lives—from entertainment to cars to phones to medical devices. Computer systems engineers work with hardware and software to help application developers make these devices a reality. This track emphasizes courses in direct control of hardware through low-level software, the design and implementation of operating systems and programming languages, networking and performance analysis, as well as embedded system design.

Additional information about the department's programs is available at www.cs.colorado.edu or by contacting the department at 303-492-7514.

Total credit hours 128

Minor Program

The department offers a minor in computer science that is available to undergraduates on the Boulder campus. The minor offers a basic introduction to the field of computer science.

Graduate Degree Programs**General Admission Requirements**

Graduate students should consider a major in computer science if they are primarily interested in the general aspects of computational processes, both theoretical and practical, e.g., methods by which algorithms are implemented on a computer, techniques for using computers accurately and efficiently, design of computer systems, and languages and interfaces. A student who is primarily interested in the results of a computer process and its relation to a particular area of application should major in another field and consider a minor in computer science.

Applicants are considered for graduate study in computer science if they hold at least a bachelor's degree or its equivalent from an institution comparable to the University of Colorado. They should have considerable programming experience, sufficient mathematical maturity to understand pure mathematics courses at the upper-division level, and a number of academic computer science courses.

Applicants should satisfy the following requirements for mathematics courses: at least three semesters of mathematics at the level of sophistication of calculus or above, courses such as: differential equations, linear algebra, probability, statistics, and abstract algebra. These courses need not be in a mathematics department; however, they should require mathematical maturity expected of a junior or senior mathematics undergraduate.

In computer science, applicants should have the equivalent of the following University of Colorado courses: CSCI 1300 Computer Science 1: Programming; CSCI 2400 Computer Systems; one course out of CSCI 3155 Programming Languages or CSCI 3753 Operating Systems; CSCI 2270 Computer Science 2: Data Structures; and either CSCI 3104 Algorithms or CSCI 3434 Theory of Computation; and one other upper-division computer science course. Upper-division courses in areas such as artificial intelligence, databases, numerical computation, operating systems, parallel processing, software engineering, and others can be substituted for courses on the above list. However, courses on the list are prerequisites to many of the graduate-level offerings and admitted students lacking their equivalent are usually required to make them up, without graduate credit. Students who lack this computer science background but who have exceptionally strong credentials in another field should contact the department for individual consideration.

Applicants should have a GPA of at least 3.000 (on a scale of 4.000). Applicants having the listed qualifications are, if accepted, classified as regular degree students. Applicants with an average below 3.000 and above 2.750 and/or lacking certain of the prerequisites listed above are sometimes considered for admission as provisional students.

These requirements apply to both the master's and PhD programs. Applicants should be aware that admission to both programs is very competitive, and meeting the requirements does not ensure admission. Admission to the PhD program is especially competitive, and successful applicants, in general, have records considerably stronger in breadth and quality than these minimum standards suggest.

PhD applicants are required to submit scores from the aptitude portion of the Graduate Record Examination (GRE). GRE scores are optional for master's applicants but are required if the undergraduate GPA is less than 3.000 (but above a 2.750). These scores are encouraged if previous study was at an institution lacking a strong national reputation.

Financial aid is available to PhD students in the form of teaching and research assistantships and fellowships. Aid is sometimes available for master's students as teaching assistants or graders, but positions are assigned only at the beginning of a semester.

Applications from domestic U.S. students for the master's program should be received by February 28 for fall admission and by October 15 for spring admission. For international students, applications for the MS and PhD programs should be received by December 1 for fall admission and September 1 for spring admission.

Applications from domestic U.S. students for the PhD program should be received by January 2 for fall admission and by October 1 for spring admission. For international students, applications for the PhD program should be received by December 1 for fall admission and by September 1 for spring admission.

Master's Degree

Admission requirements for this program are given above under General Admission Requirements. Plan I (thesis) or Plan II (no thesis) may be followed. In either plan, students must complete 30 credit hours of course or thesis work. The requirements for Plan I are as stated under the general requirements of the Graduate School section in this catalog. Students in Plan I receive 6 credit hours for thesis work and are examined orally on their thesis. Students in Plan II must pass the master's comprehensive exam. Under either plan a student may take 6 hours in a minor field. Students are expected to work out an acceptable program of course work with their advisor. Specific courses depend on the student's background and field of specialization, but four of the courses must satisfy a breadth requirement.

Doctor of Philosophy Degree

Admission requirements for this program are listed under General Admission Requirements. Students in this program must pass a preliminary examination in one subarea of computer science to be eligible for admission to PhD candidacy. A minimum of 30 semester hours in courses numbered 5000 or above is required for the degree, but the number of hours in formal courses are ordinarily greater than that total. Specific courses depend on the student's background and field of specialization.

Following the formal course work, a student must pass a comprehensive examination aimed primarily at determining whether the student is adequately prepared to begin doctoral thesis work.

Finally, students who have completed a minimum of 30 semester hours are expected to prepare a doctoral thesis based on original research in the field of computer science. After the thesis has been completed, an oral final examination on the thesis and related topics is conducted by a committee of at least five graduate faculty members.

Further details on either the master's or PhD degree programs are available at www.cs.colorado.edu/grad.

Department Computing Facility

The Department of Computer Science supports its own domain, www.cs.colorado.edu, which is a 10/100/1000 MB network linked to the campus and the rest of the world through a gigabit connection. The department has a variety of computing facilities for use by faculty, staff, and students. These include general purpose computing labs provided by the university, additional instructional labs and administrative computing resources provided by the department, and specialized labs dedicated to the work of individual research groups. A wide variety of comput-

ing resources are available so that students have the opportunity to learn about and use cutting-edge equipment and software.

Electrical, Computer, and Energy Engineering

Electrical, computer, and energy engineering is about the science and technology of information and energy. Two undergraduate curricula lead to bachelor's degrees: one in electrical engineering, and another in electrical and computer engineering. These curricula are revised frequently to keep pace with changes in this dynamic field.

Up-to-date curricula and policies are contained in the department's *HELP! Guide*, available through the department and on the Web at ece.colorado.edu.

Bachelor's Degree Requirements

A minimum of 128 semester hours must be completed for either the BS in electrical engineering (EE) or the BS in electrical and computer engineering (ECE).

Students in both undergraduate degree programs take the same courses in their freshman and sophomore years. They also begin the sequence of core courses that covers the sophomore and junior years. With this background, students are then able to specialize—or diversify—beginning in the second semester of the junior year or in the senior year. EE majors take two junior-level elective courses that prepare them for three senior theory and two senior lab elective courses in addition to the electrical engineering capstone design lab or the electrical and computer engineering design lab. These senior courses may be chosen from the following areas: biomedical engineering; communication and digital signal processing; computer engineering and VLSI; electromagnetic fields; electronics; optics; power and power electronics; renewable energy; solid-state materials and devices; and systems and controls.

For ECE majors, the senior elective courses are: two computer science courses; computer organization; switching and finite automata; and the appropriate capstone design lab course.

Practical experience in well-equipped laboratories augments the theoretical approach throughout the program. Students are encouraged to develop interests outside their electrical engineering specialties by enrolling in nontechnical courses in other colleges of the university. They are encouraged to participate in college and university activities, as well as in meetings of the two very active electrical engineering technical societies (IEEE and HKN).

In just four years it is impossible to study all areas in detail. Qualified students may specialize further by pursuing a graduate program or by taking continuing education courses after completing the BS degree requirements. A graduating senior with high scholarship can finish a master's degree in electrical engineering with about one additional full year of work at any of the nation's major universities. Another option for especially well-qualified students is the department's BS/MS program, which allows early admission to the MSEE program during the junior year. This option is described below.

Program Objectives for a BS Degree in Electrical Engineering (EEEN)

1. Graduates will be situated in growing careers involving the design, development or support of electrical or electronic systems, devices, instruments, or products, or will be successfully pursuing an advanced degree.

Graduates attaining the EE degree will have comprehensive knowledge and experience in the concepts and design of electrical and electronic devices, circuits, and systems. This is achieved through a sequence of required courses in these areas, culminating in a major design project incorporating realistic engineering constraints. Moreover, graduates will have advanced, specialized knowledge and skills in elective areas such as communications and digital signal processing, control systems, analog and digital integrated circuit design, semiconductor devices and optoelectronics, electromagnetics and wireless systems, power electronics, renewable energy, bioelectronics, and digital systems.

EE graduates will have attained other professional skills that will be useful throughout their careers, including verbal and written communication and the ability to function on multidisciplinary teams.

The EE curriculum is rich in laboratory work. EE graduates will have achieved extensive practical experience in the laboratory techniques, tools, and skills that provide a bridge between theory and practice.

2. Graduates will have advanced professional standing based on their technical accomplishments, and will have accumulated additional technical expertise to remain globally competitive.

EE graduates experience a curriculum that contains a broad core of classes focused on mathematical and physical principles that are fundamental to the field of electrical engineering. Hence, they understand the physical and mathematical principles underlying electrical and electronic technology, and are able to analyze and solve electrical engineering problems using this knowledge. In addition to basic classes in mathematics, science, and computing, the EE curriculum includes a sequence of courses in analog and digital electronic circuits and systems, and electromagnetic fields.

3. Graduates will have demonstrated professional and personal leadership and growth.

To lay the foundation for a long career in a rapidly changing field, a broad background of fundamental knowledge is required. This is achieved in the EE curriculum through a sequence of required courses in mathematics, physics, chemistry, and the EE core. In addition, the graduate must be capable of lifelong learning; this is taught through assignments and projects that require independent research and study.

The curriculum includes a significant component of electives in the humanities and social sciences. EE graduates will have knowledge of the broader contemporary issues that impact engineering solutions in a global and societal context. They will have the verbal and written communication skills necessary for a successful career in industry or academia. Graduates also understand the meaning and importance of professional and ethical responsibility.

Program Objectives for a BS Degree in Electrical and Computer Engineering (ECEN)

I. Graduates will be situated in growing careers involving the design, development or support of electrical, electronic, and computer hardware and software systems, software engineering, devices instruments, or products, or will be successfully pursuing an advanced degree.

Graduates attaining the ECE degree will have comprehensive knowledge and experience in the concepts and design of electrical, electronic, and computer devices, circuits, and systems. Besides

emphasizing computer hardware and software, the ECE curriculum also emphasizes design, integration, implementation, and application of computer systems, as well as experience in software development. This is achieved through a sequence of required courses in these areas, culminating in a major design project incorporating realistic engineering constraints. The curriculum also provides opportunities for specialization in areas such as compiler design, embedded systems, software engineering, and VLSI design, as well as in the electrical engineering specialties.

ECE graduates will have attained other professional skills that will be useful throughout their careers, including verbal and written communication and the ability to function on multidisciplinary teams.

The ECE curriculum is rich in laboratory work. ECE graduates will have achieved extensive practical experience in the laboratory techniques, tools, and skills that provide a bridge between theory and practice.

2. Graduates will have advanced in professional standing based on their technical accomplishments and will have accumulated additional technical expertise to remain globally competitive.

ECE graduates experience a curriculum that contains a broad core of classes focused on mathematical and physical principles that are fundamental to the fields of electrical and computer engineering. Hence, they understand the physical and mathematical principles underlying electrical and electronic technology and computer systems, and are able to analyze and solve electrical and computer engineering problems using this knowledge. In addition to basic classes in mathematics, science, and computing, the ECE curriculum includes a sequence of courses in analog and digital electronic circuits and systems, electromagnetic fields, probability, computer software, and computer design and architecture.

3. Graduates will have demonstrated professional and personal leadership and growth.

To lay the foundation of a long career in a rapidly changing field, a broad background of fundamental knowledge is required. This is achieved in the ECE curriculum through a sequence of required classes in mathematics, physics, chemistry, and the ECE core. In addition, the graduate must be capable of lifelong learning; this is taught through assignments and projects that require independent research and study.

The curriculum includes a significant component of electives in the humanities and social sciences. ECE graduates will have knowledge of the broader contemporary issues that impact engineering solutions in a global and societal context. They will have the verbal and written communications skills necessary for a successful career in industry or academia. Graduates also understand the meaning and importance of professional and ethical responsibility.

Biomedical Engineering Option and Premedical Studies in ECEE

The biomedical engineering option, available to both EEEN and ECEN majors, focuses on the application of engineering concepts to the improvement and protection of health. Successful completion of this option is noted on a student's transcript, and may meet medical school requirements. Course work in the ECEN/EEEN curriculum is coupled with specialized courses linking electrical engineering to such biomedical applications as neural signals and systems, bioeffects of electromagnetic fields, and therapeutic and

diagnostic uses of bioelectric phenomena. Undergraduates may also undertake independent study in these areas.

Students interested in biomedical engineering may receive elective credit for two semesters of biology if they also complete two bioengineering courses from the ECEN/EEEN offerings. One of these ECEN/EEEN courses can also be used to satisfy course distribution requirements. The basic biomedical engineering option is thus composed of two semesters of biology and two ECEN/EEEN bioengineering courses taken in lieu of electives.

Students who wish to complete course requirements for medical (or dental, veterinary, etc.) school should add two semesters of organic chemistry to the ECEN/EEEN biomedical engineering option. Premedical ECEN/EEEN students may petition to have these courses substituted for other electives.

Interested students are urged to contact the departmental biomedical engineering advisor for additional information.

BS/MS Program in Electrical and Computer Engineering

The concurrent BS/MS program in electrical and computer engineering enables especially well qualified EEEN and ECEN majors to be admitted to the MS program during the junior year of their BS program, and to work simultaneously towards BS and MS degrees in electrical engineering. This program allows for early planning of the MS portion of the student's education, taking graduate courses as part of the BS degree, more flexibility in the order in which courses are taken, and more efficient use of what would otherwise be a final semester with a light credit-hour load.

Curriculum for BS (EE)

The following information may be changed by the time this catalog is printed and distributed. Up-to-date policies are contained in the department's *HELP! Guide*, which is given to students who enter the program.

Career Opportunities

A degree in electrical engineering or electrical and computer engineering provides graduates the opportunity to enter the profession of engineering and to engage in work as a design, production, testing, consulting, research, teaching, or management professional in a wide variety of careers in the computer industry, telecommunications, instruments, the power and renewable energy industry, the biomedical industry, aerospace, and academia. Some graduates also go on to develop careers in other professions like law and medicine.

Examples of career opportunities include development of new electrical or electronic devices, instruments, or products; design of equipment or systems; production and quality control of electrical products for private industry or government; sales or management for a private firm or government; and teaching and research in a university.

Graduate Degree Programs

Electrical engineering graduate programs leading to ME, MS, and PhD degrees include the areas of biomedical engineering; communications and signal processing; computer engineering; dynamics and controls; electromagnetics; RF and microwaves; optics and photonics; power electronics and renewable energy systems; remote sensing; nanostructures and devices; and VLSI/CAD.

Close cooperation with the National Institute of Standards and Technology (NIST), the National Oceanographic and Atmospheric Administration (NOAA), the National Renewable Energy Laboratory (NREL), the National Nanotechnology Infrastructure Network (NNIN), and Colorado Front Range industrial organizations in communications, computers, and instrumentation enhances the graduate program, and both teaching and research capabilities are strengthened by the addition of adjunct faculty members from these institutions.

Requirements for Advanced Degrees

A minimum undergraduate GPA of 3.000 is required for application to the master's program. Minimum requirements for admission to the PhD program include a 3.500 undergraduate GPA, good GRE scores, and demonstration of research ability. Exceptional students with a BS degree are encouraged to apply directly to the PhD program. Information and application forms may be obtained by going to ecee.colorado.edu/academics/grad/admission.html. Qualified students in their senior year at the University of Colorado and within 18 hours of graduation may be admitted into the graduate program and apply graduate-level credit hours above the 128-semester-hour BS requirement to-

ward an advanced degree. Students formally accepted into the graduate program are assigned to program advisors.

Master's students may choose either an MS thesis option under Plan I or a nonthesis option of 30 hours under Plan II. The ME program is discussed in the College of Engineering and Applied Science general section on graduate study.

All students accepted into the PhD program must take the PhD preliminary examination the first time it is offered (usually in January). The exam covers undergraduate electrical and computer engineering, computer science, math and physics, and a student's designated area of specialization. Further information is available in the ECEE graduate office.

Professional Certificate Programs

Professional Certificate Programs are offered in embedded systems, power electronics, and software engineering. For more information, see Professional Certificate Programs in the Graduate School section.

Research Centers

Colorado Power Electronics Center (CoPEC)

Since it was founded in 1983, the power electronics group at the University of Colorado has maintained a tradition of innovative design-oriented and application-driven research. Colorado Power Electronics Center (CoPEC) activities now span the range of applications from high-efficiency milliwatt converters for portable battery-operated systems, to hundreds or thousands of watts for computer, aerospace, telecommunications, medical, and automotive power conversion, to hundreds of kilowatts for wind generation systems.

Our current research activities include projects in high-efficiency, high-power converter technology, power electronics for portable, battery-operated systems, converter modeling and computer-aided analysis, low harmonic rectifier technology for single-phase and three-phase applications, and advanced control techniques and their mixed-signal ASIC implementation. We collaborate with other research groups at the University of Colorado, including those in machines and power systems, microelectronics packaging, EMI, control, and semiconductor devices. For more information call 303-492-7327 or visit ecee.colorado.edu/~pwrelect.

The University of Colorado Center for Environmental Technology (CET)

Understanding and managing the environment—whether for agriculture, health, water resources, disaster mitigation, energy generation, transportation, weather forecasting, climate modeling, or biodiversity—requires accurate knowledge of many variables on a wide range of time and space scales. Measurements for environmental purposes are made either using in situ or remote sensors, and rely upon a variety of different means, including acoustic and electromagnetic waves, point measurements and wide-area imaging, and active and passive systems. A variety of different types of platforms can be used for environmental observation, including ships and submersibles, aircraft (both manned and unmanned), spacecraft, and stationary sites.

Research and educational activities at the CU Center for Environmental Technology are focused on developing sensors, systems of sensors, and associated hardware and algorithms for environmental observation with a focus on new remote and in situ techniques to meet contemporary scientific and applications goals. This is accomplished by direct involvement of CU faculty, CET engineering staff, and undergraduate and graduate

students on the development of sensing systems to meet the observational needs of a number of government and industry sponsors. CET training involves close interaction between students and experienced professional engineers, practicing scientists, and CU faculty.

The CET was established in 2006 with a major donation of equipment from the NOAA Earth System Research Laboratory, and has members, associates, and students from within the broad earth science and engineering communities of Colorado. For further information contact the CET director at 303-492-9688 or visit cet.colorado.edu.

Center for Research and Education in Wind (CREW)

Launched in 2009, CREW is a consortium of over 70 wind energy researchers and educators from four institutions—the University of Colorado Boulder (lead institution), the National Renewable Energy Laboratory, the Colorado School of Mines, and Colorado State University. In CREW, faculty and researchers from the four institutions have come together to work to address the research and operational issues of wind energy in a coordinated manner as well as train a new generation of scientists, engineers, and managers. The center has also formed partnerships with the National Center for Atmospheric Research and the National Oceanic and Atmospheric Administration. Its research thrusts include atmosphere sciences, wind turbine and wind farm model development and validation, control of wind energy systems, electrical systems, and turbine testing, and a center-wide thrust on education and outreach. For more information visit www.coloradocollaboratory.org/crew.html.

Research and Instructional Equipment

The department's special equipment and facilities include a class 1000 clean room facility for epitaxial growth and fabrication of microwave and optical devices; high-vacuum and vacuum deposition equipment for thin-films research; an integrated circuits laboratory; ion implantation equipment; crystal growing facilities; a modern systems laboratory; a laboratory for data storage research; a digital system design laboratory; a power electronics research laboratory; undergraduate laboratories in circuits, electronics; power electronics; digital signal processing and communications; embedded systems; microwaves; a holography and optics laboratory; an advanced optical metrology lab; numerous special purpose computers; microcomputer system development laboratory; a roof-mounted antenna range; a special microscope for laser manipulation of microorganisms in vivo; a bio-microwave laboratory; and a solar power lab.

The Department of Electrical, Computer, and Energy Engineering has a large variety of computing equipment to support its research and instructional activities. In addition to specialized computing equipment, this includes several hundred PC, Macintosh, a department server, and a student server. These machines are connected to the campuswide ethernet network.

Engineering Management

The engineering management graduate curriculum offers a master of engineering degree to students from a variety of engineering and science backgrounds. The goal is to prepare technical professionals with a minimum of two years of post-baccalaureate work experience for advancement into management positions. Areas of concentration are available in managing innovation, project management, performance excellence, engineering entrepreneurship, quality systems, software management, research

and development, and Six Sigma methodologies. The program is available via distance learning as well as on campus. Go to emp.colorado.edu for more information.

Engineering Physics

Bachelor's Degree Requirements

The engineering physics program focuses on the foundations of modern technology. The program prepares students for research, development, and entrepreneurial careers in many frontier areas of engineering, including quantum devices, ultra fast lasers, adaptive optics, cryogenic electronics, computer simulation of physical systems, solar cells, magnetic storage technology, micro-mechanical systems, and molecular electronics. All students study the core theoretical subjects of mechanics, electricity and magnetism, thermal physics, and quantum mechanics, supplemented by courses in mathematics, computation, and laboratory technique. The program can be tailored to a student's interests through electives in engineering, physics, or other sciences.

During the freshman and sophomore years, students receive a broad introduction to physics and chemistry as well as five semesters of applied mathematics and mathematical methods in physics. Starting in the junior year, students take a full year of electrodynamics, a year of quantum mechanics, a semester of classical mechanics, a semester of thermodynamics and statistical mechanics, a year of physical chemistry, and an additional semester of advanced mathematics. Laboratory courses emphasize student-developed and student-designed independent projects where students use the knowledge acquired to build apparatus of their own choosing. The Advanced Laboratory (PHYS 4430) provides students with hands-on experience with optical spectroscopy, nuclear magnetic resonance, scanning tunneling microscopy, and laser cooling and trapping of atoms, among other experiments. The program encourages the formation of student research collaborations with faculty in the pursuit of senior thesis projects. Recent projects include research in pulsed laser deposition of high-temperature superconductors, electron diffraction studies of protein structure, and lattice distortion theory of colossal magnetoresistance materials.

Additional information about the bachelor's degree in engineering physics may be obtained from the physics department, Duane Physics E-1B32, by phone at 303-492-6953, or online at www.colorado.edu/physics.

Students who plan to become registered professional engineers should check the requirements for registration in their state before choosing their engineering electives.

In order to earn a bachelor's degree in engineering physics, students must complete the curriculum in the undergraduate major programs available through the Department of Physics. (Some variations may be possible; see an engineering physics advisor.) In addition, students must meet the general undergraduate degree requirements of the College of Engineering and Applied Science.

The Department of Physics offers a minor in physics. A detailed plan can be found at www.colorado.edu/physics.

Curriculum for BS in Engineering Physics

Below is a typical schedule only. For a complete description of the engineering physics course requirements, go to www.colorado.edu/physics.

Required Courses

Semester Hours

Freshman Year**Fall Semester**

APPM 1350 Calculus 1 for Engineers	4
MCEN 1025 or AREN 1027 CAD/Engineering Drawing (Note 1).	3
PHYS 1110 General Physics 1	4
Humanities or social science electives (Note 2)	6

Spring Semester

APPM 1360 Calculus 2 for Engineers	4
CSCI 1300 Computer Science 1: Programming (Note 1)	4
PHYS 1120 General Physics 2	4
PHYS 1140 Experimental Physics	1
Humanities or social science elective (Note 2)	3

Sophomore Year**Fall Semester**

APPM 2350 Calculus 3 for Engineers	4
CHEM 1221 General Chemistry Lab for Engineers (Note 5).	2
CHEN 1211 General Chemistry for Engineers (Note 5).	3
PHYS 2150 Experimental Physics	1
PHYS 2170 Foundations of Modern Physics	3
Elective (Note 3)	3

Spring Semester

APPM 2360 Introduction to Differential Equations with Linear Algebra.	4
PHYS 2210 Classical Mechanics and Math Methods 1	3
Elective (Note 3)	3
Humanities or social science elective (Note 2)	3

Junior Year**Fall Semester**

CHEM 4521 Physical Chemistry (Note 5)	3
PHYS 3210 Classical Mechanics and Math Methods 2	3
PHYS 3310 Principles of Electricity and Magnetism 1	3
PHYS 3330 Junior Laboratory.	2
Upper-division mathematics elective	3
Elective (Note 3)	3

Spring Semester

CHEM 4541 Physical Chemistry Lab (Note 5).	2
PHYS 3220 Quantum Mechanics.	3
PHYS 3320 Principles of Electricity and Magnetism 2.	3
Physics elective (Note 4)	6
Elective (Note 3)	3

Senior Year**Fall Semester**

PHYS 4230 Thermodynamics and Statistical Mechanics	3
PHYS 4410 Atomic and Nuclear Physics	3
Electives (Note 3)	8
WRTG 3030 Writing on Science and Society.	3

Spring Semester

Engineering electives (Note 3).	10-12
Physics electives (Note 4)	3-5
Humanities or social science elective (Note 2)	3

Minimum total hours for the degree 128

Curriculum Notes

1. Engineering physics computer science/drafting requirement (6–8 hours) is as follows: CSCI 1300-4 or GEEN 1300-3, plus AREN 1027-3 or MCEN 1025-3 or second computer science course (of at least 3 credit hours) other than CSCI 1300 or GEEN 1300.
2. A total of 18 credit hours of humanities or social science courses is required. See engineering.colorado.edu/hss for specific requirements.
3. Engineering electives: 17–19 engineering elective hours above and beyond the required courses for engineering physics plan 4, including one upper-division laboratory course. Total hours required in engineering electives plus the required computer sciences and drafting hours: 25.
4. Nine hours of physics electives are required. For details, see www.colorado.edu/physics.
5. The 10-hour chemistry requirement may also be met with CHEM 1113/1114 and 1133/1134.

Environmental Engineering

Environmental engineers play a vital role in maintaining the quality of both human environmental systems and the natural environment. Environmental engineering encompasses the scientific assessment and development of engineering solutions to environmental problems impacting the biosphere, land, water, and air quality. Environmental issues affect almost all commercial and industrial sectors, and are a central concern for the public, for all levels of government, and in international relations. These issues include safe drinking water, wastewater processing, solid and hazardous waste disposal, outdoor air pollution, indoor air pollution and transfer of infectious diseases, human health and ecological risk management, prevention of pollution through product or process design, and renewable and sustainable energy sources.

To address these challenges, environmental engineers often encounter challenging problems that must be solved in data-poor situations as members of multidisciplinary teams. Environmental problems require creative solutions blended with contributions from scientists, lawyers, business people, and the public. Good communication skills, as well as technical proficiency, are essential for success in this arena. In addition, technology designed to address environmental problems is marketed globally, opening up increasing opportunities for international work in the environmental engineering field.

The faculty of the Environmental Engineering Program (EVEN) is drawn from the Departments of Civil, Environmental, and Architectural Engineering; Mechanical Engineering; Chemical and Biological Engineering; and Aerospace Engineering. The EVEN faculty, its Professional Advisory Board (representing prospective employers of its graduates), and EVEN alumni and current students have contributed to the creation of the program's mission and the educational objectives of the EVEN BS degree.

Mission

The mission of the EVEN Program is to provide a multidisciplinary undergraduate environmental engineering education that emphasizes mastery of principles and practices, inspires service for the global public good, endows a desire for lifelong learning, and prepares students for broad and dynamic career paths in environmental engineering.

Educational Objective

The educational objective of the environmental engineering bachelor of science degree is to produce graduates who reach the following achievements three to five years after graduation:

- become established in professional careers or earn advanced degrees;
- apply multidisciplinary approaches to manage the unique challenges and balance the competing social, political, economic, and technical goals of environmental problems and solutions; and
- serve the needs of our society and protect the future of our planet in an ethical manner.

Program Outcomes

The Environmental Engineering Program demonstrates that its graduates:

- have sufficient knowledge of engineering, mathematics, and science fundamentals to succeed in environmental engineering practice or advanced degrees;
- have sufficient knowledge of advanced environmental engineering applications and complementary natural sciences to succeed in environmental engineering practice or advanced degrees;
- have sufficient knowledge of engineering approaches to problem solving (hypothesis, design, testing; team work) to succeed in environmental engineering practice or advanced degrees;
- have sufficient knowledge of basic engineering skills and tools (computer, laboratory, and field) to succeed in environmental engineering practice or advanced degrees;
- have adequate writing and oral presentation skills to succeed in environmental engineering practice or advanced degrees;
- have adequate understanding of the social, economic, political, and ethical context of environmental problems and solutions;
- have adequate opportunity to include service at the local, state, national, or global levels as an important part of their environmental engineering education; and
- recognize the importance of life-long learning by seeking advanced degrees and pursuing continuing education.

Bachelor's Degree Requirements

The bachelor of science degree in environmental engineering (EVEN) at the University of Colorado provides preparation for professional proficiency or graduate training in environmental engineering in a four-year curriculum. The curriculum includes courses in engineering fundamentals and applications, advanced mathematics, chemistry, physics, biology, geology, and the arts and humanities.

Courses specific to environmental engineering practice include water chemistry, microbiology, and air pollution control. In addition, environmental engineering requires hands-on laboratory experiences, up-to-date skills in the use of computers for modeling and data analysis, and experience in the design of environmental engineering systems. Many of the required engineering courses in the bachelor of science curriculum are culled from aerospace engineering sciences; chemical and biological engineering; civil, environmental, and architectural engineering; and mechanical engineering.

The curriculum also includes three technical electives, three option courses, and one free elective. Technical elective courses include a broad range of science and engineering courses, and must include an earth sciences course. The option courses represent an area of specialization in environmental engineering selected by the student beginning in the junior year. The curriculum includes six sets of options:

Air Quality
 Applied Ecology
 Chemical Processing
 Energy
 Environmental Site Characterization and Remediation
 Water Resources and Treatment

In addition to these prescribed options, students may also formulate their own sequence of option courses (referred to as a "special option") representing an area of specialization not included in the six sets of option courses listed above. This selection must be done by petition to the Environmental Engineering Program.

Students in the program are also encouraged to participate in research through independent study projects, the Undergraduate Research Opportunities Program (UROP), or as undergraduate research assistants in sponsored research programs. Students are required to take the Fundamentals of Engineering (FE) exam when they are within 32 credit hours of graduation.

Curriculum for the Bachelor of Science in Environmental Engineering

<i>Required Courses</i>	<i>Semester Hours</i>
Freshman Year	
Fall Semester	
APPM 1350 Calculus 1 for Engineers	4
CHEM 1221 Engineering General Chemistry Laboratory	2
CHEN 1211 General Chemistry for Engineers	3
EVEN 1000 Introduction to Environmental Engineering (Note 4)	1
GEEN 1400 Engineering Projects	3
Humanities and social science elective (Note 1)	3
Spring Semester	
APPM 1360 Calculus 2 for Engineers	4
GEEN 1300 Introduction to Engineering Computing	3
PHYS 1110 General Physics 1	4
Humanities and social science elective (Note 1)	3
Technical elective (Note 2)	3
Sophomore Year	
Fall Semester	
APPM 2350 Calculus 3 for Engineers	4
PHYS 1120 General Physics 2	4
PHYS 1140 Experimental Physics 1	1
Solid mechanics: CVEN 2121 Analytic Mechanics, GEEN 3851 Statics for Engineers, or MCEN 2023 Statics and Structures	3
Humanities and social science elective (Note 1)	3
Spring Semester	
APPM 2360 Introduction to Differential Equations with Linear Algebra	4
CHEM 4521 Physical Chemistry for Engineers (Note 4)	3
CHEN 2120 Material and Energy Balances	3
CVEN 3414 Fundamentals of Environmental Engineering	3
Humanities and social science elective (Note 1)	3
Junior Year	
Fall Semester	
CVEN 4404 Water Chemistry (Note 4)	3
CVEN 4414 Water Chemistry Lab (Note 4)	1
Engineering Economics (Note 4):	
CVEN 4147 Civil Engineering Systems, EMEN 4100 Business Methods and Economics for Engineers, or EVEN 4830 Technoeconomic Analysis for Environmental Engineering.	3
Fluid Mechanics:	
CHEN 3200 Chemical Engineering Fluid Mechanics, CVEN 3313 Theoretical Fluid Mechanics, GEEN 3853 Fluid Mechanics for Engineers, or MCEN 3021 Fluid Mechanics	3
Thermodynamics:	
AREN 2110 Thermodynamics, CHEN 3320 Chemical Engineering Thermodynamics, GEEN 3852 Thermodynamics for Engineers, or MCEN 3012 Thermodynamics	3
Required Communication Course:	
Approved upper-division writing (Note 1)	3
Spring Semester	
CVEN 4484 Introduction to Environmental Microbiology (Note 4)	3
MCEN 4131 Air Pollution Control (Note 4)	3
Heat Transfer:	
CHEN 3210 Chemical Engineering Heat Transfer or MCEN 3022 Heat Transfer	3
Probability and Statistics:	
APPM 4570 Statistical Methods, CHEN 3010 Applied Data Analysis, or CVEN 3227 Probability, Statistics, and Decision	3
Option course I (Note 3)	3

Senior Year**Fall Semester**

CVEN 4444 Environmental Engineering Processes (Note 4)	3
Humanities and social science elective (Note 1)	3
Air or earth science laboratory or field course	3
Option course II (Note 3)	3
Technical elective II (Note 2) or Senior Thesis (Note 5).	3
Free Elective	3

Spring Semester

CVEN 4333 Engineering Hydrology (Note 4)	3
CVEN 4424 Environmental Organic Chemistry	3
CVEN 4434 Environmental Engineering Design (Note 4)	3
Option course III (Note 3)	3
Technical elective III (Note 2) or Senior Thesis (Note 5)	3

Minimum total semester hours 128

Curriculum Notes

1. A total of 18 credit hours of humanities and social sciences electives is required. See engineering.colorado.edu/hss for specific requirements.
2. A total of 9 credit hours of technical electives is required. Three technical elective credits may be lower-division (1000-2000-level). Three technical elective credits must be in the earth sciences, either lower or upper division. Remaining technical elective credits must be upper division in engineering, mathematics, or sciences. Independent study (EVEN 4840) or senior thesis (EVEN 4980 and 4990) may be completed as technical electives for up to 6 credits.
3. A list of courses for the Air Quality, Applied Ecology, Chemical Processing, Energy, Environmental Remediation, and Water and Wastewater Options is available in the program office.
4. Only offered in the semester shown (not including summer offerings).
5. A senior thesis can be completed on a single research topic, with faculty approval and direction, and can apply toward technical elective requirements.

Concurrent Bachelor of Science/ Master of Science Degree

A concurrent EVEN BS/CVEN MS degree program is available in cooperation with the Department of Civil, Environmental, and Architectural Engineering. Students may apply to the program when they have completed 75–110 credit hours toward the undergraduate EVEN degree. Once accepted into the program, students are allowed to count 6 credit hours taken at the graduate level for both the environmental engineering BS and the civil engineering MS degrees, thus allowing them to obtain both degrees in a five-year curriculum.

Mechanical Engineering

Bachelor's Degree Requirements

The educational objective of the undergraduate program in mechanical engineering is to prepare graduates so that, within three years of graduation, they will have successfully established themselves in professional careers and/or obtained a graduate degree, and will have begun to generate new knowledge or exercise leadership in their positions to the benefit of society.

Each graduate of the mechanical engineering program is expected to:

- apply knowledge of mathematics, science, and engineering;
- identify, formulate, and solve engineering problems;
- use computers to solve engineering problems;
- use modern instrumentation;
- design and conduct experiments, including the use of probability and statistics;
- understand contemporary issues in mechanical engineering;
- analyze and interpret data;

- design thermal systems, components, or processes to meet desired needs;
- design mechanical systems, components, or processes to meet desired needs;
- understand the processes used to manufacture products;
- understand contemporary issues in mechanical engineering;
- make effective oral presentations;
- write effectively;
- function effectively on multi-disciplinary teams;
- understand professional and ethical responsibility;
- understand the impact of engineering in a global and societal context; and
- engage in lifelong learning.

The undergraduate curriculum in mechanical engineering incorporates engineering science, physical science, mathematics, and the humanities and social sciences. The engineering science component provides basic theoretical and practical concepts in solid mechanics, materials, thermodynamics, fluid mechanics, design, and manufacturing. Required courses in engineering science, physical science, and mathematics are interwoven throughout the curriculum to provide a balanced education in the fundamentals of the profession and comprise three-fourths of the minimum curriculum requirement of 128 semester hours; they are complemented by four technical electives, five electives in the humanities and social sciences, a junior-level writing course, and a free elective.

Options in environmental and biomedical engineering are available for students interested in these interdisciplinary areas.

Curriculum for BS (ME)

The following constitutes a representative course schedule for freshmen entering the program in fall 2007 or later.

<i>Required Courses</i>	<i>Semester Hours</i>
Freshman Year	
Fall Semester	
APPM 1350 Calculus 1 for Engineers	4
CHEM 1221 General Chemistry Laboratory for Engineers.	2
CHEN 1211 General Chemistry for Engineers.	3
MCEN 1000 Introduction to Mechanical Engineering	1
MCEN 1025 Computer-Aided Design and Fabrication.	3
Humanities or social science elective	3
Spring Semester	
APPM 1360 Calculus 2 for Engineers	4
GEEN 1300 Introduction to Engineering Computing	3
GEEN 1400 First-year Engineering Projects.	3
PHYS 1110 General Physics 1	4
Humanities or social science elective	3
Sophomore Year	
Fall Semester	
APPM 2350 Calculus 3 for Engineers	4
MCEN 2023 Statics and Structures	3
PHYS 1120 General Physics 2	4
PHYS 1140 Experimental Physics	1
Humanities or social science elective	3
Spring Semester	
APPM 2360 Introduction to Differential Equations with Linear Algebra	4
MCEN 2024 Materials Science	3
MCEN 2063 Mechanics of Solids	3
PHYS 2130 General Physics 3 or general science elective	3
Free elective	3

Junior Year**Fall Semester**

MCEN 3012 Thermodynamics	3
MCEN 3017 Circuits and Electronics	3
MCEN 3021 Fluid Mechanics	3
MCEN 3030 Computational Methods	3
WRGT 3030 Writing on Science and Society	3

Spring Semester

MCEN 3022 Heat Transfer	3
MCEN 3025 Component Design	3
MCEN 3037 Experimental Design and Data Analysis	2
MCEN 3043 Dynamics	3
MCEN 4122 Thermodynamics 2	3
Humanities or social science elective	3

Senior Year**Fall Semester**

MCEN 4026 Manufacturing Processes and Systems	3
MCEN 4037 Measurements Laboratory	2
MCEN 4043 System Dynamics	3
MCEN 4045 Mechanical Engineering Design Project 1	3
Technical electives	3
Humanities or social science elective	3

Spring Semester

MCEN 4085 Mechanical Engineering Design Project 2	4
MCEN 4047 Mechanical Engineering (Senior) Laboratory	2
Technical electives	9

Minimum total hours for degree 128

Graduate Degree Programs

The department offers master of science (MS) and doctor of philosophy (PhD) degree programs to students whose career plans include advanced practice, research and development, and/or teaching at the college or university level.

The combined BS/MS program allows qualified students to simplify obtaining the MS degree. Up to 6 hours of appropriate courses may be used to satisfy both degrees. Students may apply for this program in their junior year.

Students pursuing the degree of master of science in mechanical engineering may follow either Plan I, which requires the writing of a thesis, or Plan II, which involves only course work. A student following Plan I must complete a minimum of 24 semester hours of course work and 6 semester hours of thesis work; at least 15 semester hours of the course work must be in the mechanical engineering department. A student following Plan II must complete a minimum of 30 semester hours of course work, of which at least 18 semester hours must be in the mechanical engineering department. Up to 9 semester hours of graduate course work may be transferred from another accredited institution as long as those hours were not used to satisfy another degree requirement. Students should consult with an academic advisor to decide what course of study best meets their academic objectives.

A student pursuing the PhD in mechanical engineering must complete a minimum of 12 semester credit hours in courses numbered 5000 or above, beyond the MS degree requirements, as well as 30 semester hours of thesis work. Up to 21 semester hours of graduate course work may be transferred from another accredited institution; there is no credit limit for appropriate courses taken at the University of Colorado, such as those taken for the master of science degree.

Every student desiring to pursue the PhD degree must first pass a preliminary examination. As a part of this evaluation, students must pass written and oral examinations designed to test research and fundamental mechanical engineering competency. The oral examinations will be given by committees of at

least two faculty members. Overall performance in the required examinations will determine *pass/fail* status.

After passing the preliminary examination, students continue their course work and prepare a written thesis prospectus. When ready, they take an oral comprehensive examination covering the graduate course work and the thesis prospectus. After passing the comprehensive examination, students are admitted into the PhD program and conduct original research required to satisfy the thesis requirement. This research culminates in the writing of the thesis, which students defend in a final examination.

PhD students are assigned an academic advisor to review their progress toward the degree. Students are expected to meet with the advisor at least once each semester prior to registration. Once students have selected a research topic for the thesis, academic advising is done by their thesis advisor. Additional information on graduate study may be found in the Graduate School section.

Graduate Research

Research activities are concentrated in three contemporary themes: micro/nano scale engineering, energy/environment, and bioengineering. Faculty engage in these theme areas through three disciplinary areas of mechanical engineering: fluid mechanics/thermal sciences, solid mechanics/material sciences, and design/manufacturing. Faculty and students collaborate with universities and laboratories across the United States and throughout the world.

Example research efforts in micro/nano systems include: design and reliability of MicroElectroMechanical Systems (MEMS), nanosystems, carbon nanotubes, mechanical properties of nanowires, nanomaterial processing, nanocomposites, disk drive shock analysis, microporous membranes, polymer derived ceramics, active materials and structures, multi-scale computational fluids modeling, and MEMS/electronics packaging.

Example research efforts in energy/environment include: flame treatment of polymer films, microgravity combustion of metals, urban air quality modeling, indoor air pollution, and theoretical/computational fluid dynamics.

Example research efforts in bioengineering include: optical biopsy of prostate cancer, shape memory polymers/alloys, cardiovascular fluid/bio mechanics, MEMS-based biosensing, ultrasound imaging, device design, nanoparticle diagnostics, and metallic/polymer biomaterials. These efforts are facilitated by collaborations with the Anschutz Medical Campus of the University of Colorado Denver, the Children's Hospital, and the Colorado State Veterinary College.

Department research activities are supported by a wide range of industrial and federal agencies such as the National Science Foundation (NSF), Department of Energy (DOE), National Aeronautics and Space Administration (NASA), National Institute of Health (NIH), Air Force Office of Scientific Research (AFOSR), and Defense Agency Research Project Association (DARPA). Some research activities are carried out through interdisciplinary department research centers including the Joint Center for Combustion and Environmental Research (JCCER), Membrane Applied Science and Technology (MAST) Center, and Integrated Micro/Nanoelectro-mechanical Transducers (iMINT).

Telecommunications

This interdisciplinary graduate curriculum offers master of science and PhD degrees to students from a variety of undergraduate backgrounds. Students obtain an understanding of the latest aspects of networking, wireless systems, network security, and

smart-grid technologies, as well as their business and policy frameworks in the expanding fields of telecommunications and networking. This understanding is gained through course work, research, and laboratory studies. For more information, visit telecom.colorado.edu.

Faculty—College of Engineering and Applied Science

Aerospace Engineering Sciences

JEFFREY M. FORBES, department chair; professor. BS, University of Rhode Island; MS, University of Illinois; PhD, Harvard University.

DENNIS M. AKOS, assistant professor. BS, MS, MS, PhD, Ohio University.

BRIAN M. ARGROW, associate dean for education; professor. BS, MS, PhD, University of Oklahoma.

PENINA AXELRAD, professor. BS, MS, Massachusetts Institute of Technology; PhD, Stanford University.

ALFRED J. BEDARD, associate professor adjunct. BS, Boston College; MS, PhD, University of Colorado.

SEDAT BIRINGEN, professor. BS, MS, Robert College, Turkey; Diploma, von Karmán Institute for Fluid Dynamics; DSc, University of Brussels.

GEORGE H. BORN, professor. BS, MS, PhD, University of Texas.

XINZHAO CHU, associate professor. BS, PhD, Peking University.

ROBERT D. CULP, professor emeritus.

ALIREZA DOOSTAN, assistant professor. BS, MS, Sharif University of Technology; MA, PhD, The Johns Hopkins University.

WILLIAM EMERY, professor. BS, Brigham Young University; PhD, University of Hawaii.

CARLOS A. FELIPPA, professor. BS, Universidad Nacional de Cordoba, Argentina; MS, PhD, University of California, Berkeley.

ERIC FREW, assistant professor. BS, Cornell University; MS, PhD, Stanford University.

DONNA SUE GERREN, senior instructor. BS, MS, University of Colorado; MSE, University of Michigan; PhD, University of Kansas.

MAHMOUD I. HUSSEIN, assistant professor. BS, The American University in Cairo; MS, Imperial College of Science, Technology and Medicine, London; MS, MS, PhD, University of Michigan—Ann Arbor.

KENNETH E. JANSEN, professor. BS, University of Missouri—Columbia; MS, PhD, Stanford University.

LAKSHMI KANTHA, professor. BS, Bangalore University, India; MS, Indian Institute of Science; PhD, Massachusetts Institute of Technology.

DAVID KLAUS, assistant professor. BS, West Virginia University; MS, PhD, University of Colorado.

JEAN N. KOSTER, professor. Dip-Ing, Dok-Ing, University of Karlsruhe, Germany.

KRISTINE LARSON, professor. AB, Harvard University; PhD, University of California, San Diego.

DALE A. LAWRENCE, associate professor. BS, Colorado State University; MS, PhD, Cornell University.

ROBERT R. LEBEN, associate research professor. BS, MS, PhD, University of Colorado.

XINLIN LI, associate professor. BS, University of Science and Technology of China; MS, Shanghai Institute of Optics and Fine Mechanics; PhD, Dartmouth College.

JAMES MASLANIK, research associate professor. BS, MS, Pennsylvania State University; PhD, University of Colorado.

KURT MAUTE, associate professor. PhD, University of Stuttgart.

MICHAEL THOMAS McGRATH, professor adjunct. BS, University of Colorado.

GEORGE W. MORGENTHALER, professor emeritus.

R. STEVEN NEREM, associate director of CCAR and professor. BS, Colorado State University; MS, PhD, University of Texas at Austin.

SCOTT PALO, assistant professor. BS, Clarkson University; MS, PhD, University of Colorado.

KWANG-CHUN PARK, professor. BS, Inha Institute of Technology, Korea; MS, Stanford University; PhD, Clarkson College.

HANSPETER SCHAUB, associate professor. BS, MS, PhD, Texas A&M University.

DANIEL J. SCHEERES, professor. BS, Calvin College; BSE, MSE, PhD, University of Michigan.

TRUDY SCHWARTZ, senior instructor. BS, MS, University of Colorado.

HOWARD SNYDER, professor emeritus.

RYAN STARKEY, assistant professor. BS, University of Alberta, Edmonton; MS, PhD, University of Maryland.

LOUIS STODIECK, director of BioServe; research associate professor. BS, MS, PhD, University of Colorado.

JEFFREY P. THAYER, associate professor. BS, State University of New York; MS, PhD, University of Michigan.

Chemical and Biological Engineering

KRISTI S. ANSETH, distinguished professor. BS, Purdue University; PhD, University of Colorado.

CHRISTOPHER N. BOWMAN, associate dean for research; professor. BS, PhD, Purdue University.

STEPHANIE J. BRYANT, assistant professor. BS, University of Texas at Austin; PhD, University of Colorado.

DAVID E. CLOUGH, professor. BS, Case Institute of Technology; MS, PhD, University of Colorado.

ROBERT H. DAVIS, dean, professor. BS, University of California, Davis; MS, PhD, Stanford University.

JANET DeGRAZIA, senior instructor. BA, Barnard College; MS, PhD, University of Colorado.

JOHN L. FALCONER, professor. BES, Johns Hopkins University; MS, PhD, Stanford University.

SCOTT FOGLER, professor adjunct. BS, University of Illinois; MS, PhD, University of Colorado Boulder.

STEVEN M. GEORGE, professor. BS, Yale University; PhD, University of California, Berkeley.

RYAN GILL, assistant professor. BS, Johns Hopkins University; MS, PhD, University of Maryland.

DOUGLAS GIN, professor. BS, University of British Columbia; PhD, California Institute of Technology.

CHRISTINE M. HRENYA, associate professor. BS, Ohio State University; PhD, Carnegie Mellon University.

ARTHI JAYARAMAN, assistant professor. BE, Birla Institute of Technology and Science; PhD, North Carolina State University.

DHINAKAR S. KOMPALA, associate professor. BTech, Indian Institute of Technology, Madras; MS, PhD, Purdue University.

MELISSA J. MAHONEY, assistant professor. BS, Northwestern University; PhD, Cornell University.

WILL MEDLIN, assistant professor. BS, Clemson University; PhD, University of Delaware.

CHARLES MUSGRAVE, associate professor. BS, University of California, Berkeley; MS, PhD, California Institute of Technology.

RICHARD D. NOBLE, professor. BE, ME, Stevens Institute of Technology; PhD, University of California, Davis.

CHARLES NUTTELMAN, instructor. BS, MS, PhD, University of Colorado.

FRED RAMIREZ, professor adjunct emeritus.

THEODORE W. RANDOLPH, professor. BS, University of Colorado, PhD, University of California.

ROBERT L. SANI, professor. BS, MS, University of California, Berkeley; PhD, University of Minnesota.

AARON SAUNDERS, assistant professor. BS, Iowa State University; PhD, University of Texas at Austin.

DANIEL K. SCHWARTZ, professor. AB, AM, PhD, Harvard University.

JEFFREY W. STANSBURY, professor. BS, PhD, University of Maryland.

MARK STOYKOVICH, assistant professor. BS, Massachusetts Institute of Technology; PhD, University of Wisconsin–Madison.

ALAN W. WEIMER, professor. BS, University of Cincinnati; MS, PhD, University of Colorado.

Civil, Environmental, and Architectural Engineering

BERNARD AMADEI, professor. Dipl Eng, School of Applied Geology and Mine Prospecting, E.N.S.G., France; MS, University of Toronto; PhD, University of California, Berkeley.

GARY L. AMY, professor emeritus.

RAJAGOPALAN BALAJI, associate chair; assistant professor. BS, Regional Engineering College, India; MS, Indian Statistical Institute; PhD, Utah State University.

L. DUANE BALL, professor emeritus.

ANGELA R. BIELEFELDT, associate professor. BS, Iowa State University; MSCE, PhD, University of Washington.

MICHAEL J. BRANDEMUEHL, professor. Engineering. BS, MS, PhD, University of Wisconsin–Madison.

THOMAS CHASE, associate professor. BS, MS, Colorado State University.

PAUL S. CHINOWSKY, professor. BS, MS, California Polytechnic State University; PhD, Stanford University.

ROSS COROTIS, professor. BS, MS, PhD, Massachusetts Institute of Technology.

JOHN P. CRIMALDI, associate professor. BSE, Princeton University; MS, PhD, Stanford University.

SHIDEH DASHTI, assistant professor. BS, Cornell University; MS, PhD, University of California, Berkeley.

JAMES E. DIEKMANN, professor. BS, MS, University of Missouri; PhD, University of Washington.

DAVID L. DILaura, professor emeritus.

JOHN O. DOW, associate professor emeritus.

CHUAN CHUNG FENG, professor emeritus.

DAN M. FRANGOPOL, professor emeritus.

KURT H. GERSTLE, professor emeritus.

GEORGE G. GOBLE, professor emeritus.

VIJAY GUPTA, professor. BE, University of Roorkee, India; MS, Colorado State University; PhD, University of Arizona.

MILAN F. HALEK, senior instructor. BA, University of Colorado; MS, Czechoslovakia Technical University.

MATTHEW HALLOWELL, assistant professor. BS, MS Bucknell University; PhD, Oregon State University.

GEORGE HEARN, associate professor. BS, The Cooper Union; MS, PhD, Columbia University.

GREGOR HENZE, associate chair; professor. BS, Technical University of Berlin; MS, Oregon State University; PhD, University of Colorado.

MARK HERNANDEZ, professor. BS, MS, PhD, University of California, Berkeley.

HON-YIM KO, professor emeritus.

MONCEF KRARTI, professor. Dipl Ing, Ecole Nationale des Ponts és Chaussées; MS, PhD, University of Colorado Boulder.

JAN F. KREIDER, professor emeritus.

ABBIE LIEL, assistant professor. BSE, Princeton University; MSc, University College London; PhD, Stanford University.

KARL G. LINDEN, professor. BS, Cornell University; MS, PhD, University of California, Davis.

JOHN McCARTNEY, assistant professor. BS, MS, University of Colorado; PhD, The University of Texas at Austin.

DIANE M. McKNIGHT, professor. BS, MS, PhD, Massachusetts Institute of Technology.

KEITH MOLENAAR, department chair; associate professor. BS, MS, PhD, University of Colorado Boulder.

LUPITA MONTOYA, assistant professor. BS, California State University; MS, PhD, Stanford University.

ROSEANNA NEUPAUER, associate professor. BS, Carnegie Mellon University; SM, Massachusetts Institute of Technology; MS, PhD, New Mexico Institute of Mining and Technology.

RONALD Y. S. PAK, professor. BE, McMaster University, Canada; MS, PhD, California Institute of Technology.

WILLIAM T. PFEFFER, professor. BA, University of Vermont; MA, University of Maine, PhD, University of Washington.

KEITH A. PORTER, associate research professor. BS, University of California, Davis; MEng, University of California, Berkeley; PhD, Stanford University.

J. BRENT PROTZMAN, assistant professor. BS, MS, PhD, University of Nebraska at Lincoln.

HARIHAR RAJARAM, professor. BTech, Indian Institute of Technology, Madras; MS, University of Iowa; ScD, Massachusetts Institute of Technology.

RICHARD REGUEIRO, assistant professor. BSE, University of Pennsylvania, SM, Massachusetts Institute of Technology; PhD, Stanford University.

FERNANDO ROSARIO-ORTIZ, assistant professor. BS, University of Puerto Rico; MS, California Institute of Technology; DEnv, University of California, Los Angeles.

JOSEPH N. RYAN, professor. BS, Princeton University; MS, PhD, Massachusetts Institute of Technology.

VICTOR A. SAOUMA, professor. BE, American University of Beirut; PhD, Cornell University.

METTUPALYAM SIVASELVAN, assistant professor. BTech, Indian Institute of Technology; MS, PhD, State University of New York at Buffalo

JOANN SILVERSTEIN, professor. BA, Stanford University; BS, MS, PhD, University of California, Davis.

KENNETH M. STRZEPEK, professor. ScB, SM, PhD, Massachusetts Institute of Technology.

STEIN STURE, Croft Professor. BS, MS, PhD, University of Colorado.

LUIS L. SUMMERS, professor emeritus.

R. SCOTT SUMMERS, professor. BS, MS, University of Cincinnati; PhD, Stanford University.

LEONARD G. TULIN, professor emeritus.

SANDRA L. VASCONEZ, senior instructor. BA, King's College; MS, Rensselaer Polytechnic Institute; MA, University of Denver.

FRANCK VERNEREY, assistant professor. MS, PhD, Northwestern University.

WALTER A. WEERS, associate professor emeritus.

KASPAR J. WILLAM, professor emeritus.

AMY WILL-JAVERNIK, assistant professor. BS, MS, University of Colorado; PhD, Stanford University.

YUNPING XI, professor. BS, Peking Institute, Beijing; MS, Central Research Institute of Building and Construction, Beijing; PhD, Northwestern University.

WILLIAM S. YEARSLEY, senior instructor. BS, Southern Illinois University; MS, PhD, Colorado State University.

EDITH ZAGONA, research professor. BS, University of Arizona; MS, Colorado State University; PhD, University of Colorado Boulder.

JOHN ZHAI, assistant professor. BS, MS, PhD, Tsinghua University; PhD, Massachusetts Institute of Technology.

DOBROSLAV ZNIDARCIC, professor. BS, MS, University of Zagreb; PhD, University of Colorado.

Computer Science

XIAO-CHUAN CAI, department chair; professor. BS, Peking University; MS, PhD, New York University.

KENNETH M. ANDERSON, associate chair; associate professor. BS, MS, PhD, University of California, Irvine.

JOHN K. BENNETT, professor. BSEE, MEE, Rice University; MS, PhD, University of Washington.

JOHN R. BLACK, associate professor. BS, California State University, Hayward; PhD, University of California, Davis.

ELIZABETH BRADLEY, professor. BS, MS, PhD, Massachusetts Institute of Technology.

TIMOTHY X. BROWN, associate professor. BS, Pennsylvania State University; PhD, California Institute of Technology.

RICHARD H. BYRD, professor. BA, MA, PhD, Rice University.

BOR-YUH EVAN CHANG, assistant professor. BS, Carnegie Mellon University; MS, PhD, University of California, Berkeley.

AARON CLAUSET, assistant professor. BS, Haverford College; PhD, University of New Mexico.

ELIANA COLUNGA, assistant professor. BS, MSc, El Instituto Tecnológico y de Estudios Superiores de Monterrey; PhD, Indiana University.

NIKOLAUS J. CORRELL, assistant professor. MS, Eidgenössische Technische Hochschule Zürich; PhD, Ecole Polytechnique Fédérale de Lausanne.

AMER S. DIWAN, associate professor. BA, Middlebury College; MS, PhD, University of Massachusetts Amherst.

ROBIN D. DOWELL, assistant professor. BS, Texas A&M University; DSc, Washington University in St. Louis.

ANDRZEJ EHRENFUCHT, distinguished professor. MA, University of Warsaw, Poland; PhD, Mathematical Institute of P.A.N., Warsaw.

MICHAEL A. EISENBERG, professor. BA, Columbia University; MS, PhD, Massachusetts Institute of Technology.

CLARENCE A. ELLIS, professor emeritus.

GERHARD FISCHER, professor. MS, University of Heidelberg; PhD, University of Hamburg.

LLOYD D. FOSDICK, professor emeritus.

HAROLD N. GABOW, professor emeritus.

DEBRA S. GOLDBERG, assistant professor. BS, Yale University; MS, University of Denver; MS, PhD, Cornell University.

DIRK C. GRUNWALD, professor. BS, MS, PhD, University of Illinois, Urbana-Champaign.

RICHARD Y. HAN, associate professor. BS, Stanford University; MS, PhD, University of California, Berkeley.

LAWRENCE HUNTER, professor. BS, MS, PhD, Yale University.

ELIZABETH R. JESSUP, professor. BA, Williams College; MS, MPhil, PhD, Yale University.

ROGER A. KING, professor. AB, Occidental College; MS, PhD, University of Southern California.

ROBIN D. KNIGHT, associate professor. BS, University of Otago, New Zealand; PhD, Princeton University.

CLAYTON H. LEWIS, professor. AB, Princeton University; MS, Massachusetts Institute of Technology; PhD, University of Michigan.

QIN LV, assistant professor. BE, Tsinghua University; MA, PhD, Princeton University.

MICHAEL G. MAIN, associate professor. BS, MS, PhD, Washington State University.

JAMES H. MARTIN, professor. BS, Columbia University; PhD, University of California, Berkeley.

OLIVER McBRYAN, professor emeritus.

SHIVAKANT MISHRA, associate professor. BTech, Indian Institute of Technology Bombay; MS, Southern Illinois University; PhD, University of Arizona.

MICHAEL C. MOZER, professor. BS, Brown University; MA, PhD, University of California, San Diego.

JANE MULLIGAN, research assistant professor. BS, Acadia University; MS, PhD, University of British Columbia.

EVI NEMETH, associate professor emerita.

GARY J. NUTT, professor emeritus.

LEYSIA A. PALEN, associate professor. BS, University of California, San Diego; MS, PhD, University of California, Irvine.

MARTHA S. PALMER, professor. BA, MA, University of Texas; PhD, University of Edinburgh.

ALEXANDER REPENNING, research associate professor. BS, Engineering College, Brugg-Windisch, Switzerland; MS, PhD, University of Colorado Boulder.

BRUCE W. SANDERS, senior instructor. BS, Louisiana State University; MS, University of Colorado Boulder.

SRIRAM SANKARANARAYANAN, assistant professor. BTech, Indian Institute of Technology Kharagpur; MS, PhD, Stanford University.

ROBERT B. SCHNABEL, professor emeritus.

DOUGLAS C. SICKER, associate professor. BS, MS, PhD, University of Pittsburgh.

JEREMY SIEK, assistant professor. BS, MS, University of Notre Dame; PhD, Indiana University.

KATIE A. SIEK, assistant professor. BS, Eckerd College; MS, PhD, Indiana University.

TAMARA R. SUMNER, associate professor. BA, BS, University of California, Santa Cruz; MS, PhD, University of Colorado Boulder.

HENRY M. TUFO, associate professor. BS, Duke University; MS, University of Vermont; MS, PhD, Brown University.

MANISH VACHHARAJANI, assistant professor. BS, Rutgers State University of New Jersey; MA, PhD, Princeton University.

WILLIAM M. WAITE, professor emeritus.

WAYNE H. WARD, research professor. BA, Rice University; MS, PhD, University of Colorado Boulder.

KARL A. WINKLMANN, senior instructor emeritus.

Electrical, Computer, and Energy Engineering

MICHAEL R. LIGHTNER, department chair, professor. BS, MS, University of Florida; PhD, Carnegie Mellon University.

JAMES AVERY, professor emeritus.

SUSAN AVERY, professor emerita.

FRANK S. BARNES, distinguished professor. BS, Princeton University; MS, Engineer Degree, PhD, Stanford University.

DAVID E. BEEMAN, professor adjunct. BS, Stanford University; PhD, University of California, Los Angeles.

JOHN BENNETT, professor. BS, ME, Rice University; MS, PhD, University of Washington.

AARON R. BRADLEY, assistant professor. BS, MS, PhD, Stanford University.

ELIZABETH BRADLEY, professor. BS, MS, PhD, Massachusetts Institute of Technology.

THOMPSON R. BROWN, senior instructor. BS, Wichita State University.

TIMOTHY X BROWN, professor. BS, Pennsylvania State University; MS, PhD, California Institute of Technology.

W. THOMAS CATHEY, professor emeritus.

CAROL COGSWELL, research professor. MA, PhD Equivalent, University of Oregon.

RUTH H. DAMERON, senior instructor. BS, Wheaton College; MS, Syracuse University.

HOWARD DEMUTH, professor adjunct. BS, University of Colorado; MS, PhD, Stanford University.

ROBERT W. ERICKSON, professor. BS, MS, PhD, California Institute of Technology.

DEJAN FILIPOVIC, associate professor. Dipl Eng, University of Nis, Yugoslavia; MS, PhD, University of Michigan.

EWALD F. FUCHS, professor. Dipl, Dipl Ing, Technical University of Stuttgart; PhD, University of Colorado.

ALBIN J. GASIEWSKI, professor. BS, MS, Case Western Reserve University; PhD, Massachusetts Institute of Technology.

JULIET T. GOPINATH, assistant professor. BS, University of Minnesota; SM, PhD, Massachusetts Institute of Technology.

DIRK GRUNWALD, associate professor. BSc, MSc, PhD, University of Illinois, Urbana-Champaign.

GARY D. HACHTEL, professor emeritus.

JOHN E. HAUSER, associate professor. BS, United States Air Force Academy; MS, PhD, University of California, Berkeley.

UTE HERZFELD, associate professor research. MS, Dr.Rer.NAT., Johannes Gutenberg Universität, Mainz, Germany.

VINCENT P. HEURING, associate chair; associate professor. BS, University of Cincinnati; PhD, University of Florida.

SHANNON HUGHES, assistant professor. BA, BS, Rice University; PhD, Princeton University.

HENRY C. KAPTEYN, professor. BS, Harvey Mudd College; MA, Princeton; PhD, University of California, Berkeley.

EDWARD F. KUESTER, professor. BS, Michigan State University; MS, PhD, University of Colorado.

YOUJIAN LIU, associate professor. BE, Beijing University of Aeronautics and Astronautics, China; MS, Peking University; MS, PhD, Ohio State University.

ARNOLDO MAJERFELD, professor emeritus.

DRAGAN MAKSIMOVIC, associate professor. BS, MS, University of Belgrade; PhD, California Institute of Technology.

JASON MARDEN, assistant professor. BS, MS, PhD, University of California, Los Angeles.

PETER MATHYS, associate chair; associate professor. Dipl El Ing, PhD, Swiss Federal Institute of Technology, Zurich.

LINDEN B. McCLURE, professor adjunct. BS, University of Maine at Orono; MS, PhD, University of Colorado.

ROBERT McLEOD, associate professor. BS, MS, Montana State University; MS, University of California, Davis; PhD, University of Colorado.

DAVID G. MEYER, associate professor. BS, University of Wyoming; MS, PhD, Stanford University.

FRANCOIS G. MEYER, associate professor. MS, ENSIMAG, Grenoble; PhD, INRIA, Rennes.

ALAN R. MICKELSON, associate professor. BS, University of Texas at El Paso; MS, PhD, California Institute of Technology.

RICHARD T. MIHRAN, professor adjunct. BS, Case Western Reserve University; MS, PhD, University of Colorado.

GARRET MODDEL, professor. BS, Stanford University; MS, PhD, Harvard University.

MARGARET MURNANE, professor. BSc, MSc, University College Cork, Ireland; PhD, University of California, Berkeley.

WILLIAM G. NEWHALL, professor adjunct. BS, MS, PhD, Virginia Polytechnic Institute and State University.

LUCY Y. PAO, professor. BS, MS, PhD, Stanford University.

WOUNJHANG PARK, associate professor. BS, Seoul University; MS, Dongguk University; PhD, Georgia Institute of Technology.

RAFAEL PIESTUN, associate professor. EE, Universidad de Republica, Uruguay; MSc, PhD, Technion-Israel Institute of Technology; Post Doc, Stanford University.

MELINDA PIKET-MAY, associate professor. BS, University of Illinois; MS, PhD, Northwestern University.

ANDREW R. PLESZKUN, associate professor. BS, Illinois Institute of Technology; MS, PhD, University of Illinois.

ZOYA POPOVIC, professor. BS, University of Belgrade, Yugoslavia; MS, PhD, California Institute of Technology.

MILOS POPOVICH, assistant professor. BS, Queen's University, Kingston, Ontario, Canada; MS, PhD, Massachusetts Institute of Technology.

LI SHANG, assistant professor. BE, ME, Tsinghua University; PhD, Princeton University.

JEREMY SIEK, assistant professor. BS, MS, University of Notre Dame; PhD, Indiana University.

SAM SIEWERT, professor adjunct. BS, University of Notre Dame; MS, PHD, University of Colorado Boulder.

FABIO SOMENZI, professor. DrEng, Politecnico di Torino, Italy.

MANISH VACHHARAJANI, assistant professor. BS, Rutgers University; MA, PhD, Princeton.

BART J. VAN ZEGHBROECK, professor. Dipl, Katholieke Universiteit Leuven; MS, PhD, University of Colorado Boulder.

MAHESH K. VARANASI, professor. BE, Osmania University, India; MS, PhD, Rice University.

HOWARD WACHTEL, professor. BS, Cooper Union; MS, Drexel Institute; PhD, New York University.

KELVIN H. WAGNER, professor. BS, MS, PhD, California Institute of Technology.

WILLIAM M. WAITE, professor emeritus.

REGAN ZANE, associate professor. BS, MS, PhD, University of Colorado Boulder.

Engineering Management

BARBARA B. LAWTON, program chair; Lockheed-Martin Professor. BA, American University; MA, Pennsylvania State University; PhD, University of Wyoming.

WAYNE R. KIRSHLING, scholar-in-residence; attendant-rank professor. BS, United States Air Force Academy; MS, Stanford University; MBA, University of Colorado at Colorado Springs; DBA, University of Colorado Boulder.

JEFFREY T. LUFTIG, Deming professor of management. BS, State University of New York College at Buffalo; MEd, Bowling Green University; PhD, University of Minnesota.

Herbst Humanities

WAYNE AMBLER, associate professor. BA, Cornell University; MA, University of Toronto and Boston College; PhD, Boston College.

SCOT DOUGLASS, associate professor, Herbst Program of Humanities and Department of Comparative Literature/Humanities. BS, University of Arizona; ThM, Dallas Seminary; PhD, University of Colorado.

HARDY FREDRICKSMEYER, senior instructor, Herbst Program of Humanities. BA, University of Colorado Boulder; MA, Columbia University and University of Texas, Austin; PhD, University of Texas, Austin.

LELAND GIOVANNELLI, senior instructor, Herbst Program of Humanities. BA, St. John's College, Annapolis; MA, PhD, University of Chicago.

ANJA LANGE, senior instructor, Herbst Program of Humanities. PhD, University of Colorado.

DIANE SIEBER, program director; associate professor. BA, University of Virginia; MA, PhD, Princeton University.

Mechanical Engineering

VICTOR BRIGHT, department chair; professor. BS, University of Colorado; MS, PhD, Georgia Institute of Technology.

MELVYN C. BRANCH, professor emeritus.

TIMOTHY L. BROWER, senior instructor. BS, Idaho State University; MS, Montana State University; PhD, Colorado State University.

J. SCOTT BUNCH, assistant professor. BS, Florida International University; MS, PhD, Cornell University.

LAWRENCE E. CARLSON, professor. BS, University of Wisconsin; MS, DrEngr, University of California, Berkeley.

JOHN W. DAILY, professor. BS, MS, University of Michigan; PhD, Stanford University.

SUBHENDU K. DATTA, professor emeritus.

OLIVIER DESJARDINS, assistant professor. MS, SUPAERO (Toulouse, France); MS, PhD, Stanford University.

YIFU DING, assistant professor. BS, MS, Fudan University; PhD, University of Akron.

MARTIN L. DUNN, professor. BS, Montana State University; MS, PhD, University of Washington.

VIRGINIA FERGUSON, assistant professor. BS, MS, PhD, University of Colorado Boulder.

THOMAS L. GEERS, professor emeritus.

ALAN R. GREENBERG, professor. BS, MS, PhD, Drexel University.

MICHAEL HANNIGAN, assistant professor. BS, Southern Methodist University; MS, PhD, California Institute of Technology.

DAVEN K. HENZE, assistant professor. PhD, California Institute of Technology.

JEAN R. HERTZBERG, associate professor. BSE., University of Michigan; MS, PhD, University of California, Berkeley.

DAVID R. KASSOY, professor emeritus.

FRANK KREITH, professor emeritus.

DARIA KOTYS-SCHWARTZ, instructor. BS, MS, Ohio State University; PhD, University of Colorado Boulder.

SE-HEE LEE, associate professor. PhD, Seoul National University.

YUNG-CHENG LEE, professor. BS, National Taiwan University; MS, PhD, University of Minnesota.

JANA B. MILFORD, professor. BS, Iowa State University; MS, PhD, Carnegie Mellon University.

SHELLY L. MILLER, associate professor. BS, Harvey Mudd College; MS, Claremont College; MS, PhD, University of California, Berkeley.

TODD MURRAY, associate professor. BS, MSE, PhD, Johns Hopkins University.

PHILLIP F. OSTWALD, professor emeritus.

HAROLD S. PARK, assistant professor. BS, MS, PhD, Northwestern University.

GARY PAWLAS, instructor. BS, University of Cincinnati; MSME, University of Colorado Boulder; PhD, University of Toledo.

JOHN PELLIGRINO, research professor. BS, City College of New York; MS, PhD, University of Colorado Boulder.

H. JERRY QI, assistant professor. BS, MS, PhD, Tsinghua University; ScD, Massachusetts Institute of Technology.

RISHI RAJ, professor. BS, University of Newcastle-upon-Tyne; BS, Allahabad University; PhD, Harvard University.

DEREK REAMON, senior instructor. BS, MS, PhD, Stanford University.

MARK E. RENTSCHLER, assistant professor. BS, University of Nebraska; MS, Massachusetts Institute of Technology; PhD, University of Nebraska.

TIMOTHY F. SCOTT, research assistant professor. BS, University of Melbourne; PhD, Monash University.

ROBIN SHANDAS, research professor. BS, University of California, Santa Barbara; MS, PhD, University of California, San Diego.

CONRAD STOLDT, associate professor. BA, University of Colorado Boulder; PhD, Iowa State University.

WEI TAN, assistant professor. BS, East China University of Science and Technology; MS, PhD, University of Illinois, Chicago.

OLEG V. VASILYEV, associate professor. MS, Moscow Institute of Physics and Technology; MS, PhD, University of Notre Dame.

PATRICK D. WEIDMAN, professor emeritus.

RONGGUI YANG, assistant professor. BS, Xi'an Jiaotong University; MS, Tsinghua University; MS, University of California, Los Angeles; PhD, Massachusetts Institute of Technology.

JACK ZABLE, industry professor of mechanical engineering design. BS, City College of New York; MS, PhD, Purdue University.

Telecommunications

KENNETH BAKER, scholar-in-residence. PhD, Virginia Tech.

FRANK S. BARNES, professor. BS, Princeton University; MS, Engineer's Degree, PhD, Stanford University.

BRAD BERNTHAL, associate clinical professor. BA, University of Kansas; JD, University of Colorado.

TIMOTHY X BROWN, director; professor. BS, Pennsylvania State University; MS, PhD, California Institute of Technology.

HARVEY M. GATES, assistant professor adjunct. BS, University of New Mexico; MS, PhD, University of Denver.

DALE N. HATFIELD, professor adjunct. BS, Case Institute of Technology; MS, Purdue University.

GERALD A. MITCHELL, senior instructor. AS, Boise State College; BS, Regis College; MS, University of Colorado Boulder.

PATRICK S. RYAN, scholar-in-residence. BA, Monterrey Institute of International Studies; JD, University of Texas at Austin; PhD, Katholieke Universiteit, Leuven.

SCOTT SAVAGE, assistant professor. BB, Edith Cowen University, Australia; MEd, University of Western Australia, PhD, Curtin University of Technology, Australia.

DOUGLAS SICKER, associate professor. BS, MS, University of Pittsburgh; PhD, University of Pittsburgh.

PHILLIP WEISER, associate professor. BA, Swarthmore College; JD, New York University School of Law.

Engineering (General)

TANYA D. ENNIS, director, Goldshirt Program; instructor. BS, Southern University; MS, University of Southern California.

CHRISTOPHER J. KOEHLER, director, Colorado Space Grant Consortium. BS, MS, University of Colorado Boulder.

BEVERLY LOUIE, director, teaching and learning initiatives. BS, MS, University of Colorado; PhD, University of Oxford.

TERRY S. MAYES, director, academic programs and assessment. BS, MBA, MS, University of Colorado Boulder.

LaRUTH C. McAFEE, director, student engagement and community building programs. BSE, University of Michigan; PhD, Massachusetts Institute of Technology.

BETH A. MYERS, director, access and recruitment. BA, University of Colorado Boulder.

SHERRY A. SNYDER, director, student programs. BA, Ashland University; MS, Nazareth College, EdS, University of Colorado Boulder; PhD, Colorado State University.

MARY D. STEINER, assistant dean for students. BSE, University of Michigan; MLS, Rutgers University.

JACQUELYN F. SULLIVAN, associate dean for inclusive excellence; co-director, Integrated Teaching and Learning Laboratory. BS, Olivet College; MS, University of Detroit; PhD, Purdue University.

Graduate School

John Stevenson, interim dean

26 UCB • phone: 303-492-7401 • fax: 303-492-5777
school website: www.colorado.edu/graduateschool

GRADUATE WORK at the University of Colorado began on a small scale in 1892. Following years of development, the Graduate School was organized in 1909 with a separate faculty. Each of the three campuses of the University of Colorado system now offers graduate degree programs, and a dean is in residence on each campus. The Graduate School at CU-Boulder is governed by its own set of Graduate School Rules.

Degrees

The Graduate School of the University of Colorado Boulder offers instruction leading to the following advanced degrees:

- Master of Arts (MA)
- Master of Business Administration (MBA) (through Leeds School of Business)
- Master of Engineering (ME)
- Master of Fine Arts (MFA)
- Master of Music (MMus)
- Master of Music Education (MMusEd)
- Master of Science (MS)
- Doctor of Audiology (AuD)
- Doctor of Musical Arts (DMusA)
- Doctor of Philosophy (PhD)

Programs

MA programs in:

- Anthropology
- Art History
- Chinese
- Classics
- Communication
- Comparative Literature
- Ecology and Evolutionary Biology
- *Economics
- Education
 - Curriculum and Instruction
 - Education/Psychological Studies
 - Social, Multicultural, and Bilingual Foundations
- English (see MFA for Creative Writing)
 - English Literature
- French
- Geography
- German
- History
- Japanese
- Journalism
- Linguistics
- Mathematics
- *Molecular, Cellular, and Developmental Biology
- Philosophy
- Political Science
 - International Affairs

- Political Science
- Public Policy
- *Psychology
- Religious Studies
- *Sociology
- Spanish
- Speech, Language, and Hearing Sciences
- Theatre

**Master's degree offered as part of the PhD program only.*

ME programs in:

- Chemical Engineering
- Computer Science
- Electrical Engineering
- Engineering Management
- Mechanical Engineering
- Telecommunications

MFA programs in:

- Creative Writing
- Dance
- Studio Arts

MMus

- Music

MMusEd

- Music Education

MS programs in:

- Aerospace Engineering Sciences
- Applied Mathematics
- Astrophysical and Planetary Sciences
- Atmospheric and Oceanic Sciences
- *Biochemistry
- Business Administration
 - Accounting
 - Accounting–Taxation
- Chemical Engineering
- *Chemistry
- Civil Engineering
- Computer Science
- Electrical Engineering
- Environmental Studies
- Geology
- Information and Communication Technology for Development
- Integrative Physiology
- Mechanical Engineering
- Museum and Field Studies
- Physics
- Telecommunications

**Master's degree offered as part of the PhD program only.*

DAud

- Audiology

DMusA

Musical Arts

PhD programs in:

Aerospace Engineering Sciences
 Anthropology
 Applied Mathematics
 Astrophysical and Planetary Sciences
 Atmospheric and Oceanic Sciences
 Biochemistry
 Business Administration
 Chemical Engineering
 Chemical Physics
 Chemistry
 Chinese
 Civil Engineering
 Classics
 Cognitive Science
 Communication
 Communication-Media Studies (through Journalism)
 Comparative Literature
 Computer Science
 Ecology and Evolutionary Biology
 Economics
 Education
 Curriculum and Instruction
 Education/Psychological Studies
 Educational Foundations, Policy, and Practice
 Equity, Education, and Cultural Diversity
 Research and Evaluation Methodology
 Electrical Engineering
 English
 Environmental Studies
 French
 Geography
 Geology
 Geophysics
 History
 Integrative Physiology
 Japanese
 Linguistics
 Mathematics
 Mechanical Engineering
 Molecular, Cellular, and Developmental Biology
 Music
 Music Education
 Musicology
 Neuroscience
 Philosophy
 Physics
 Political Science
 Psychology
 Sociology
 Spanish
 Speech, Language, and Hearing Sciences
 Technology, Media, and Society
 Theatre

Inquiries regarding admission to graduate programs should be addressed to the graduate department in which the applicant wishes to study (see the *University of Colorado Boulder Directory* for campus addresses or see www.colorado.edu).

Concurrent Bachelor's/Master's Degree Programs

Concurrent BS/MS and BA/MA degree programs are offered in several departments at CU-Boulder. These programs allow a student to receive both a bachelor's and master's degree in five

years of study without compromising the academic integrity of either degree.

Currently approved concurrent degree programs in arts and sciences include: applied mathematics, Asian languages and cultures, classics, cognitive psychology, ecology and evolutionary biology, engineering physics/physics, film/art history, French, Germanic studies, integrative physiology, linguistics, physics/engineering physics, mathematics, and religious studies; in business, accounting/accounting, finance/accounting, information systems/accounting, information systems/telecommunications; and all departments in engineering.

These concurrent degree programs are open only to highly qualified CU-Boulder undergraduates. Students are formally admitted at the end of their sophomore year or the beginning of their junior year. They are admitted through the admission procedure of their department and do not go through the normal process of admission to Graduate School. When students have completed the program requirements, they receive both a bachelor's and a master's degree simultaneously. Students wishing to continue studying toward a doctorate must formally apply for admission to the Graduate School.

Students interested in a concurrent bachelor's/master's program should inquire in the department.

Dual Degree Programs

In an environment where there is a rapidly increasing desire for interdisciplinary and professional skills, receiving two master's degrees in complementary fields can be a real asset. Contact the individual departments for details.

Combinations with MBA

Anthropology/MBA
 Computer science/MBA
 Environmental studies/MBA
 German/MBA
 Art and art history/MBA
 Telecommunications/MBA
 Theatre and dance/MBA

Combination within the Graduate School

Religious studies/Asian languages/history (any two)
 Music (two areas)
 Applied math/MCD biology
 Engineering management/telecommunications
 Audiology/speech, language, and hearing sciences (both through the department of SLHS)

Combination with Law

Environmental studies/law
 Telecommunications/law

Academic Excellence

Scholarships and Fellowships

CU-Boulder administers various forms of financial assistance for graduate students: fellowships, traineeships, scholarships, research and teaching assistantships, and awards from outside agencies.

The Chancellor's Graduate Fellowship Program, instituted in 1984–85, attracts outstanding students for graduate study at the University of Colorado. Selected students receive a stipend of \$25,000 for two academic years and a full waiver of all tuition, fees, and insurance. Recipients must be entering master's or doctoral degree students and be nominated by their department.

Additional fellowships are available from private sources. Fellowships, traineeships, and scholarships are also offered by some departments. Applications for financial support are due in the departments by the announced deadlines; most departments must receive applications by January 15.

For more about assistantships, see Financial Aid for Graduate Study. Information on other funding opportunities is available on the Graduate School website at www.colorado.edu/graduateschool/funding.

Academic Standards

Grade Point Average

A student is required to maintain at least a *B* (3.00) average in all work attempted while enrolled in the Graduate School, and must have at least a 3.00 cumulative average to receive a graduate degree.

Nonacceptable Grades

1. A student who receives a grade of *C* or below in a course may petition to repeat that course once, provided the course has not been previously applied toward a degree.
2. Courses in which grades below *B-* (2.700) are received are not accepted for doctoral programs.
3. Courses in which grades below *C* (2.000) are received are not accepted for master's degree programs or for the removal of academic deficiencies.
4. Courses taken toward the fulfillment of requirements for graduate degrees may not be taken *pass/fail*.

Probation

A student whose cumulative GPA falls below 3.000 is placed on academic probation. The student has two semesters in which to raise the cumulative GPA to 3.000 or above. If the student's cumulative GPA is at or below 2.500, a dean's administrative stop is placed on the student's record, and the student may be withdrawn from course work for upcoming semesters.

If, after the two-semester probationary period, the student's cumulative GPA is still below 3.000 or if other conditions placed by the major department or Graduate School are not met, a dean's administrative stop will be placed on the student's record and he or she may be subject to dismissal.

A provisionally admitted student whose GPA falls below 3.000 has a dean's administrative stop placed on his or her record pending a review by the major department and the Graduate School.

No Credit

Course work to be applied toward an advanced degree may not be taken for *no credit (NC)*. Courses taken for *no credit* cannot be used toward the minimum credit load requirement for full-time or half-time status.

Pass/Fail

No course work to be applied toward an advanced degree may be taken *pass/fail*.

Student Ethics

Students are expected to adhere to the highest codes of personal and professional ethics. Students who do not adhere to written guidelines regarding academic honesty and/or academic or research ethics may be dealt with according to the appropriate

policy documents. Students found guilty of misconduct in any of these areas may have sanctions imposed, or may be dismissed from CU-Boulder.

Admission and Enrollment Policies

Application Procedures

Students seeking admission to a CU-Boulder master's or doctoral program apply directly to the appropriate department, not the Graduate School. An applicant for admission must present complete application materials that include:

1. Complete the graduate application, available online at www.colorado.edu/prospective/graduate.
2. Two official transcripts of all academic work completed to date.
3. A \$50 nonrefundable application fee (check or money order). No application will be processed unless this fee is paid. The application fee for international students is \$70.
4. Three or four letters of recommendation. Please check with your program to obtain the required number of recommendations needed.
5. Test scores and other materials as required by specific departments.

A completed application must be in the major department by the published deadline for the term for which admission is sought. Most departments have an application deadline that is several months before the start of the desired admission term. Qualified applicants may find that their application cannot be processed for a specific term if enrollment levels have been reached.

International students should have complete applications on file in the Office of Admissions before December 1 for the fall semester and October 1 for the spring semester.

Admission Requirements

A graduate student may be admitted to CU-Boulder as either a regular degree student or a provisional degree student.

Regular Degree Students

Qualified students may be recommended for admission to regular degree status by approved programs of the Graduate School provided they meet the following criteria:

1. They hold a baccalaureate degree from an accredited college or university or have done work equivalent to that required for such a degree.
2. They show promise of ability to pursue advanced study and research, as judged by their scholastic record.
3. They have had adequate preparation to enter graduate study in the chosen field.
4. They have at least a 2.750 (on a 4.000 scale) undergraduate GPA (for engineering, 3.000). (NOTE: Applicants who cannot meet criterion 4 may still secure regular admission if they have completed 9 semester hours of relevant graduate course work with at least a 3.250 average.)
5. They meet additional requirements for admission established by the major department.

Provisional Degree Students

Students who do not meet the requirements for admission as regular degree students may be recommended for provisional

degree status by their major department. With the concurrence of the dean of the Graduate School, these students are admitted for a probationary term of either one or two semesters of full-time study (or the equivalent for part-time students). At the end of the specified probationary period, provisional degree students must be either admitted to regular degree status or dismissed from the graduate program. Provisional students are subject to the same standards of performance required of regular degree students, plus any other requirements imposed by the program faculty as conditions of admission.

Credit earned by persons in provisional degree status may count toward a degree at CU-Boulder.

To meet the standard terms of provisional admission, the student must generally complete 12 hours in two semesters (or equivalent for part-time students) with a 3.000 cumulative GPA. Program faculty may recommend additional or alternative conditions as appropriate.

Admission to a Concurrent Bachelor's/ Master's Degree Program

A number of CU-Boulder departments offer concurrent bachelor's/master's degrees, which enable CU undergraduate students to pursue undergraduate and graduate programs simultaneously and to receive both degrees in a shorter time period than it would take to pursue them separately.

Highly qualified undergraduate students may be recommended for admission to a concurrent bachelor's/master's degree program at the end of their sophomore year or the beginning of their junior year. Such students are not formally admitted to the Graduate School. Standards for admission as well as eligibility to remain in the program are specified in each department's program guide.

Admission to a Dual Degree Program

The Graduate School, in conjunction with the faculty of each department and the deans of schools and colleges where appropriate, approves dual degree programs that combine previously approved graduate degree programs in two areas or departments.

Qualified graduate students may be recommended for admission to an approved dual degree program upon meeting the qualifications of each graduate program and any special qualifications as outlined by each program's approved guidelines. Minimum standards and qualifications for admission and continuation may be found in each department's approved program guide. Students wishing to complete degrees in more than one department that have no approved dual degree program or interdisciplinary major combination must complete all the requirements for both degrees with no shared or overlapping course work.

Admission of Seniors

A CU-Boulder senior who is not pursuing the concurrent bachelor's/master's degree, but who has satisfied the undergraduate residence requirement and does not need more than 6 semester hours of advanced subjects to meet the requirements for a bachelor's degree, may be admitted to the Graduate School.

Admission of Nondegree Students to Regular Degree Status

Students with nondegree status who wish to apply for regular student status must complete their application for admission before completing 9 semester hours as nondegree students at CU-Boulder.

Admission of Former and Suspended Students

Students who were previously admitted to a graduate degree program but who did not complete that degree and who have not been continuously registered at CU-Boulder must complete the following steps before being readmitted:

1. Clarify their status with the department to determine their eligibility to return and pursue the same degree.
2. Submit an application to the department (departmental approval is required) before enrollment levels are met or deadlines passed for the term in which they expect to return to CU-Boulder.

A regular degree student who is dismissed for failure to maintain a 3.000 grade point average is eligible to apply for readmission after one year. Approval or rejection of this application rests jointly with the student's major department and the dean of the Graduate School. The final decision will be made by the dean based on the recommendations of the department.

Students Transferring from Other CU Campuses

Students transferring from another CU campus to CU-Boulder must apply to and be accepted by the Boulder campus.

Students Changing Major Departments

Students who want to change major departments must apply to and be accepted by the new department. When adding a second major in an approved interdisciplinary major combination, this must be noted on the application.

Admission of Faculty Members

No member of the faculty above the rank of instructor may be working toward an advanced degree from CU-Boulder.

Credit Policies

Transfer Credit

Transfer credits from accredited institutions are accepted by CU-Boulder only after approval by the department chair/program director and the dean of the Graduate School, and under conditions outlined below. Transfer credit is defined as any credit earned at another accredited institution, credits earned on another campus of the CU system, or credits earned as a non-degree student within the CU system. Students seeking a degree from CU-Boulder must complete the majority of their course work while enrolled as degree-seeking students.

The following rules apply to transferring credit to CU-Boulder graduate programs:

1. The maximum amount of work that may be transferred to CU-Boulder depends upon the graduate degree sought (individual departments may have more restrictive limits).

<i>Degree</i>	<i>Semester Hours</i>
MA, ME, MS, MMus, MMusEd, or DMA	9
MFA	18
PhD or AuD	21
AuD students with MA and audiology certification	30

2. Work already applied toward a graduate degree received from CU-Boulder or another institution cannot be accepted for transfer toward another graduate degree of the same level at CU-Boulder. In addition, work completed for a doctoral degree may not be applied toward a subsequent master's degree. Extension work completed at another institution cannot be transferred, and correspondence work, except to make up deficiencies, is not recognized.

3. All courses accepted for transfer must be graduate-level courses. A course in which a grade of *B-* or lower was received will not be accepted for transfer. Transfer course work that is to be applied to a graduate degree at CU-Boulder and was completed more than five years prior to being accepted to the program will be evaluated by the major department as to current relevance and applicability to the degree requirements. At the discretion of the department, a student may be asked to validate transfer credits prior to approval.
4. Credit may not be transferred until the student has completed 6 credits of graduate course work as a regular, degree-seeking student at the Boulder campus with a 3.000 GPA. Transferred credits do not reduce the minimum registration requirement, but may reduce the amount of work to be done in formal courses.
5. Excess undergraduate credits from another institution may not be transferred to the CU-Boulder Graduate School.

Graduate Credit for CU-Boulder Seniors

With the exception of students enrolled in a concurrent bachelor's/master's degree program, seniors at CU-Boulder may earn graduate credit for a limited amount of graduate-level work (up to 9 semester hours), provided such work is completed with a grade of *B* or above in course work at CU-Boulder; comes within the five-year course time limit; has not been applied toward another degree; and is recommended for transfer by the department concerned, and such transfer is approved by the dean of the Graduate School.

Registration

Registration procedures are sent to new graduate students when they confirm their intent to enroll. Please refer to Registration in the General Information section for further information.

Late registration is held only if enrollment levels have not been reached. Graduate students (including candidates for degrees and students taking only thesis hours) who fail to complete registration and pay fees during regular registration may be charged a late registration fee.

Concurrent Registration

Boulder campus students unable to obtain courses required for their degree program on the Boulder campus may register for up to two courses or 6 credit hours, whichever is greater, on another University of Colorado campus. The course work must be required for their degree program; they must have their dean's permission; they must be enrolled for at least one course on the Boulder campus; and enrollment levels must not have been reached on the other campus. Contact the Office of the Registrar for additional information.

Reciprocal Exchange Agreement Program

Reciprocal registration enables University of Colorado graduate students to attend classes at other Colorado institutions, including Colorado School of Mines, Colorado State University, and the University of Northern Colorado. For more information, contact the Office of the Registrar.

Withdrawal

A graduate student who desires to withdraw from the university should go to Regent Administrative Center 125 for a withdrawal interview. A student who discontinues attendance in a course without officially withdrawing is marked as having failed that

course. Except under extreme circumstances, graduate students are not permitted to withdraw after the last day of classes.

Financial Aid for Graduate Study

The University of Colorado offers several types of financial assistance for graduate students who demonstrate financial need. Students apply for assistance by submitting a financial aid application (the FAFSA) as soon as possible after January 1.

The Colorado Graduate Grant Program is open to graduate students who are Colorado residents. Nonresidents are eligible for student fee grants. To receive assistance, students must be nominated by their departments.

Graduate students may apply for long-term loans through the Stafford Loan (formerly GSL) program or the Perkins Loan program (formerly the National Direct Student Loan) and for part-time jobs through the college work-study program.

Graduate Part-Time Instructors and Teaching Assistants

Many departments employ graduate students as graduate part-time instructors (GPTIs) or as teaching assistants (TAs). GPTIs must possess a master's degree or the equivalent and have demonstrated competence in classroom teaching. Teaching assistants are not required to have previous teaching experience. In order to be eligible to be a GPTI or a TA, one must be a fully enrolled graduate student, with a cumulative GPA of at least 3.000. Compensation is based on the percentage of time worked, and includes a tuition waiver and partial insurance benefit.

Research Assistants

In many departments, research activities provide opportunities for graduate students to work part time as research assistants. All research assistants must maintain a cumulative GPA of at least 3.00 and be full-time regularly enrolled graduate students. Compensation is based on percentage of time worked and includes a tuition waiver and partial insurance benefit.

Graduate Teacher Program

The Graduate Teacher Program provides professional development opportunities, career consulting, videotape consultation, and teacher training for all graduate students. Because teaching skills prepare graduate students for any career, all graduate students, including those with no teaching appointments, TAs, GPTIs, and RAs are welcome at GTP workshops on teaching, research, service, and personal and professional development. Workshops are held prior to both fall and spring semesters, throughout the academic year, and during summer session. Topics range from preparing a syllabus, diversity issues, effective approaches to research, academic service, and conflict management to preparing for an academic job interview.

The Graduate Teacher Program offers three certificates: the Certificate in College Teaching for graduate students who actually teach; the Professional Development Certificate for Preparing Future Faculty (PDC/PFF); and, in collaboration with Career Services, the Professional Development Certificate for graduate students who are considering nonacademic career paths in business, government, industry (PDC/BGIA), or the arts. Requirements for each are posted on the GTP website at gtp.colorado.edu.

The Lead Graduate Teacher Network offers academic leadership training to 50 graduate students each year. Leads receive the Best Should Teach Silver Award, spend one week in exten-

sive training, and assist departmental faculty with discipline-specific TA training.

International graduate students may benefit from the pre-fall-semester Cultural Intensive, workshops throughout the year, individualized consultation on teaching and career planning, and referrals to ESL services.

The Graduate Teacher Program's Collaborative Preparing Future Faculty Network (COPFFN) provides professional development opportunities for graduate students and faculty. PFF fellows may attend site visits on partner campuses, identify a faculty mentor on a partner campus, work on technology projects, and pursue the PDC/PFF.

The Graduate Teacher Program collaborates with the University Libraries to provide Provost's Fellowships to graduate students who wish to explore academic librarianship as a career.

Requirements for Advanced Degrees

A graduate student is responsible for becoming informed about and observing all regulations and procedures required by the graduate program pursued. Ignorance of a rule does not constitute a basis for waiving that rule. Any exceptions to the policies stated in this catalog must be approved by the dean of the Graduate School.

Animal Research and Human Research

Research involving the use of animals and/or the observation or participation of human subjects must have approval from the Animal Care and Use Committee (IACUC) and/or the Human Research Committee (HRC) prior to the beginning of the project. Forms are available from the office of the vice chancellor for research/dean of the Graduate School or from the website at www.colorado.edu/VCREsearch/integrity/humanresearch or www.colorado.edu/VCREsearch/integrity/animalcare.

Graduate Faculty Appointments for Courses and Exams

All courses, 5000-level or above, completed to fulfill graduate degree requirements must be taught by members of the graduate faculty. In addition, any faculty member serving on a master's or doctoral examination/defense committee must hold a current graduate faculty appointment. Membership on the university faculty does not automatically constitute an appointment to the graduate faculty. Contact your departmental graduate program assistant for questions concerning these appointments.

Master's Degrees

A student enrolled in a master's program must satisfy the degree requirements of both the Graduate School and the major department. The requirements listed below are the minimum standards of the Graduate School; additional requirements are set forth by the major department.

Minimum Requirements

The minimum requirement for the master's degree is 30 credit hours. A student may complete a Plan I (thesis) option, or a Plan II (course work) option. At least 24 hours must be completed at the 5000 level or above; these 24 hours may include a minimum of 4, but not more than 6, thesis hours for those students completing a Plan I degree. A maximum of 6 credit hours may be completed at the 3000 or 4000 level at the discretion of the academic department.

Independent study course work cannot exceed 25 percent of the course work required for the master's degree.

Master's Thesis

A thesis, which may be research or expository, critical, or creative work, is required of every master's degree candidate under Plan I. Every thesis presented in partial fulfillment of the requirements for an advanced degree must accomplish the following:

- represent the equivalent of 4–6 semester hours of work, and
- comply in mechanical features with the specifications for theses and dissertations available in the Graduate School.

The final grade is withheld until the thesis is completed; if the thesis is not finished at the end of the term in which the student is registered, an in-progress (*IP*) grade is reported.

Language Requirement

There is no campuswide foreign language requirement for the master's degree. The decision regarding the foreign language requirement for each graduate degree is the responsibility of the graduate program.

Time Limit

Master's degree students have four years (six years for students pursuing an ME) from the semester in which they are admitted and begin course work to complete all degree requirements. The phrase "all degree requirements" includes the filing of the thesis with the Graduate School if Plan I is followed. Students who fail to complete the degree in this four-year period may be dismissed from their program with the concurrence of the major advisor and/or appropriate departmental personnel. To continue, the student must file a petition for an extension of the time limit with the dean of the Graduate School. Such petitions must be endorsed by the student's major advisor and/or other appropriate departmental personnel and may be granted for up to one year.

Students who have not completed the degree within their time limit, and who have received approval for an extension, must have any course work completed more than five years prior to the completion of the degree requirements evaluated by their department for relevance and applicability. At the discretion of the department the student may be required to validate these courses as part of the completion of their degree requirements.

Students who need to leave CU-Boulder for a period of time may apply to the Time Off Program for up to one year. Participation in the Time Off Program does not extend the student's time limit, but may be used as a reason to request an extension.

Students whose registration at CU-Boulder is interrupted by military service may apply to the dean of the Graduate School for an extension.

Minimum Registration Requirement

Master's degree minimum registration requirements can be met only by full-time registration at CU-Boulder for at least two semesters, at least three summer sessions, or a combination of at least one semester and two summer sessions/part-time semesters.

For purposes of deciding minimum registration credit toward a graduate degree, a student must be registered as a full-time student. One semester of minimum registration credit may be earned for full-time registration during the fall or spring semesters or two summer semesters/part-time semesters.

To be a full-time master's student, a student must carry one of the following course loads: a minimum of 5 credits of graduate course work, 8 credits of combined undergraduate and graduate

course work, 12 hours of undergraduate course work, at least 1 master's thesis hour, or at least 1 hour of "Master's Candidate for Degree." Full- and half-time standards may be different for students receiving federal or state financial aid. Students should contact the Office of Financial Aid to see if these standards apply. These different standards are for financial aid purposes only.

Candidacy and Graduation

To be granted a master's degree, a student must become a candidate for that degree by filing an Application for Admission to Candidacy with the Graduate School no later than the posted graduation deadlines during the semester in which he or she plans to have the degree conferred. Students must meet all posted graduation deadlines in order to receive a degree in any given semester.

Comprehensive-Final Examination

Each candidate for a master's degree is required to take a comprehensive-final examination/thesis defense after the requirements for the degree have been substantially completed or to present an approved degree plan which meets the requirements of the field and represents an intellectually coherent graduate education as determined by the major department. The examination/defense may be given near the end of the student's last semester while the candidate is still taking required courses for the degree, provided satisfactory progress is being made in those courses. The approved degree plan must be approved by the department chair, graduate director, and major advisor on the Degree Plan Approval Form. The Degree Plan Approval option is available only in select departments.

The following rules apply to the comprehensive-final examination:

1. A student must be registered on the Boulder campus as a regular degree-seeking student during the semester the examination is passed.
2. Notice of the examination/defense must be filed by the major department in the Graduate School at least two weeks prior to the examination/defense. The examination/defense must be scheduled no later than the posted deadline for the semester in which the degree is to be conferred.
3. The exam is given by a committee of three graduate faculty members appointed by the department with approval of the dean of the Graduate School. The chair of the committee must have a regular or tenured graduate faculty appointment.
4. The examination, which may be oral, written, or both, must cover the thesis (which should be essentially complete), other work completed in courses and seminars in the major field, and all work presented for the degree.
5. A student must have an affirmative vote from the majority of the committee members to pass. A student who fails the comprehensive-final examination may attempt it once more after a period of time determined by the examining committee.

Doctor of Philosophy, Doctor of Musical Arts, and Doctor of Audiology

The doctor of philosophy (PhD), the doctor of musical arts (DMusA), and the doctor of audiology (AuD) are the highest academic degrees conferred by CU-Boulder. The requirements stated below are minimal requirements for all candidates for the PhD degree; additional conditions are found in department announcements. Additional requirements for the doctor of mu-

sical arts are available from the College of Music. Additional requirements for the doctor of audiology are available from the Department of Speech, Language, and Hearing Sciences.

Admission

A student admitted to the Graduate School for the master's program must reapply for admission for the doctoral program.

Minimum Course Requirement

The minimum requirements for the PhD or DMusA degree are 30 credit hours of course work at the 5000 level or above. Those students pursuing the PhD shall complete a minimum of 30 credit hours of dissertation work beyond the minimum course work requirement. The minimum transfer requirements for the AuD degree are 108 credit hours of course work at the 5000 level or above.

Unless otherwise specified by departmental requirements, all courses taken at the 5000 level or above that were taken for the master's degree at CU-Boulder may be applied toward the PhD degree. Course work taken in pursuit of a doctoral degree cannot be applied toward a subsequent master's degree.

Dissertation Credit-Hour Requirement

To complete the requirements for the PhD degree, a student must register for a minimum of 30 dissertation credit hours. Distribution of those hours is as follows:

1. A student may not register for more than 10 dissertation credit hours in any one semester.
2. Not more than 10 dissertation credit hours taken in semesters prior to the semester in which the comprehensive examination is passed may be counted in the 30 dissertation hours required for the degree.
3. Not more than 10 dissertation hours of credit taken the semester in which the comprehensive examination is passed may be included in the 30 dissertation credit hours required for the degree.

Minimum Registration Requirement

The minimum registration requirement for doctoral students is six semesters beyond the attainment of an acceptable bachelor's degree. Two semesters of minimum registration credit may be allowed for a master's degree from an accredited institution; however, at least four semesters of minimum registration credit, two of which must be consecutive in one academic year, must be earned for work taken at CU-Boulder.

For purposes of deciding minimum registration credit toward a graduate degree, a student must be registered as a full-time student. One semester of minimum registration credit may be earned for full-time registration during the fall or spring semester or during two summer semesters. Doctoral students who have not passed the comprehensive examination are considered full time during the spring and fall semesters if they are enrolled for at least 5 credit hours of course work at the graduate level, 8 credit hours of combined undergraduate and graduate hours, 12 credit hours of course work at the undergraduate level, or at least 1 doctoral dissertation hour. DMA students who have not passed their comprehensive exam may also be considered full time if they are taking 1 hour of course work numbered 8200–8399 or TMUS 8019. Doctoral students who have passed the comprehensive examination must register for at least 5 doctoral dissertation hours to be considered full-time students. DMA students who have passed their comprehensive examination must register for 1

hour of course work numbered 8200–8399 or TMUS 8029 to be considered full time. Doctor of audiology students are considered full-time students if they are enrolled for at least 5 credit hours of course work at the graduate level, 8 hours of course work of combined undergraduate and graduate hours, or 12 credit hours of course work at the undergraduate level. Full- and half-time standards may be different for students receiving federal or state financial aid. Students should contact the Office of Financial Aid to see if these standards apply. These different standards are for financial aid purposes only.

Preliminary Examination

Each department determines for itself (by examination or other means) that students who wish to study for the doctoral degree are qualified. The means by which each department makes this evaluation are specified in departmental requirements. Students who are thus evaluated are notified immediately of the results.

Language Requirement

There is no campuswide foreign language requirement for the doctoral degree. The decision regarding the foreign language requirement for each graduate degree is the responsibility of the graduate program.

Comprehensive Examination

Before admission to candidacy for the doctoral degree, students must pass a comprehensive examination in the field of concentration and related fields.

The following rules apply to the doctoral comprehensive examination.

1. Students must be registered (*pass/fail* or credit) on the Boulder campus as regular degree-seeking students when they pass the comprehensive examination.
2. Notice of the examination must be filed by the major department with the Graduate School at least two weeks before the examination.
3. The examination is conducted by an examining board appointed by the chair of the major department and approved by the dean of the Graduate School. The board consists of the major advisor and additional members as necessary to a minimum of five. The chair must have a regular or tenured graduate faculty appointment. Successful candidates must receive affirmative votes from a majority of the members of their examination board. A candidate who fails the examination may attempt it once more after a period of time determined by the examination board.
4. The examination, which may be oral, written, or both, tests mastery of a broad field of knowledge, not merely formal course work. The oral part is open to members of the graduate faculty.

Admission to Candidacy

A student must formally apply for admission to candidacy for the doctoral degree on forms supplied by the Graduate School at least two weeks before attempting the comprehensive examination. Before being admitted to candidacy a student must earn at least three semesters toward the minimum registration requirement, and pass the comprehensive examination.

Continuous Registration Requirement

A PhD student is required to register continuously for a minimum of 5 dissertation hours in the fall and spring semesters of

each year, beginning with the semester following the passing of the comprehensive examination and extending through the semester in which the dissertation is successfully defended (final examination). DMusA students must maintain continuous registration for at least 1 credit of course work numbered 8200–8399 (or TMUS 8029). AuD students must maintain continuous registration for appropriate course work in the fall and spring semesters of each year through the semester in which the final exam is passed.

1. A student not required to maintain full-time status and not using campus facilities may claim off-campus status, which allows registration for 3 rather than the minimum of 5 dissertation credit hours. Off-campus status (3 credits of dissertation hours) is considered part-time. All CU-Boulder considerations for part-time status apply.
2. A student who fails to register continuously for dissertation credit hours after passing the comprehensive examination must retake and pass the comprehensive examination in order to regain status as a student in good standing in the Graduate School. The department may require that the student validate course work more than five years old. At its discretion, the department may petition the dean of the Graduate School for a time limit for completion of all degree requirements of up to one year after the retaking of the comprehensive exam. The department must petition the dean of the Graduate School to waive the requirement to retake the comprehensive exam.
3. A PhD student must be registered full time for a minimum of 5 dissertation hours during the semester (including summer session) in which the dissertation defense is passed. DMusA students must be registered full time in course work numbered 8200–8399 (or TMUS 8029) during the semester in which the dissertation defense is passed. AuD students must be registered full time for 5 hours of graduate level course work or 8 hours of combined undergraduate and graduate hours during the semester in which the final exam is passed.

Dissertation Requirements

A PhD student must write a dissertation based upon original investigation, showing mature scholarship and critical judgment, as well as familiarity with tools and methods of research. The subject must be approved by the student's major department.

1. Every dissertation presented in partial fulfillment of the requirements for an advanced degree must represent the equivalent of at least 30 semester hours of work.
2. The student is responsible for notifying the Graduate School of the exact title of the dissertation on or before the posted deadlines during the semester in which the doctoral degree is to be conferred.
3. The dissertation must comply in mechanical features with the specifications for theses and dissertations available in the Graduate School.
4. After the dissertation defense, the student is responsible for submitting the dissertation and signature page on or before the posted deadline during the semester in which the doctoral degree is to be conferred.

The final grade is withheld until the dissertation is completed. In progress (*IP*) grades are assigned during each semester until the defense is successfully completed and the final copy of the dissertation is accepted by the examination committee, at which

time the final grade for all dissertation hours is submitted to the Graduate School.

Dissertation Defense/Final Exam

After the dissertation has been accepted for defense by the student's committee, a final examination on the dissertation and related topics is conducted. For AuD students, a final examination is conducted in place of the dissertation defense.

The following rules apply to the dissertation defense.

1. A student must be registered as a full-time, regular degree-seeking student at CU-Boulder, for a minimum of 5 dissertation hours during the semester in which the final examination is passed. DMusA students must be registered full time in course work numbered 8200–8399 (or TMUS 8029) during the semester in which the dissertation defense is passed. Doctor of audiology students should be registered during the final exam for 5 credit hours of course work at the graduate level or 8 hours of combined undergraduate and graduate hours.
2. Students must notify the Graduate School of their final oral examination at least two weeks before their scheduled examination date.
3. This examination is wholly or partly oral, the oral part being open to anyone.
4. The examination is conducted by a committee appointed by the chair of the major department and approved by the dean of the Graduate School, which consists of at least five persons, one of whom must be from outside the student's major department. Three of the members must be CU-Boulder graduate faculty. The chair and outside member of the committee must have regular or tenured graduate faculty appointments. The other committee members must have either regular or special graduate faculty appointments. The chair and a majority of the committee must be present on the Boulder campus for the examination. More than one dissenting vote disqualifies the candidate in the final examination.
5. A student who fails the examination may attempt it once more after a period of time determined by the examining committee.

Time Limit

Doctoral degree students are expected to complete all degree requirements within six years from the semester in which they are admitted and begin course work in the doctoral program. The phrase "all degree requirements" includes the filing of the dissertation and all accompanying forms with the Graduate School. Students who fail to complete the degree in this six-year period may be dismissed from their program with the concurrence of the major advisor and/or appropriate departmental personnel. To continue, the student must file a petition for an extension of the time limit with the dean of the Graduate School. Such petitions must be endorsed by the student's major advisor and/or other appropriate departmental personnel and may be granted for up to one year. If the dean of the Graduate School and the department chair/program director cannot agree on whether a student should continue, the Graduate School's executive advisory council makes the final decision.

Students who need to leave CU-Boulder for a period of time may apply to the Time Off Program for up to one year. Doctoral students who are required to maintain continuous registration may petition for an exception in order to participate in the Time

Off Program for parental leave or other extenuating circumstances. Participation in the Time Off Program does not extend the student's time limit, but may be used as a reason if applying for an extension.

Students whose registration at CU-Boulder is interrupted by military service may apply to the dean of the Graduate School for an extension of time.

Graduation

Students must meet all posted graduation deadlines in order to receive a degree in any given semester.

Sequestration of Dissertations

Dissertations approved by the departments and the Graduate School are released to ProQuest/UMI and kept on file electronically at Norlin Library.

Occasionally, the primary academic advisor, after consultation with the student, may find it necessary to sequester the student's dissertation to protect university rights to intellectual property. The university accepts the obligation to protect potentially publishable creative works and potentially patentable subject matter from premature public disclosure so as to preserve entitlement to patent protection while the technology is being evaluated. This sequestration should take place only when it is absolutely required and only for the minimum time necessary.

With just cause, the student may request that an embargo be placed on the publication/sale of the thesis for a reasonable amount of time. This request is made upon the electronic submission of the document.

Interdisciplinary Programs

Atmospheric and Oceanic Sciences

The interdisciplinary Department of Atmospheric and Oceanic Sciences (ATOC) provides an educational and research environment to examine the dynamical, physical, and chemical processes that occur in the atmosphere and the ocean. A major theme is the establishment of a physical basis for understanding, observing, and modeling climate and global change.

Graduate students, research staff, and faculty work together on a wide range of research topics, such as large-scale dynamics of ocean and atmosphere, air-sea interaction, radiative transfer and remote sensing of ocean and atmosphere, sea ice and its role in climate, cloud-climate interactions, atmospheric chemistry and aerosols, atmospheric technology, extended weather and climate prediction, hydrological processes, and boundary-layer measurement and modeling.

In addition to doctoral and master's degrees, ATOC offers graduate certificates in Atmospheric and Oceanic Sciences (ATOC), and Oceanography. Students majoring in atmospheric and oceanic sciences or other associated departments may wish to consider obtaining one of these certificates to emphasize on their vita that they have specialized in that additional area. Students who are not enrolled in a graduate degree program, but have received a BA or BS degree and meet the course prerequisites may also enroll in courses to obtain the ATOC Certificate or the Oceanography Certificate through the ACCESS program of Continuing Education.

Students who wish to obtain the Graduate Certificate in Atmospheric and Oceanic Sciences (ATOC) must complete a total of four courses from the approved list of courses (below), each with a grade of *B* or better.

Courses for the ATOC Certificate

ASEN 5215/ATOC 5215 Descriptive Physical Oceanography
 ASEN/ATOC 5235 Introduction to Atmospheric Radiative Transfer and Remote Sensing
 ASEN 5325 Small-Scale Processes in Geophysical Fluids
 ASEN 5335 Aerospace Environment
 ASTR/ATOC/GEOL 5810 Planetary Atmospheres
 ATOC 5050 Introduction to Atmospheric Dynamics
 ATOC 5051 Introduction to Physical Oceanography
 ATOC 5060 Dynamics of the Atmosphere
 ATOC 5061 Dynamics of the Oceans
 ATOC/CHEM 5151 Atmospheric Chemistry
 ATOC/ASTR 5560 Radiative Processes in Planetary Atmospheres
 ATOC 5600 Physics and Chemistry of Clouds and Aerosols
 ATOC 5750 Desert Meteorology and Climate
 ATOC 6100 Predicting Weather and Climate
 GEOG 5231 Physical Climatology: Field Methods
 GEOL 5060 Oceanography

Courses that may be taken if they are not in the student's home department include:

ASEN 5051 Fluid Mechanics
 ATOC/ASTR 5400 Introduction to Fluid Dynamics
 ATOC/ASTR 5410 Fluid Instabilities, Waves, and Turbulence
 ATOC/PHYS 5220 Nonlinear Dynamics
 CHEM 5161 Analytical Spectroscopy
 GEOG 5221 Synoptic and Dynamic Climatology
 GEOG 5331 Mountain Climatology

Students who wish to obtain the Graduate Certificate in Oceanography must complete at least three oceanography core courses (see below) passed with a letter of *B* or better. In addition, students may take an independent study course to replace one of the core courses.

Courses for the Oceanography Certificate

ATOC 5051 Introduction to Physical Oceanography
 ATOC 5061 Dynamics of Oceans
 ASEN/ATOC 5215/4215 Descriptive Physical Oceanography
 ASEN 5307/4307 Engineering Data Analysis Methods
 ASTR/ATOC 5400 Introduction to Fluid Dynamics
 ASTR/ATOC 5410 Fluid Instabilities, Waves, and Turbulence
 GEOL 5060 Oceanography
 GEOL 5270 Marine Chemistry and Geochemistry
 GEOL 5430 Paleoceanography and Paleoclimatology

For additional information about the ATOC Certificate or the Oceanography Certificate, contact the Department of Atmospheric and Oceanic Sciences, University of Colorado Boulder, 311 UCB, Boulder, CO 80309-0311, **303-492-7167** or atocasst@colorado.edu.

Behavioral Genetics

The Institute for Behavioral Genetics (IBG) offers a training program in behavioral genetics. The goal of the program is to train scientists in the study of genetic contributions to individual differences in behavior. This is accomplished by requiring students to obtain strong training in a primary academic discipline, by providing training in the interdisciplinary field of behavioral genetics, and by providing an atmosphere in which close interactions among scholars with different perspectives may be established.

The program features a core set of courses and continuous research training with one or more IBG faculty members, and furnishes valuable opportunities for interaction among scholars with widely varying academic backgrounds. A student wishing to specialize in behavioral genetics must be regularly enrolled as a graduate student in an academic department of the university.

The training program requires completion of four core courses (Genetics, Molecular and Behavioral Genetics, Statistics, and Scientific Integrity), one course from core quantitative electives (Quantitative Genetics, Biometrical Methods in Behavioral Genetics, and Statistical Genetics), one course from core basic science electives (Bioinformatics and Genomics, Neuropharmacology), and one "Concepts" or "Seminar" course in behavioral genetics. Students also must participate in a weekly journal club and monthly colloquia series.

Each trainee works as a teaching assistant for one semester in a course relevant to his or her professional specialty. An IBG trainee's doctoral dissertation research must be conducted on a topic directly relevant to animal or human behavioral genetics.

A student in the interdisciplinary certificate program must have an IBG faculty member as an advisor and an advisory committee composed of faculty from both IBG and the academic department. The advisory committee evaluates the student's progress and may impose additional requirements.

Information about the IBG interdisciplinary certificate program may be obtained at www.colorado.edu/ibg/education_and_training/affiliated.html or by contacting the Institute for Behavioral Genetics, University of Colorado Boulder, 447 UCB, Boulder, CO 80309-0447; **303-492-7362**; fax **303-492-8063**.

Biotechnology

The graduate certificate program in biotechnology provides integrated, interdisciplinary training that encompasses both modern biological sciences and biochemical engineering. The goal of the program is to help students acquire the skills and credentials to undertake crossdisciplinary research in modern industrial, academic, and government biotechnology research laboratories and the perspective to serve as leaders in the advancement of beneficial applications of modern biotechnology.

The graduate biotechnology program is offered cooperatively by the Departments of Chemical and Biological Engineering, Chemistry and Biochemistry, and Molecular, Cellular, and Developmental Biology. The program awards a certificate, not a separate degree; each student enrolls in a participating department and meets the degree requirements for that department.

A student must take 6 semester credit hours of graduate biotechnology courses, including CHEN 5830 Introduction to Modern Biotechnology and CHEN 5831 Biotechnology Case Studies. For the remaining credits, bioscience graduate students choose from bioengineering courses, and bioengineering students choose from bioscience courses.

During their first year, students take laboratory rotations in participating faculty laboratories. At least one laboratory rotation must be outside the student's home department. Students receive up to 7 semester credit hours of independent study or laboratory-methods credit for these rotations.

All students are expected to undertake internships with local biotechnology companies. These internships usually take place during the summer after the first year of graduate study.

For more information on the biotechnology certificate program, contact Professor Ryan Gill, Department of Chemical and Biological Engineering, University of Colorado Boulder, 424 UCB, Boulder, CO 80309-0424; **303-492-2627**.

Chemical Physics

The interdepartmental doctoral program in chemical physics prepares students for research in such interdisciplinary fields as atomic and molecular radiative processes, spectroscopy, laser chemistry and physics, atmospheric chemistry, molecular quan-

tum mechanics, statistical mechanics, kinetics, chemistry and physics of the surface and condensed phase, semiconductors, and nanoscale processes.

Students wishing to pursue the doctoral degree in chemical physics should apply for admission to either the Department of Chemistry and Biochemistry or the Department of Physics.

Entering students take a qualifying examination in the area of their undergraduate major. The comprehensive examination tests their knowledge of both chemistry and physics. Certain requirements associated with the regular doctoral programs in the participating departments will be replaced by requirements in the complementary field; each student's program of course work and research will be individually planned according to the student's special needs.

The program is administered by an interdepartmental committee. For further information, contact the graduate program assistant in either the Department of Chemistry and Biochemistry or the Department of Physics.

Cognitive Science

The cognitive science academic program includes a combined PhD degree between cognitive science and a core discipline, as well as a combined PhD plan of study tailored for students interested in cognitive neuroscience. In addition, there are two certificates at the graduate level of study. The first of these is a certificate in general issues in cognitive science that can be tailored to the individual student's area of interest. The cognitive science curriculum for this certificate is designed to provide broad as well as in-depth training in the cognitive sciences. The second graduate certificate is in Human Language Technology (HLT) and is specifically designed to provide interested graduate students with a rich and broad background in computational tools for human language processing. These programs are administered by the Institute of Cognitive Science (ICS) of the University of Colorado Boulder. Graduate students in cognitive science are admitted to graduate programs in participating departments that have cognitive science faculty and must meet the requirements for admission and degree completion in their home department.

Students wishing to attain a degree or certificate in cognitive science must formally apply to the director of Academic Programs of ICS. To be admitted they must be a student affiliate of ICS, which requires being a graduate student in good standing in a member department, and they must be sponsored by an ICS faculty member. Students who enter the Graduate School without a master's degree may be admitted to the program upon completion of their first year of study; students with a master's degree may be admitted during their first year.

The degree and certificate programs in cognitive science require students to demonstrate acceptable performance in interdisciplinary course work and courses outside their home department. The courses must be offered by the departments of computer science; education; linguistics; philosophy; psychology; speech/language/hearing sciences; architecture, planning, and design; or another department in which there is an ICS faculty member. Details about requirements for the degree and certificate programs can be obtained through the Director of Academic Programs for ICS, or by contacting the ICS main office.

For further information contact the University of Colorado Boulder, Institute of Cognitive Science, 344 UCB, Boulder CO 80309-0344; 303-492-5063.

Distance Learning and Professional Development Programs

The Center for Advanced Engineering and Technology Education (CAETE) is the distance learning and professional studies arm of the College of Engineering and Applied Science. CAETE provides convenient and flexible education for working professionals. Courses are delivered in the campus classroom and via the Internet to students across the country and abroad.

Academic course sequences may lead to a graduate certificate or master's degree in the following areas:

Certificates

- Computer and Network Security
- Embedded Systems (classroom only)
- Engineering Management
- Engineering Entrepreneurship
- Leadership and Ethical Decision Making
- Managing Applied Research in Technology
- Managing Research and Development
- Performance Excellence in Technology Management
- Power Electronics
- Project Management
- Quality Systems for Product and Process Engineering
- Six Sigma
- Software Engineering
- Technology Ventures and Product Management
- Wireless Networks and Technologies

Degrees

- Aerospace Engineering, ME and MS
- Computer Science, ME
- Electrical and Computer Engineering, ME and MS
- Engineering Management, ME
- Telecommunications, ME and MS

CAETE also provides access to over 100 pre-recorded courses via their virtual library. These courses are available for academic course work, or purchase by companies for in-house training.

For additional information refer to the engineering and applied science section or contact CAETE at 303-492-6331, caete@colorado.edu, or caete.colorado.edu.

Engineering Management Program

The Engineering Management Program at the College of Engineering and Applied Science offers a master of engineering degree in engineering management. The ME degree is designed for professionals who seek to develop in-depth managerial and entrepreneurial skills specific to engineering and the applied sciences. The curriculum provides in-depth engineering and management knowledge. Courses may be taken on campus or through our distance learning program.

The master of engineering degree in engineering management consists of 30 credit hours, six core courses, and four elective courses. The electives offer competency in the following areas:

- Engineering Entrepreneurship
- Leadership and Ethics
- Management of Research and Development
- Managing Applied Research
- Performance Excellence in Technology Management
- Project Management
- Quality Systems
- Six Sigma (Green Belt, Black Belt, Master Black Belt)
- Software Management
- Technology Ventures

Graduate certificates are also available in many of the above core competency areas. Credits accrued toward a certificate can be applied toward a master's degree.

Visit emp.colorado.edu for more information.

Environment, Policy, and Society

In order to understand contemporary environmental issues, today's scholars must transcend historical academic disciplinary boundaries. Indeed, complex issues related to energy, climate change, species preservation, and air and water quality are best addressed by valuing insights from multiple perspectives. The Graduate Certificate Program in Environment, Policy, and Society allows students the opportunity to engage in interdisciplinary exploration of these contemporary environmental problems by drawing from courses across a wide range of social science disciplines. The certificate curriculum incorporates courses from many departments in the College of Arts and Sciences, including anthropology, biology, economics, geography, philosophy, political science, psychology, and sociology. In addition, pertinent courses are available in the College of Architecture and Planning, the Leeds School of Business, the College of Engineering and Applied Science, the School of Journalism and Mass Communication, and the School of Law. Tracks are available in:

- Environment and Society
- Environmental Policy
- Energy and Society
- Water and Society

Students will be expected to complete the interdisciplinary cornerstone course, an integrative capstone course, and 9–12 hours from the menu of courses available for each track.

Admission to the certificate program is open to students in any regular graduate degree program at the University of Colorado. A limited number of individuals already holding master's or doctoral degrees from other institutions may be admitted, provided they meet the normal admission requirements of a participating department.

To receive the certificate, students must complete 18 hours of approved course work, including 6 hours of cornerstone/capstone seminars. At least 12 of the 18 hours must be in courses outside the department in which the student is currently enrolled. The certificate is awarded to recognize the additional course work beyond that required for the student's regular degree program. Hence, transfer credit for courses taken elsewhere may not be counted toward certificate requirements.

For more information, please consult the Environmental Studies Program website at envs.colorado.edu.

Environmental Studies

The interdisciplinary graduate degrees in environmental studies offer opportunities for education and research at the professional level to address the complex environmental issues facing Colorado, the Rocky Mountain west, and the global community. Students may pursue studies toward the master of science (MS) or doctor of philosophy (PhD) degrees, as well as dual degrees with Leeds School of Business (MS/MBA) and the Law School (MS or PhD/JD).

Graduate students, faculty, and research staff work together on research topics such as: climate and atmospheric chemistry, water sciences, energy, environmental policy, sustainability, environmental social sciences, and biogeoscience.

Skills acquired through participation in the program will allow graduates to devise strategies for the use of natural resources that are sustainable and comply with environmental

regulations; apply the environmental sciences to commercial and government work in environmental remediation; analyze environmental resources for private or public planning purposes; provide an interface between management and engineering/science in industry and government; propose and implement cost-effective solutions to environmental problems; and develop regulatory laws that have a sound physical basis.

For more information, please consult the Environmental Studies Program website at envs.colorado.edu.

Geophysics

The interdisciplinary doctoral program in geophysics encourages students with a variety of undergraduate backgrounds to pursue graduate study in the physics of the Earth, with special emphasis on the interior of the planet. Students specialize in one of the sub-fields of geophysics while gaining a broad, general background in the discipline and in-depth education in the relevant aspects of the parent fields of geology, physics, and engineering.

Students enter the program by applying for admission to one of the following departments: aerospace engineering sciences; astrophysical and planetary sciences; civil, environmental, and architectural engineering; electrical and computer engineering; geological sciences; mechanical engineering; or physics. Upon satisfactory performance on the doctoral preliminary examination given by the home department, the student may formally apply for admission to the geophysics doctoral program.

The program is administered by the geophysics graduate program committee, which includes representatives from each of the participating departments. The comprehensive examination and the dissertation defense are directed by this committee, with a faculty member of the home department normally chairing these procedures.

For more information, please consult the Geophysics Studies Program website at colorado.edu/geophysics.

Human Language Technology

The recent growth of the World Wide Web and the vast improvements in computing power of the last decade have led to a greater need for education and research in human language technology. This interdisciplinary field includes key technological and scientific areas such as automatic speech recognition and synthesis, natural language understanding and generation conversational agents, augmentative and alternative communication, audio and text-based information retrieval, and grammar and spelling aids.

The curriculum for the certificate includes five core courses, consisting of a computer programming foundation course plus four courses in human language technologies (e.g., natural language processing, morphology and syntax, speech processing, and recognition). At least two of the language technologies courses must be outside the student's home department.

Students are required to major in computer science, electrical and computer engineering, linguistics, or speech, language, and hearing sciences. The program is available to master's or PhD students at CU-Boulder, including students in concurrent bachelor's/master's programs. For further information see www.colorado.edu/linguistics/programs/grad, or Institute of Cognitive Science at ics.colorado.edu.

Hydrologic Sciences

The CU-Boulder Hydrologic Sciences Graduate Program focuses on quantitative studies of water in the environment including its role in geologic and biogeochemical processes, ecosystem

functions, and global elemental cycling. The program is interdisciplinary and interdepartmental. It is intended for science and engineering graduate students, both currently enrolled and prospective. It allows students to obtain recognition for their accomplishments in hydrologic sciences and demonstrates the quantitative multi-disciplinary education desired by many prospective employers.

Students can choose to enroll for a full Hydrologic Sciences PhD degree or obtain a hydrologic sciences graduate certificate while concurrently obtaining a master's or doctoral degree in an associated academic department. Prerequisites and course requirements are identical for the PhD degree and graduate certificate.

Students are members of the broader CU-Boulder Geophysical Sciences Program, which has two specialization options: solid-Earth geophysics and hydrologic sciences. All hydrologic sciences students are admitted through one of the participating departments: civil, environmental, and architectural engineering; ecology and evolutionary biology; environmental studies; geography; or geological sciences.

Students may apply for admission either concurrently with their application to one of the participating departments or after admission by a department. The program is designed to encourage students with a variety of undergraduate backgrounds to enter the field. Nevertheless, all students in the program must have a substantial background in math and physics, including fluid dynamics. At the time of acceptance, the student will be informed of any undergraduate deficiencies that they will need to address within the first year in the program.

Most hydrologic sciences students conduct research with participating departments, research institutes, and centers (e.g., INSTAAR), or partner government agency labs in the Boulder area (e.g., USGS and NOAA). Primary supervision of the student's research may be provided by any faculty member approved by the department.

Additional information is available at hydrosociences.colorado.edu/about/index.php, or by contacting the Graduate Coordinator, Hydrologic Sciences Graduate Program, University of Colorado Boulder, 450 UCB, Boulder, CO 80309-0450, hydrgrd@colorado.edu.

Molecular Biophysics

The goal of the molecular biophysics certificate program is to introduce graduate students to the field of biophysics, its methodologies, and the state-of-the-art biophysical research efforts being carried out in diverse laboratories and departments on the CU-Boulder campus. The program creates interdepartmental connections that provide the breadth of training needed to develop biophysical scholars.

Students must be admitted through the regular admissions process to a PhD program in one of the following departments: chemical engineering, chemistry and biochemistry, ecology and evolutionary biology, or physics. They must satisfy all of their home department's requirements to receive a PhD.

The first requirement of the molecular biophysics certificate is participation in one to three laboratory rotations outside the thesis lab, which provide experience with a range of biophysical methods.

The second component of the program is the completion of two courses chosen from a list of approved courses. Currently this list includes 15 courses in areas ranging from theoretical physics to molecular and cellular biophysics.

Students are expected to take part in a seminar series, which introduces internationally renowned speakers and their research. They also are required to participate in supergroup meetings and symposia, which provide forums for them to present their own research in front of their colleagues and advisory committee.

Museum and Field Studies

The interdisciplinary museum and field studies program leading to a master of science degree is administered by the University Museum, in conjunction with the departments of anthropology; history; art history; ecology and evolutionary biology; and geological sciences; as well as other departments. The program provides a strong background in a chosen field as well as theoretical and practical grounding in museology.

Internships are offered at a variety of museums in the region, including natural history, history, and art museums. Students completing the MS are trained as collection managers, curatorial assistants, registrars, museum educators, exhibit technicians, and administrators.

Program Tracks

Two tracks are available: a collection/field track and an administrative/public track.

The **collection/field track** offers training for students interested in the curatorial and research aspects of museum work, such as floristic or faunistic studies of the past and present, material culture of the past and present, and biological inventory. The curriculum gives students academic training as well as experience in all areas of museum work. Field experience is offered through the curatorial and field practica.

The **administrative/public track** offers education for students interested in the public aspects of the museum such as program development and evaluation, exhibition planning and design, education, and the organization and management of museums. The curriculum offers both academic training in a discipline and hands-on experience with all aspects of the public museum.

Admission

Students must meet all university requirements for admission to graduate school and have a baccalaureate degree and at least a *B* (3.00) grade-point average in previous academic work. The baccalaureate degree should be in anthropology, biology, geology, geography, history (including archival studies), classics, fine arts, or education, although other majors will be considered. Acceptance to the program is decided by the admissions committee of the University Museum in consultation with the student's department. The student must be accepted by an advisor in his or her discipline.

Requirements

The degree in museum and field studies is a two-year program requiring a total of 32 credit hours. Students may choose either the thesis or nonthesis plan. Depending on the track and plan, students complete from 9 to 15 credit hours in a department and from 13 to 22 credit hours in museology courses. One hundred fifty work hours of internship are required. The thesis plan requires the completion and successful defense of a thesis; the nonthesis plan requires the completion of a paper or a project.

For current course information, consult the Museum section under the College of Arts and Sciences. For new course or admissions information, write the Museum and Field Studies Program, University Museum, University of Colorado Boulder,

265 UCB, Boulder, CO 80309-0265; call 303-492-5437; e-mail mfsinfo@colorado.edu; or visit cumuseum.colorado.edu/MFS.

Neuroscience and Behavior

The Graduate Certificate in Neuroscience and Behavior focuses on understanding the nervous system and its relationship to disease and behavior. This understanding encompasses the molecular, cellular, and behavioral aspects of neuroscience.

Students come from such graduate programs as ecology and evolutionary biology; behavioral genetics; molecular, cellular, and developmental biology; psychology; and integrative physiology. They receive a PhD in their department and a certificate in neuroscience.

The neuroscience core curriculum includes courses in the following areas: neuroscience methods laboratory, neuroanatomy (PSYC 5263), neurochemistry or neuropharmacology (e.g., PSYC 5062, PSYC 5132), neurophysiology or systems neuroscience (e.g., PSYC 5042, EPOB 5190), behavioral neuroscience or animal behavior (e.g., EPOB 5240, KINE 5610, PSYC—to be developed), molecular neuroscience or molecular genetics or developmental neuroscience (e.g., PSYC 5232, EPOB 5200, MCDB—to be developed).

Students are required to attend a weekly journal club or discussion group and neuroscience colloquia.

Neuroscience, Interdepartmental PhD Program in

The graduate PhD program in neuroscience is an interdepartmental program currently consisting of eight tracks to a PhD: behavioral genetics (psychology); behavioral neuroscience (psychology); clinical neuroscience (psychology), cognitive neuroscience (psychology); social neuroscience (psychology); integrative physiological neuroscience (integrative physiology); molecular, cellular, and developmental neuroscience (MCD-biology); or speech, language, and hearing neurosciences (SLHS). Students apply for admission to one of the participating departments and their admission to CU-Boulder and financial support are determined by that department. Once in residence, students enter the neuroscience PhD program while still maintaining their “home” in the department to which they were admitted. They receive a PhD that lists both their home department and neuroscience.

The neuroscience curriculum includes a year-long intensive core course, graduate seminar courses linked to an invited speaker series, and wide-ranging neurosciences courses offered by many departments and institutes across campus.

Potential applicants are encouraged to visit the neuroscience website, which provides detailed information on the program, application process, courses, faculty, and current trainees: www.colorado.edu/neuroscienceprogram.

Peace Corps Master’s International Programs

The Graduate School is pleased to announce the initiation of four new Master’s International (MI) programs developed in cooperation with the Peace Corps and with four academic units on the Boulder campus (geography, education, environmental studies, and the master of business administration). Students accepted into the graduate programs of these four units may choose to also apply for one of the MI programs that entail both graduate training and Peace Corps service to combine theory with practice while working overseas.

Interested students should begin by consulting the following websites:

- Peace Corps national headquarters: www.peacecorps.gov/index.cfm?shell=learn.whyvol.eduben.mastersint
- CU-Boulder Peace Corps Recruiting Office: www.colorado.edu/iece/peacecorps/masters.html

Departmental websites for each of the PC MI programs are under development.

Population Studies

The Graduate Certificate in Population Studies, offered through the Population Program of the Institute of Behavioral Science, recognizes master’s and doctoral degree students for interdisciplinary work in demography. The population program, which is international in scope and has an applied and policy-oriented focus, fosters research on population trends and patterns and provides training in population analysis. Students who are earning graduate degrees through the Departments of Economics, Geography, or Sociology and are interested in majoring in demography are eligible to petition for admission to the program.

The population program emphasizes research training through direct faculty/student interaction and involvement in research projects. Students are required to take three core courses: ECON 8666 Economic Demography; GEOG 6732 Formal Population Geography; and SOCY 6012 Population Issues, Problems, and Policies. Students are granted a certificate on the basis of the three core courses, their applied research, and their thesis or dissertation.

Questions about the certificate program in population studies should be directed to the Population Program, Institute of Behavioral Science, University of Colorado Boulder, 484 UCB, Boulder, CO 80309-0484; 303-492-7986; www.colorado.edu/ibs/pop; cupc@colorado.edu.

Remote Sensing

Remote sensing (satellite and ground based) is increasingly being used as a technique to probe the Earth’s atmosphere, ocean, and land surfaces. Probing of other planets is accomplished largely by satellite remote sensing. Given national priorities in such areas as climate and global change, the interest in remote sensing will only increase with time.

Remote sensing is a relatively new academic subject, with few universities having any sort of an organized curriculum. The purpose of formalizing the CU-Boulder remote sensing curriculum is to coordinate curricula across campus so that a coherent curriculum in remote sensing can be provided to complement and supplement the students’ regular degree program. An additional purpose is to encourage multidisciplinary education of the students in the area of remote sensing.

Graduate students, research staff, and faculty work on a wide variety of topics, ranging from the theory of remote sensing to its application. These applications include: use of satellite remote sensing to determine ocean surface temperature and heat fluxes, use of surface radar to improve the determination of clouds and precipitation from satellites; determination of surface biological characteristics and productivity from satellites; mapping of surface landform and topographical features; searching for locations of buried artifacts; use of surface radar to determine upper atmosphere wind motions; and aircraft remote sensing to assess the validity of satellite retrieval algorithms of surface and atmospheric characteristics.

A Certificate in Remote Sensing will be awarded based on a written request by the student to the remote sensing graduate chairman, provided that the following requirements have been met.

All students must take at least three remote sensing core courses (passed with a grade *B* or better) and register for ATOC 7500/ASEN 6310, Remote Sensing seminar, for at least one semester. This class is given once each year. Most remote sensing core courses are offered once each year.

The remote sensing graduate core courses are:

ATOC 7500/ASEN 6310 Remote Sensing Seminar
 ASEN/ATOC 5235 Remote Sensing of the Atmosphere and Ocean
 ASEN 5337 Remote Sensing Data Analysis
 ASEN 5168 Remote Sensing Instrumentation
 ASEN 5245/ECEN 5254 Radar and Remote Sensing
 ECEN 5274 Radar Science and Techniques
 GEOL/GEOG 5093 Remote Sensing of the Environment
 GEOL 5440/GEOG 6443 Remote Sensing Field Methods
 GEOL 6340 Remote Sensing of Planetary Surfaces

Letters to the Remote Sensing Graduate Committee should be sent to the remote sensing graduate chairman, Professor Bill Emery, University of Colorado Boulder, 431 UCB, Boulder, CO 80309-0431; phone 303-492-8591; or e-mail emery@colorado.edu.

Renewable and Sustainable Energy

The graduate renewable and sustainable energy certificate program provides a broad exposure to energy issues, with an emphasis on renewable and sustainable energy. Required course work on energy science and technology, policy, and business, coupled with electives on energy economics, energy law, and other topics, give students the skills and knowledge to tackle society's pressing energy problems.

The energy certificate core required courses are:

ENVS 5100 Energy Science and Technology
 ENVS 5820 Renewable Energy Policy
 BADM 6930 Commercializing Sustainable Energy Technologies

In addition, students are required to complete nine credits of course work from a list of approved electives. These electives include energy-related courses in engineering, business, law, and other disciplines. A complete list of approved electives can be found at rasei.colorado.edu.

Interested students must apply to the program, and admissions are competitive. There are no prerequisite courses for the program, and applications are accepted from any student pursuing a graduate degree at CU-Boulder. Details on the application process are available at rasei.colorado.edu.

This program is administered by the Renewable and Sustainable Energy Institute (RASEI). RASEI also offers an undergraduate energy certificate program—for details, see rasei.colorado.edu.

Science and Technology Policy

The graduate certificate in science and technology policy is a rigorous educational program to prepare students pursuing graduate degrees for careers at the interface of science, technology, and decision making. Past recipients of the certificate have gone on to positions in the U.S. Congress, academia, NOAA, and other policy relevant positions. Students come from such graduate programs as aerospace engineering, atmospheric and oceanic sciences, biological sciences, chemistry, civil engineering, environmental studies, geography, journalism, and mechanical engineering. Students enrolled receive either a master's or doctoral degree in their department and a certificate in science and technology policy. Each year, the certificate program will begin with a capped enrollment of 18 students per cohort. These 18 students will take three required courses:

ENVS 5100 Science and Technology Policy
 ENVS 5110 Science, Technology, and Society Studies
 ENVS 5120 Quantitative Methods of Policy Analysis

In addition to the above three required courses students are also required to take three additional courses from a list of approved electives. For a list of all required courses and electives see sciencepolicy.colorado.edu/stcert/curriculum/courses.html. Successful completion of the certificate program requires the completion of 18 hours of course work (or course work plus internship credit).

For more information, visit sciencepolicy.colorado.edu/stcert.

Telecommunications

Modern telecommunication encompasses the Internet, wireless and mobile networks, and the telephone network. These networks drive economic growth and have an important role in society. The graduate Interdisciplinary Telecommunications Program prepares students for a professional career in telecommunications through a study of the underlying technologies, the business and economic environment in which they operate, and the legal and policy framework that shapes the industry. Students are given the tools for successful careers today and the foundation to be future technology leaders.

Masters Degree Programs

Students may pursue studies toward the master of science degree (MS) or the master of engineering degree (ME). The Interdisciplinary Telecommunications Program also offers several concurrent degrees that combine the MS in telecommunications with a: BS in operations and information management; masters of business administration; ME in engineering management; or juris doctor. All degrees include a strong laboratory component, interaction with industry leaders, participation in nationally recognized policy debates, and an emphasis on developing communication skills. Degree seeking and non-degree students may pursue certificates in computer and network security; and wireless networks and technologies.

Students are required to have an undergraduate degree from a regionally accredited university and must include current GRE and/or GMAT scores with their applications. Applications are invited from graduates who have good academic records and professionals with work experience/training in telecommunications. For more information about the telecommunications program go to telecom.colorado.edu. The MS in telecommunications may be completed either on campus or through the Center for Advanced Engineering and Technology Education (CAETE) Distance Learning Program. For more information about the Distance Learning Program, go to caete.colorado.edu.

Women and Gender Studies

The graduate certificate in women and gender studies offers a graduate-level education in the systematic approach to the study of gender from an interdisciplinary perspective. It provides an intellectual context in which students study feminist theory and methodology at an advanced level. At the same time, the certificate program bridges the gap between discipline-centered studies and the interdisciplinary foundations of women's studies, thereby enhancing the student's ability to conduct gender-based research.

Students wishing to take part in the women's studies certificate program must be enrolled in a master's or doctoral degree program at CU-Boulder and have completed at least 6 hours of graduate study.

The certificate program has two components: course work based in the interdisciplinary women's studies curriculum, and course work drawing upon gender studies in other disciplines. The program's curriculum consists of two required courses:

- WMST 5010 Feminist Methodologies
- WMST 5090 Feminist Theories

Two elective courses on gender-related issues from different departments outside the student's discipline are also required.

Students in the program work with an advisor to develop an elective course plan and research emphasis that reflects a coherent and interdisciplinary plan. Departments in which electives may be taken include anthropology, economics, English, fine arts, history, journalism, law, music, philosophy, and sociology. Contact Women and Gender Studies at wgst@colorado.edu for information about other departments that may qualify.

Professional Certificate Programs

Astrodynamics and Satellite Navigation Systems

The certificate recognizes student accomplishments at the graduate level in successfully completing a specialized program of study in Astrodynamics and Satellite Navigation (ASN). It is essentially a specialization of the aerospace engineering sciences master of science (MS) degree in the ASN focus area with additional requirements for breadth and depth in the ASN area.

The certificate will make students more desirable to future employers looking for astrodynamics and satellite navigation specialists.

Certificate Requirements

Complete all four core area subjects in ASN, plus two advanced ASN courses of the student's choosing.

Core Requirements

- ASEN 5010 Spacecraft Attitude Dynamics and Control
- ASEN 5050 Astrodynamics (can be satisfied by taking an additional 6000-level course that has ASEN 5050 as a prerequisite.)
- ASEN 5070 Statistical Orbit Determination
- ASEN 5090 Introduction to Global Navigation Satellite Systems

Advanced Requirements

- Select ANY two 6000-level courses in ASN including:
 - ASEN 6080 Advanced Statistical Orbit Determination
 - ASEN 6090 GNSS Software and Applications (course number assignment pending)
 - ASEN 6091 Satellite Navigation Receiver and Architectures (course number assignment pending)
 - ASEN 6519 Advanced Spacecraft Attitude and Control
 - ASEN 6519 Spacecraft Formation Flying
 - ASEN 6519 Optimal Trajectories
 - ASEN 6519 Advanced Astrodynamics and Celestial Mechanics

Critical Theory

The Graduate Certificate in Critical Theory offers students a background in the philosophical foundations of critical theory. Drawing on disciplines such as philosophy, psychoanalysis, Marxism, literary criticism, and sociology, critical theory develops analytical tools for describing and evaluating modern society and cultural production. Students who are currently enrolled in a graduate disciplinary degree or a professional degree program are encouraged to apply for the Graduate Certificate in Critical Theory early in their graduate career. For further information, visit the Department of Germanic and Slavic Languages and Literatures website at gsll.colorado.edu.

Embedded Systems

In the last few years, commercially available digital systems (microprocessors, microcontrollers, memory chips, interface systems, and systems that handle image, voice, music, and other types of signals) have experienced explosive growth in the electronics industry. These devices are increasingly powerful, cheap, and flexible as design components.

The certificate in embedded systems, which is offered by the Department of Electrical, Computer, and Energy Engineering and the Center for Advanced Engineering and Technology Education, with support of the Division of Continuing Education, offers students the hardware and software knowledge and skills needed to design and implement these systems. The curriculum consists of two core courses and one elective course from an approved list. The two core courses are:

- ECEN 4613/5613 Embedded System Design
- ECEN 4623/5623 Real-Time Embedded Systems or ECEN 4033/5033 Real-time Digital Media Systems

The list of approved electives is periodically updated and currently includes:

- ECEN 4573 ECE Capstone (course number is now 4033, but students may still apply with old course number)
- ECEN 4033/5543 Software Engineering of Stand-Alone Programs
- ECEN 4633/5633 Hybrid Embedded Systems
- ECEN 4532/5532 DSP Lab

Applicants for the certificate program must have been or currently be enrolled for a baccalaureate degree from an accredited institution and have satisfied the prerequisites for each course through course work or work experience. They need not be enrolled in a degree-granting program at CU-Boulder. A grade of B- or better is required for each course applied toward the certificate. For more information, visit ecee.colorado.edu/academics/cert_programs/overview.html.

Engineering Management Program

Engineering Entrepreneurship (12 credit hours)

This certificate is offered in partnership with the nationally renowned Deming Center for Entrepreneurship in Colorado. It provides the student with the essential knowledge, understanding, and skills to successfully practice entrepreneurship in a start-up venture or within a larger corporation (intra-preneurship). The focus is on how much to launch, lead, and manage a viable business starting with concept validation to commercialization and business formation. The program culminates with the development of a business plan for a project that the student chooses and then pitches to business community leaders and venture capitalists.

- EMEN 5050 Leadership or EMEN 5020 Finance and Accounting for Engineering Managers
- EMEN 5710 Business Simulation
- EMEN 5090 High Technology Marketing
- EMEN 5825 Business Plan Development

Engineering Management (12 credit hours)

The certificate provides a broad-based view of the key principles and concepts that are important for technical managers, including finance and accounting, leadership and management, quality management, and project management. The certificate requires four courses selected from the five core courses in the Engineering Management graduate curriculum.

- EMEN 5010 Introduction to Engineering Management
- EMEN 5020 Finance and Accounting for Engineers
- EMEN 5030 Project Management Systems
- EMEN 5040 Quality, Strategy, and Value Creation
- EMEN 5050 Leadership

Leadership and Ethical Decision-making (9 credit hours)

Engineers and scientists can think systemically, visualize complex technical and human interactions, and resolve conflicting viewpoints. This certificate develops technical professionals so that they may apply these talents more broadly and play a leadership role in their organizations. Students develop the knowledge and skills necessary to lead and learn the ethical decision-making processes they need to make real-world decisions. There are two core courses:

EMEN 5050 Leadership
EMEN 5080 Ethical Decision-making

The third course is chosen by the student from the following list. Each of these courses provides grounding and context for the different situations in which technical professionals work.

EMEN 5010 Introduction to Engineering Management
EMEN 5040 Quality, Strategy, and Value Creation
EMEN 5825 Entrepreneurial Business Plan Preparation

Managing Applied Research in Technology (12 credit hours)

This certificate provides engineering managers with the tools to effectively and efficiently manage applied research in areas such as sustaining engineering, customer and supplier evaluation, quality improvement and problem solving, new process and facility start-up, the design of complex and interdependent systems, and cost reduction analysis. Methods taught include advanced experimental design, sample sizes, use of powerful parametric and nonparametric analyses, and data mining.

EMEN 5042 Methods for Quality Improvement
EMEN 5610 Advanced Statistical Methods for Engineering Research
EMEN 5620 Data Mining and Screening Experiments for Engineering Research
EMEN 5900 Research Methods

Managing Research and Development (9 credit hours)

The formal name for innovation within a corporate setting is R&D. Innovation has become essential to every company's survival and well-being. Innovation takes many forms including product, process, and business model innovation. Individuals who understand and can manage innovation and creativity have great career opportunities. This certificate provides proven concepts and tools for managing the innovation process of strategy formation, portfolio development, and project execution in both hardware and software environments.

EMEN 5030 Project Management Systems
EMEN 5300 Management of Research and Development (R&D)
EMEN 5400 Principles of Product Management or EMEN 5430 Software Product Management

Performance Excellence in Technology Management (12 credit hours)

This certificate provides a cutting-edge model for Business Performance Excellence (BPE). BPE is a facilitating system, enabling companies to successfully execute their improvement program efforts, such as Six Sigma, to increase profitability. In addition to cost reduction, the application of quality principles and allocated cost accounting enables identification of revenue generating "sweet spots" for profit optimization.

EMEN 5040 Quality, Strategy, and Value Creation
EMEN 5041 Advanced Topics in Value Creation
EMEN 5042 Methods for Quality Improvement
EMEN 5050 Leadership

Project Management Professional Certification (9 credit hours)

This certificate is designed around the Project Management Body of Knowledge (PMBOK) and builds a foundation for the preparation of PMP certification. This certificate can be completed in one calendar year.

EMEN 5030 Project Management Systems
EMEN 5032 Advanced Topics in Project Management
EMEN 6830 Project Management Capstone or EMEN 5050 Leadership

Quality Systems for Product and Process Engineering (12 credit hours)

This certificate provides engineering managers with the technical expertise needed to manage initiatives in quality improvement, problem-solving, and

reliability improvement. Upon completion, students are certified as Green Belts for Six Sigma programs.

EMEN 5040 Quality, Strategy, and Value Creation
EMEN 5042 Methods for Quality Improvement
EMEN 5043 Advanced Topics in Quality Systems/Engineering
EMEN 5900 Research Methods

Six Sigma Practitioner

This certificate is designed to educate students in the advanced statistical tools that are used in business to solve problems and improve product and service quality. The curriculum focuses on the use of basic and advanced statistical techniques and how to use them to identify and achieve improvement opportunities in the real world. Numerous case studies from business and industry will emphasize the connection that applied statistics has to making optimal business decisions.

APPM 5570/EMEN 5005 Introduction to Applied Statistics
APPM 5580/EMEN 5900 Research Methods
EMEN 5610 Advanced Statistical Methods
EMEN 5620 Data Mining and Complex Experimental Design

Technology Ventures and Product Management (12 credit hours)

Technology venture management and product development is key to the sustained success of any high-technology business in today's intensely competitive and global marketplace. This certificate is designed for the engineer in any size company (Fortune 500 to start-up) who wants to embrace the challenge of managing the strategy and implementation of new technology product development. Using case studies and realistic business emulation exercises, the student will gain an understanding and practice the skills required to evaluate technology, consider its viability as a product, and manage the development effort required to deliver a product that provides an exceptional customer experience.

EMEN 5050 Leadership or EMEN 5020 Finance and Accounting for Engineering Managers
EMEN 5090 High Technology Marketing
EMEN 5710 Business Simulation
EMEN 5400 Principles of Product Management or EMEN 5430 Software Project Management

Museology

The professional certificate in museology provides professional museum training for CU-Boulder graduate students and for museum professionals who seek to upgrade their skills and credentials. The museology certificate serves a range of disciplines in the arts and sciences, education, and engineering, as well as the Colorado museum community.

The curriculum for the professional certificate consists of the core museology sequence for the Museum and Field Studies degree program:

MUSM 5011 Introduction to Museum Studies

Three of the following five courses:

MUSM 5030 Museum Education
MUSM 5031 Exhibit Development
MUSM 5041 Museum Administration
MUSM 5051 Collections Management
MUSM 6110 Seminar in Museum Issues

This 12-credit curriculum is supplemented by a 75-hour internship (which may be waived for comparable professional experience).

Power Electronics

Power electronics is a key enabling technology in essentially all electronic systems ranging from wireless communication devices, portable and desktop computers, to telecommunication infrastructure systems, renewable energy systems, and industrial systems. The necessity for power electronics technology in

these rapidly expanding areas creates a rising need for design engineers equipped with knowledge and skills to follow sound engineering principles and actively participate in multidisciplinary teams. The power electronics field has evolved rapidly with the advances in technology and introduction of many new application areas. As a result, it is likely that the required knowledge and skills were not in the curricula when many of today's professionals were in college. This creates a strong ongoing demand for continuing education of the workforce in the area of power electronics. The certificate program addresses the ongoing demand for skilled power electronics design engineers.

This program offers an opportunity for electrical engineers to obtain the specialized knowledge required to practice power electronics. It is intended for students and engineers having a BS degree in electrical engineering or equivalent.

The courses required for the professional certificate in power electronics are:

- ECEN 5797 Introduction to Power Electronics
- ECEN 5807 Modeling and Control of Power Electronic Systems
- ECEN 5817 Resonant and Soft-Switching Techniques in Power Electronics

The certification program was initiated by the Colorado Power Electronics Center, and is operated through the Department of Electrical, Computer, and Energy Engineering and through the Center for Advanced Engineering and Technology Education (CAETE). A grade of B- or better is required for each course applied toward the certificate. For more information, go to ecee.colorado.edu/academics/cert_programs/overview.html.

Software Engineering

Experienced software professionals work in a field that has maintained a relentlessly rapid rate of change for decades, making it impossible to stay current in all aspects of software engineering. Those with limited experience find that the challenges of work assignments exceed their preparation from most undergraduate degree programs. In a typical computer-related undergraduate curriculum, it is not possible to devote enough credit hours specifically to software engineering to address all aspects of engineering complex systems including, for example, design for embedded systems, maintainability, concurrency, and distributed systems.

The professional certificate in software engineering, offered by the Department of Electrical and Computer Engineering and the Division of Continuing Education, covers the body of knowledge necessary to develop products more predictably and reliably for stand-alone programs as well as for software in more complex environments. The courses required for the professional certificate in software engineering are:

- ECEN 4583/5543 Software Engineering of Stand-alone Programs (same as CSC1 5548)
- ECEN 4643/5643 Software Engineering of Concurrent Systems
- ECEN 4753/5753 Software Engineering of Distributed Systems

Applicants for the certificate program must have received or currently be enrolled in a baccalaureate degree from an accredited institution and have satisfied the prerequisites for each course through class work or work experience. They need not be enrolled in a degree-granting program at CU-Boulder. A grade of B- or better is required for each course applied toward the certificate. For more information, visit ecee.colorado.edu/academics/cert_programs/overview.html.

Telecommunications

Students entering either the Computer and Network Security or the Wireless Network and Technologies Certificate program should be professionally familiar with data networks and/or telecommunications networks. Familiarity with security procedures or at least one wireless system, respectively, would be an advantage. Alternatively, students should take the following courses and pass with a 3.000 GPA or better before enrolling in either certificate program.

- TLEN 5330 Data Communications 1
- TLEN 5460 Telecommunications Systems Lab

Visit the Interdisciplinary Telecommunications Program website at telecom.colorado.edu to further explore application and admission details.

Computer and Network Security (12 credit hours)

To understand network security requires more than simply taking an introductory course on network security; it requires a comprehensive understanding of not only how networks operate but also how users behave on the network. Simply designing a technically secure network fails to appreciate the social engineering vulnerabilities facing modern networks. To actually protect networks requires a detailed and well-executed process, one that includes substantial technical, behavioral, economic, accounting, and policy understanding. Therefore, students must gather a wide range of training and experiences to truly understand what is required to secure a network.

The certificate provides a broad range of coverage and includes not only the fundamentals of how networks operate and how to secure these networks, but also covers how to approach security in a practical manner. Security issues and topics range from technical theory to legal procedures. The curriculum consists of two required core courses and two electives.

Core Courses

- TLEN 5530 Applied Network Security
- TLEN 5540 Network Security Lab

Electives

- ECEN 5022 Cryptography
- TLEN 5420 Foundations of Computer and Network Security
- TLEN 5490 Network Programming
- TLEN 5832 Privacy, Security, and Digital Rights Management

Wireless Network and Technologies (12 credit hours)

Wireless is everywhere. There are almost twice as many cell phones in the world today as there are wireline service connections. Cell phone users not only make trillions of phone calls, but they also sent trillions of text messages from their cell phones. Wireless local area networks (LANs) and hotspots are gaining ground in the marketplace, and new wireless technologies and standards are being developed to further advance the wireless world. Personnel are needed in many positions to understand wireless technologies. Network administrators and technicians must know what a given product can and cannot do, how to select the right product, how to deploy a reliable wireless network, how different wireless products might interact, and the security and vulnerability characteristics of wireless networks.

Higher-level management should understand the regulatory and legal aspects of owning and operating wireless networks as well as the cost-benefit tradeoffs between wireless and non-wireless options. Managers should also understand the opportunities now offered by new-generation (3G) cell phone technologies in maintaining contact with mobile employees. The certificate program covers a range of wireless and LAN issues, and in-

cludes topics ranging from technical theory to legal procedures. It is designed to satisfy the needs of students with technical, legal, or business backgrounds. The curriculum consists of two required core courses and two electives.

Core Courses

TLEN 5510 Wireless and Cellular Communications
TLEN 5520 Wireless LANs

Electives

ASEN 5190 GPS Technology
CSCI 5273 Network Systems
ECEN 5692 Communication Networks
TLEN 5190 Standardization and Standards Wars
TLEN 5260 Law for the Information Age
TLEN 5350 Satellite Communication Systems
TLEN 5440 Multimedia Networking
TLEN 5470 Signaling Protocols

Research Support

The University of Colorado Boulder takes an active part in research in a wide variety of fields.

More than \$454 million in sponsored research and programs was generated this past year. Research and training grants and contracts awarded by various agencies of the federal government are the principal sources of these funds. The University of Colorado's research activity is also supported by appropriations from the state of Colorado, private foundations, and private industry. For more information, visit www.colorado.edu/VCRsearch/research.

Research Institutes

The Cooperative Institute for Research in Environmental Sciences (CIRES) is jointly sponsored by the University of Colorado and the National Oceanic and Atmospheric Administration (NOAA). CIRES supports more than 650 faculty, scientists, students, and staff from a variety of disciplines. Academic departments and programs represented in CIRES are aerospace engineering sciences; atmospheric and oceanic sciences; chemistry and biochemistry; civil, environmental, and architectural engineering; ecology and evolutionary biology; electrical and computer engineering; environmental studies; geography; geological sciences; hydrologic sciences; molecular, cellular, and developmental biology; and physics. The institute serves as a center for multidisciplinary collaboration among environmental scientists from Boulder and throughout the world. A visiting fellowship program enables scientists from other institutions to conduct interdisciplinary research with CIRES faculty and scientists and with our NOAA science partners.

CIRES research programs involve field investigations conducted in the mountains of Colorado, the Arctic and Antarctic regions, Greenland, southeast Asia, New Zealand, the Himalaya, and elsewhere. Results of this research bear on such practical societal problems as understanding climate change, ozone, air quality, water resources, earthquake and tsunami prediction, and toxic waste treatment.

Current CIRES research programs, in which approximately 105 graduate students participate, can be grouped into six research disciplines: cryospheric and polar processes, ecosystem science, environmental chemistry, weather and climate, solid earth sciences, and environmental observations, modeling, and forecasting. In addition, CIRES' Center for Science and Technology Policy Research conducts research to improve the relationship between societal needs and science and technol-

ogy policy. The Western Water Assessment engages multidisciplinary teams of experts in climate, water, law, and economics to provide information about natural climate variability and human-caused climate change to assist regional water-resource decision makers. CIRES Education and Outreach Program supports exemplary science education at all levels.

The Institute of Arctic and Alpine Research (INSTAAR) is an Earth and environmental systems institute that investigates how the Earth's environment is affected by natural and human-induced physical and biogeochemical processes at local to global scales. INSTAAR is home to interdisciplinary studies of Quaternary and modern environments, geochronology, human and ecosystem ecology, hydrology, oceanography, landscape evolution, biogeochemistry, cold regions research, and past-to-present climate variability. INSTAAR consists of about 60 PhD level scientists, including 16 tenured or tenure track faculty from across campus (geological sciences, environmental and evolutionary biology, geography, environmental studies, civil engineering). About 65 graduate students from seven departments are working in INSTAAR laboratories. Another 60 undergraduates work and do research with INSTAAR researchers and teachers. Including federal scientists and affiliates (USGS, NOAA, NCAR, etc.), post-doctoral fellows, and operational and administrative staff, the institute consists of about 220 members, excluding undergraduates.

INSTAAR's Ecosystems Group focuses on biocomplexity, carbon sequestration, nitrogen cycling, alpine biodiversity, ecosystem disturbance and recovery, atmospheric dynamics and chemistry, eco-hydrology and engineering, and invasive species. The Geophysics Group applies quantitative field geodynamics and numerical methods to discover the properties, patterns, and dynamics of snow, ice, water, and sediments in the world's oceans, glaciers, and land areas. The Past Global Change Group focuses on the reconstruction of the dynamics of past environments and climate variability to enhance our understanding of the interactions between all components of the Earth system: atmosphere, ocean, land, ice, and biosphere, including humans.

Major facilities and programs at INSTAAR include: Long-Term Ecological Research studies in alpine and polar regions; The Mountain Research Station, a world-class complex of laboratory and field facilities to support year-round alpine research efforts; an Environmental Computation and Imaging Facility powered by a supercomputer with global connections to geophysical databases and nationally developed software; the Center for Geochemical Analysis of the Global Environment, which promotes the development and application of analytical methods that reveal past and present changes in Earth's climate, its land surface, and major biogeochemical cycles; a Front Range Carbon Cycle Consortium that determines the stocks, exchange fluxes, and stability of carbon, and expands the educational opportunities in carbon biogeochemistry; a national multi-institutional facility for developing a Community Surface-Dynamics Modeling System to predict the transport and accumulation of sediment and solutes in terrestrial landscapes and sedimentary basins; 35 high-quality analytical labs, including unique campus wide facilities; and the international *Arctic, Antarctic and Alpine Research* journal.

The Mountain Research Station, located at 2,900 meters (9,500 feet) in the Front Range of the Rocky Mountains, is operated for the university by INSTAAR. The station, a national center for field studies in the biological and physical sciences, is especially well known for long-term ecological, climatological, and atmospheric research.

The station offers researchers easy access to a variety of terrestrial and aquatic habitats at altitudes from 1,500 meters to 3,800 meters. A wide variety of courses is offered in areas such as plant and animal ecology, climatology, geomorphology, and hydrology. The station maintains the mountain climate program in support of the environmental field research conducted in the area.

Weather observing stations have been operated since 1952 at four altitudes between 2,200 and 3,750 meters, and additional stations are established for new projects.

The Institute for Behavioral Genetics (IBG) is one of the top research and training facilities in the world for genetic research on behavior. This rapidly developing field brings to bear upon behavioral research the perspectives of biochemical genetics, developmental genetics, evolutionary genetics, molecular genetics, pharmacogenetics, and statistical and quantitative genetics. IBG is home to one of the nation's largest DNA repositories for research on human behavior, as well as housing a wide array of behaviorally and genetically defined lines of selected, recombinant inbred, transgenic, and knockout-gene mice. Facilities are available for research on a variety of organisms, including humans, laboratory mice, and nematodes. Current research includes studies of aging, psychopathology, reading disability, cognition, substance abuse, behavioral development, and evolution. IBG provides NIH-supported training opportunities, at the postdoctoral and predoctoral level, in affiliated programs at the University of Colorado campuses in Boulder and Denver.

The Institute of Behavioral Science (IBS) is an interdisciplinary research organization serving faculty and graduate students in the behavioral sciences. Its principal functions are to conduct and sponsor research programs involving two or more of the behavioral sciences and related fields; to provide research facilities, equipment, and administrative services for participating faculty; to facilitate graduate and undergraduate research training; and to disseminate information about its activities and findings to scientific groups and institutions.

The institute sponsors research programs in environment and society, political and economic change, population, and problem behavior. IBS includes Computing and Research Services which provides assistance and training in social science methods, statistics, and computing; the Center for the Study and Prevention of Violence; the Natural Hazards Research and Information Center, and the African Population Studies Research and Training Program.

The Institute of Cognitive Science (ICS) was established to promote interdisciplinary research in the fields of psychology, computer science, linguistics, philosophy, education, speech/language/hearing sciences, and other cognitive sciences. Its major research programs fall into six areas: neuroscience; natural language processing; human-computer interaction and knowledge-based systems; connectionist modeling; human information processing and skilled performance; and judgment and decision making. These programs include the use of artificial intelligence techniques and cognitive simulations in gaining an understanding of basic cognitive processes as well as educational and industrial applications.

JILA has been one of the nation's leading research institutes in the physical sciences since its founding in 1962. A joint institute of the University of Colorado and the National Institute of Standards and Technology, JILA is located on the CU-Boulder campus. JILA's NIST members hold adjoint faculty appointments at CU. The Departments of Physics, Chemistry and Biochemistry, Astrophysical and Planetary Sciences, Molecular, Cellular, and

Developmental Biology, and Electrical and Computer Engineering are affiliated with JILA.

Through the years, JILA scientists have made key contributions to applied technology, including advanced, ultrafast lasers; precision mirror mounts; laser stabilization techniques; femto-second optical and ultraviolet frequency combs; high-finesse optical cavities; a nonlinear optical system for blind signal separation; precision measurements of optical frequency standards; novel designs for optical atomic clocks; high-precision gravimeters; and software that delivers international time standards over the Internet. Scientists trained at JILA have joined such firms as Amgen, Ford, Hewlett Packard, Intel, and 3M; numerous entrepreneurial companies; the Massachusetts Institute of Technology's Lincoln Laboratory, Argonne National Laboratory, the National Renewable Energy Laboratory, and other major laboratories; and universities throughout the world, including Harvard University, the Massachusetts Institute of Technology, Oxford University, the University of California, the University of Tokyo, the Weizmann Institute of Science, and Yale University.

JILA scientists explore some of today's most challenging and fundamental questions in physics. Their research ranges from the small, cold world of quantum physics through the design of precision optics and lasers to processes that shape the stars and galaxies. The institute's research spans seven broad categories: astrophysics, atomic and molecular physics; biophysics; chemical physics; nanoscience; optical physics; and precision measurement.

The institute's faculty includes two Nobel laureates, seven members of the National Academy of Sciences, and two John D. and Catherine T. MacArthur Fellows. JILA offers advanced training for visiting academic and industry scientists, postdoctoral fellows, and CU graduate students. Creative collaborations among JILA Fellows and their groups play an important role in generating the pioneering research JILA is known for around the world. This rich mix of research and educational experience make graduate study at JILA a distinctly interdisciplinary endeavor. Each year, the institute attracts many scientific visitors and seminar speakers. Graduate students can also attend in-house courses in laboratory electronics, instrument making, computing, and scientific writing.

JILA's facilities comprise a 10-story tower containing offices for scientists and administrative support staff, a 128-seat auditorium, and a laboratory wing with an isolated, underground research bay. A four-story south wing contains computing systems, laboratories, a reading room, meeting rooms, and private offices. The institute supports its research and education with electronics and instrument shops; computing, networking, and administrative services; the W. M. Keck Optical Measurement Laboratory; and a Scientific Reports Office.

More information about JILA is available from the JILA Chair, University of Colorado Boulder, 440 UCB, Boulder, CO 80309-0440 (303-492-6787) or at jila.colorado.edu.

The Laboratory for Atmospheric and Space Physics (LASP) is a research institute carrying out basic research in space science, including in planetary, atmospheric, solar, and space physics. LASP is one of a very small number of university-based groups that is able to design, build, test, and operate spacecraft instruments and even entire spacecraft. Due to its broad approach, LASP activities span the entire research cycle, including designing and fabricating instruments to address scientific questions, flying the instruments and analyzing data returned from them, integrating the results with laboratory and theoretical analyses, and developing the next generation of questions to address, supported by labo-

ratory and theoretical analyses that provide a broad context for understanding the scientific questions and results.

LASP has active instruments on several spacecraft, including the *Cassini* mission to Saturn, the *MESSENGER* spacecraft that is studying Mercury, the *Solar Dynamics Observatory*, the *SORCE* and *TIMED* spacecraft that are in Earth orbit studying the Sun's influence on the Earth's atmosphere, and the *AIM* spacecraft to study the Earth's mesosphere. A student-designed and -built instrument is currently on its way to Pluto aboard the *New Horizons* spacecraft. Instruments are currently being designed and built to fly on the Radiation Belt Storm Probe mission that will study the Earth's radiation belts. LASP researchers also are involved in analyzing data from the Mars *Global Surveyor*, Mars *Odyssey*, Mars *Reconnaissance Orbiter*, Mars *Exploration Rover* and *Phoenix* missions, and in planning for upcoming data analysis from the Mars Science Laboratory mission. LASP is the lead institution and is providing two science instruments for the *MAVEN* mission that will study the Mars upper atmosphere. Launch is scheduled for 2013.

Students and faculty from the Departments of Astrophysical and Planetary Sciences, Atmospheric and Ocean Sciences, Physics, Geological Sciences, and Aerospace Engineering pursue their research under the auspices of LASP. LASP is home to the Center for Astrobiology, through which scientists from many disciplines across campus work to understand the potential for life to exist elsewhere in the universe, and the Center for Integrated Space Weather Modeling (CISM), whose goal is to understand the nature of the Earth's space weather environment. LASP has approximately 300 full-time professionals, including 68 scientists and 140 engineers, and 180 students at any point in time. This high student-to-professional ratio is indicative of the high level of collaboration between students and professionals. LASP graduates have gone on to play important roles in spacecraft mission design and operation, science analysis, and in the astronaut corps.

LASP's space research programs are recognized internationally. The combination of mission operations, instrument development, science analysis, and student involvement in all aspects of its programs is unique in the world. For additional information about LASP and its current programs, visit lasp.colorado.edu.

Renewable and Sustainable Energy Institute (RASEI)

The Renewable and Sustainable Energy Institute (RASEI), an interdisciplinary joint research effort between the University of Colorado Boulder and the National Renewable Energy Laboratory (NREL), is advancing solutions for producing energy economically from low carbon sources, decreasing reliance on foreign oil, reducing greenhouse gas emissions, and using energy more efficiently to meet the global energy challenge.

RASEI's efforts focus on interdisciplinary energy research, training the next generation of energy professionals, and the development of market-ready leading-edge technologies.

Learn more about the RASEI at rasei.colorado.edu.

Research Centers

(A comprehensive list of active research centers can be found at www.colorado.edu/research/institutes.)

The Business Research Division performs contract research and provides the Colorado business community with information and special studies on the state's economy and business problems. The division is also responsible for the organized research activities of the Leeds School of Business, which are conducted

through three organizations. **The Rocky Mountain Trade Adjustment Assistance Center** provides management assistance, business information, and consulting services to small and medium-sized businesses in the region. **The Mid-America Manufacturing Technology Center Colorado**, with locally based field engineers and project management staff, provides on-site assessments of the business and technical aspects of small manufacturing operations in the state and recommends priority actions to improve a company's competitive position.

The College of Engineering and Applied Science oversees 16 interdisciplinary research centers whose programs augment discipline-based research in traditional academic fields. These research centers have a wide variety of research foci such as the commercial development of space (**BioServe**); decision support for water and environmental systems (**CADSWES**); computer simulations in aerospace structures (**CAS**); astrodynamics research (**CCAR**); Industry/University Cooperative Project Center (**I/UCPC**); photopolymerization methods (**CFAP**); power electronics (**CoPEC**); pharmaceutical biotechnology (**CPB**); Research and Engineering Center for Unmanned Vehicles (**RECUV**); lifelong learning and design (**L3D**); separations using thin films (**MAST**); advanced environmental sensors (**CET**); biofuels and biorefining (**C2B2**); real-time hybrid simulations for earthquake engineering (**FHT**); integrated micro/nano-electromechanical transducers (**iMINT**); and environmental mass spectrometry (**CEMS**).

The Center for Astrophysics and Space Astronomy (CASA) is a research center within the Department of Astrophysical and Planetary Sciences. CASA provides a focus for campuswide expertise in experimental, observational, computational, and theoretical astrophysics, including solar and stellar physics, interstellar and intergalactic medium studies, star and planetary system formation, galactic and extragalactic astrophysics, and cosmology. Staff members carry out research involving x-ray, far-UV, optical, infrared, submillimeter, and radio observations using both satellites and ground-based facilities.

CASA scientists play leading roles in data analysis for NASA astrophysics missions such as the Hubble Space Telescope. CASA instrumentalists manage an active sounding rocket program, develop millimeter instrumentation for the Caltech Submillimeter Observatory, APEX telescope, and Herschel Space Observatory, built the spectrographs for the Far Ultraviolet Spectroscopic Explorer (FUSE) and the Cosmic Origins Spectrograph (COS), which may be installed in the Hubble Space Telescope in 2007. CASA students and researchers also built the Near Infrared Camera for use on the Apache Point Observatory 3.5m telescope.

Other CASA programs include laboratory experimentation on molecules of astrophysical interest, space and ground-based observations in all wavelength bands from x-ray to radio, extensive numerical modeling of the evolution of matter in the early universe to study the formation and evolution of galaxies and intergalactic medium, and theoretical investigations in many areas of astrophysics.

The Center for British and Irish Studies promotes research in all aspects of British culture, history, and contemporary life. Its resources include the outstanding research collections of the University of Colorado Libraries, including a wide range of microfilmed copies of original materials from Britain. The center is the leading research facility in British studies in the Rocky Mountain/high plains area.

The center sponsors visiting lecturers, colloquium series, and conferences, and serves as a gathering point for scholars and students in the region. It welcomes outside users of the research

collections and continues to develop the research base. The center also cooperates with community groups in sponsoring activities dealing with British politics, business, and the arts.

The Center for Labor Education and Research (CLEAR) conducts labor education programs and research in various aspects of labor relations. Noncredit courses are offered for members of organized labor as the university's service to the labor community of Colorado. Graduate students may attend conferences with staff members and use available library facilities. CLEAR staff members also teach credit courses in other schools and colleges.

The Center for Science and Technology Policy Research was established within the Cooperative Institute for Research in Environmental Science to focus on research, education, and outreach at the interface of science, technology, and the needs of decision makers in public and private settings.

Its long-term vision is to serve as a resource for science and technology decision makers and those providing the education of future decision makers. Its mission is to improve how science and technology policies address societal needs, including research, education, and service.

The McGuire Center for International Economics, organized within the Department of Economics, is dedicated to research and graduate training in a broad range of international topics. Specialties of faculty associated with the center include international trade and finance, monetary theory and policy, monetary history and reform, and economic development and macroeconomics. Research on questions concerning international debt and trade relations in the Pacific region is given particular emphasis and support. The center offers opportunities for students and faculty interested in interdisciplinary work between international economics and areas such as international politics, conflict and peace studies, and international business.

Laboratories and Special Equipment

Laboratories, special classrooms, and specialized equipment are essential to graduate training and research. Some of the facilities at the University of Colorado are described in the following paragraphs.

Aerospace engineering sciences is equipped with both high-end workstations and PCs, an educational wind tunnel, laboratories in structural dynamics and controls, a guidance and control laboratory, a Global Positioning System laboratory, and the Lockheed Martin Room, dedicated to senior design teams. Space hardware laboratories aid in developing expertise in electronics, structures, fluids, and thermal control for the development, testing, and operation of small payloads; and space biotechnology laboratories develop expertise in microgravity studies involving animal physiology, agricultural products, bioprocessing, and advanced spacecraft life support systems. An unmanned vehicles systems integration laboratory provides learning opportunities for sophisticated subsystems integration. Computer laboratories are equipped for use in upper-division and graduate courses and for graduate research, with special capabilities for computer-aided control systems design, satellite image processing, satellite mission design, and parallel processing for computational structural mechanics, fluid dynamics, control, acoustics, and optimization. A NOAA satellite receiving station is available to the department for use in teaching and research.

The Department of Astrophysical and Planetary Sciences emphasizes studies of theoretical, instrumental, and observational astrophysics (including the sun), planetary atmospheres and surfaces, astrophysical fluid dynamics, space physics, and plasma astrophysics.

The department is a member of the ARC 3.5m telescope consortium and operates the Sommers-Bausch Observatory and laboratories for space astrophysical hardware, computational fluid dynamics, and UV/IR/X-ray astronomy. Also used are observational facilities of Cerro Tololo Inter-American Observatory in Chile; the Kitt Peak National Observatory in Tucson, Arizona; the Very Large Array (VLA) in New Mexico; and many NASA astronomical and planetary satellites, such as the Hubble Space Telescope, *Galileo* and *Cassini* Spaceprobes, and Far Ultraviolet Spectroscopic Explorer. Teaching and research are conducted in collaboration with the Laboratory for Atmospheric and Space Physics (LASP), JILA, the National Center for Atmospheric Research (including the High Altitude Observatory), and the Center for Astrophysics and Space Astronomy (CASA).

Chemical and biological engineering research facilities are extensive and modern. Nearly all research equipment is interfaced to microcomputer systems for automated data collection, monitoring, and control.

Studies in heterogeneous catalysis and surface science use ultrahigh vacuum systems located in the chemical engineering laboratories.

Research in chemical process control makes extensive use of an array of real-time computer systems and experimental units.

The suspension fluid dynamics laboratories include microfilters, sedimentation devices, and particle size analyzers.

Membrane studies use casting machines for fabricating flat sheet and hollow fiber membranes, and a variety of analytical equipment. A pendant drop tensiometer is used to study membrane formation via interfacial polymerization. A differential scanning calorimeter is used for determining the glass-transition and crystallization temperatures as well as other properties of polymeric membrane materials.

The biotechnology research laboratories are equipped with highly instrumented and controlled fermenters, high-performance liquid chromatographs, a flow cytometer, a tissue-culture laboratory, a DNA microarray facility, a UV-vis scanning spectrophotometer, an electron paramagnetic resonance spectrometer, a phosphorescence imager, centrifuges, and other standard bioprocess and bioanalytical equipment.

In the polymer laboratories, the latest differential scanning calorimeter is used to study photopolymerization reactions and phase transitions. Nonlinear optical polymeric materials are characterized on an optical bench equipped with a Neodymium/YAG laser and photo detection system. The laboratories are also equipped with a Hewlett Packard UV-visible spectrophotometer and facilities to perform photopolymerizations to produce membranes and polymer films.

The ceramics processing laboratory includes a high-temperature furnace, a thermal gravimetric analyzer, and several fluidized beds.

Research encompasses the infrastructure of our modern society, which depends on the technologies of structural, geotechnical, environmental, water resources, building systems, and construction engineering. Research facilities include unique laboratories for multiscale simulation of civil, environmental, and building systems. A 400 g-ton centrifuge with a sample capacity of two tons is used for simulation of the behavior of earthen and structural systems. The department has one of the 15 NSF-supported George Brown National Network for Earthquake Engineering Simulation facilities in the United States for dynamic testing of the response of large structural elements to earthquakes. The Larson Building Systems Laboratory contains a full-size room with complete HVAC controls for the study of

energy efficiency, comfort, and room air quality in buildings. The environmental fluid mechanics laboratory contains a large capacity hydraulic flume equipped with a 3-D laser system for visualization of turbulence and mixing in order to study aquatic ecology and contaminant dispersion in surface waters. In addition, numerous research projects are carried out in multipurpose laboratories on the Boulder campus and at field sites from Colorado to Antarctica. The department maintains significant computing facilities for research in diverse areas such as construction project management and groundwater contaminant transport. The Center for Advanced Decision Support for Water and Environmental Systems develops software that is widely used in river basin management throughout the United States. Drawing on these facilities, faculty and students have initiated interdisciplinary research that seeks to apply emerging analytical methods such as life-cycle analysis to study the long-term interactions between built infrastructure (building, transportation, and hydraulic structures), the environment, natural resources, and the concerns of human society for safety and well-being.

The Department of Computer Science supports its own domain (cs.colorado.edu), which is a 10/100/1000 mb network connected to the campus and the world by gigabit fast ethernet. The department has been instrumental in pushing the campus to a faster networking model through research. Research and computing needs are handled by department staff. Computer science supports most architectures and operating systems, giving research students the opportunity to learn about and use the latest, greatest equipment and software.

Current hardware inventory includes Sun Microsystems workstations and servers, Digital Compaq workstations, an Alpha and DS20 parallel processing cluster, Macintoshes and Windows 2000 desktop workstations, HP workstations, NCD xterminals, and various computers. All are networked with 10/100/1000 mb networks connected with switches and hubs to a firewalled gateway.

Electrical and computer engineering special equipment and facilities include a class 1000 clean room facility for epitaxial growth and fabrication of microwave and optical devices, high-vacuum and vacuum deposition equipment for thin-films research, an integrated circuits laboratory, ion implantation equipment, crystal growing facilities, a systems and control laboratory, a laboratory for data storage research, a digital system design laboratory, a power electronics design laboratory, undergraduate laboratories in circuits, electronics, and energy conversion, several holography and optics laboratories, a computer laboratory for VLSI design, a microwave device research laboratory, a communications laboratory, a roof-mounted antenna range, numerous special-purpose computers, an anechoic chamber for studying propagation effects at microwave frequencies, a special microscope for laser manipulation of microorganisms *in vivo*, and an electromagnetic fields bio-effects laboratory.

The department has a variety of computing equipment to support its research and instructional activities. Most machines are connected via Ethernet, which also provides access to a large number of shared computing resources on campus.

Mechanical engineering laboratories provide for experimental studies of thermal, mechanical, and electronic systems. Typical areas of study include heat transfer, fluid and solid mechanics, mechanical behavior of materials, combustion, prosthetic device performance, electronic packaging and manufacturing, and design optimization.

The combustion laboratory contains instrumentation for velocity, temperature, and composition measurements in chem-

ically reacting flows. Included are systems for gas chromatography, laser-induced fluorescence spectroscopy, laser absorption spectroscopy, laser schlieren, laser interferometry, and laser doppler anemometry. The laboratory is also equipped for computer control of the instrumentation and automatic data reduction including graphics capabilities.

The materials laboratory is well equipped for the measurement of the physical and mechanical properties of polymers, metals, ceramics, and composites. Major facilities include a pressure dilatometer with capabilities to 200 MPa and 450°C for determination of solid and melt equations of state, a forced-oscillation dynamic mechanical analyzer as well as a large capacity torsion pendulum for measurement of modulus and damping behavior, a modern servohydraulic mechanical test system for the analysis of tensile and relaxation properties, and an acoustic microscope for morphological studies.

The fluid mechanics laboratory is equipped with several basic facilities for experimentation in fluid systems. The Stokes flow apparatus is devoted to measurement of drag in highly viscous fluid flow using laser-timer instrumentation. The Taylor-Couette apparatus incorporates thermistor sensors, laser sheet visualization, and computer data acquisition to study instabilities of fluid motion between rotating cylinders with a radial temperature gradient. A humidity-controlled room provides an environment for studying the stability of rotating capillary rivulets. A Ling vibration exciter provides the basis for g-jitter experiments on the stability of differentially heated fluid layers.

The packaging laboratory is equipped with a quick prototyping workcell for semicustom multichip modules, two fluxless solder reflow chambers, a thermosonic flip-chip bonding machine and a thermal-chip testing system. The electronic manufacturing laboratory houses a mock-up chemical vapor deposition reactor, a condensation soldering set-up, a wind-tunnel for testing various high performance heat sinks, and a Czochralski crystal growth simulator. This equipment supports work on novel packaging and process control techniques, including artificial neural networks and fuzzy logic.

The Mechatronics Laboratory has state-of-the-art facilities to lay out MEMS designs using Tanner Research Tools and IntellicAD simulation software. The laboratory has probe stations equipped with computer control, video cameras, and power supply units. Personnel are able to activate, record, and evaluate MEMS to be fabricated for the proposed study.

Various optical instruments are available to verify the electromechanical behavior of fabricated MEMS in real time as a function of environmental temperature and pressure. For temporal response studies, an optical interferometer is available. For static deformation studies, a Zygo Interferometric Microscope (New View 200) is available in the **MEMS R&D Laboratory**. This imaging system uses noncontact scanning white light interferometry and provides 3-D surface analysis with Z-scan from 1 nm to 5,000 um with 0.1 nm height resolution. The field of view is adjustable from 1 um to 50 mm. With this unique system staff can visualize and study any MEMS deformation induced by internal material stresses and/or applied external forces, as well as the wear effects due to friction.

The Nuclear Physics Laboratory, of the Department of Physics, conducts research in high-energy nuclear physics, the study of quark-gluon systems in nature. Current activities include experimental studies of a new form of matter, known as the quark-gluon plasma, created in high-energy collisions of heavy nuclei, and the precise determination of the internal structure of the proton using high-energy particle beams.

Graduate students and faculty of the laboratory develop and install experimental equipment, help run the experiments during accelerator operation, and then analyze their data, both at the accelerator facilities and in the Boulder lab facilities. The present research is performed primarily at the Relativistic Heavy Ion Collider at Brookhaven National Laboratory, along with questions still under study at DESY (Germany), Fermilab, and Jefferson Lab.

Theoretical activities focus on development of Effective Field Theory (EFT) methods for treating low-energy (or, equivalently, diffuse) systems whose underlying dynamics are governed by short-ranged interactions. Many topics of much current interest (nuclear few-body systems, BECs, etc.) are susceptible to treatment via these methods.

Support for the research program comes from the U.S. Department of Energy and the National Science Foundation. Consult up.colorado.edu/CUNuclearPhysics for more detailed information.

The High Altitude Observatory (HAO) is an internationally recognized center for the study of solar, solar-terrestrial, and related astrophysics with emphasis on the interrelationships. Established in 1940, HAO has its central laboratory and administrative offices in the National Center for Atmospheric Research (NCAR) building in south Boulder.

HAO is a part of NCAR, which is sponsored by the National Science Foundation. HAO's extensive research facilities are used by graduate students pursuing advanced studies in atmospheric sciences and physics.

School of Journalism & Mass Communication

Paul S. Voakes, dean

478 UCB • phone: 303-492-5007 • fax: 303-492-0969
school website: journalism.colorado.edu

With major changes in the media profession, the School of Journalism and Mass Communication is undergoing a review of its current structure. The school is being evaluated as to how best to provide a media education for the professional of the 21st century. The catalog copy that follows has two parts. The first deals with the School of Journalism and Mass Communication in its present structure and applies only to those students admitted to the school in fall 2011 with the potential to graduate by spring 2013.

The second part on page 279 is a brief section on what a new curricular structure might look like, which may apply to those freshmen entering fall 2011. For the most recent updates on the school's structure and curricular revisions, visit journalism.colorado.edu.

The Current Program

The School of Journalism and Mass Communication offers a next-generation media education that prepares its graduates to collaborate within the professional world, engage the public, and produce positive social change.

The school uses innovative teaching technologies, empowering strategies for responsible democratic engagement, and an integrated curriculum to foster excellence among its students. Students are trained for successful careers in advertising, broadcast, print and online media, photojournalism, public relations, and media analysis.

By encouraging students to apply civic responsibility in their media work, the School of Journalism and Mass Communication seeks to empower audiences through honesty, integrity, and a commitment to social progress. Students learn the significance of their role as media professionals, gaining an appreciation of the profound interactions between mass communication and society in order to approach their work with respect, openness, and a broader cultural perspective. Included in a broad array of professional and conceptual courses are offerings in global media. A large percentage of the school's students study abroad.

The school is also home to two internationally recognized centers: the Center for Media, Religion and Culture; and the Center for Environmental Journalism.

Diversity

The school is actively committed to helping media organizations reflect the diversity of the communities they serve. It does this through focused recruitment and retention efforts aimed at preparing underrepresented students with the skills and support to excel as media professionals.

Media Opportunities

The school takes full advantage of its proximity to Denver, a major media market. Distinguished media professionals regularly serve as adjunct faculty. Hundreds of Denver and Boulder media organizations provide wide-ranging internship and career opportunities. Students consistently are offered highly competitive internships at leading Denver television and radio stations, newspapers, advertising agencies, public relations firms, and government, nonprofit, and corporate public information offices. Competitive internships are available locally and nationally to students at award-winning newspapers, magazines, advertising and public relations firms, government and social service agencies, radio and television stations, cable television systems, video production houses, online media, and other operations, including *USA TODAY*, *The Wall Street Journal*, *The Washington Post*, *National Geographic*, *Sports Illustrated*, *Newsweek*, ABC, MTV, NewLine Cinema, National Public Radio, Leo Burnett, TBWA\Chiat\Day, CBS, NBC, CNN, Bloomberg, C-SPAN, and Discovery Channel.

Facilities and Equipment

Technology is changing the way information is delivered, and the School of Journalism and Mass Communication is at the forefront of this shift, incorporating new technologies into its curriculum to make newsgathering, broadcasting, public relations, and advertising more accessible to audiences. Students use technology to create new media possibilities, renewing audience trust by collaborating with them to communicate important information. All lab courses—reporting, editing, advertising, public relations, radio, television, new media, and photojournalism—contain no more than 20 students. Broadcast students use a state-of-the-art digital broadcast studio in CU's ATLAS center with its 1,000-square-foot studio furnished with the latest equipment.

Accreditation

The School of Journalism and Mass Communication is accredited by the Accrediting Council on Education for Journalism and Mass Communications. It is a fundamental principal of the ACE-JMC that education for journalism be broadly based. Undergraduate students take about two-thirds of their college course work outside of the school and approximately one-third in the school.

Undergraduate Programs

The school enrolls 600 students in five sequences. Students begin with a broad education in the liberal arts and finish with superior professional preparation and media studies instruction. Most students take advantage of the school's extensive internship listings to obtain significant media experiences.

In addition to the required courses, the school offers all students a wide range of classes in many aspects of media practice including photojournalism, electronic and digital journalism, advertising creative development, consumer behavior, publication design, magazine article writing, public relations principles and projects, and communication law.

Media criticism and analysis are also broadly represented in the curriculum through courses such as media institutions and economics, media ethics, mass communication history, media culture and globalization, and special-topics offerings.

Students who intend to apply to the school complete their freshman year of undergraduate work (a minimum of 30 semester hours) typically in the College of Arts and Sciences as pre-journalism and mass communication majors.

Upon completion of their studies in the school, students receive a bachelor of science degree in journalism from one of five sequences.

- Advertising
- Broadcast News
- Broadcast Production
- Media Studies
- News-Editorial

The International Media Certificate is designed for high-achieving majors in international affairs (IAFS) and journalism and mass communication (JOUR) at CU-Boulder. This certificate will open doors to international and world-area specializations for students in the School of Journalism and Mass Communication and will introduce international affairs students to careers in communication media. For more information, visit www.colorado.edu/Journalism/globalmedia/imc/index.htm.

Student Activities

Many successful alumni proudly trace their careers back to student-run media and professional organizations here. *CU Sports Magazine* is a weekly televised program that follows collegiate athletics. KVCU, the university's 24-hour radio station, broadcasts to the Denver area. *Cultural Currents* is a newsletter that focuses on issues of diversity in media coverage and personnel. *NewsTeam Boulder* is a twice-weekly cable news show produced by students in the advanced broadcast classes. The *CU Independent* is a student-run online news source for the campus, at CUIndependent.com.

All news-editorial students complete internships at local daily newspapers and magazines as reporters, copy editors, online editors, or photographers. Students participate in chapters of the Advertising Club, Society of Professional Journalists, the

Multi-ethnic Media Organization (MEMO), Association for Women in Communication, and Journalism Board, the student government organization.

Internships

An ambitious year-round program helps students locate quality internships suited to their specific career goals. Many students complete two or more internships by graduation. Students perform internships at magazines, weekly and daily newspapers, advertising and public relations firms, businesses, and at government and nonprofit agencies. Others do broadcast and cable television internships in Denver. Opportunities for multimedia internships abound.

Students regularly obtain nationally competitive internships through the Politics & Journalism Semester in Washington, D.C., the Dow Jones Newspaper Fund, American Society of Magazine Editors, the Advertising Club of New York, and the Chips Quinn Scholars.

In recent years students have served as interns at *The Wall Street Journal*, *USA TODAY*, *Skiing*, *Backpacker*, *Sports Illustrated*, *The Today Show*, High Noon Entertainment, MTV, Fox Sports, NBC, ABC, CBS, CNN, The Children's Hospital, and IBM and top ad agencies throughout the United States. These include Crispin Porter + Bogusky, Goodby, Silverstein & Partners, DDB, BBDO, TBWA\Chiat\Day, Young & Rubicam, Saatchi & Saatchi, Leo Burnett, Publicis, and Arnold Worldwide.

Internships are also available in communities throughout the state, including Colorado's mountain resort areas.

Careers

Graduates of the School of Journalism and Mass Communication hold key positions throughout the United States in advertising, news, entertainment, government, education, business, and law. Many participate in the rapidly expanding alumni Career Network to help new graduates get started in their field by providing advice and contacts. The Student Resource Center fields local and national job opportunities through its contacts with employers and hosts on-campus interviews with a wide variety of employers. With the Student Journalism Board, it sponsors major career and internship events each year. The center also assists students and graduates by offering individual counseling and a regular series of workshops on résumé preparation, interviewing, and career planning specifically for media careers. The center maintains a library of media directories and career planning resources and offers students extensive lists of websites related to media jobs.

Centers

Through the **Center for Environmental Journalism** the school seeks to enrich and elevate the quality, range, and significance of media coverage of environmental issues. The CEJ is home to the prestigious Ted Scripps Fellowships in Environmental Journalism, which provide working journalists with a one-year opportunity to deepen their understanding of environmental science, policy, law and journalism.

The Resource Center for Media, Religion, and Culture is a clearinghouse of information for those interested in exploring the intersection of religious and media-related practices in the everyday lives of contemporary adults and their families.

Study Abroad Programs

The School of Journalism and Mass Communication, in conjunction with the Office of International Education, encourages

students to participate in the university's study abroad programs. Study abroad usually is undertaken during the junior year. Since an additional semester may be necessary to meet graduation requirements, prospective majors are urged to plan early and seek advising from the journalism and mass communication assistant dean or coordinator of student services. Programs are offered in more than 70 countries worldwide. Information and application forms are available at the Office of International Education, University of Colorado Boulder, 123 UCB, Boulder, CO 80309-0123, or studyabroad.colorado.edu.

Academic Excellence

Dean's List

Students in the School of Journalism and Mass Communication who have completed at least 12 credit hours of CU-Boulder course work for a letter grade in any single semester with a term grade point average of 3.750 or better are included on the dean's list and receive a notation on their transcript and a letter from the dean.

Honors

Journalism and mass communication students may graduate with general honors and/or school honors. Students interested in general honors must consult the honors program office. The school may award the bachelor's degree with honors to students who have a 3.500 cumulative GPA and a 3.500 GPA in journalism and mass communication courses, complete an independent study in journalism and mass communication involving scholarly research, and demonstrate a high degree of professional skill. Application for school honors must be made to the student's advisor the semester prior to the one in which the honors project would be done. Transfer students must complete at least 60 hours in residence. Complete information on honors requirements is available at the main office.

Students who achieve a 3.750 overall GPA will graduate with distinction. Students whose academic records rank in the upper 10 percent are eligible for election to Kappa Tau Alpha in recognition of outstanding scholastic achievement.

School Awards and Scholarships

Alumni and friends of the school have made it possible to provide more than three dozen annual scholarships and awards to officially admitted students in the School of Journalism and Mass Communication. The deadline for application is February 20.

A. Gayle Waldrop Award
 Arthur B. Levis Scholarship
 Barrie Hartman News Editorial Scholarship
 Boulder Press Club
 Bob and Gloria Palmer Scholarship
 Brian Hostetler Memorial Scholarship
 Chris M. & Chris J. Burns Memorial Scholarship
 Colorado Broadcasters Association

 William W. White Awards

Academic Standards

Scholastic Suspension

Journalism students are subject to suspension if they do not maintain a cumulative university GPA of 2.250 and a cumulative journalism and mass communication GPA of 2.500.

Students whose GPAs fall below either of these levels are normally placed on probation for one semester, during which they have an opportunity to raise their averages to the required levels. Students whose averages continue below the required levels are subject to suspension from the School of Journalism and Mass Communication and will be notified in writing.

Scholastic records will be reviewed as soon as possible after each semester, and students will be informed in writing if they are to be placed on probation or suspension.

The normal period of suspension is two regular semesters (one academic year, excluding summer sessions). The period of suspension will be stated in the suspension notice to the student. A student suspended a second time will be reinstated only on the basis of unusual circumstances, which the student should state in a petition to the assistant dean of the school.

Academic Dishonesty

The School of Journalism and Mass Communication maintains the highest standards of intellectual honesty. Acts of academic dishonesty are referred to the Honor Council. The policies and procedures governing acts of academic dishonesty can be found on the Web at www.colorado.edu/academics/honorcode.

Policy on Grade Appeals

The following shall be the official policy of the School of Journalism and Mass Communication regarding grade appeals.

When a student believes that a grade has been improperly assigned, and discussions between the instructor and the student have not led to any resolution of the problem, then:

1. The student shall have the option of making a formal written appeal to the assistant dean of the SJMC. The appeal must specify the remedy desired by the student, and it must be submitted within 45 days of the end of the academic term in which the course was taken.

2. The assistant dean will meet with the student and with the faculty member who taught the course. The instructor will be asked to submit a formal, written response to the student's written appeal. If the assistant dean is unable to broker a solution mutually acceptable to both student and instructor, then:
 - a. The dean shall appoint an ad hoc Student Ethics committee, which will review the dispute. The committee shall consist of two impartial faculty members competent in the subject matter of the course in question. The assistant dean will chair the committee and provide the committee with the student's written appeal and the written response from the faculty member.
3. Within 45 days, the committee will submit a report and recommendation to the dean, and the dean will recommend to the instructor either 1) that the originally assigned grade stand; or 2) that a new grade be assigned.
4. In cases where a change of grade is recommended and the instructor does not wish to accept the recommendation of his/her colleagues, the dean shall make the final decision.

Admission and Enrollment Policies

Requirements for Admission

Students who intend to apply to the school complete their freshman year of undergraduate work (a minimum of 30 semester hours) typically in the College of Arts Sciences as prejournalism and mass communication majors. Students may be eligible to apply to the school during the second semester of their freshman year for admission as sophomores to one of the five sequences. See Undergraduate Admission in the General Information section for admission standards for transfer students.

Prejournalism and Mass Communication

Prejournalism and mass communication students are enrolled in the College of Arts and Sciences until they are eligible to transfer into the School of Journalism and Mass Communication, which normally occurs at the end of the freshman or sophomore year. They must have completed or be working toward completing 30 semester hours with a GPA of at least 2.250, based on a minimum of 12 credit hours. These students should consult with advisors in the school.

Before they can apply for admission to the school, prejournalism and mass communication majors must make satisfactory progress in courses that meet the core areas of study requirements in the College of Arts and Sciences. Students must complete or have in progress two journalism classes (JOUR 1001 and either JOUR 2403 or 2601) with a GPA of at least 2.500 before applying.

Students wishing to apply to the School of Journalism and Mass Communication must fill out an intrauniversity transfer (IUT) form and a letter of application by October 1 for spring admission or February 20 for fall admission. Students must indicate the sequence in which they wish to enroll. Meeting these minimum requirements does not guarantee a student admission to the school.

Transfer Students

Students applying to transfer into the School of Journalism and Mass Communication from another institution must have 30 semester hours of college credit and must have completed the equivalent of the two introductory courses in journalism with a

GPA of at least 3.000, both overall and in journalism courses, before they apply. Students without 30 hours of credit should apply to the College of Arts and Sciences' prejournalism major. See Undergraduate Admission in the General Information section for transfer student admission standards.

Attendance Regulations

Students are expected to attend classes regularly and to comply with the attendance regulations specified by their instructors at the beginning of each semester. A student who does not attend any of the first week's sessions of a class during a term may be dropped from the class.

Credit Policies

Pass/Fail

In addition to the university's general policies, majors in the School of Journalism and Mass Communication may not take any MAPS, arts and sciences core requirements, certificate or minor courses, business, or journalism and mass communication courses *pass/fail*, but any other course may be taken *pass/fail*. Up to 16 hours of nonjournalism courses may be taken *pass/fail*, except for transfer students, for whom the limit is one hour in every eight attempted at the University of Colorado. Only 6 hours of *pass/fail* may be taken in any one semester.

Transfer Credits

Credit in subjects transferred from other institutions to the University of Colorado is limited to the amount of credit given for similar work at the University of Colorado. Transfer credits in journalism and mass communication courses are limited to 12 semester credits from four-year institutions and 6 semester credits from two-year institutions. All transfer credit is subject to approval of the dean of the school. For additional information on transfer of credit policies, please see the Transfer of College-Level Credit section.

Residence Requirement

A candidate for a degree from the School of Journalism and Mass Communication must earn the last 30 hours in residence at the University of Colorado. This may include courses taken on the Boulder, Denver, or Colorado Springs campus.

Senior Requirement

Seniors must file a diploma card with the school by October 15 for May and August graduation and March 1 for December graduation. Diploma cards are available at the office of the School of Journalism and Mass Communication. These students must also meet with the assistant dean or the coordinator of student services the semester prior to graduation to complete the graduation check-out form.

Withdrawal

Students may withdraw at any time prior to the start of the final examination period. Students are encouraged to consider the Time Out Program when their withdrawal from the university is temporary.

Advising

Majors are encouraged to consult an advisor each registration period. Advising is available from faculty and staff throughout the academic year, and major advising sheets are provided for each sequence. However, students are ultimately responsible for fulfilling all degree requirements.

Requirements for Graduation

A total of 120 credit hours with a minimum of 28 hours in journalism and 80 nonjournalism hours is required for graduation. Sixty-five of the 80 nonjournalism hours must be in arts and sciences course work, which will include all the arts and sciences core except the upper-division written core. Forty of the 120 credit hours must be upper-division. Within the 80 credit hours of nonjournalism course work, 12 credit hours must be upper-division hours concentrated in a single area of study.

Double-Degree Programs

Students may complete requirements in two fields and receive two degrees from the university. Such double-degree programs are available combining journalism and mass communication with business, music, or disciplines in the College of Arts and Sciences. The double degree between Journalism and Mass Communication and Arts and Sciences requires 145 hours. All other double degrees require 150 hours. Students must make application for a double-degree program in both the School of Journalism and Mass Communication and the Leeds School of Business, the College of Arts and Sciences, or the College of Music. Any other combined program must be arranged by consulting both schools or colleges.

Sequences

Advertising

The advertising major prepares students through a holistic approach that is rooted in theory and grounded in practice. Students examine approaches to creative thinking, branding, and consumer engagement and explore the rapidly evolving digital landscape and its impact on business and culture. Then they draw on that base of knowledge to solve real-world problems for both commercial clients and non-profit organizations.

The major offers courses in such areas as creative concepts, art direction, branding, media, and consumer insight, and students regularly intern at Colorado agencies and global agencies such as Ogilvy & Mather, JWT, and BBDO. The program's focus, however, is not on technical skills but on ideas and creative problem solving in the broadest sense. That is why graduates have been able to launch successful careers in everything from advertising and arts management to health policy and law. Those choosing to pursue advertising careers have taken positions at a variety of Colorado firms and at such national agencies as Goodby, Silverstein & Partners, Wieden & Kennedy, BBH, Crispin, Porter + Bogusky, Leo Burnett, and BBDO.

The advertising program was named one of the country's "renowned advertising programs" by the American Association of Advertising Agencies. Students in the creative track have also consistently taken home more awards than those at any other four-year university in the international One Show College Competition, the premier creative competition sponsored by New York's One Club.

Course Requirements for Advertising Majors

A total of 120 credit hours with a minimum of 28 hours in journalism and 80 nonjournalism hours are required for graduation. Sixty-five of the 80 nonjournalism hours must be in arts and sciences course work. Forty of the 120 credit hours must be upper-division. Within the 80 credit hours of nonjournalism course work, 12 credit hours must be upper-division hours concentrated in a single area of study. The last 30 hours toward the degree must be taken after admission to the school.

Journalism Core Requirements (12 hours)

JOUR 1001 Contemporary Mass Media	3
JOUR 2403 Principles of Advertising	3

ECON 1000 Introduction to Economics or ECON 2010 Principles of Microeconomics	4
BCOR 2400 Fundamentals of Marketing	3
MKTG 3250 Buyer Behavior	3

Broadcast News

The broadcast news sequence prepares students for careers as news producers, reporters, photographers, editors, and writers for radio and television news organizations and cable TV systems. The curriculum covers several aspects of broadcast journalism, including broadcast news writing, videography and editing, television reporting, and producing and mass communication law. Students produce and anchor live newscasts twice a week and have won regional Emmys for their work. Many students intern at major market network affiliates. Students regularly win nationally competitive internships, and some have recently interned at ABC, CBS, CNBC, CNN, Fox Sports, MTV, NBC, MSNBC, PBS, and for *Inside Edition* and Bloomberg.

Course Requirements for Broadcast News Majors

A total of 120 credit hours with a minimum of 28 hours in journalism and 80 nonjournalism hours are required for graduation. Sixty-five of the 80 nonjournalism hours must be in arts and sciences course work. Forty of the 120 credit hours must be upper-division. Within the 80 credit hours of nonjournalism course work, 12 credit hours must be upper-division hours concentrated in a single area of study. Electives and Internships (4–16 hours)

JOUR 4931 Internship (JOUR 3604, JOUR 3644 prerequisites)	1-3
---------------------------------------------------------------------	-----

Broadcast Production

The broadcast production sequence prepares students for production careers in radio, television, cable, private industry, and independent firms, including positions in programming, advertising, promotion, and management. The curriculum includes broadcast

news writing, broadcast production principles, mass communication law, and advanced television production. Students direct and handle production duties for a live newscast twice a week and broadcast a weekly sports magazine. Many intern at Denver network affiliates and production facilities, including those of local professional sports teams. Students cover many collegiate sporting events on campus, where they produce, direct, and host programs, for which they have won numerous local and regional Emmy awards. Students intern at national news and entertainment organizations including Warren Miller Entertainment in Boulder, High Noon Entertainment in Denver, ESPN, Fox Sports, MTV, Sony Pictures Television, and *Entertainment Tonight*.

Course Requirements for Broadcast Production Majors

A total of 120 credit hours with a minimum of 28 hours in journalism and 80 nonjournalism hours are required for graduation. Sixty-five of the 80 nonjournalism hours must be in arts and sciences course work. Forty of the 120 credit hours must be upper-division. Within the 80 credit hours of nonjournalism course work, 12 credit hours must be upper-division hours concentrated in a single area of study. The last 30 hours toward the degree must be taken after admission to the school.

JOUR 4931 Internship (JOUR 3644 prerequisite)	1-3
---------------------------------------------------------	-----

Media Studies

The media studies major prepares students for careers as analysts, evaluators, and producers of media messages and policies in government and private industry and for graduate education in the social sciences, humanities, and law. The curriculum covers courses in media, history, law, policy, institutions, industries, and culture. Students may gain practical experience by taking media practice courses and at campus media such as KVCU-AM, the *CU Sports Magazine* weekly television broadcast, as well as through internships. In recent years, media studies majors have interned at the Discovery Channel, Bravo, *Late Night with Conan O'Brien*, *The Financial Times*, Rocky Mountain Planned Parenthood, Kenney Marketing and Advertising, Ogilvy Public Relations Worldwide, *Aspen Magazine*, Boulder County AIDS Project, and KCNC-TV Community Affairs.

Course Requirements for Media Studies

A total of 120 credit hours with a minimum of 30 hours in journalism and 80 nonjournalism hours are required for graduation. Sixty-five of the 80 nonjournalism hours must be in arts and sciences course work. Forty of the 120 credit hours must be upper-division. Within the 80 credit hours of nonjournalism course work, 12 credit hours must be upper-division hours concentrated in a single area of study. The last 30 hours toward the degree must be taken after admission to the school.

Journalism Core Requirements (12 hours)

JOUR 1001 Contemporary Mass Media	3
JOUR 2403 Principles of Advertising or 2601 Principles of Journalism	3
JOUR 4651 Media Communication Law	3
One upper-division conceptual course	3

Media Studies Core Requirements (6 hours)

JOUR 4301 Media Ethics	3
JOUR 4321 Media Institutions and Economics	3

Media Theory Requirements (6–9 hours)

JOUR 2403 Principles of Advertising	3
JOUR 3771 Mass Media History	3
JOUR 4201 International Mass Communication	3
JOUR 4331 Women and Popular Culture	3
JOUR 4453 Advertising and Society	3
JOUR 4711 Mass Communication and Culture	3
JOUR 4874 The Meaning of IT (Information Technology)	3
JOUR 4871 Special Topics (conceptual only)	3

Media Practice (0–3 hours)

Students are strongly encouraged to take ONE of the following:

JOUR 3102 Press Photography	3
JOUR 3453-3 Advertising Copy and Layout (JOUR 2403 prerequisite and instructor permission)	3
JOUR 3473 Advertising Research (JOUR 2403 prerequisite and instructor permission)	3
JOUR 3614 Radio Programming and Production	3
JOUR 4102 Advanced Photography (JOUR 3102 prerequisite)	3
JOUR 4272 Public Relations	3
JOUR 4282 Public Relations Programs (JOUR 4272 prerequisite)	3
JOUR 4562 Electronic Journalism	3
JOUR 4802 Editorial and Opinion Writing (instructor permission prerequisite)	3
JOUR 4802 Magazine Writing (instructor permission prerequisite)	3
JOUR 4831 Publication Design and Production	3
JOUR 4872 Digital Newsroom	3
JOUR 4873 Motion Design (instructor permission prerequisite)	3
JOUR 4873 Experience Design Workshop (instructor permission prerequisite)	3

Journalism Electives and Internships (1–13 hours)

Any JOUR course, including those listed above under Media Theory and Media Practice will fulfill the elective category. Media Studies majors who wish to gain practical experience are also strongly encouraged to do an internship (JOUR 4931, 1–3 hours) and/or to work for a semester or more for one of the campus media: *CUIdependent* (instructor permission prerequisite); KVCU radio; *Sports Mag*; or *Cultural Currents*. For internships offered through news-editorial, broadcast, or advertising, students will need to take additional prerequisites (see major sheet for each sequence's requirements).

News-Editorial

The news-editorial major prepares students for careers as reporters, editors, and photographers for newspapers, websites, news services, magazines, trade and technical publications, company publications, the government, and public relations firms. Beyond required courses in the principles of journalism, reporting, editing, and media law, students may choose electives ranging from photography and magazine writing to the digital newsroom and legislative reporting. Photo students have repeatedly placed nationally in the Hearst Journalism Awards Program. News-editorial students regularly obtain internships through national programs including the Dow Jones Newspaper Fund, the Politics & Journalism Semester in Washington, D.C., the Scripps Howard Foundation, and the Chips Quinn Scholars minority internship program. Others recently interned

at The Associated Press, USA TODAY, Huffington Post, Smithsonian Magazine, MLB.com, People magazine, Rolling Stone, The New York Times, The Wall Street Journal, National Geographic, and Sports Illustrated. Students intern year-round at Boulder outdoor recreation and healthy lifestyle magazines including SKI, Skiing, Freeskier, Backpacker, VeloNews, Climbing, and Women's Adventure.

Course Requirements for News-Editorial Majors

A total of 120 credit hours with a minimum of 28 hours in journalism and 80 nonjournalism hours are required for graduation. Sixty-five of the 80 nonjournalism hours must be in arts and sciences course work. Forty of the 120 credit hours must be upper-division. Within the 80 credit hours of nonjournalism course work, 12 credit hours must be upper-division hours concentrated in a single area of study. The last 30 hours toward the degree must be taken after admission to the school.

Proposed Undergraduate Curriculum

The faculty in the School of Journalism and Mass Communication has been working on curricular revisions to lead the way in educating the journalist/media practitioner of the 21st century. One proposal that may be implemented for incoming students consists of two specializations: 1) Journalism and Media Studies and 2) Advertising and Media Design. Both specializations integrate professional and theoretical course work.

In each specialization, students would have the opportunity to focus their studies more tightly in their chosen area or select courses across areas of emphasis, providing they meet the prerequisites for those courses.

Students in both specializations would take two introductory courses dealing with the principles of journalism and networked communication and with the principles of advertising and consumer culture. They would also take four foundation courses dealing with storytelling; ideas and issues in media, culture, and society; media ethics; and media law.

Students emphasizing journalism and media studies would then be able to specialize in print and online journalism, electronic journalism, or media studies. Students emphasizing advertising and media design would be able to specialize in creative advertising or planning and management.

All students would be required to do an internship and a capstone course. The total hours for the new curriculum would be 34 credit hours of required course work, leaving six hours of elective credit for a total of 40 credit hours within the major.

Over the past two years the school has been revising its skills courses to reflect the changes in the dissemination of informa-

tion. As the future of media education at the University of Colorado Boulder becomes clearer, it will be possible to provide details of the curricular structure of the program. Please check at journalism.colorado.edu for further information. This website will be updated as decisions concerning the School of Journalism and Mass Communication are made.

Graduate Programs

Master's Degrees

More than 70 students are earning master of arts degrees at the School of Journalism and Mass Communication in two degree programs: newsgathering and mass communication research.

Newsgathering

The newsgathering option is designed for students with limited academic or professional experience in news reporting and writing. It prepares students to work in a wide variety of professional settings including newspapers and magazines, broadcast and cable media outlets, online publishing, and corporate communications. Students in the newsgathering program select an emphasis in print, broadcast, or a combination. Newsgathering students complete internships at radio, television, and award-winning daily newspapers along Colorado's Front Range. The program culminates with a professional project. Students complete a minimum of 36 graduate semester hours and should be able to finish the degree in two years.

Mass Communication Research

The mass communication research option offers an opportunity for critical reflection on contemporary media structures, performance, policy, and practice. It provides graduate-level study in communication theory, research methods and relevant realms of culture, law, history, politics, and ethics. The research track is designed for students interested in an in-depth study of media or for those who wish to enhance an undergraduate or professional media background. The program is especially recommended for students desiring to continue their studies toward a PhD and for professionals seeking to teach at the college level or develop an area of reporting specialization. Total required hours: 33.

Prerequisites: None, unless students wish to update their knowledge in specific areas or lack background in the course of study they choose to pursue.

Interdisciplinary Graduate Certificate Program in Environmental Policy

In collaboration with the university's Interdisciplinary Graduate Certificate Program in Environmental Policy, the school offers students the opportunity to earn both the master's degree in journalism, with an emphasis in environmental journalism, and the Certificate in Environmental Policy. The time to complete the degree and the certificate is estimated to be about two years.

Deadlines for Master's Programs

The domestic application deadline is February 1. International applications must be submitted by December 1. Applications received after February 1 will be considered on a space-available basis.

Doctoral Degree in Communication

The PhD in communication offered by the School of Journalism and Mass Communication is dedicated to interdisciplinary inquiry into the social, political, economic, and cultural dimen-

sions of media, nationally and internationally, historically and in contemporary societies.

Because of the centrality of communication and media in social and individual life, media theory and research draw from a wide range of fields and disciplines, including political science, sociology, cultural studies, philosophy, history, linguistics, economics, anthropology, business, psychology, literature, law and public policy. The interdisciplinary nature of media studies is reflected in the research interests of the graduate faculty and in the curriculum, in which students take a significant portion of their course work outside the school and receive training in both qualitative and quantitative research methods. In general, the curriculum within the school focuses on the following areas: the range of theories, disciplines, and methodological approaches that have contributed centrally to the field of media studies; the institutional and cultural sources of meaning; the history and development of media industries and systems; and the relationship of media to other social institutions.

Doctoral students in the media studies program must take 42 hours of course work, pass the written and oral comprehensive examinations at the conclusion of course work, and prepare and defend a dissertation. The course work includes a two-semester Proseminar (6 hours), which is required of all first-year doctoral students in the program; 15–18 hours of electives within the school; 12–15 hours of electives taken outside the school; and 6 hours of methods (the qualitative and quantitative methods courses offered within the school).

Applicants to the PhD program in media studies are expected to hold the master's degree or equivalent graduate work. In exceptional cases, applicants without a master's degree may be considered for admittance.

Deadlines for Doctoral Programs

The domestic application deadline is January 1. International applications must be submitted by December 1. Applications received by the school after January 1 will not be considered.

Financial Support

Master's Degree

A few graduate assistantships are available. Applicants who wish to be considered should submit a resume and letter that includes detailed professional or academic qualifications by February 1 to the director of graduate studies at the School of Journalism and Mass Communication. Applicants are chosen based on experience and the specific skills needed for available assistantships each semester.

Doctoral Degree

Admitted PhD students are awarded graduate assistantships including a tuition waiver and stipend.

Faculty— School of Journalism and Mass Communication

School faculty members have major-market experience in TV, radio, newspaper, magazine, and advertising. Among the faculty are leading researchers on communication policy; technology and social change; media, religion and culture; marketing and visual communication; international media development; audience behavior; and mass media law.

PAUL S. VOAKES, dean; professor. BA, University of California, Davis; MJ, University of California, Berkeley; PhD, University of Wisconsin–Madison.

LEN ACKLAND, associate professor. BA, University of Colorado; MA, Johns Hopkins School of Advanced International Studies.

JOANNE EASLEY ARNOLD, professor emerita.

SHU-LING C. BERGGREEN, associate professor. BA, Fu-Zen University; MS, Southern Illinois University; PhD, University of Tennessee.

P. DELBERT BRINKMAN, dean emeritus and professor emeritus.

ANDREW CALABRESE, associate dean; professor. BA, Denison University; MA, PhD, Ohio State University.

DESERAI CROW, assistant professor. BS, University of Colorado Boulder; MPA, University of Colorado Denver; PhD, Duke University.

MELINDA KIGER CHEVAL, senior instructor. BS, West Virginia University School of Journalism.

PAUL DAUGHERTY, instructor. BA, MA, University of Colorado Boulder.

THOMAS R. DUNCAN, professor emeritus.

NABIL ECHCHAIBI, assistant professor. BA, Mohammed V University, Morocco; MA, PhD, Indiana University, Bloomington.

SANDRA FISH, instructor. BS, MA, Iowa State University.

STEWART HOOVER, professor. BA, McPherson College; MA, PhD, University of Pennsylvania.

STEPHEN B. JONES, assistant dean; senior instructor. BA, MA, West Virginia University; PhD, University of Utah.

FRANK L. KAPLAN, professor emeritus.

HUN SHIK KIM, assistant professor. BA, Chung-Ang University; MA, PhD, University of Missouri.

SAM KUCZUN, professor emeritus.

KELTY LOGAN, assistant professor. BA, University of California, Los Angeles; MBA, Tulane University; PhD, University of Texas at Austin.

MICHAEL J. McDEVITT, associate professor. AB, University of California, Berkeley; MA, San Jose State University; PhD, Stanford University.

POLLY E. McLEAN, associate professor. BA, Richmond College, City University of New York; MS, Columbia University; PhD, University of Texas.

BELLA MODY, James de Castro Chair in Global Media Studies; professor. BA, St. Xavier's College, Ranchi University, India; MA Communication, University of Pennsylvania; PhD, Gujarat University, India.

SANDRA E. MORIARTY, professor emerita.

MARGUERITE J. MORITZ, UNESCO chair; professor. BS, MS, PhD, Northwestern University.

JANICE A. PECK, associate professor. BA, University of Utah; MA, University of Washington; PhD, Simon Fraser University.

PATRICIA RAYBON, professor emerita.

ROBERT B. RHODE, professor emeritus.

BRETT ROBBS, associate professor. BA, Rhodes College; MA, PhD, Vanderbilt University.

WILLARD D. ROWLAND, JR., dean emeritus and professor emeritus.

KATHLEEN RYAN, associate professor. BA, University of California, Santa Barbara; MA, University of Southern California; PhD, University of Oregon.

ELIZABETH A. SKEWES, associate professor. BA, University of California, Los Angeles; MA, Ohio State University; PhD, Syracuse University.

DAVID SLAYDEN, associate professor. BA, Southern Illinois University; MA, University of Chicago; PhD, Indiana University.

RICK STEVENS, assistant professor. BS, Abilene Christian University; PhD, University of Texas.

MICHAEL TRACEY, professor. BA, University of Exeter; PhD, University of Leicester.

ROBERT TRAGER, professor. BA, San Francisco State College; MA, PhD, University of Minnesota; JD, Stanford University.

JAN WHITT, professor. BA, MA, Baylor University; PhD, University of Denver.

THOMAS YULSMAN, associate professor. BA, Harpur College, State University of New York at Binghamton; MS, Columbia University Graduate School of Journalism.

Law School

David H. Getches, dean

401 UCB • phone: 303-492-8047 • fax: 303-492-1757
school website: www.colorado.edu/law

THE UNIVERSITY OF COLORADO LAW SCHOOL, established in 1892, has a long and proud history as a top public law school. The first students of color entered in 1898. The school became a charter member of the Association of American Law Schools organized in 1901. The first woman graduated in 1908. And, the school has been on the American Bar Association's list of accredited law schools since its first publication in 1923.

Today, Colorado Law, housed in the beautiful new "green" Wolf Law Building with one of the largest law libraries in the country, is also one of the most technologically advanced law schools in the country. Most importantly, it provides one of the best comprehensive legal educations in the nation, featuring:

- 530 students, selected from the nation's statistically best applicants with diverse backgrounds and representing 100 undergraduate institutions
- A favorable faculty-student ratio (1:12.5) that produces class sizes that encourage discussion
- 60 highly published resident faculty dedicated to interacting with students inside and outside the classroom
- First-year students who are placed in small sections for more class participation opportunities and to build relationships with classmates and professors
- Full-time, three-year Juris Doctor degree, one-year Master of Law degree, eight dual degrees, four certificates, four centers, and three journals
- An Experiential Learning Program that integrates lawyering activities, including nine legal clinics, externships, public service pledge, and trial and court competitions
- Comprehensive program to prepare students for any career; a quarter of graduates obtain judicial clerkships
- Impressively high first-time bar passage rate, especially compared to the state average

Law School Vision

A supportive and diverse community of scholars and students in a place that inspires vigorous pursuit of ideas, critical analysis, and civic engagement in order to advance the rule of law in an open, sustainable society.

Our Mission

- **Teaching:** To employ robust theoretical inquiry, doctrinal and policy analysis, and professional skills.
- **Scholarship:** To explore and discuss ideas, to develop and test new ideas and approaches, to challenge the status quo, and

to convey the school's research and ideas to lawyers, academics, policymakers, and the world.

- **Public Service:** To instill in students an awareness of a lawyer's civic responsibilities and opportunities to serve and lead.

Wolf Law Building

The five-story Wolf Law Building was completed in 2006 and was only possible through the financing of alumni, friends, law firms, and 61 percent by students.

- Top "green" certification, from construction to operation, including 88 percent renewable energy and electricity, 40 percent water use reduction, and 59 percent regionally manufactured materials
- Technologically advanced wireless networking, video conferencing, videotaping capabilities for distance learning, and digital kiosks
- All classrooms have electrical outlets for each student and complete audio-visual equipment (LCD projectors, DVD, VHS, cable) with built-in touch-screen control systems
- Student commons with café and patio, study and interview rooms, individual lockers and mailboxes, law bookstore, and courtyard with barbeque
- Suites and offices for centers, clinics, student organizations, journals, and all faculty offices
- 250-seat main courtroom with judge's chambers, 30-seat teaching courtroom with jury box and witness stand, and a mock trial practice room for competition and clinic training

The three-story William A. Wise Law Library is housed in the Wolf Law Building.

- Most comprehensive law library in the 12-state Rocky Mountain region, one of the largest in the country, serving as a selective federal government depository
- 40 instructional student lab computers, five group study rooms, 445 seats, distributed computing stations
- 25,000 visitors served per year
- 720,000 volumes and microform equivalents

Academics

Colorado Law's three-year, full-time Juris Doctor (JD) degree provides a strong, well-rounded legal education with a rich mixture of theory, policy, doctrinal analysis, and professional skills. Students have broad flexibility to meet their individual interests and needs.

Areas of Academic Strength

- **Environmental, Energy, and Natural Resources Law.** Ranked consistently among the very best in the country, environmental and natural resources law has been a key focus of the Colorado Law curriculum for more than half a century, and is one of the strongest and deepest programs of its kind.
- **Technology, Entrepreneurial, and Intellectual Property Law.** Boulder is the heart of one of the nation's premier telecommunications and technology hubs, and boasts a vibrant entrepreneurial community, ranking it No. 1 by Federal Reserve Bank of Boston researchers as the highest performing small city for venture capital investment.
- **American Indian Law.** With more than 30,000 American Indians living within a 30-mile radius of the CU-Boulder campus, Colorado Law is in the "Hub of Indian Country," which is why Boulder is home to the Native American Rights Fund.
- **Juvenile and Family Law Program.** With U.S. state trial courts reporting nearly 5 million cases involving domestic relations, there is an increased demand for trained lawyers and advocates who have acquired an interdisciplinary specialization in resolving family issues.

Certificates

Certificate programs allow students to add a law specialty to their JD degree. Students must earn 6 credit hours beyond the JD requirements, which can be completed within the normal three years.

- American Indian Law
- Entrepreneurial Law
- Juvenile and Family Law
- Tax Emphasis Program
- Graduate Certificate Program in Environment, Policy, and Society (through CU's Environmental Studies Program)

Dual Degree Programs

Colorado Law students take advantage of an array of rich opportunities for interdisciplinary study through other CU schools and colleges, in addition to the University of Alberta. The schools work in cooperation to select courses for the programs that allow students to earn the dual degrees in less time than it takes to earn each degree separately. Students apply separately to and are admitted by the two schools under their respective admissions requirements. Only credits earned after law school enrollment count toward the JD degree, and the first year of the JD curriculum must be taken exclusively at Colorado Law.

- Juris Doctor/Master of Business Administration (JD/MBA) with CU-Boulder's Leeds School of Business
- Juris Doctor/Master in Environmental Studies (JD/ENVS) with CU-Boulder's Environmental Studies Program
- Juris Doctor/Doctorate in Environmental Studies (JD/PhD) with CU-Boulder's Environmental Studies Program
- Juris Doctor/Doctor of Medicine (JD/MD) with UC Denver's School of Medicine on the Anschutz Medical Campus in Aurora
- Juris Doctor/Master of Public Administration (JD/MPA) with UC Denver's School of Public Affairs

- Juris Doctor/Master of Science, Telecommunications (JD/MST) with CU-Boulder's Interdisciplinary Telecommunications Program
- Juris Doctor/Master of Urban and Regional Planning (JD/MURP) with CU-Boulder's College of Architecture and Planning
- Juris Doctor/Bachelor of Laws (JD/LLB) with the University of Alberta Faculty of Law, Canada

Master of Laws (LLM)

Colorado Law offers one-year, full-time LLM degrees in three specialty areas:

- Entrepreneurial Law
- Information Technology and Intellectual Property Law
- Natural Resources Law

Study Abroad and Summer Session

While Colorado Law offers exciting but limited summer courses, it offers a variety of legal study abroad opportunities in Europe, Russia, Israel, and Canada. Study abroad allows students to learn about other nations' system of laws, participate in international and comparative legal studies, and approach legal systems and subjects from a non-U.S. perspective. This is a great opportunity to study with law students from other countries in the areas of international business, comparative law, European Union law, and international law.

Legal Research and Writing

Colorado Law's Legal Research and Writing Program ensures that its graduates are proficient in legal research, analysis, and writing, and capable of adapting these skills to varying contexts. All first-year Legal Writing and Appellate Court Advocacy courses are taught by resident legal writing faculty, and legal research and research strategy is guided by professional librarian instructors. Upper-division courses are designated as writing classes and students spend a seminar preparing a substantial paper requiring significant legal research and writing.

First Year

First-year courses lay the foundation and all JD candidates take these courses to learn to "think like a lawyer." Common law courses taught in the Socratic Method allow students to develop legal reasoning and critical thinking skills. All first-year students are assigned to a small cohort to help build strong relationships and study groups with classmates.

Fall Semester

Civil Procedure: Rules governing pleading, joinder of parties, discovery, jurisdiction of courts, right to jury trial, appeals, and res judicata and collateral estoppel, with emphasis on the Federal and State Rules of Civil Procedure
Contracts: Contract liability, offer and acceptance, consideration, frauds statute, contract remedies, the parol evidence rule, contract performance, conditions, changed circumstances

Legal Writing: Legal analysis and document preparation, objective legal analysis techniques, legal rule synthesis, authority use to explain rules, and rule application to case facts

Legislation and Regulation: Statutory interpretation, architecture of the administrative state, and interpretation and review of regulation.

Torts: Nonconsensual allocation of losses for civil wrongs, focusing on negligence and strict liability

Spring Semester

Appellate Court Advocacy: Appellate brief and document preparation, oral arguments before a three-judge mock court, techniques of persuading

a court to accept a client's view of the law and facts, professional judgments within ethical boundaries, and lawyer credibility

Constitutional Law: Constitutional structure, including judicial review, federalism, separation of powers, and constitutional rights of due process and equal protection

Criminal Law: Statutory and common law of crimes and defenses, the procedures by which the law makes judgments as to criminality of conduct, constitutional limits

Property: Personal property, estates and interests in land, landlord-tenant, basic land conveyancing, and private land use controls

Academic Support

From the student's first day, Colorado Law invests in her or his academic success. Through the Rothgerber Academic Assistance Program, upper-division law students tutor first-year students in any of their courses, except Legal Writing and Advocacy. The program is open to all first year students, and more than 50 percent of the class participates in this free opportunity.

Second and Third Years

The elective program in the second and third years builds upon the foundation laid in the first-year curriculum. Students must take Evidence and Legal Ethics and Professionalism courses, a seminar course, and a legal practice course. Colorado Law encourages a balance between experiential learning and classroom studies, graded courses and non-graded courses, and study within and outside the law school.

Elective Courses

Business

Accounting Issues for Lawyers
Advanced Contracts: Commercial Transactions
Agency, Partnership, and the LLC
Antitrust
Bankruptcy
Business Planning
Business Transactions
Corporate Finance
Corporations
Creditors' Remedies and Debtors' Protection
Deals
Humanizing Contracts
Government Regulation of Business
Law Practice Management
Mergers, Acquisitions, and Reorganizations
Payment Systems
Secured Transactions
Securities Regulation

 Public Health Law and Ethics
 Securities Litigation and Enforcement
 Separation of Powers
 Tax Policy
 Theory of Punishment

Note: Not all courses are offered each semester. This is a composite list of the last three years of course offerings.

Experiential Learning

Experiential education encompasses lawyering activities in which students receive experience outside the classroom—clinics, externships, appellate and trial competitions, and voluntary public service work. Colorado Law's Experiential Learning Program gives greater coherence to our entire curriculum and builds linkages with faculty involved in experiential education and those involved in traditional classroom teaching.

Legal Clinics

Colorado Law's Clinical Education Program started in 1948 and now serves almost 900 clients each year. Clinics are courses that provide practical learning experiences for our students, much-needed assistance to those less fortunate in our community, and invaluable service to the public good. By handling actual cases, students make the transition from legal theory to legal practice, enabling them to take classroom knowledge and turn it into real-world understanding. Under the supervision of expert clinical faculty, student practitioners take primary responsibility for understanding the goals of their clients, and working to represent those clients' interests persuasively and competently. Clinics are available to all interested students.

- Juvenile Law Clinic
- Natural Resources Litigation Clinic
- Technology Law and Policy Clinic

Public Service Pledge Program

Colorado Law is a public institution with a public spirit. The faculty and the students have a passion and deep appreciation of a lawyer's civic responsibilities to serve the underprivileged and the community. Students who complete a voluntary pledge of at least 50 hours of law-related public service work, not for credit or other compensation, receive recognition on their transcripts. Such service provides students with valuable skills and values, such as legal research and writing, client interviewing, and legal argument development. Students can perform pro bono work for any government agency engaged in legal work (administrative agencies, public defenders, district attorney offices, and judiciary), nonprofit that provides legal services, public interest law firm, or private firm with pro bono projects.

Trial Advocacy and Moot Court

Appellate advocacy, mock trials, and moot court competitions help to develop skills in appellate brief writing and oral argument, and gain valuable trial practice experience. Colorado Law teams have consistently been extremely competitive and participate in and host more competitions each year. Coaching and support come from an experienced group of faculty, fellow students, alumni who recently competed, and judges and lawyers in the community. Students may earn academic credit for their participation.

Externships

Students may gain academic credit for performing substantive legal work with government agencies, public interest institutions, private non-profits, and other private-sector employers such as a law firms. Students develop professional lawyering skills, gain insight into various aspects of the legal system and profession, and cultivate a sense of professional responsibility. While uncompensated, students receive credit hours (1 credit hour per 50 hours of work) toward their degrees.

Research Centers

Colorado Law's centers have earned national prominence for their research, publications, and leading conferences that debate legal and policy issues, foster practical solutions and innovative ideas, facilitate networking, and produce scholarship. Students are an integral part of the centers. Students may work as volunteers, externs, or research assistants on research projects, reports, newsletters, and events. In addition, students will have unique access to national and local policymakers, researchers, scientists, entrepreneurs, and legal practitioners in many areas of the law.

- **Byron R. White Center for the Study of American Constitutional Law.** Named in honor of the retired Supreme Court Justice and CU alumnus, the center was founded in 1990 to enhance the study and teaching of Constitutional law and stimulate public debate and understanding of our Constitutional system. Each year, the center gathers politicians, academics, and practitioners for the Ira C. Rothgerber, Jr. Conference. Recent topics have included home rule, reapportioning Colorado, state initiatives, academic freedom, and conscience and the free exercise of religion.
- **Center for Energy and Environmental Security.** As a nonpartisan forum, this center develops innovative ideas dealing with energy and environmental security issues through interdisciplinary research and policy. It moves beyond research to create practical real-world strategies and solutions that address local, state, national, and international issues. Major projects include EnergyPledges (a global watchdog for international sustainable energy commitments), President's Climate Action Plan, Colorado Energy Profile, Energy Justice Fuel for Life addressing indoor pollution from burning biomass for cooking and heating and new technologies, and Capital Solutions for a Sustainable Future, which is an interactive legal information website to facilitate clean-energy technology exchange between the United States and India.
- **Natural Resources Law Center.** Founded in 1982, the center promotes intellectual discourse over critical natural resources law and policy problems to foster practical and effective solutions. Research projects bring an academic focus to real-life issues and typically lead to publications that inform and influence policy-makers to promote better decisions. Major projects include The WesternWater Policy Program to assure adequate water supplies, The Red Lodge Clearinghouse website for information to solve natural resources law and policy problems, The Public Comment Project that has students draft comments and participate in public meetings and hearings, and Best Management Practices for Oil and Gas Surface Use.
- **Silicon Flatirons Center for Law, Technology, and Entrepreneurship.** The center is nationally recognized as a telecommunications law powerhouse. It hosts leading technology policy conferences with legal, technical, regulatory, and business experts to elevate the debate around technology policy issues, facilitate networking, and develop "human capital" in the Colorado technology community. Students assist on major research projects including the Software Regulation Clearing House and help organize 15–20 events a year on topics such as digital broadband migration, entrepreneurial law and startups, new technology, business plan competition, private equity, software patents, and regulatory law and economics.

Student Life

Students who choose the University of Colorado Law School generally seek the very best all-around legal education combined with a great location, a supportive community, top specialties, interdisciplinary study, dedicated faculty, a public service tradition, and so much more. Colorado Law is distinguished by the extraordinary quality of its students. As a competitively selective school, its students rank in the top tier, represent a rich blend of geographic and ethnic backgrounds, and bring experiences of leadership, career achievement, and community service. Although competitiveness among students with such elite qualifications is typical, our students have a proud history of putting collegiality first.

Commitment to Diversity

Colorado Law is proud to have been one of the earliest law schools in the nation to graduate lawyers of color. The first students of color entered the University of Colorado Law School in 1898 and the first woman graduated in 1908. Colorado Law's commitment to diversity is evident throughout the Law School. We seek students with not only the academic credentials to excel in a rigorous legal education program, but also a desire to join a diverse community of future lawyers committed to the service of others. Student organizations offer support and networking opportunities. For first-year students, the Office of Career Development developed a diversity mentor program and supports the Colorado Pledge to Diversity Summer Clerkship Program for summer associate positions.

Journals

Colorado Law is home to three nationally respected student-led law journals. These journals provide legal research, writing, editorial, and publishing experience to competitively chosen second- and third-year law students, with a select number of third-year students serving as prestigious Editorial Board members. Subscribers include government agencies, judicial courts, law school and government libraries, judges, attorneys, faculty, and alumni.

- *Colorado Journal of International Environmental Law and Policy*
- *Journal on Telecommunications & High Technology Law*

Student Organizations

Colorado Law's student organizations reflect the diverse interests and concerns of its active student body. Students increase their knowledge in specific areas, gain leadership experience, and work closely with fellow students, faculty, alumni, and legal professionals with similar passions. The Student Bar Association serves as the school's student government, represents the interests of law students generally, allocates funding to other organizations, and administers the school's honor code with the Honor Council.

Honor System

Members of the legal profession are held to the highest standards of ethical and professional conduct, and Law School faculty and students are expected to maintain the same level of professional competence and integrity in their work. The Colorado Law School Honor Code, subscribed to by all students, is a system of rules administered by student officers and demands the highest ethical conduct. Law students have considerable individual freedom and responsibilities, such as being able to take unproctored exams.

Career Development

Colorado Law prepares students for a wide variety of careers. The Office of Career Development offers students and alumni individualized career counseling and professional development advice to help them identify and achieve their career goals. The office has career counselors with JDs who have more than 30 years of law practice experience. It maintains state-of-the-art career development and job search resources and helps students prepare for and pursue job opportunities during and after law school.

Services and Programs

- **Career Counseling:** Each first-year student meets with a career counselor who helps with résumés and job search action plans.
- **Employer Outreach:** Counselors conduct extensive employer outreach in- and out-of-state.
- **Career Fairs/Symposia:** The office organizes employer networking opportunities on and off campus.
- **On-Campus Interviews:** Each year, nearly 70 employers come on campus to interview students for summer clerkships, internships, and associate attorney positions with law firms and government agencies.
- **Résumé Collections:** Resumes from interested students are sent to in- and out-of-state employers.
- **Brown Bag Speaker Series:** Practicing attorneys from the local and national legal community are regularly invited to speak

to students during weekly lunch-hour informational sessions about what it's like to work in a variety of legal areas.

- **Job Postings:** Through a secure web-based system, students and alumni can review current job listings and an online resources library.
- **Mock Interviews:** Counselors set up appointments with students for practice interviews with the counselors or with volunteer attorneys. Students receive tips and feedback to help them improve.
- **Referrals:** Counselors help students connect with alumni and other legal professionals as resources for information about a field or practice area of law in Colorado or any other part of the country or world.
- **Mentoring and Community Involvement:** The office regularly helps students get involved in the legal community by referring them to mentor programs (including the Student Alumni Mentoring Program), bar associations, Inns of Court, and other law-related organizations.

Job Opportunities

Colorado Law helps students pursue numerous job opportunities and helps connect them to valuable part-time and permanent legal positions, including:

- **Externships** are for students working unpaid in the legal community for academic credit, under the supervision of a field and faculty supervisor.
- **Internships** are paid or voluntary student positions with law firms, corporations, government agencies, judges, and public interest organizations.
- **Honors programs** are prestigious programs for students and graduates to work within federal government agencies.
- **Judicial clerkships** are prestigious paid positions for new graduates working for judges in federal, state, and appellate trial courts.
- **Summer law clerks** are paid part-time or full-time for first- or second-year students in law firms and other organizations.
- **Fellowships** provide funding for law students and graduates to work with public service organizations or academic programs.

Employment during Law School

The study of law is demanding and requires the highest level of concentration. Most students devote 50–70 hours a week to class time and study. Therefore, it is Colorado Law's policy that students may not accept employment during the critical first two semesters. After that, students may be employed for no more than 20 hours per week when enrolled in more than 12 credit hours, in accordance with ABA Rule 304(f).

JD Admissions and Financial Aid

Admission Standards

Above all, Colorado Law values leadership, character, diversity, and commitment to service in its students. The small size of the Law School—about 170 in each entering class—and the large number of applicants require a very selective admissions process. Admissions decisions are based on many factors, including undergraduate grade point average (GPA) and the Law School Admissions Test (LSAT) score, and take into account other indicators of ability, motivation, and achievement as well. In the

faculty's judgment, a diverse student body improves the educational experience of all students.

Application Process

The **Early Decision** application process is for prospective law students who know that Colorado Law is the school they wish to attend. Candidates who apply under this option are expected to enroll at Colorado Law if offered admission. Early Decision applications are accepted starting October 1, and all materials must be received by November 15 for the application to be reviewed for early decision. Early Decision applicants will receive a decision in early January. Those students who are not admitted through this process will automatically be considered again as part of the regular admission process.

Regular admission applications with all required materials should be submitted starting October 1 and no later than March 15. Find complete application instructions at www.lsac.org and on the Colorado Law website. The Admissions Committee considers regular decision applications beginning in December. Applicants are notified by letter of decisions from mid-January until the class is filled in May. Admission from the waitlist, which is not ranked, can occur as late as July and the number of offers varies from year to year.

International Students

International applicants have additional requirements as explained on the school's website, including transcripts showing completion of the equivalent of an American bachelor's degree, foreign degree verification, and transcript translation, if applicable. The TOEFL is required of all students whose native language is not English, as a thorough and excellent command of written and spoken English is crucial to success in law school. After admissions, international students must submit a financial affidavit stating that they have the financial resources to support themselves while attending school in the United States, since the Colorado Law cannot offer loan assistance to international students.

Transfer Students

Students who have completed at least one full year of study (approximately 30 semester credits) at a law school accredited by the American Bar Association may apply for fall transfer admission to Colorado Law. Applications for fall enrollment are accepted after May 1 and must be received by July 1. The number of transfer students admitted varies each year, and only those who have done very well in their law studies elsewhere have a substantial chance of admission.

Visiting Students

Colorado Law admits some students who are receiving their law degree from another law school to study here for the fall or spring semester. Admission as a visiting student is available to applicants who have completed one or two years of high-quality work at another law school and have demonstrated a compelling need to attend Colorado Law. Financial aid for visiting students is usually handled by a consortium agreement between Colorado Law and the degree-granting institution.

Financial Aid

All admission decisions are made without regard to students' financial need. Every attempt is made to provide full financial assistance through federal and private educational loans, grants, work-study, and scholarships. Students applying for financial aid, private law scholarships, or grants based on financial need

must complete the Free Application for Federal Student Aid (FAFSA, www.fafsa.ed.gov) and submit it to the processor as soon as possible after January 1. The priority FAFSA filing deadline is April 1. Eligible students are awarded Federal Direct Stafford/Ford Loans up to a maximum of \$20,500 per year. Graduate PLUS loans are available to students when financial need exceeds Stafford loan limits. Graduate PLUS loans are federally guaranteed, but unlike Stafford loans, they have good credit requirements for borrowers. Private alternative law loan programs have interest rates and fees that vary according to the lender, the credit rating of the student, and whether there is a co-signer. Both loan fees and interest rates may be higher than those of the Stafford Direct loans and there is no cap in interest rates.

Scholarships, Fellowships, and Awards

A number of scholarships, fellowships, and awards are given annually on a competitive basis for academic and financial considerations. All admitted first-year students are considered for scholarships, as recipients are selected by the Admissions and Financial Aid Committee after an offer of admission has been made. It is possible for scholarships to be awarded through August. Colorado Law also offers scholarship money to second-year and third-year students each spring. These scholarships are awarded based on academic performance and other criteria, such as economic need and demonstration of assistance in advancing the diversity of the student body.

Family Educational Rights and Privacy Act

The Family Educational Rights and Privacy Act (FERPA) affords certain rights with respect to a student's education records. Copies of the policy are available in the Wise Law Library and the Rules of the Law School on the website.

Faculty

NORMAN F. AARONSON, clinical professor emeritus.

J. BRAD BERNTHAL, associate clinical professor. BA, University of Kansas; JD, University of Colorado.

College of Music

Daniel P. Sher, dean

301 UCB • phone: 303-492-6352 • fax: 303-492-5619
school website: music.colorado.edu

THE COLLEGE OF MUSIC provides specialized training designed to prepare students for a variety of careers in music. The college offers three undergraduate degrees, two certificate programs, and four graduate degrees; numerous performance opportunities are also available.

Established by the Regents of the University of Colorado in 1920, the College of Music is a fully accredited member of the National Association of Schools of Music.

Mission

The mission of the College of Music at CU-Boulder is to promote excellence in music through distinguished instruction in performance, composition, musicology, theory and teacher preparation, and to provide opportunities for performance, creative activities, research and scholarship, and teaching.

The college is dedicated to:

- providing music majors the opportunity to develop their knowledge, understanding, and ability in the various aspects of music;
- preparing students for careers as performers, composers, scholars, teachers, administrators, and other professionals in the field of music;
- broadening and deepening the knowledge and understanding of music through research, teaching, creative activities, and publication; and
- enriching the lives of students and faculty as well as the community, state, nation, and the world with a variety of performances and publications.

The College of Music is an academic community committed to maintaining a climate of mutual respect and collegiality showing appreciation for a diversity of musical cultures and individual backgrounds.

The widely varied functions of music in the world today present many challenging and interesting opportunities for teachers, performers, creative artists, technicians, and commercial personnel. While these different pursuits require specialized emphases, the faculty of the College of Music recognize the musical and educational experiences that are common to all. Therefore, each curriculum of the College of Music is designed to present music as an integrated whole. Solo performance and technique, ensemble performance, historical and theoretical studies, concert and recital opportunities, and elective courses both inside and outside the college are intended to give students a balanced approach to musical understanding and musicianship.

The college maintains a ratio of approximately one faculty member for every 10 students. This enables students to benefit from dynamic, personal interaction with their professors. The

college also offers students regular academic advising to ensure that they complete their degrees without unnecessary delay.

In addition to training in the various professions of music, the college provides general music studies and activities for the non-major; broad cultural programs (concerts, recitals, lectures) for the university and Boulder communities; favorable conditions for research in music; and service activities to the state and nation.

Major Fields and Degrees

Undergraduate degrees include the bachelor of music (BM), the bachelor of arts in music (BA), and the bachelor of music education (BME). Students may also elect to earn a certificate in jazz studies or music technology in conjunction with their degree. In addition to a substantial core of studies in music, the BA in music program allows a wide choice of study in areas outside of music. BM areas of concentration include: composition, musicology, performance, and jazz studies. The major emphasis areas in the BME program are: choral, choral-general, instrumental, and instrumental-general.

Incoming freshmen and transfer students in the College of Music are normally declared as music majors before or at the beginning of their first semester. There is no minor in music.

Qualified students may receive both the bachelor of music and bachelor of music education degrees by taking the required extra work (approximately 30 additional semester credit hours). Intent to be admitted to candidacy for both degrees should be indicated as soon as possible, preferably by the end of the sophomore year. Students may also pursue double degrees in music and an outside field such as engineering, business, etc. Questions may be directed to the associate dean for undergraduate studies, College of Music, **303-735-2283**, or ugradmus@colorado.edu.

Graduate degrees include the master of music (MM), the master of music education (MME), doctor of musical arts (DMA), and doctor of philosophy (PhD). Major fields in the master of music and doctor of musical arts degrees are conducting, composition, music theory (MM only), jazz studies, pedagogy, and performance. The master of music education degree is designed to provide advanced instruction for teachers in the elementary and secondary schools. The PhD is a research degree for the fields of musicology and music education.

Graduate degrees are offered through the Graduate School and additional information can be found in the Graduate School section as well as in the curricula listed for the college. Correspondence regarding details not included in this publication should be directed to the associate dean for graduate studies, **303-492-2207** or gradmusic@colorado.edu.

Facilities

The College of Music has several beautiful performance halls, including the 2,000-seat Macky Auditorium, the 500-seat Grusin Music Hall, the 270-seat Music Theatre, and the 120-seat Chamber Hall. The college is located primarily in the Warner Imig Music Building, a large complex of practice rooms, faculty studios, offices, ensemble rehearsal areas, seminar facilities, and classrooms. An addition to the east side of the building features a 4,300 square foot rehearsal space with a 35-foot ceiling and acoustical draping. Additional rehearsal and classroom facilities are located in Macky.

The college's outstanding Howard B. Waltz Music Library is considered to be among the nation's most comprehensive. The library contains over 150,000 volumes, scores, recordings, and periodicals. Computerized facilities are provided for listening to recordings and practicing ear training. Computer terminals are available for computer-based reference searching. The Music Library also includes the American Music Research Center, a unique facility dedicated to the discovery of new information about American music. The center sponsors concerts and scholarly activities and serves as an archive for several extensive collections of American music.

The college also features extensive facilities for music technology and electronic music study. The Computer-Assisted Music Laboratories (I and II) are multi-purpose labs designed primarily for classroom instruction. They feature numerous workstations, each with a Musical Instrument Digital Interface, sampling keyboard, and a computer. The CRUNCH lab is a fully-featured electronic music project studio. This lab is optimized for computer music research (including live interactive performance systems), as well as sound recording and editing projects and audio/video production. The Class Piano laboratory is equipped with 12 digital pianos.

Performances

Each year the College of Music presents over 400 concerts by students, faculty, and guests. In addition to individual musical pursuits, students at all levels have the opportunity to perform in a variety of outstanding ensembles including orchestras, choirs, bands, world music ensembles, chamber and early music groups, jazz ensembles and combos, opera productions, and musicals. Many of these groups have been invited to perform at prestigious national and international events. Recitals by students and faculty are supplemented by visits from world-class guest artists, all of which provide the Boulder community with the chance to hear some of the finest music being performed today. The vast majority of these excellent performances are free and open to the public. Other programs presented by CU Concerts include: the Artist Series, CU Opera, Takács Encore Series, and the Holiday Festival. For a schedule of all College of Music performances, call 303-492-8008 or visit cupresents.org.

Student Organizations

The student body of the College of Music has its own government, represented by the College of Music Student Union and the Graduate Music Student Council. Honorary music fraternities are Sigma Alpha Iota and Kappa Kappa Psi. Pi Kappa Lambda, the national scholastic honorary music fraternity, is also an active organization on campus. Music education majors are eligible for membership in student chapters of the Na-

tional Association for Music Education (MENC), the American Choral Directors Association, and the American String Teachers Association.

Entrepreneurship Center

The Entrepreneurship Center for Music helps students think creatively about using their talents and interests in the music industry. The traditional job choices for music students—teaching and performing—are only two of the hundreds of employment options in the \$40 billion global music industry. The center helps students develop an entrepreneurial spirit through specialized courses, guest speakers, workshops, and individual appointments to discuss career options. The internship program provides valuable experience outside of the classroom in arts organizations around the country. More information about the center is available at www.ec4music.com.

Academic Excellence

Dean's Honor Roll

A full-time undergraduate student in the College of Music who has completed at least 24 credit hours of course work by the end of the spring semester on the Boulder campus (excluding continuing education), and who earned a semester grade point average of at least 3.700, will be included in the college dean's honor roll for that semester. Notation of the "Dean's Honor Roll" is also listed in the Honors Convocation Program.

Honors at Graduation

Students achieving a cumulative GPA of 3.700–3.790 (honors), 3.800–3.890 (high honors), and 3.900–4.000 (highest honors) are recognized at commencement.

Scholarships and Awards

A number of scholarships and awards are designed specifically for students in the College of Music (see below). Undergraduate music majors are eligible for scholarships or renewal of their scholarships as long as they make satisfactory musical progress in their major as determined by the faculty in jury exams and auditions, and maintain a minimum cumulative GPA of 3.000.

Graduate students must enroll as full-time students, maintaining a 3.000 GPA, and make adequate progress toward their degrees. The college offers approximately 70 graduate assistantships as well as graduate fellowships, and a variety of endowed scholarships for graduate students (included below.)

- Nancy and Ted Anderson Music Awards
- Beckie Reeder Arnold Piano Scholarship
- Joyce Mata Ashley Scholarship Fund in Music Education
- The Bagley Prize
- Frank W. Baird Trumpet Scholarship
- John W. (Jack) Bartram Memorial Scholarship
- Bettina Baruch Foundation Scholarship for Winds
- Virginia Blake Becker Flute Scholarship
- Darrell and Lauren Boyle Music Theatre Scholarship
- Dewitt and Billie Brennan Music Fund
- Charles Byers Choral Music Education Scholarship
- Rebecca Beardmore Chavez Scholarship Fund
- Herbert T. Clark Memorial Scholarship
- William Clendenin Music History Scholarship
- Berton Coffin Scholarships in Voice
- Arline P. Cohen Scholarship
- Walter and Jenny Kate Collins Memorial Graduate Fellowship in Choral Studies

Sue Conrad and C. Dickson Titus Memorial Fund
 Viola Vestal Coulter Foundation Voice Scholarship in Honor of
 Harold A. Norblom
 Wilma and Perry Louis Cunningham Scholarship in Voice
 Frank and Gina Day Music Scholarship
 Denver Lyric Opera Guild Scholarship
 Barbara M. Doscher Memorial Voice Scholarship
 Robert A. and Louise P. Dudley Scholarship for Horn
 Edith E. Edwards Scholarship in Music
 Cecil Effinger Fellowship in Composition
 Dorothea Eldridge Music Fund
 Ewing Memorial Music Scholarship
 Robert R. Fink Undergraduate Scholarship in Music Theory
 Wallace F. Fiske Performance Awards
 James M. Grossi Composition Scholarship
 Charles Haertling Piano Scholarship
 Jessie and Albert Henry Memorial Scholarship
 Everett J. Hilty Carillon Fellowship
 Everett J. Hilty, Sr. Fund
 Bernice Holic Piano Scholarship
 Warner and Norma Imig Choral Conducting Scholarship
 Dennis Jackson Opera Scholarship
 Freelyn Jeffers Award in Choral Conducting
 Dale R. Johnson Opera Scholarship
 Donald L. and Maria A. Johnson Music Awards
 Denés Koromzay String Chamber Music Award
 George Lynn Memorial Scholarship
 Alice Mason Memorial Scholarship
 Scott Robert McBurney Memorial Scholarship in Piano
 McDowell Opera Endowment
 Robert K. McIntosh Fund for Music Instruction for Disadvantaged
 Children
 Claudia Boettcher Merthan Vocal Scholarship
 Trudi Mielziner Graduate Opera Scholarship
 Mile High Band Music Education Scholarship
 Noris Graduate Piano Award
 O'Neal Taniguchi Music Entrepreneurship Fund
 Gabor Ormai String Scholarship
 Phyllis and Paul Parmelee Memorial Piano Scholarship
 Denby and Georgia L. Peebles Memorial Fund
 Percy-Roth Memorial Scholarship
 John N. Parsons Musicology Fund
 Theodore Presser Academic/Performance Award
 Gregory Philip Ranno Excellence in Music Scholarship
 Charlotte Orr Reid Memorial Voice Scholarship
 Anthony and Dorothy Riddle Lyric Theatre Performance Prize
 Walter Orr Roberts Music Scholarship
 William Earl Rose, Sr. Scholarship Fund
 Robin Sawhill Award for Excellence in Piano Performance
 Charles Sawtelle Memorial Music Scholarship in Jazz Studies
 Virginia Schwatel Fund for Music Education

 Galen and Ada Belle Files Spencer Fellowship in Voice
 Starling Foundation Graduate Violin Award
 Peter and Julianne Steinhauer AMRC Scholarship in honor of
 Wayne Scott
 Crick Streamer Memorial Scholarship
 Beth Suits CU Opera Endowment
 Takács Scholarship Endowment in Memory of Fay Shwayder
 Takács Society String Scholarship
 Jean L. and Jack C. Thompson Jazz Endowment Fund
 Louise Touhy Music Scholarship
 Gloria and Martin Trotsky Music Scholarships
 Howard B. Waltz Scholarship
 Judith Richardson Waterman Choral Music Education Scholarships
 Katherine Anne Suber Whiton Memorial Scholarship in String Bass

Lynn Whitten Fellowship in Graduate Choral Conducting
 Brownlow V. Wilson Music Education Scholarship
 Wright Endowment for Colorado Light Opera
 Paula Marie and H. Rolan Zick Endowment

Academic Standards

Academic Ethics

Students are expected to conduct themselves in accordance with the highest standards of honesty and integrity. Cheating, plagiarism, illegitimate possession and disposition of examinations, alteration, forgery, or falsification of official records, and similar acts or the attempt to engage in such acts are grounds for suspension or expulsion from the university.

In particular, students are advised that plagiarism consists of any act involving the offering of the work of someone else as their own. It is recommended that students consult with their instructors as to the proper preparation of reports, papers, etc., in order to avoid this and similar offenses. Students are expected to be acquainted with and abide by provisions of the University of Colorado Boulder Honor Code.

Scholastic Requirements

To remain in good academic standing, a student must maintain at least a 2.000 cumulative grade point average (GPA) and make satisfactory progress toward the degree as defined by the College of Music and area faculty.

Academic probation is an official warning that a student's grades are unsatisfactory. Any undergraduate student who has a cumulative or semester grade point average below 2.000 is automatically placed on probation for the following three semesters. (Cumulative grade point average is calculated on grades earned at this university.) If a probationary student's grade point averages (semester and cumulative) at the end of any probationary semester and the cumulative probationary period are not 2.000 or above, automatic suspension results. Any undergraduate student who has a cumulative or semester grade point average below 1.000 also is automatically suspended without a probationary period.

While on suspension, students may not register for regular day classes during the fall or spring semester on any CU campus and are not considered eligible for graduation. To regain good academic standing, suspended students must earn a semester GPA of 2.000 or higher and raise their cumulative GPA to 2.000 or above during the following term by successfully completing at least 12 credits (with no withdrawals, no incomplete grades, and no courses taken *pass/fail*) through continuing education or summer session classes. The Division of Continuing Education and Professional Studies (303-492-5148) should be contacted for more information.

Courses taken at other campuses or institutions will not be used for purposes of reinstatement, but credits earned may be transferred according to normal procedures and policies after reinstatement and readmission. Suspended students who raise their cumulative GPA to 2.000 or above may then petition for readmission and receive a personal hearing before the associate dean. Suspended students who do not raise their cumulative GPA to 2.000 or above are dismissed from the college and university. Students who have been dismissed must reapply for admission to the university after being reinstated by the college.

Undergraduate music majors are eligible for scholarships or renewal of their scholarships as long as they make satisfactory progress in their major (as determined by the faculty), demonstrate satisfactory proficiency in jury exams and auditions, en-

roll in ensemble, and maintain a minimum cumulative GPA of 3.000. Students who have a cumulative GPA below 3.000 will be placed on scholarship probation for a maximum of two semesters (consecutive or cumulative), provided the GPA improves each semester. Students on scholarship probation who do not earn a cumulative GPA of 3.000 or higher by the end of the probationary period will have their scholarships revoked.

Appeals

Students have the right to appeal decisions of academic dishonesty and to petition for exceptions to the academic policies stated in this catalog. Appeals should be directed to the Office of the Dean. College of Music policies stated below are in addition to the campus policies.

Undergraduate Admission and Enrollment Policies

Admission Requirements

In addition to the entrance requirements of the university outlined in Undergraduate Admission in the General Information section, freshman and transfer students must meet College of Music entrance requirements. Successful College of Music applicants have extensive prior experience in music (including private study), the ability to read and sight-read music notation, an understanding of music fundamentals or basic music theory, and elementary piano skills. Students with appropriate skill in piano sight reading and keyboard harmony may be able to test out of all or part of the secondary (class) piano requirement included in their degree plan.

Auditions

An audition is required for all prospective undergraduate music majors. Undergraduate auditions are held in Boulder on selected Saturdays in January and February. Alternate audition dates may also be scheduled if necessary. If travel distance is prohibitive, prospective students may substitute a high-quality recording. Applicants should identify themselves by name and list selections and titles at the beginning of the recording. In order for students to be fully considered for financial assistance, live auditions should be completed and recordings should be received by February 15. Students should prepare a 10–20 minute audition program in accordance with the audition requirements that are listed on the College of Music website: music.colorado.edu/apply/undergraduate/audition-information.

Contact the Undergraduate Office at 303-735-2283 or ugradmus@colorado.edu for more information.

Admissions decisions for music education applicants are based on academic qualifications, audition results, and an interview conducted by two or more music education faculty members. Interviews address written and verbal communication skills, motivation and goals related to music teaching, prior music teaching experiences, and affective characteristics associated with effective music teachers. For information about music education interviews, contact Margaret Berg, music education chair, at 303-735-5301 or margaret.berg@colorado.edu.

Provisional Admission

Applicants who meet all admission requirements except the minimum academic preparation standards (MAPS) may petition the associate dean for undergraduate studies for admission as a provisional student.

Transfer Students

Transfer students from within the university and from other universities must meet the general requirements of the university and the specific requirements of the College of Music, including the audition. See Undergraduate Admission in the General Information section for specific requirements.

Nondegree Students

With the written permission of the instructor and on a space available basis, nondegree students may take any class offered by the College of Music except private applied instruction.

Attendance Requirements

Successful work in the College of Music is dependent on regular attendance in all classes. At the beginning of each semester, instructors will inform students of policies governing grading and attendance in each class. Students are expected to attend classes and comply with the attendance requirements specified by their instructors. For ensembles and other performance classes, attendance at dress rehearsals, major concerts, and other approved/sanctioned performances, as listed in the course syllabus, also is required.

Convocations and Recitals

All degree students are required to pass Music Convocation (CONV 1990) for a minimum of six semesters. Transfer students normally do four semesters. Graduation is not permitted until this requirement is met. If necessary, students may register for two convocations in one semester (CONV 1990 and 2990.) Discrepancies concerning convocation credit should be resolved within one year of the semester in question.

Each semester, students are given a list of convocations and recitals from which a minimum of seven must be attended to receive a passing grade. Events in which the student participates do not count toward this requirement. Monitors are present at each event to distribute and collect attendance slips. Students are encouraged to keep their copies of attendance slips for verification.

Ensembles

All undergraduate students enrolled in applied music must participate in a university ensemble appropriate to and required by their degree program. (Students enrolled in Conducting courses must concurrently be enrolled in a conducted ensemble.) Voice performance majors are not required to be in ensembles during the semester of their senior recital, and bachelor of music education students are exempt from ensemble participation during the student teaching semester. Any student who studies applied music beyond degree requirements must participate concurrently in a university ensemble. Double majors need be in only one ensemble at a time.

Sophomore Proficiency

Students must pass a variety of jury tests and proficiency exams during their degree work. Each applied area has different requirements, so students need to consult the chair of their area and/or studio professor. However, all students must pass a sophomore proficiency exam. Students who cannot pass this exam receive an incomplete grade and cannot progress to the junior level of applied study until the proficiency is achieved. Studio professors provide students with proficiency and repertoire requirements.

Course Load

The normal academic load for an undergraduate student in the College of Music is 15–17 semester hours. Schedules of fewer than 12 or more than 19 hours must have approval of the associate dean for undergraduate studies of the College of Music.

See limitations on registration under the Graduate School section for graduate student course load stipulations.

Dropping a Course

Students should adhere to the deadlines for dropping a course in the registration handbook distributed each semester. After a certain date each semester, a special action form signed by the instructor and associate dean for undergraduate studies is required to drop a course.

Pass/Fail Option

The *pass/fail* option for 12 credits is open only to undergraduate students. Music education students may only use the *pass/fail* option for student teaching. *Pass/fail* hours are to be selected from nonmusic courses and are in addition to those that may be taken in honors. Courses so elected are taken according to the *pass/fail* policies of the college or school concerned.

Pass/fail hours that transfer students can apply toward degree requirements from departments within the university are limited to 1 in every 8 semester hours earned in the College of Music.

Residence Requirement

Of the hours required for an undergraduate degree, the last 56 credits must be completed in residence in the College of Music. This may be reduced by the faculty for excellent work done in this university and for high scholarship exhibited at previous institutions attended. In no case shall the minimum be fewer than 40 hours distributed over three semesters. At least 9 hours in applied music (private instruction) must be earned in this college for the degrees bachelor of music and bachelor of music education, and 6 hours for the bachelor of arts in music.

Student Work

A copy of all scholarly student papers that generate credit (dissertations, theses, projects, lecture recitals, and other document-producing activities), whether undergraduate or graduate, is placed in the Music Library. More than one copy may be required in individual degree programs. To ensure that degree requirements have been met and the document is appropriate for placement in the Music Library, all faculty-approved documents must be presented to the appropriate associate dean's office at least two weeks before the graduation date.

Any recital required for graduation is recorded. Arrangements are to be made through the College of Music Concerts Office, and a recording fee is charged. The original recording is placed in the Music Library.

Stay Connected Program/Withdrawal

The online Schedule of Courses indicates the deadlines for withdrawal from the university and the financial penalties incurred with each. Students wishing to withdraw or apply to the Stay Connected Program should follow appropriate university guidelines (contact the office of the registrar or the associate dean of music). Those who stop attending class without officially withdrawing will receive *Fs* in each of their courses.

Undergraduate Degree Programs

The degrees bachelor of arts in music, bachelor of music, and bachelor of music education are granted by the university, upon recommendation of the faculty of the College of Music, to those who have successfully completed prescribed requirements.

Students must complete graduation forms and schedule a final checkout appointment by December 15 for May/August graduation and by October 1 for December graduation.

General Education in Music

The undergraduate degrees in music emphasize knowledge and awareness of:

- solo performance and technique, including the various musical styles used in compositions for students' musical instruments or voice;
- each composition performed, notation and editorial signs used in the compositions performed, and repertoire for the students' performance medium;
- ensemble performance, including familiarity with major composers in the student's performance medium and the techniques necessary to blend a number of individual musicians into an ensemble;
- concert and recital opportunities, including literature composed for different performance forces;
- theoretical studies, including tonal harmony, counterpoint, voice-leading, and notation; formal principles and analytical techniques for tonal music; and instruments in score, including the concert pitch of transposing instruments and nomenclature used in scores; and
- historical studies, including representative works in the canon of musical literature from chant to the present, the general outlines of the history of music from the Middle Ages to the present, music in the United States, and musical cultures other than those of Europe.

In addition, students completing any of the degrees in music are expected to acquire the ability to:

- perform solo and ensemble repertoire demonstrating musical artistry, technical proficiency, and stylistic understanding;
- demonstrate an understanding of theoretical studies, including sight-reading and ear training; and
- demonstrate an understanding of historical studies including the analysis of stylistic periods and music of non-Western cultures.

Double-Degree Programs

Students may complete requirements in two fields and receive two degrees from the university. Such double-degree programs are available combining music with business, engineering, journalism and mass communication, or disciplines in the College of Arts and Sciences. Students must make application for a double-degree program in both the College of Music and the Leeds School of Business, the College of Engineering and Applied Science, the School of Journalism and Mass Communication, or the College of Arts and Sciences. Any other combined program must be arranged by consulting both schools or colleges.

Bachelor of Arts in Music

The bachelor of arts in music degree has as its goal a broad education in music within a liberal arts context. Although students may elect to pursue special interests, the primary emphasis is on the development of basic musicianship, an ability to perform music, and a broad knowledge of the foundations and principles of music as an art. The bachelor of arts in music may be completed with or without an emphasis in musicology and world musics.

Students may elect to pursue a degree in a nonmusic field in addition to a music degree. This is most often done with a BA in music; double degrees typically require more than four years to complete.

A minimum of 120 semester hours with an overall GPA of 2.000 must be earned for the BA in music degree. Of these hours, at least 68 (66 for musicology emphasis) must be in non-music courses. Thirty must be at the 3000 or 4000 level. A minimum of 44 hours (50 for musicology emphasis) is required in music courses.

The normal pattern for private applied instruction in this degree is one half-hour lesson per week for 2 semester hours of credit. Not more than 16 semester hours (12 for musicology emphasis) of credit in private instruction may be used toward the degree.

Students registered for applied music must participate in an ensemble as recommended by their applied faculty. A maximum of 4 credit hours (6 for musicology emphasis) in ensemble can apply to the BA in music degree.

A recital may be given with permission of the chair of the applied faculty area and the student's advisor.

Minimum Requirements

In addition to the general requirements listed above, the following specific requirements must be met:

1. Three credits of English composition.
2. Basic proficiency in one foreign language equal to three semesters at the university level. This requirement also may be fulfilled by three years of study in high school in one language or by passing a university proficiency examination.
3. Nonmusic electives to fulfill the minimum requirement of 68 semester hours of credit. Of the nonmusic electives, 37 semester hours of credit must be fulfilled through the College of Arts and Sciences core curriculum. The arts and sciences core curriculum for the BA degree includes:

- 3 credit hours of written communication
- 3 credit hours of historical context
- 3 credit hours of culture/gender diversity
- 3 credit hours of United States context
- 3 credit hours of contemporary societies
- 3 credit hours of ideas and values
- 6 credit hours of literature and the arts
- 13 credit hours of natural science

Courses and Curricula

For the BA in music degree, students must complete the courses listed below. More detail is given on the degree sheet available from the associate dean of undergraduate studies.

Bachelor of Arts in Music

<i>Required Courses</i>	<i>Semester Hours</i>
Freshman Year	
CONV 1990 Convocation (two semesters)	0
MUSC 1101, 1111 Theory 1 and 2.	4

MUSC 1121, 1131 Aural Skills 1 and 2	2

Nonmusic electives	20

Bachelor of Music

The four-year professional curriculum leading to the bachelor of music degree emphasizes creative skill, academic achievement, and artistic performance in music. Concentration areas are offered in performance, composition, musicology, and jazz studies. Performance areas include voice, piano, jazz piano, organ, string instruments, classical guitar, woodwinds, brass, and percussion.

A half recital in the junior year and a full recital in the senior year are required of students in the performance concentration areas, except voice theatre. Students should check with their advisor about preview policies.

A thesis is required of students in the composition and musicology areas. For composition students, the thesis should be an original composition; for musicology students, a major paper. Students should check with their advisor for details.

A senior project is required of students in the voice theatre area. This project may be a senior recital, major role, or direction or design of a major show.

Specific performance group requirements are controlled by the degree plan in each concentration area and are subject to the advisor's judgment in the best interest of the student.

The bachelor of music degrees include requirements in theory, history, and literature of music. Elective study in most degrees requires 30 nonmusic credits, including 3 in English composition, and 12 free electives that may be music or non-music courses. A suggested course sequence is shown below. (More detail is given on the degree sheets available from the associate dean for undergraduate studies.)

Written Communication

Students pursuing the bachelor of music degree will be required to take one 3-hour course in English composition through the Program for Writing and Rhetoric or the English department. Courses such as First-Year Writing and Rhetoric, Freshman Writing Seminar, or Introduction to Creative Writing fulfill the requirement. The credit hours are applied in the liberal arts electives category. Students are strongly encouraged to complete this requirement by the end of their freshman year.

Courses and Curricula

All degrees require 120 credit hours.

Brass and Percussion Performance Concentration Area

Bachelor of Music Education

The purpose of the four-year professional program leading to the bachelor of music education (BME) degree is to prepare students to teach music in elementary and secondary schools. Students completing this degree program qualify for a Colorado K–12 music teaching license. Students also may apply for teaching licenses in other states that have reciprocity agreements with Colorado.

Because of the varying challenges and opportunities associated with teaching music in K–12 school contexts, the undergraduate music education curriculum strikes a balance between specialization and generalization. BME students must demonstrate a sufficiently broad knowledge of the entire music program/curriculum, but also possess the specialized skills necessary to be a successful general music, choir, orchestra, or band instructor.

Courses and Curricula

Four basic curricular options are provided for students pursuing the bachelor of music education degree: choral, choral-general, instrumental, and instrumental-general emphases. The choral-general and instrumental-general emphases include a larger concentration of course work and field experiences related to elementary general music teaching, while the choral and instrumental emphases involve more specialized course work and field experiences related to the teaching of choir, orchestra, or band classes at the secondary level. Within each degree emphasis, students have a limited number of elective credits that may be used to further customize degree work according to their interests and needs.

As first-year students, BME students complete core studies in music and liberal arts. The first music education courses and early field experiences are completed during the sophomore year. During the junior year, students enroll in capstone methods courses and specialized electives that allow for more detailed and sustained study of curricular models, instructional materials, and teaching methods. Internships and full-time student teaching provide culminating experiences during the senior year, as students work in partnership with experienced public school teachers and assume the role and responsibilities of a professional music educator. Internship and student teaching placements are chosen in consultation with faculty advisors and the music education chair.

Degree Requirements

A minimum of 126 semester hours with a cumulative GPA of 2.750 must be earned for the BME degree, with no grade below C- in a course. In addition to 40 semester hours of teacher education course work and 150 clock hours of early field experience, music education majors complete 24 semester hours in liberal arts disciplines (English composition, literature and arts, mathematics, social sciences, natural sciences) and 62 hours in music (music theory and aural skills, musicology and ethnomusicology, applied study, ensemble, keyboard and voice, and conducting). Core requirements in liberal arts and music are designated by the College of Music curriculum committee.

Admission to the Teacher Education Program

Teacher education is a campuswide function at the University of Colorado. Admission to the music education program in the College of Music does not constitute admission to the teacher education program. Students must apply to the School of Education through the music education chair no later than the second semester of the junior year or by the time 65 credits have been completed toward the BME degree (including approved transfer credits). Students may not register for certain education courses and student teaching until they are admitted to the teacher education program.

Requirements for recommended admission to the teacher education program are:

1. Minimum GPA of 3.000 in music and music education, and a minimum cumulative GPA of 2.750.
2. Minimum grade of C- in MUSC 2103.
3. Twenty-five hours of documented, supervised field experience.
4. Satisfactory functional piano ability as demonstrated by passing the proficiency examination or completing prescribed course work.
5. Satisfactory performance ability as demonstrated by meeting the sophomore proficiency requirements in an applied area of study.
6. Recommendation by the music education faculty. An interview with each student is held by the members of the music education faculty during the first semester of the sophomore year to review the student's progress and qualifications for admission to the teacher education program.

For further information, please refer to the *Handbook for Undergraduate Studies in Music Education*, which can be obtained in the undergraduate studies office.

Student Teaching

Students wishing to receive a student teaching assignment must complete an application and submit it to the School of Education through the chair of the music education faculty early in the semester preceding the student teaching semester. Prerequisites for student teaching are:

1. Admission to the teacher education program.
2. A minimum GPA of 3.000 in music and music education, and a minimum cumulative GPA of 2.750.
3. Completion of all required music education and education courses in the music education curriculum.
4. Satisfactory performance ability as demonstrated by passing the junior recital.
5. Passing score on the PLACE Music Assessment.
6. Recommendation by the music education faculty.

Choral Music Emphasis

Students must take keyboard or voice as the primary applied area, or petition the music education faculty for an exception. A minimum of five of the seven semesters of required ensemble registration must be in a conducted choral ensemble (University Singers, University Choir, Collegiate Chorale, or Women's Chorus). For keyboard majors, two semesters of independent accompanying may be applied to the ensemble requirement. Students must be enrolled in a conducted choral ensemble when concurrently enrolled for Conducting.

<i>Required Courses</i>	<i>Semester Hours</i>

Undergraduate Certificate Programs

Certificate in Jazz Studies

The Jazz Program offers a Certificate in Jazz Studies for undergraduate music majors. The certificate program consists of an intense 18-hour curriculum in both academic and performance areas, concluding with a jazz recital. Courses include jazz theory and aural foundations, improvisation, history of jazz, scoring and arranging, jazz piano, jazz techniques for the music educator, jazz combo, and jazz ensemble.

Certificate in Music Technology

The certificate in music technology provides students with an opportunity to study music technology in greater depth than music degrees currently allow. This certificate program requires 18 credit hours, including five music technology courses, an interdisciplinary performance course, and an independent project (a composition, performance, or research project) under the supervision of a member of the Music Technology faculty. For more information, contact John Drumheller at drumhell@colorado.edu.

Graduate Degree Programs

All graduate degrees in music are granted by the Graduate School of the University of Colorado upon the recommendation of the faculty of the College of Music and approval by the administrative officers of the Graduate School. The information supplied here is supplemental to and must be read in conjunction with the information contained in the Graduate School section. Other information regarding rules applying to graduate degree students in music may be found in supplements to the catalog and in the Graduate Studies in Music Handbook, both available in the office of the College of Music's associate dean for graduate studies. This information can also be viewed online at music.colorado.edu/students/graduate/degrees.

Admission Requirements

Admission requirements for specific degree programs that supplement the Graduate School requirements are discussed in the degree program descriptions that follow. Students are urged to take the general (verbal, quantitative, analytical) portions of the Graduate Record Examination (GRE). GRE scores are required as part of the application to the PhD programs, and are recommended for the DMA, MM in music theory, and Master of Music Education degrees.

Preliminary Examinations

Just before the beginning of their first semester of work toward a master's or doctoral degree, students are given preliminary exams covering the major field, several areas of music theory, and music history. Specific requirements vary with the student's degree and program. Students pursuing the master's and doctoral degrees in voice also must pass proficiency requirements in piano and diction (English, French, German, and Italian).

Any deficiencies demonstrated by the preliminary examination scores must be removed early in the degree program. Application for candidacy and required examinations cannot be approved until deficiencies are removed. Thesis and dissertation projects may not be completed while preliminary examination deficiencies remain.

Results from the major-field examination serve as one basis for recommending specific course work in the program. The

major-field examination in musicology includes essay questions, score analysis, and identification of terms. Conducting majors should be knowledgeable in areas of repertoire, score analysis, and conducting techniques. Performance majors are examined in the areas of technique, repertoire, stylistically informed performance, and pedagogy. Students enrolled in the master's degree in Jazz Performance and Pedagogy must demonstrate knowledge of jazz theory and history, and jazz keyboard proficiency.

College Teaching Area

For graduate students in music who intend to teach at the college level and who have had no prior college teaching experience, a teaching module of at least 6 hours of courses is recommended. This module can consist of professional education courses, music education courses, teaching-skills courses, or teaching practica. The teaching-area module is not normally used toward the minimum 30-hour course requirement for master's or DMA programs. Workshops, videotaping of students' teaching, observation, and consultation services are available through CU's excellent Graduate Teacher Program. Students who participate in this program are eligible to receive a graduate teacher certificate. For more information, visit www.colorado.edu/gtp.

Financial Aid

In addition to the opportunities for financial aid described in the Graduate School section, the College of Music grants teaching assistantships and part-time instructorships to numerous graduate students each year. The assistantships and instructorships, which are usually one-quarter time, include both a stipend and the waiver of 5 or 6 credit hours of tuition each semester. There are also scholarships offered by the individual faculties, grants-in-aid given for various college-related responsibilities, and fellowships awarded through the Graduate School. All prospective students who have completed their applications by December 1 will automatically be considered for available scholarships, fellowships, and assistantships.

English Language Requirements

A student who is noticeably deficient in the use of the English language may not obtain an advanced degree from the University of Colorado. Satisfaction of this requirement depends not so much upon ability to pass formal tests, although these may be required, as upon the consistent use of good English in all oral and written work.

Graduate Auditions

Auditions are required for all performance and performance/pedagogy programs. A personal audition is strongly preferred, but students may be accepted into most programs by submitting a recorded audition. Note that some studios require a preliminary, recorded audition before a student may be invited to schedule an audition on campus. For specific information and audition dates, refer to the website (music.colorado.edu/apply/graduate/auditions-major-field-requirements) or contact the office of the associate dean for graduate studies at 303-492-2207 or gradmusic@colorado.edu.

Master of Music

The major fields for this degree are composition, conducting, music theory, performance, and the combined major of performance/pedagogy. Conducting students may concentrate in choral, orchestral, or wind symphony/band. Performance and performance/pedagogy majors may concentrate in brass instru-

ments, early keyboard, jazz, piano, percussion, organ, harpsichord, string instruments (including harp and guitar), voice, or woodwind instruments.

Major work in the conducting degrees includes advanced conducting, analytical studies, score reading, orchestration, arranging, conducting practica, and research and writing. In music theory, course work and two thesis papers are required. In pedagogy, courses in the psychology of music learning, the pedagogy and literature of one's performing area, and a written thesis are required. In performance, students complete applied study, recitals, and courses that investigate the repertoire of their performance areas. All master's degree students are required to take a course in bibliographic research and 6 credits outside their major area.

Brass, conducting, percussion, string, voice, and woodwind majors are required to participate in a music ensemble. Committee chairs advise students concerning the appropriate choice of ensemble.

Prerequisites

As noted in the Graduate School section, students should have completed undergraduate preparation equivalent to that expected for the bachelor's degree at this university. Normally this is a bachelor of music degree in the proposed area of concentration.

Before admission, composition majors should submit representative scores and recordings (CD format), and a list of completed compositions. Theory majors should submit two scholarly writing samples that demonstrate ability in critical analysis, appropriate research techniques, and skill in the cogent use of English. For further details, see the Application Process section of the website. Performance majors must submit a repertoire list and arrange for an audition, or submit a non-returnable recording of their performance. Conducting majors must submit a videotape or DVD of their performance. Refer to "Graduate Auditions" above for further details.

Program of Study

The master of music (MM) degree, which the Graduate School considers a Plan II program, requires a minimum of 30–32 semester hours of graduate course work, including thesis projects. Many students find it necessary to exceed this minimum in order to meet the musical and academic standards demanded by the MM qualifying examination. Outlines of specific programs may be obtained online at music.colorado.edu/students/graduate/degrees.

Each student's program is directed by a three-member advisory committee headed by the major advisor (the student's major professor). A second member is chosen from the major area, and a third from outside the major area. (The major areas are music education, musicology, music theory, composition, and performance.) By the second semester of residence, the student should complete a tentative degree plan and obtain the approval of the advisory committee and the associate dean for graduate studies. Students must complete the master's degree within four years of matriculation into the program.

Examinations

In addition to preliminary examinations, master's degree students in music must take the master's qualifying examination. The procedures, guidelines for registration, and deadlines for taking these examinations are announced by the Music Graduate Office.

Recital/Thesis Requirements

The recital/thesis requirement for the MM in composition is the composition (during the period of graduate study) of several works of major proportion, at least one of which must receive public performance. For the major in conducting, the requirement is a public practicum and a performance-related or other scholarly document. For the major in music theory, it is two thesis papers. For the major in performance, presentation of two public recitals constitute the requirement. For the major in performance and pedagogy, a full-length recital and a research document in pedagogy are required.

Master of Music Education

The master of music education (MME) program addresses the professional development needs of music teachers in the field. Master of music education students are challenged to develop a greater understanding and mastery of music teaching-learning processes, to improve personal musicianship, and to become committed leaders within the music education profession.

Prerequisites

Applicants are expected to provide evidence of undergraduate preparation equivalent to that required for the bachelor of music education degree at this university. Applicants also must possess a music teaching certificate/license or agree to work toward a Colorado music teaching license. GRE scores are not required for admission, but can be helpful in determining merit-based financial aid. Individuals who wish to pursue music performance or conducting as their minor field must demonstrate at least senior-level proficiency on their particular medium, through an audition.

Program of Study

Students earning the MME degree must complete a minimum of 30 hours of course work, including 12 hours in music education, 12 hours in music, and 6 hours of electives in a specialization area or other areas of interest. Of the 12 hours in music, a two-hour course in bibliography and research is required as well as six hours of study in a minor area, which includes musicology, music theory, or performance (including conducting and jazz studies).

The music component of the degree should assist students in developing their musical knowledge and skills. One member of the student's graduate advisory committee should be from the minor area, and it is assumed that at least some part of the student's study is with that faculty member. All music studies must be at the 5000-level or above. Under special circumstances, up to 6 credit hours at the 4000-level may be applied to the open electives portion of the degree.

As a master of music education degree candidate, each student must produce a culminating paper that focuses on a topic of vital interest or importance. This paper may be developed as part of the requirements for a music education course or may take the form of a master's thesis. Culminating papers or theses are defended during final oral examinations.

Students typically complete the degree in two academic years, or one academic year plus two summers. Degree work must be completed within four years of the semester in which the student is accepted into a degree program and begins studies. Because most master's-level music education courses are offered in late afternoons, students who live within commuting distance can earn a significant portion of credit toward the degree while continuing to work full time.

Dual Master's Degree Program

Students may apply for a dual master's degree that incorporates any two master's programs in the College of Music. They must be accepted into both programs through the normal application process. The full complement of courses in the major area of each degree program, and nonthesis courses common to both programs may be counted for each. A minimum of 45 credit hours must be earned. For most students, it is preferable to pursue the DMA or PhD degree after completing a master's degree, rather than to pursue a dual master's degree.

Professional Certificate in String Quartet Performance

The Professional Certificate in String Quartet Performance is designed to provide instruction and experiences for young artists who have already completed a master's degree or its equivalent in performance. Students are generally accepted into the certificate program as part of a pre-formed string quartet, which will apply for admission into the College of Music graduate program as a unit.

Professional Certificate in Opera and Solo Vocal Performance

This program provides instruction and experiences for a select number of young artists, most of whom have already completed a master's degree in performance. Participants in the certificate program will concentrate significantly on the performance aspect of their work. This program is considered a path to a specialized career in solo vocal performance.

Professional Certificate in Woodwind Performance

This program is designed to emphasize performance experiences for truly outstanding young artists who have already completed a master's degree or its equivalent in woodwind performance. The professional certificate is intended for students who plan on careers in performance and admission and is highly selective.

Doctor of Musical Arts

The doctor of musical arts (DMA) is a professional degree for creative and performing students who possess the talent as well as the breadth of knowledge, background, outlook, and scholarly capacity requisite to a doctoral program. Fields of study are composition, instrumental conducting and literature, and performance of choral music, performance, and performance/pedagogy. Performance and/or performance/pedagogy concentration areas are brass instruments, guitar, harpsichord, organ, percussion, piano, string instruments, voice, and woodwind instruments. Outlines of specific programs may be obtained online at music.colorado.edu/students/graduate/degrees and from the office of the associate dean for graduate studies.

Prerequisites

Entrance requirements include a master's degree in music or demonstrated background comparable to that of the master of music degree at this university. All graduate applicants must complete an audition, interview, or some other demonstration of their ability in the major field. If at all possible, a visit to the campus is strongly encouraged. As part of the application, composition majors should submit representative scores and recordings (CD format), and a list of completed compositions. Performance majors should submit a repertoire list and arrange

for a personal audition and interview, if at all possible. (Some areas require applicants to send a pre-audition screening recording of their performance.) Conducting majors must submit a DVD of their performance. All DMA applicants must also submit a scholarly writing sample that demonstrates ability in critical thinking, appropriate research techniques, and skill in the cogent use of English. Full details concerning audition and application requirements may be found online at music.colorado.edu/apply/graduate.

Program Requirements

The following program description supplements the requirements applying to all graduate students found in the Graduate School section and in the introductory section on Graduate Degree Programs in this College of Music section. Information on quality of work, credit by transfer, application for admission to candidacy, comprehensive examination, and final examination found under the PhD description is applicable to the DMA degree. DMA degree work must be completed within six years of first registration.

Advisory Committee. Each DMA program is directed by a five-member advisory committee headed by the major advisor, who is usually the student's main studio teacher. At least one member must hold the PhD degree.

Residence Requirements. The minimum residence requirement is six semesters of work beyond the attainment of an acceptable bachelor's degree. Two semesters of residence credit may be allowed for a master's degree from another institution of approved standing, but at least four semesters of residence credit, two of which must be consecutive in one academic year, must be earned for course work and/or dissertation work taken at this university.

Not more than one-half semester of residence credit may be earned in a summer session. Students must be registered full-time to earn residence credit. For employed students, only those with one-fourth time or less in work that does not contribute directly to their degree program may earn full residence credit.

Continuous Registration. After the residence requirements for the doctor of musical arts program have been satisfied, a student must enroll for fall and spring semesters of each year until attaining the degree. If a student has enrolled in all required dissertation courses but has still to complete the work, he or she should enroll in TMUS 8019 Precandidate for Doctor of Musical Arts Degree, or TMUS 8029 Candidate for Doctor of Musical Arts Degree, until the degree is completed.

Degree Plan. A degree plan approved by the advisory committee will be presented to the associate dean for graduate studies no later than the second semester of residence. The student's major professor is responsible for helping the student formulate this plan. The plan should include designated members of the student's doctoral committee, projected remedial and supporting course work, proposed dissertation projects, and tentative dates for the comprehensive and final examinations.

Language Requirement. Each DMA student must satisfy a foreign language requirement, and the one foreign language used to satisfy the requirement must be approved by the student's advisory committee. Additional language work is required for voice students. Advanced competence in music technology may be approved as an alternative to the foreign language requirement. Appropriate courses and projects are prescribed by the college's music technology faculty. International students whose native language is not English are exempt from the requirement.

Course Requirements. Students must take a minimum of 30 hours of course work, of which at least 18 hours are dissertation projects. Students take two doctoral topic classes, preferably one each in musicology and music theory; prerequisites are stipulated by the theory and musicology faculties. Some areas require specific course work prior to or in conjunction with work on dissertation projects. In other instances students may be advised to take course work in preparation for the comprehensive examination. Applied music instruction may be elected for the duration of the residency requirement.

Dissertation. The DMA dissertation consists of a specified number of performances, projects, and documents. The student's permanent advisory committee must approve all dissertation projects. Dissertation requirements for the various majors differ somewhat, and individual instances may require that the permanent advisory committee adjust dissertation requirements to the student's artistic and educational needs.

Doctor of Philosophy

The doctor of philosophy (PhD) in music degree is offered through the Graduate School for students who seek a terminal degree with an emphasis on research. The two principal areas of study are music education and musicology (including ethnomusicology).

Prerequisites

Students applying to the PhD program should have a bachelor's degree or equivalent in a music field related to their intended area of study. Applicants for the PhD with an emphasis in music education should hold an MME degree. Letters of recommendation, representative research papers, and satisfactory scores on the GRE (the general test) are required elements of the student's application for the degree. Upon entrance to the degree program, students must pass the preliminary examinations and begin working toward basic requirements.

Music Transfer Credit

Graduate credit of high quality taken at another institution may be accepted for transfer once a student has established a satisfactory record of residence at CU. Transfer credit is limited to 21 semester hours where a grade of B- or higher was received. All requests for credit transfer must be approved by the chair of the respective faculty unit, the associate dean for graduate studies in music, and other university officers as specified on the transfer credit application form. Transfer credit will not affect the residency or dissertation credit-hour requirement.

Residence Requirement

The minimum residence requirement for the PhD is 6 semesters of full-time study beyond the attainment of an acceptable bachelor's degree. Two semesters of residence credit may be allowed for a master's degree from another institution of approved standing. At least 4 semesters of residence credit, two of which must be consecutive in one academic year, must be earned for work taken at CU-Boulder.

Doctor of Philosophy—Musicology

For the musicology student, the doctor of philosophy in music degree is intended to emphasize research in music history, music theory, ethnomusicology, or some other aspect of music in culture. The musicology faculty encourages students entering the graduate program, whether from the bachelor's or master's level, to pursue the PhD, the benchmark of professional

education within the field. A minimum of 30 semester hours in courses numbered at 5000 or above is required (although the minimum number is almost always exceeded). At least 4 doctoral seminars (7000 level) in musicology and music theory (3 plus 1, 1 plus 3, or 2 plus 2) must be taken at the University of Colorado Boulder as part of this course work. Up to 21 semester hours of graduate work taken at another institution may be considered for transfer. The College of Music requires proficiency in two foreign languages appropriate to the student's program of study. Normally the language requirement is met by a translation examination scheduled twice a semester through the graduate music office.

Dissertation Requirements

A student must complete a total of at least 30 credit hours of dissertation credit (beyond course work), with not more than 10 of these hours in any one semester. Furthermore, not more than 10 hours of dissertation credit earned prior to a student's advancement to candidacy may be applied toward the required 30 credit hours. The dissertation itself should be an original and worthwhile contribution to knowledge in the field of musicology. It is expected that the student work closely with a major professor who will serve as the first reader and critic before it is submitted to the other dissertation committee members.

Doctor of Philosophy—Music Education

The doctor of philosophy degree in music, with music education as a field of specialization, is offered through the Graduate School for students who demonstrate both superior commitment to the music education profession as well as scholarly potential. This degree program requires that individuals think abstractly, generalize knowledge, apply research results to areas of specialization, and communicate effectively in both oral and written forms. Course work emphasizes the study of historical, philosophical, psychological, and sociological foundations of music education; the theoretical and pedagogical principles of music teaching and learning; curriculum development; testing and assessment; and research techniques. Graduates typically pursue careers in music education at the college level or supervisory positions in elementary and secondary schools.

Course Work

A minimum of 45 semester hours of courses numbered 5000-level or above (15 of which may be transferred from the master's degree) and a minimum of 30 hours of doctoral dissertation credit are required for the PhD degree.

Dissertation Requirements

A dissertation based on original investigation, demonstrating mature scholarship, must be completed by each candidate. Following the successful completion of the comprehensive examination, the student designates a dissertation committee, develops a dissertation prospectus, and presents it to the committee for approval. After the dissertation has been accepted, a final oral examination on the dissertation and related topics is conducted by the student's dissertation committee.

Faculty—College of Music

DANIEL SHER, dean; professor (piano). BM, Oberlin College Conservatory of Music; MS, Juilliard School; EdD, Columbia University.

PHILIP AAHOLM, professor emeritus

KWASI AMPENE, associate professor (ethnomusicology). Diploma, University of Ghana; MM, West Virginia University; PhD, University of Pittsburgh.

JAMES R. AUSTIN, associate dean for undergraduate studies, professor (music education). BME, University of North Dakota; MAEd, PhD, University of Iowa.

LINA BAHN, assistant professor (violin). BM, Juilliard School; MM, University of Michigan; DMA, Indiana University.

GRETCHEN HIERONYMUS BEALL, professor emerita.

MARGARET BERG, associate professor (music education). BS, Case Western Reserve University; BM, Cleveland Institute of Music; MME, University of Cincinnati; PhD, Northwestern University.

GIORA BERNSTEIN, professor emeritus.

DANA BIGGS, assistant director marching band (instructor). BM, University of Kentucky, Lexington; MM, Eastern Kentucky University, Richmond; DMA, University of Kentucky, Lexington.

JAMES BRODY, associate professor (oboe). BM, Ohio State University; MM, Indiana University.

STEVEN M. BRUNS, associate dean for graduate studies, associate professor (theory/composition). BME, Northern State College, Aberdeen, SD; MM, PhD, University of Wisconsin, Madison.

JOEL BURCHAM, assistant professor (voice). BM, Southern Illinois University; MM, University of Arkansas—Fayetteville; DMA, ABD, University of Wisconsin—Madison.

CARLO CABALLERO, associate professor (musicology). BA, Pomona College; PhD, University of Pennsylvania.

NICHOLAS CARTHY, associate professor (opera). Studies at the Guildhall School of Music and the Mozarteum Salzburg.

PHILIP CHANG, instructor (music theory). BA, Florida State University; MA, PhD, Eastman School of Music.

JOAN CATONI CONLON, professor emerita.

PETER COOPER, instructor (oboe). BM, Northwestern University.

ANDREW COOPERSTOCK, professor (piano). BM, University of Cincinnati; MM, Juilliard School; DMA, Peabody Conservatory of Music.

DAVID CORBUS, instructor (jazz guitar). BM, New York University.

ALEJANDRO CREMASCHI, associate professor (piano pedagogy). BA, University of Maryland, Baltimore County; MM, DMA, University of Minnesota, Twin Cities.

JOHN DAVIS, associate professor (jazz studies). BA, Metropolitan State College; MM, University of Denver; DA, University of Northern Colorado.

JOHN DRUMHELLER, instructor (theory/composition). BME, Montana State University; MM, DMA, University of Colorado Boulder.

J. MICHAEL DUNN, associate professor (tuba). BS, Tennessee Technological University; MM, DMA, Arizona State University.

CHARLES EAKIN, professor emeritus.

ERIKA ECKERT, associate professor (viola). BM, Eastman School of Music.

OLIVER ELLSWORTH, professor emeritus.

AKIRA ENDO, professor emeritus.

PAUL ERHARD, associate professor (double bass). BM, Eastman School of Music; MM, DMA, Juilliard School.

ELIZABETH FARR, professor (organ, harpsichord). BM, Stetson University; MM, Juilliard School; DMA, University of Michigan.

ROBERT FINK, dean emeritus and professor emeritus.

JOHN GALM, professor emeritus.

JUDITH GLYDE, professor (cello). BM, Hartt College of Music; MM, Manhattan School of Music.

BRADLEY M. GOODE, associate professor (jazz trumpet). BM, University of Kentucky; MM, DePaul University.

LUIS GONZALEZ, professor emeritus.

LARRY GRAHAM, professor emeritus.

JOHN GUNTHER, assistant professor (jazz studies, saxophone). BM, MA, Berklee College of Music; MA, University of Miami.

KEVIN HARBISON, professional exempt (recording technology). BM, Cleveland Institute of Music.

JANET HARRIMAN, instructor (harp). BM, College of Wooster; MM, Cleveland Institute of Music.

KUNIAKI HATA, professor emeritus.

DEBORAH HAYES, professor emeritus.

ALLEN HERMANN, instructor (jazz trombone).

HSING AY HSU, instructor (artistic director, Pendulum: New Music at CU). BM, Juilliard School of Music; MM, Yale School of Music.

YOSHIYUKI ISHIKAWA, professor (bassoon). BME, MM, Northwestern University; DMA, University of Michigan.

MAMI ITASAKA, instructor (assistant director, Japanese ensemble). BA, English literature, Komazawa University, Tokyo.

DENNIS JACKSON, professor emeritus.

JEFF JENKINS, instructor (jazz piano).

CHRISTINA JENNINGS, assistant professor (flute). BM, MM, Juilliard School; DMA, Rice University.

LAWRENCE KAPTEIN, associate professor (choral). BME, Willamette University; MA, Portland State University; DMA, University of Southern California.

WILLIAM KEARNS, professor emeritus.

JAY KEISTER, associate professor (ethnomusicology). BA, California State University, Fullerton; MA, PhD, University of California, Los Angeles.

DANIEL KELLOGG, assistant professor (composition). BM, Curtis Institute of Music; MM, MMA, Yale School of Music.

DAVID KOREVAAR, associate professor (piano). BM, MM, DMA, Juilliard School.

IMADE LASMAWAN, instructor (director, gamelan ensemble). SMK, Skar, Indonesian Traditional Performing Arts College.

JONATHAN LEATHWOOD, instructor (guitar). BM, King's College; studies at University of Denver, University of Surrey.

DORIS PRIDONOFF LEHNERT, professor (piano). Attended University of Southern California, Juilliard School, and University of Connecticut.

OSWALD LEHNERT, professor (violin, viola). Special Studies, Chicago Musical College; Juilliard School, University of Connecticut.

DAPHNE LEONG, associate professor (theory). BM, University of Saskatchewan; MA, MM, PhD, Eastman School of Music.

GARY LEWIS, director of orchestras; professor. BME, University of Oklahoma; MM, Texas Tech University.

ALAN LUHRING, professor emeritus.

REBECCA MALOY, associate professor (musicology). BM, University of Illinois, Champaign-Urbana; MM, PhD, Cincinnati College Conservatory of Music.

PATRICK MASON, professor (voice). BM, Peabody Conservatory of Music, MM, University of Nebraska at Lincoln.

KEVIN MCCARTHY, professor emeritus.

MARGARET McDONALD, assistant professor (collaborative piano). BM, MM, University of Minnesota, Twin Cities.

ALLAN McMURRAY, director of bands; Robert and Judith Charles Professor (trumpet). BA, California State University, Long Beach; MM, University of Wisconsin. Additional study, University of Michigan.

PETER MIKSZA, assistant professor (music education). BM, College of New Jersey; MME, PhD, Indiana University.

MARTINA MIRANDA, associate professor (music education). BA, Trinity International University; MA, San Francisco State University; PhD, Musical Arts in Music Education, Arizona State University.

MUTSUMI MOTEKI, associate professor (vocal coach, accompanist). BA, Kunitachi College of Music; MM, Westminster Choir College; DM, University of Michigan.

TOM MYER, associate professor (saxophone). BS, University of Wisconsin-LaCrosse; MM, North Texas State University.

ALEXANDRA NGUYEN, assistant professor. BS, McGill University; DMA, MM, Eastman School of Music.

CARTER PANN, assistant professor (composition/theory). BM, Eastern School of Music; MM, DMA, University of Michigan.

PATTI PETERSON, associate professor (voice). BM, Salem College; MM, DMA, University of Colorado Boulder.

DAVID PINKOW, professor emeritus.

THOMAS RIIS, director, American Music Research Center; professor (musicology). BA, Oberlin College; MA, PhD, University of Michigan.

FRANCISCO RODRIGUEZ, instructor.

MATTHEW ROEDER, assistant professor, associate director of bands. BM in Music Education, Miami University; MM, Music Education/Conducting, Peabody Conservatory of Johns Hopkins University; DMA (wind conducting), University of Colorado Boulder.

PAUL ROMAINE, instructor (jazz, drum set). BS, University of Colorado Denver.

BRENDA ROMERO, associate professor (musicology, ethnomusicology). BM, MM, University of New Mexico; PhD, University of California, Los Angeles.

BARBARA KINSEY SABLE, professor emerita.

TERRY SAWCHUK, associate professor (trumpet). BM, MM, University of Michigan.

F. WAYNE SCOTT, professor emeritus.

DANIEL SILVER, associate professor (clarinet). BM, Northwestern University; MM, University of Michigan.

MARK SIMON, instructor (jazz bass).

JULIE SIMSON, professor (voice). BM, Western Michigan University; MM, University of Illinois.

JEREMY SMITH, associate professor (musicology). BA, Washington College; MFA, University of California, Irvine; PhD, University of California, Santa Barbara.

ROBERT SPILLMAN, professor emeritus.

WILLIAM STANLEY, associate professor (trombone). BME, University of Kansas; MM, DMA, University of Illinois.

MICHAEL THEODORE, associate professor (theory/composition). BA, Amherst College; MM, Yale School of Music; PhD, University of California, San Diego.

MICHAEL THORNTON, assistant professor (horn). BM, Temple University; additional studies at Manhattan School of Music and Juilliard School.

RICHARD TOENSING, professor emeritus.

DOUGLAS WALTER, professor (percussion). BM, University of North Texas; MM, University of Michigan; DMA, Temple University.

KEITH WATERS, associate professor (theory/composition). BM, University of North Carolina, Greensboro; MM, New England Conservatory of Music; PhD, Eastman School of Music.

SUSAN WILLIAMSON, assistant professor (music education). BME, Ball State University, MME, University of Colorado Boulder; PhD, University of Washington.

CHARLES WOLZIEN, professor emeritus.

CHRIS ZEMLAUSKAS, instructor (vocal coach, accompanist). BM, Ithaca College; MM, University of Minnesota.

Takács Quartet

EDWARD DUSINBERRE, artist in residence (violin). Performer's Diploma, London Royal College of Music; Advanced Certificate, Juilliard School.

ANDRAS FEJER, artist in residence (cello). Music Diploma, Franz Liszt Academy of Music, Budapest.

KAROLY SCHRANZ, artist in residence (violin). Music Diploma, Franz Liszt Academy of Music, Budapest.

GERALDINE WALTHER, artist in residence (viola). BM, Curtis Institute; MM, Manhattan School of Music.

Other Academic Programs

Continuing Education and Professional Studies

The mission of the Division of Continuing Education and Professional Studies is to provide quality, innovative, lifelong learning opportunities to a diverse student population by extending the educational resources of the University of Colorado Boulder. A variety of credit courses, noncredit programs, certificate programs, and seminars is offered through Continuing Education, which also administers CU-Boulder's summer session. Only university-approved faculty teach in Continuing Education programs.

The office is located at 1505 University Avenue in Boulder, 303-492-5148 (or 1-800-331-2801). The fax number is 303-492-5335, and the website is conted.colorado.edu.

Boulder Evening Credit Program

Offered in conjunction with CU-Boulder's academic departments, the Boulder Evening Program provides credit courses in the evening on the Boulder campus. These affordable, smaller-sized classes are provided through various departments including anthropology, communication, economics, English, film studies, art and art history, geography, mathematics, philosophy, psychology, sociology, Spanish, theatre, and more.

Independent Learning Program

The Independent Learning Program offers online and print correspondence courses representing and approved by more than 20 departments on campus. Term-based courses follow a traditional semester schedule and allow for rich interaction with the instructor and other classmates. Self-paced courses offer students the flexibility of progressing through the course at their own pace, and to finish in less than a full semester or take up to a full year.

Applied Music Program

The Applied Music Program offers students the opportunity to earn CU credit for beginning or continuing music lessons on guitar, piano, voice, organ, winds, brass, drums, percussion, or strings. Instruction is available in individual or group sessions depending on instrument.

Individualized Instruction

Individualized Instruction provides an opportunity for students to receive credit for university courses by meeting with faculty members outside the regular classroom setting. This option may be used when the student cannot reasonably be expected to enroll in the main campus course.

Center for Advanced Engineering and Technology Education (CAETE)

CAETE, a partnership between the College of Engineering and Applied Science and the Division of Continuing Education and Professional Studies, serves as the distance learning and professional studies arm of the college. CAETE provides graduate engineering and technical education and professional development for practicing engineers and managers of technology. Course sequences may lead to a master's degree in aerospace engineering, computer science, electrical and computer engineering, engineering management, or telecommunications. Elective courses are also offered in civil/environmental and mechanical engineering. Graduate certificates and short courses are available in some fields. CAETE also provides ongoing access to over 100 pre-recorded courses via its virtual library. These courses are available for academic course work, rental, or purchase by companies for in-house training.

ACCESS and High School Concurrent Programs

In conjunction with CU-Boulder academic departments, ACCESS (Available Credit Courses for Eligible Special Students) enables nondegree students to enroll in Boulder main campus undergraduate and graduate credit courses after most degree-seeking students have registered. Colorado high school juniors and seniors interested in the challenge of university course work may enroll in ACCESS as part of the High School Concurrent Program. In addition to earning college credit, students may also earn credit toward high school graduation requirements.

Extraordinary and Contract Credit Programs

Through Continuing Education, academic departments can offer special courses that target audiences both on and off campus and provide academic credit for those offerings. Once a course proposal is submitted, Continuing Education coordinates the approval process and provides administrative support to the course initiator. Programs initiated from outside the university community are also considered for approval as well as noncredit and certificate programs.

Noncredit

Noncredit offerings are designed to meet students' personal enrichment, career advancement, and educational interests. The program features short classes and one-day workshops for the community on the weekend in art and art history, foreign languages, writing, communication, theatre, career exploration, and science and society.

CU Complete

The goal of CU Complete is to assist former students in the completion of degrees they began at CU in the past. Advisors work with each student individually and offer a degree analysis, recommendations, resources, and assistance in completing remaining requirements.

Science Discovery

Science Discovery is a hands-on science, mathematics, and technology outreach program that serves over 1,500 teachers and 25,000 K–12 students each year. Its mission is to stimulate scientific interest, understanding, and literacy through the use of university resources and academic expertise. Core programs include over 500 annual classroom presentations throughout Colorado; approximately 200 summer and after-school classes for ages 4–14; a series of statewide professional development workshops for teachers; various one-day outdoor environmental education classes; and 8–10 weeklong summer wilderness camps for ages 8–16.

Executive Education Programs

Executive Education Programs is a partnership between the Leeds School of Business and the Division of Continuing Education and Professional Studies, offering certificate and custom programs. Executive Education offers professional development opportunities through programs such as the 50 for Colorado program for business professionals and the CU Business Intensive Certificate (CUBIC), which provides an intensive exposure to business education for nonbusiness undergraduate students.

International English Center

The International English Center (IEC) offers language learning, cultural adjustment, and academic preparation programs for international students planning to matriculate at universities and for members of the campus and local community with limited English proficiency. The IEC also contracts with corporate groups to provide language training and professional development courses.

Outreach: Reaching Off Campus and into Communities

Extending educational opportunities to the citizens of Colorado is a vital part of the university as well as the mission of the Division of Continuing Education and Professional Studies. CU-Boulder faculty and students provide a wide variety of outreach programs to communities across Colorado. These programs extend the scholarship of the faculty and the educational resources of the university and serve various educational, social, economic, and cultural needs. The division annually supports these efforts by designating funds for the CU-Boulder Outreach Committee along with contributions from the offices of the chancellor and the provost. The committee awards funding to faculty projects designed specifically for external audiences that highlight faculty research, creative work, and teaching. Projects feature an extensive range of disciplines, including everything from history, dance, and musical arts to physics, math, and engineering. Visit outreach.colorado.edu.

Summer Session and Maymester at CU-Boulder

Summer Session offers over 500 campus courses and enrolls about 8,000 students in a relaxed, comfortable learning environment. Online and on-campus courses are available. Courses are available to students who wish to enhance or accelerate their academic progress. Courses are also open to students visiting from other colleges, teachers, high school students, or others interested in pursuing their professional development or enrichment.

Maymester is a special three-week Summer Session term immediately following the end of spring semester. It provides intense, accelerated courses for those who need academic credits in an abbreviated time period.

Dean

ANNE HEINZ, dean of the Division of Continuing Education and Professional Studies; associate vice chancellor for summer session outreach and engagement. BS, Southern Illinois University; EdM, PhD, University of Illinois, Urbana-Champaign.

ARMANDO PARÉS, assistant dean of the Division of Continuing Education and Professional Studies. BS, University of Colorado Boulder; MPA, University of Colorado Denver.

Leadership, Certificate in the Study and Practice of

The certificate program in leadership development seeks to expand a student's capacity to be effective in leadership roles and opportunities during their time at CU and in their future professions. The program enhances a student's self-awareness, systemic thinking, creativity, and problem-solving skills. This development unfolds over a student's undergraduate career and is maximized by a variety of courses and experiences that challenge, support, and provide students with increased understanding of what they are learning and how it fits into the larger world. The Certificate in the Study and Practice of Leadership integrates the variety of experiences into a context that is likely to be useful when undertaking new leadership roles and responsibilities. Faculty and staff skilled at weaving those experiences and courses in connected and meaningful ways facilitate this developmental process.

A leadership certificate can enhance the undergraduate experience and better prepare students both as citizens and leaders in whatever profession they might seek to enter. The program recognizes the need for individuals to take leadership roles in all professions and sectors of society. It is the belief of the program that leadership can be learned in formal classes, community-based leadership opportunities, mentoring and internship settings, as well as through a range of collaborative leadership activities.

For more information about the Certificate in the Study and Practice of Leadership, see www.colorado.edu/chancellors/rap/lccert.html.

Program Requirements

This certificate program has an 18-credit-hour requirement comprised of lower- and upper-division courses. Undergraduate students working toward this certificate are usually affiliated with one of the following academic programs:

- Leadership Program at Williams Village (WV)
- Presidents Leadership Class (PLC)
- INVST Community Studies (INVST)
- ROTC programs

Each of these programs has defined particular academic courses within their programs to be certificate requirements. Students may also apply elective courses from other disciplines on campus toward the total credits required for the certificate. Students in the leadership programs at WV, PLC, and INVST programs are required to do an internship that is overseen by one of the program directors. Students in all four programs participate in either a four-credit-hour capstone course during their senior year or a capstone project mentored by their academic program director. To qualify for the certificate, students must maintain a 3.000 GPA in the required course work.

Leadership Program at Williams Village

For certificate requirements, see The Leadership Program at Williams Village in this section.

Presidents Leadership Class

PLC certificate requirements are listed under the Presidents Leadership Class in this section.

INVST Community Studies

Selection criteria govern admissions.

Four required theory courses plus community based service-learning experiences (18–24 credits).

Minimum of 15 hours of upper-division courses.

INVS 4932 Senior Capstone Course and/or Project.

Minimum total credit hours: 18 with a 3.000 GPA

Reserve Officer Training Corps Programs

Admission to CU-Boulder and ROTC required. (Some courses are open to all CU-Boulder students.)

Required summer field training program(s).

4–8 required courses in ROTC (12–22 hours).

Minimum of 15 hours of upper-division courses.

Additional courses from Recommended Leadership Courses to complete the 18-hour requirement.

Senior Capstone Course and/or Project (4 hours).

Minimum total credit hours: 18 with a 3.000 GPA.

The Capstone Course and Project

The capstone project is designed to synthesize the leadership work students have completed during their undergraduate studies. Together with the program's faculty, students design a format that demonstrates their cumulative learning and development and reflects their leadership abilities. Like oral examinations at the graduate level, these projects are an opportunity for students to present a body of work that demonstrates what they have learned as they address some of the critical questions associated with leadership development and their role as a leader in the 21st century.

In the capstone course, Critical Issues in Leadership, LDSP 4010 or PRLC 4010, students explore leadership issues across disciplines. Leadership education is multi-disciplinary and students need to know how to assess research and writing from different perspectives. Students read, discuss, and write critical evaluations of contemporary leadership theory from ethical, military, community building, and business perspectives.

Internships

Internships are an agreed-upon experience in a work setting that is driven by intentional learning goals and accompanied by sustained reflection. The internship provides students with an opportunity to apply the skills and knowledge gained through their leadership studies. During the semester students use the concepts

and theories learned in the classroom to analyze and understand the host organization. In addition, students are asked to reflect on the complexities of leadership and the personal challenges that they face in practicing and refining their own leadership skills.

The Leadership Residential Academic Program at Williams Village

The Leadership Residential Academic Program at Williams Village houses two academic programs for students with an interest in leadership studies: the Ethnic Living and Learning Community Leadership Studies Program (ELLC) and the Chancellor's Leadership Studies Program (CLSP).

Admission and Enrollment

Students select one of the leadership programs at Williams Village during the housing application process prior to beginning their freshman year. When students choose Williams Village as their residence hall they are given the option to enroll in one of these programs. Most participants reside at Williams Village.

The Ethnic Living and Learning Community Leadership Studies Program

The Ethnic Living and Learning Community Leadership Studies Program (ELLC) offers students a multicultural living and learning experience and the opportunity to study leadership from a multicultural and global perspective. Students are required to take a 3-credit-hour leadership course and the ELLC Practicum each semester of their freshman year. In these courses, students explore their roles and responsibilities in society including the moral and ethical dimensions of leadership. Students also learn about contemporary issues related to leadership and take part in activities that develop teamwork, ethical decision making, and problem solving. Credits earned from these courses may be applied toward graduation as well as a Certificate in the Study and Practice of Leadership.

ELLC Curriculum

Semester Hours

LDSP 1000 The Foundations of 21st Century Leadership (fall)	3
LDSP 2400 Understanding Privilege and Oppression in Contemporary Society (spring)	3
LDSP 2910 Field Practicum (1 credit each semester of freshman year).	1
LDSP 3100 Multicultural Leadership: Theories, Principles and Practices	3
LDSP 4010 Critical Issues in Leadership	4

Fees and Scholarship Opportunities

There is a \$725 program participation fee for the freshman year. Some scholarships to cover the fee are available for students with financial need. A LEAD Alliance scholarship of \$1,500 per year is also available to qualifying ELLC students. Additional information about this program can be found at www.colorado.edu/ellc.

The Chancellor's Leadership Studies Program

The Chancellor's Leadership Studies Program (CLSP) examines the academic foundations of leadership and engages students in practical applications of leadership through simulations and class projects. Utilizing an experiential learning model, students learn the basics of decision making, problem solving, dialogue skills, ethical reflection, and the abilities needed to lead in a global and multicultural world. Students take a required

3-credit-hour leadership course fall semester and must take at least one CLSP course in the spring. Credits earned from these courses may be applied toward graduation as well as a Certificate in the Study and Practice of Leadership.

<i>CLSP Curriculum</i>	<i>Semester Hours</i>
LDSP 1000 The Foundations of 21st Century Leadership (fall)	3
LDSP 1571 Topics in Leadership	1
LDSP 2400 Understanding Privilege and Oppression in Contemporary Society (spring)	3
LDSP 2910 Field Practicum	1
LDSP 3100 Multicultural Leadership: Theories, Principles and Practices . . .	3
LDSP 4010 Critical Issues in Leadership	4

Fees and Scholarship Opportunities

There is a \$725 program participation fee for the freshman year. Some scholarships to cover the fee are available for students with financial need. Additional information about this program can be found at www.colorado.edu/chancellorsrap.

Certificate in the Study and Practice of Leadership

ELLC and CLSP students who complete 10 credits of approved lower-division courses and 8 credit hours of approved upper-division courses with a 3.000 GPA as well as a pre-approved supervised internship are eligible to earn a Certificate in the Study and Practice of Leadership. The certificate is comparable to a minor in leadership studies and is noted on a student's transcript at graduation.

<i>Required Courses</i>	<i>Semester Hours</i>
Freshman Year	
LDSP 1000 The Foundations of 21st Century Leadership	3
LDSP 2400 Understanding Privilege and Oppression in Contemporary Society	3
Students must take 2 credits from the following courses. These classes are repeatable for credit:	
LDSP 1561 Compassionate Leadership and Mindfulness	1
LDSP 1571 Topics in Leadership	1
LDSP 2910 Field Practicum	1
Sophomore Year	
One approved lower-division elective.	3
Junior Year	
LDSP 3100 Multicultural Leadership: Theories, Principles, and Practices. . . .	3
One approved upper-division elective	1-3
Internship—can be completed during academic year or during the summer.	
Senior Year	
LDSP 4010 Critical Issues in Leadership	4

Norlin Scholars Program

The Norlin Scholars Program offers a range of educational benefits and financial incentives for outstanding students. Named after a distinguished former president of the University of Colorado, the Norlin Program includes a total of approximately 125 students.

Norlin scholars accepted as first-year students receive a four-year award, contingent upon fine academic progress. University juniors (either continuing students at CU-Boulder or transfer students) receive a two-year award.

Norlin scholars are encouraged to shape an enriched educational experience tailored to fit their interests and goals in any of CU-Boulder's undergraduate colleges and schools.

Some of the benefits of the program include:

- Small, interdisciplinary seminars, some of which fulfill arts and sciences core curriculum requirements. Whether 3-credit core classes or 1-credit electives, Norlin courses appeal to students from all colleges and disciplines and encourage critical engagement with a wide range of issues.
- Individualized advising and guidance toward creating an enriched education through honors courses, internships, study abroad, and more.
- Research and creative opportunities with faculty that augment the classroom experience and enhance students' academic credentials.
- Academic, cultural, and social experiences shared in a community of creative, intellectually engaged peers.

Financial Information

Each Norlin Scholar receives a merit-based award of \$3,000 per year with the potential for additional funding for enrichment projects. Students who need additional financial assistance should complete the FAFSA (Free Application for Federal Student Aid).

Applying to the Program

A flexible selection system ensures that students with many different interests and talents are accepted as Norlin Scholars. Students may apply either as high school seniors (to enter the program as incoming first-year students) or as second-semester sophomores in college (to enter the program as juniors). Colorado residents as well as out-of-state and foreign students are eligible.

Applicants must demonstrate exceptional achievement or creativity in their academic work or other areas.

All applicants should complete the special Norlin Scholars application form, write their individual essay and submit these pieces in a single application packet. Application forms can be downloaded directly from the website at www.colorado.edu/norlinscholars.

The deadline for receipt of the application materials is listed on the website. For first-year students and transfer students, the campus's standard application form must also be submitted separately to the Office of Admissions.

Preprofessional Programs

Preprofessional advising resources have been developed at CU-Boulder to help undergraduate students and previously graduated students prepare for later study at professional schools. Except for prejournalism, CU-Boulder does not offer preprofessional undergraduate majors or degrees. Completion of preprofessional prerequisites does not guarantee later admission to a professional school. However, preprofessional advisors are well-equipped to provide information about professional schools within Colorado and beyond, and can help students to prepare well for later professional study.

Prehealth Programs

Students can prepare to enter the undergraduate professional health science program at the Anschutz Medical Campus of University of Colorado Denver in the area of nursing by taking courses on the Boulder campus.

Students whose goals include entering the medical, dentistry, physical therapy, physician assistant, pharmacy, or public health programs and schools at the University of Colorado Denver, or the veterinary medicine or occupational therapy programs at

Colorado State University in Fort Collins, can complete any undergraduate major at CU-Boulder. In most cases, these students are required to complete a baccalaureate degree before entering professional school. In fact, a baccalaureate degree is recommended for most health professions.

At the time of application to a professional school, students are judged on several factors, including performance in undergraduate courses. For this reason, no required course may be taken on a *pass/fail* basis. Some fields require specific preprofessional examinations before application. For most fields, interviews are an essential part of the application process.

In all cases, admission committees are concerned with students' compassion, coping, and decision-making abilities, intellectual capabilities, realistic self-appraisal, sensitivity in interpersonal relations, and staying power (physical and motivational). In addition to formal course work, students should have experience in people-related activities (especially those related to their field of choice), so they can be more certain of their motivation for health careers. Also, health-related activities expose premed and other health science hopefuls to various patients and illnesses. The health professions require, or strongly recommend, such experience.

Some of the professional programs at the Anschutz Medical Campus give preference to Colorado residents and residents of WICHE (Western Interstate Commission on Higher Education) states; interested students should check with individual programs for specific policies. Students from other states usually can obtain at CU-Boulder the preprofessional courses required by their state schools, but should check with those schools in advance. Students are encouraged to apply to their state school, as well as to other public and private professional schools, to increase their chances of gaining acceptance to the professional program of their choice.

During the preprofessional years, personal intellectual development leads many students to change professional goals. Since there are usually more applicants for these programs than there are spaces available, many students need to pursue alternative goals. Under these circumstances, students should plan college programs to give themselves the greatest flexibility in considering other vocations.

Advising for preprofessional study in the health sciences is conducted through the Preprofessional Advising Office in the University Club. Check the prehealth advising website at www.colorado.edu/aac/prehealth.html for information on prerequisite courses, events, volunteer opportunities, student prehealth organizations, applications, and many other useful resources. Students should attend a prehealth advising session at orientation and then schedule an appointment with a prehealth advisor (aac.colorado.edu) early in their undergraduate careers to help plan course work and extracurricular experience in preparation for applying to programs of their choice. CU-Boulder also offers an extensive array of workshops and informational meetings, practice interviews, a fall speaker series, and a spring Health Professions Information Day.

Other Preprofessional Programs

Prejournalism

A specific prejournalism and mass communication option is offered at CU-Boulder in the College of Arts and Sciences. Students complete two prerequisite courses while working toward arts and sciences core curriculum requirements. See the School

of Journalism and Mass Communication at journalism.colorado.edu for more information.

Prelaw

Students who plan to apply to law school upon completing their baccalaureate degree do not have to complete any specific requirements for admission to law school. Instead, they should major in the discipline that best suits their intellectual interests and talents. Prelaw students should seek a rigorous and broad-based education that will ensure them a fundamental understanding of American society and its institutions. Students should become familiar with mathematical analysis and scientific reasoning, and develop excellent oral and written communication skills.

Prelaw advising is available in the Preprofessional Advising Center. In addition, there are faculty members who have special interest and expertise in the theoretical and practical aspects of the law and judicial systems. These faculty advisors are available for consultation with students on the CU-Boulder campus. Contact the Preprofessional Advising Center in Old Main 1B-90 for more information.

Presidents Leadership Class

The Presidents Leadership Class (PLC) is a specially designed academic curriculum that focuses on leadership development, personal development, and community service initiatives. Skills are developed in an interdisciplinary, experiential environment through exposure to government, education, the humanities, business, and science. Students from all of the schools and colleges participate in the Presidents Leadership Class curriculum as a part of their regular course work.

The Presidents Leadership Class is a program of CU-Boulder and the Presidents Leadership Institute, and is overseen by a Board of Trustees representing Colorado business, educational, nonprofit, and government communities.

Admission and Enrollment

Admission to the Presidents Leadership Class is considered one of the highest honors awarded to incoming University of Colorado Boulder students. Presidents Leadership Class students are admitted prior to the beginning of their first year. Selection criteria include academic excellence, demonstrated commitment outside of self, demonstrated leadership potential, and uniqueness of contribution. Each year, 50 first-year students are enrolled, comprising both Colorado residents and nonresidents. A separate admission application must be obtained from the PLC office and returned prior to February 1. Applications may be obtained by visiting the website at www.presidentsleadershipclass.org or by calling the PLC office at 303-492-4PLC.

Only students who are accepted into the Presidents Leadership Class are eligible to enroll in PLC courses. Students receive arts and sciences core credit in ideals and values for PRLC 1810 Leadership and Ethics, core credit in contemporary societies for PRLC 1820 Community Issues in Leadership, and core credit in upper-division critical thinking for LDSP 4010 Leadership Capstone.

Academic Program

Although there are many unique aspects of each leadership situation, leaders generally follow three basic steps when faced with a leadership situation: 1) try to get a read on the existing situation, 2) set a strategy to achieve a desired outcome, and 3) execute the strategy.

This fundamental human process—read, set, execute—has strong roots in basic psychological processes (i.e., stimulus, thought, response), but the steps can happen with varying degrees of quality. Because PLC's mission is to develop extraordinary leaders, research was done on the differences in quality between the read-set-execute process that ordinary leaders use and the read-set-execute process that extraordinary leaders use. The research determined that the routes to ordinary leadership are different than those to extraordinary leadership.

Extraordinary leaders need to read situations with insight, generate incisive strategy, and then execute with stunning results. The PLC Strategic Academic Plan is built upon developing six core leadership skills: information literacy, critical thinking, applied quantitative ability, writing, oratory, and group process. The six skills executed in an integrative manner provide the key fundamentals for students to read, set, and execute in an extraordinary manner.

For more information on the PLC Academic Plan and the research behind it, go to www.presidentsleadershipclass.org.

Required Courses:

PRLC 1810 Ethical Leadership
 PRLC 1820 Community Leadership
 PRLC 2810 Multilevel Leadership
 PRLC 3810 Global Leadership
 PRLC 4010 Leadership Capstone

University of Colorado Boulder Leadership Certificate

The University of Colorado Boulder offers a certificate in the Study and Practice of Leadership. The certificate is comparable to a minor in leadership studies and is permanently marked on the student's transcript to certify that he or she has completed a focus in leadership studies at the undergraduate level.

Certificate requirements are as follows:

- Complete a minimum of 12 credit hours of PRLC courses during year one and two of the program: PRLC 1810, PRLC 1820, PRLC 2820, PRLC 3810
- Complete a minimum of 4 credit hours of upper-division PRLC course work: LDSP 4010.
- Complete 3 additional credit hours of approved upper-division course work outside of PLC. Approved courses are listed at www.colorado.edu/chancellorsrap/lcelectives.html and a student may also petition to have an unlisted course accepted.
- Participation in practica and/or internships. These may be built into courses or conducted outside of courses.
- Receive an overall 3.000 average GPA for all required Leadership Certificate courses.

Scholarship Programs and Opportunities

PLC students receive a merit-based scholarship of \$1,000 to over \$12,000 (dependent upon participation). Students must enroll in PRLC course work to maintain their scholarship.

Scholars are also eligible to be selected for a variety of other merit-based scholarships only available to PLC students, including the FirstBank Colorado Scholarship Fund (base scholarship of \$6,000 plus additional funding depending on endowment earnings), the Alvin G. Flanigan Scholarship Fund (annual \$1,000 minimum awards), the Walker Family Scholarship Fund (annual \$500 minimum awards), the Michael Lee Hoelscher Memorial Scholarship (annual \$2,000 award), the Jamie Hallum Memorial Scholarship (annual \$2,000 award), and additional scholarships available only to the Presidents Leadership Class Scholars.

Faculty

ANGELA THIEMAN-DINO, academic director. BA, MA, PhD, University of Colorado Boulder.

ALICE SWANSON, associate director. BA, Western Kentucky University.

BRIAN BAGLEY, instructor. BA, Brigham University; MBA, JD, University of Colorado Boulder.

GORDON RIGGLE, instructor. BA, Lafayette College; MPA, Harvard University JFK School of Government.

Reserve Officer Training Corps

Enrollment in Reserve Officer Training Corps (ROTC) programs is open to both men and women, and ROTC lower-level leadership courses are open to all students whether or not they contract with ROTC.

All services provide undergraduate and selected graduate students with the opportunity to combine academic study with a military officer's educational program. The three services conduct courses in their respective areas leading to a regular or reserve commission upon graduation. The Navy also offers a program leading to a regular commission in the Marine Corps.

Air Force Aerospace Studies

U.S. Air Force ROTC offers several programs leading to a commission in the U.S. Air Force upon receipt of at least a baccalaureate degree.

Standard Four-Year Program

This standard program is designed for incoming freshmen, or any student with four years remaining until degree completion. It consists of three parts: the general military course (GMC) for lower-division (normally freshman and sophomore) students; the professional officer course (POC) for upper-division students (normally juniors and seniors); and the leadership laboratory (LLAB) attended by all cadets. Completion of a four-week summer field training program is required prior to commissioning.

Modified Four-Year Program

Certain undergraduate and graduate students may be eligible for this program. It is offered to full-time, regularly enrolled degree students and requires at least five semesters of full-time college work (undergraduate or graduate level, or a combination). May only be available to students pursuing academic majors in demand. Those selected for this program must complete the field training program during the summer months as a prerequisite for entry into the professional officer course the following fall semester.

Leadership Lab

All AFROTC cadets must attend leadership lab (two hours per week). The laboratory involves a study of Air Force customs and courtesies, drill and ceremonies, career opportunities, and the life and work of an Air Force junior officer.

Other Air Force ROTC Programs

Other programs are frequently available based on current Air Force needs. Any AFROTC staff member in Boulder (303-492-8351) can discuss the best alternatives. Interested students should make initial contact as early as possible to create the best selection opportunity, as selection is on a competitive basis. There is no obligation until a formal contract is entered.

Air Force College Scholarship Program

Normally a scholarship board is held at the end of each semester for students who have at least one semester of full-time college credit. Prior participation in AFROTC may not be required to compete for these scholarships. Students can compete for scholarships in most academic majors. Students selected for this program receive scholarships that pay up to \$18,000 in tuition, a book allowance, nonrefundable educational fees, and subsistence each month, tax-free. These scholarships are available in all academic disciplines and are two to three years in length.

USAF Medical Programs

Qualified nursing students can compete for nursing scholarships. These scholarships can lead to a career as an Air Force officer, serving as a nurse. Students may also compete for a pre-health designator. If selected, they would receive a scholarship for medical school.

Air Force ROTC Course Credit

AFROTC credit for graduation varies with each college. Students should contact the appropriate college for credit determination.

Registration

CU-Boulder students who wish to register for AFROTC classes sign up for them through the normal course registration process.

Military Science (U.S. Army)

The Department of Military Science is a leadership program leading to an officer's commission in the Active Army, Army Reserve, or National Guard in conjunction with an undergraduate or graduate degree. Military science courses supplement a regular degree program and offer practical leadership and management experience. Scholarships are available for those that qualify. Additionally, financial benefits may be available for enlisted soldiers.

Four-Year Program

For college freshmen, the four-year program consists of two phases: the basic course (freshman and sophomore years) and the advanced course (junior and senior years).

Basic courses (MSI & MSII) cover Army history and organization as well as military leadership and management. Labs provide the opportunity to develop leadership experience while learning basic military skills. Participating in the basic courses incur no military obligation, except for those receiving an Army scholarship.

Advanced courses (MSIII & MSIV) cover leadership, tactics and unit operations, training techniques, military law, and professional ethics. Additionally, a 35-day summer leadership camp at Fort Lewis, Washington, is a requirement between the Junior and Senior year, and is a prerequisite for commissioning. Students enrolled in the advanced courses must have completed the basic courses (or the equivalent) and obtain permission from the professor of military science (PMS).

Two-Year Program

For college students entering as a sophomore, the two-year program consists of the advanced courses, preceded by a four-week summer ROTC leadership training course (LTC) at Ft. Knox, Kentucky. Inquiries into LTC should be directed to the Department of Military Science prior to completing the sophomore year. LTC is a paid internship and the academic equivalent to the MS1/MSII basic courses.

Prior service and enlisted soldiers who have completed basic training may be eligible to enroll in the advanced course without attending LTC or completion of the ROTC basic courses. Enlisted soldiers pursuing advanced placement must obtain permission from the PMS.

Scholarship Programs

College freshmen, sophomores, and juniors may be eligible for four-, three-, and two-year scholarships, regardless of academic major. Interested students must enroll in Army ROTC and meet eligibility requirements, including an army physical fitness test.

High school scholarship applicants may be eligible for four- and three-year college scholarships. High school students can apply during their junior year and before January 10 of their senior year.

All scholarship recipients receive tuition and fees, a \$1,200 book allowance, and a stipend of \$300–500 per month during the academic year. Students interested in scholarships should contact the enrollment and scholarship officer at armyrotc@colorado.edu, 303-492-3549, or 303-492-6495.

Simultaneous Membership Program

College sophomore and juniors who want additional leadership training, may participate with an Army Reserve or Army National Guard unit as an officer trainee. Students participating in this program earn approximately \$240 in monthly drill pay, plus a monthly ROTC stipend of \$300–500. Additionally, SMP participants receive Army National Guard or reserve tuition benefits of up to \$4,500 per year. Enlisted and prior service students retain their authorized GI benefits.

Army ROTC Course Credit

ROTC is an elective credit in most departments. Individual academic advisors verify if ROTC classes count toward the student's degree.

Registration

Amy ROTC classes begin with MILR prefix. Register for classes through the normal course registration process. For more information, contact the enrollment and scholarship officer at CU-Boulder at armyrotc@colorado.edu, 303-492-3459, or 303-492-6495. See also the AROTC website at www.colorado.edu/arotc.

Naval Science

Naval science course work is offered in the fall and spring semesters only. All naval science students enroll in NAVR 1010, 2020, 4010, and 4020. Those desiring commissions in the U.S. Navy enroll in NAVR 3020, 3030, 3040, and 4030 for upper-division work. Those desiring commissions in the U.S. Marine Corps enroll in NAVR 3101 and 4101 for upper-division work.

Scholarship Programs

NROTC offers two-, three-, and four-year scholarship programs, and two-year and four-year college (non-scholarship) programs. Navy scholarships may be earned while students are enrolled in the college program. Scholarship students receive tuition and fees, a \$375 book allowance per semester, and a \$250 per month subsistence allowance. This subsistence allowance gradually rises to \$400 by the student's senior year. College program students receive a \$350 per month subsistence allowance their junior year and \$400 per month subsistence allowance their senior year in the program.

Naval science (Navy option) students must complete one year of calculus, physics, and English, and one semester of American military history or national security policy, and a cultural course. Students should check with their naval science instructor to determine specific course offerings that fulfill the above requirements.

Degree Credits

The number of NROTC semester hours of credit that may count toward degree requirements is determined by the individual colleges. Students should therefore consider their college's policy when formulating their degree plan.

Commissioned Service

Opportunities for commissioned service are presently available in the unrestricted line (surface, subsurface, aviation, special warfare, and special operations) and staff corps (nursing) in the U.S. Navy. Opportunities in ground and aviation specialties are available in the U.S. Marine Corps. Students interested in other programs leading to commissions in either the U.S. Navy or U.S. Marine Corps are encouraged to contact the NROTC unit on campus. All commissioning programs require that the student be working toward, and receive, a college degree.

Faculty

Aerospace Studies Faculty

KEITH E. TOBIN, colonel, U.S. Air Force; chair; professor. BS, Rutgers State University of New Jersey; MS, SAAS.

KIM LANGLEY, major, U.S. Air Force; assistant professor. BA, University of San Diego; MBA, Webster University.

Eric P. Moore, captain, U.S. Air Force; assistant professor. BS, Regents College; MBA, St. Mary's University.

LAILA S. SAED, captain, U.S. Air Force; assistant professor. BS, University of Colorado; MBA, University of Utah.

JASON A. SCHLARB, captain, U.S. Air Force; assistant professor. BS, Montana State University; MBA, University of Phoenix.

Military Science (U.S. Army)

DAVID M. ROZELLE, lieutenant colonel, U.S. Army; chair; professor. BA, Davidson College; MMS, Marine Corps University.

MARTIN LOPEZ, sergeant major, commandant of cadets, U.S. Army; assistant professor.

JIM HODGE, lieutenant colonel (r); assistant professor. BA, Columbus College; MA, Webster University.

CARA MCLEAN, captain, U.S. Army National Guard; assistant professor. BA, University of Colorado Boulder; MA, University of Denver.

Naval Science

STEPHEN R. DINAUER, colonel, U.S. Marine Corps; chair; professor. BS, University of Wisconsin; MA, Naval War College.

LESLIE E. HIRKO, commander, U.S. Navy; associate professor. BS, United States Naval Academy; MSS, Marine Corps War College.

NICHOLAS S. CARDILLO, lieutenant, U.S. Navy; assistant professor. BS, United States Naval Academy.

NICHOLAS D. LEVINE, lieutenant, U.S. Navy; assistant professor. BS, University of Denver; MEM, Old Dominion University.

JUAN M. NAVARRO, major, U.S. Marine Corps; assistant professor. BA, University of Idaho; MA, Webster University.

NICHOLAS J. SCHONS, lieutenant, U.S. Navy; assistant professor. BS, Iowa State.

PAUL J. VALCKE, JR., lieutenant, U.S. Navy; assistant professor. BA, University of Arizona.

Technology, Arts, and Media Program

The ever-expanding landscape of the networked age requires new and adaptable skill-sets, within both academic and commercial paradigms. In order to address this need, the Technology, Arts, and Media Program, based within the ATLAS Institute, offers two undergraduate programs: a Minor in Technology, Arts, and Media (MTAM) and a smaller Certificate in Digital Media (CDM). The minor is intended for students who wish to pursue research and careers related to digital media, whereas the certificate is intended for students who are interested in the fundamentals of digital media production.

Certificate in Digital Media (CDM)

The Certificate in Digital Media (CDM) provides a fundamental understanding of information technology and digital media production. The program will motivate students to think critically about technology and its impacts upon society.

Certificate Goals

- to equip students with a basic digital media skill-set
- to transform students from passive users of technology into active producers of technology

Certificate Requirements

A minimum of 9 credit hours:

ATLS 2000, The Meaning of Information Technology
ATLS 3010, Digital Media 1
Invention and Practice Elective*

Student must maintain a 2.000 GPA within all CDM courses.

Students must earn a minimum grade of *C* in all courses counted for the certificate.

Course work used to satisfy CDM requirements cannot be taken *pass/fail*.

Core ATLS courses cannot be substituted (ATLS 2000, ATLS 3010).

*See tam.colorado.edu for a current listing of approved elective courses.

Minor in Technology, Arts, and Media (MTAM)

The minor in Technology, Arts, and Media (MTAM) provides a broad multidisciplinary perspective that integrates technological skills with a critical, theoretical, and historical understanding of technology, media, and the arts. The MTAM curriculum includes creative production courses, as well as classes that impart foundational knowledge and critical perspectives on the role of technology in society. Students from a wide range of majors receive instruction in digital media production, design, art criticism, computer programming, information technology, data visualization, media and societal analysis, and project development.

Minor Goals

- to prepare the next generation of artists, designers, and media producers for the networked age
- to give students the necessary technical, theoretical, and historical backgrounds so they can contribute to the development of new functionalities and aesthetics for computer media
- to facilitate the exploration of the intersection of technology and other specific disciplines
- to produce active and critically aware participants and producers of technology

Minor Requirements

A minimum of 21 credit hours:

ATLS 2000, The Meaning of Information Technology
 ATLS 3010, Digital Media 1
 ATLS 3020, Digital Media 2
 Historical and Social Implications Elective*
 Theories and Foundations Elective*
 Invention and Practice Elective*
 ATLS4010, Capstone

Students must maintain a 2.000 GPA within all MTAM courses.

Students must earn a minimum grade of *C* in all courses counted for the minor.

Students may not take more than one elective course from a single department (this does not apply to ATLS courses).

Course work used to satisfy MTAM requirements cannot be taken *pass/fail*.

ATLS core courses cannot be substituted (ATLS 2000, ATLS 3010, ATLS 3020, ATLS 4010).

A minimum of 15 credit hours must be taken on the Boulder campus.

Failing to meet the minimum grade for any individual ATLS core course twice will result in automatic removal from the MTAM program.

*See tam.colorado.edu for a current listing of approved elective courses.

Course Substitutions

- Course work not on the approved elective list (including course work from another University of Colorado campus, another institution, Study Abroad, or Semester at Sea) must be approved by the MTAM Faculty committee. Students must complete a Course Substitution Petition Request Form and attach supporting documentation (syllabus).
- Substitution requests will not be considered if the student has already satisfied the requirement with an approved elective course.

TAM Faculty

JOHN BENNETT, ATLAS director; professor, Department of Computer Science, Department of Electrical and Computer Engineering, Interdisciplinary Telecommunications Program. BS, MS, Rice University; PhD, University of Washington.

JILL VAN MATRE, ATLAS associate director. BS, Indiana University; JD, University of Colorado Boulder.

IAN HALES, instructor. BA, University of Colorado Boulder.

AILEEN PIERCE, instructor. BS, Carnegie-Mellon University.

DAVID SCHAAL, instructor. BA, BFA, MFA, University of Colorado Boulder.

JOEL SWANSON, TAM director; instructor. BFA, University of Colorado; MFA, University of California, San Diego.

College of Architecture and Planning 320

College of Arts and Sciences 322

Leeds School of Business 471

School of Education 482

College of Engineering and Applied Science 489

School of Journalism and Mass Communication 521

Law School 525

College of Music 537

Other Academic Programs 544

Course Descriptions

The following courses are offered on the Boulder campus during the 2011–12 academic year. This listing does not constitute a guarantee that any particular course will be offered during this year. Consult specific programs and major requirements within each school and college for more information. Also see the online Schedule Planner for details about course offerings. Changes in course descriptions may have occurred since catalog publication; see the online catalog for course description updates at www.colorado.edu/catalog.

Course Numbering

Always consult specific departments and programs within schools and colleges for restrictions, requirements, and prerequisites.

- **1000–2000 courses** are usually intended for lower-division students (freshmen and sophomores).
- **3000–4000 courses** are intended for upper-division students (juniors and seniors), and may require instructor's consent. Consult the program or department for other restrictions.
- **5000-level courses** usually require graduate-student status, but may be open to qualified undergraduates with instructor consent. Consult the program or department.
- **Courses at the 6000, 7000, and 8000 level** are usually open only to graduate students. Consult the program or department for restrictions.

Finding a Course by Course Number

Some departments list their courses in numerical order. For others, courses are sorted by 1) the first digit and then 2) the fourth digit. For example, all ENVD 2xx0 courses are listed together, then all ENVD 2xx2 courses, then all ENVD 2xx3, etc.

Abbreviations

Coreq.—corequisite

Lab.—laboratory

Lect.—lecture

Prereq.—prerequisite

Rec.—recitation

College of Architecture & Planning

Architecture

ARCH 3114-3. History and Theories of Architecture 1. Surveys architecture, landscape architecture, and urban design from 3000 B.C. to A.D. 1400, emphasizing developments in the Western world. Open to nonmajors on a space available basis.

ARCH 3214-3. History and Theories of Architecture 2. Surveys architecture, landscape architecture, and urban design from A.D. 1400 to the present, emphasizing developments in the Western world. Open to nonmajors on a space available basis.

ARCH 4010-6. Architectural Appreciation and Design. Introduces basic processes and principles of architectural design. Provides a basis for understanding and evaluating architecture. Open to AREN seniors and second semester juniors only.

Environmental Design

Studios

ENVD 2120-6 Design Lab: Planning + Urban Design. Exposes students to a sequence of design investigations that lead to the development of design concepts for critical evaluation and discussion. The intent of this intermediate design studio is to expose students to the fundamental design practices that are common to the disciplines of environmental design, planning and urban design, landscape design, and architectural design; these disciplinary areas share the responsibility for shaping the design environment. This design lab will focus on aspects of Planning and Urban Design in relationship to other disciplinary areas. Prereqs., ENVD 1004, 1052, 2001. Coreqs., ENVD 3122, 3124.

ENVD 2130-6 Design Lab: Landscape Design. Exposes students to a sequence of design investigations that lead to the development of design concepts for critical evaluation and discussion. The intent of this intermediate design studio is to expose students to the fundamental design practices that are common to the disciplines of environmental design, planning and urban design, landscape design, and architectural design; these disciplinary areas share the responsibility for shaping the design environment. This design lab will focus on aspects of Landscape Design in relationship to other disciplinary areas. Prereqs., ENVD 2120, 3122, 3124. Coreqs., ENVD 3003, 3004.

ENVD 3220-6. Planning Studio 2. See ENVD 2120. Prereq., ENVD 2120. Restricted to PLAN majors.

ENVD 3100-6 ENVD Design Lab: Architecture Design. Exposes students to a sequence of design investigations that lead to the development of design concepts for critical evaluation and discussion. The intent of this intermediate design studio is to expose students to the fundamental design practices that are common to the disciplines of environmental design, planning and urban design, landscape design, and architectural design; these disciplinary areas share the responsibility for shaping the design environment. This design lab will focus on aspects of Architecture Design in relationship to other disciplinary areas. Prereqs., ENVD 2130, 3003, 3004. Coreqs., ENVD 3114 or 3214, 3115.

ENVD 3320-2. Planning Practicum. Supervised practicum in some aspect of urban or regional planning. Prereq., ENVD 3220.

ENVD 4300 (3-6). Advanced Design Lab. Design lab exploring new and emerging themes in design. May be repeated up to 12 total credit hours. Prereq., ENVD 3300.

ENVD 4320-6. Planning Studio 3. See ENVD 2120. Prereq., ENVD 3220. Restricted to PLAN majors.

ENVD 4340 (4-6). Landscape Design Studio. Studio in landscape design. Prereq., ENVD 2110.

ENVD 4360 (4-6). Historic Preservation Studio. A design studio exploring emerging issues and practices in historic preservation. Prereq., ENVD 3310.

ENVD 4420-3. Senior Planning Seminar. Advanced seminar focuses on theoretical concerns and practical issues inherent in environmental design planning. Views concerns and issues in terms of setting, processes, and planning outcomes. Provides a critical synthesis of the inherently interdisciplinary nature of planning education. Open to planning seniors only, or by instructor consent.

ENVD 4510-6. Architecture Studio 3. The third of the four upper-division studios focuses on concepts of program, architectural meaning and human behavior in buildings. Through a number of design exercises, students learn how these factors help shape buildings. Prereq., ENVD 3310. Formerly ENVD 4310.

ENVD 4550 (4-6). Urban Design Studio. A studio exploring emerging issues and practices. Prereq., ENVD 3310 or 3320.

ENVD 4710-6. Architecture Studio 4. The last of the four upper-division studios focuses on concepts of building technology, context and environmental sustainability. Prereq., ENVD 4510. Formerly ENVD 4410.

History and Theory

ENVD 1004-3. Introduction to Environmental Design Theory. Introduces students to the complexity of forces that interact to shape the designed environment. A lecture sequence and parallel set of design exercises exposes students to the theory and practice of environmental design, and to the important issues that guide the work of architects, landscape architects, urban designers, and urban planners. Open to nonmajors on a space available basis.

ENVD 1010-3. Design Appreciation. Designed for non-ENVD major students who are interested in pursuing a degree in design. Provides a foundation for viewing the world through the eyes of a designer and gives a broad overview of various design professions including architecture. Controlled enrollment.

ENVD 1104-3. Introduction to Environmental Design Methods. Explores the forces and conditions that interact to shape the designed environment. It does so through a lecture sequence and parallel set of design exercises introducing students to the theory and practice of environmental design. It develops student understandings of the central role design thinking plays as the unique process used to effect appropriate change in the designed environment.

ENVD 3004-3. History of Landscape Architecture. Investigates landscape architectural thought from antiquity to the present. Begins with a review of Greek ideals and proceeds—through an appreciation of landscape and nature as essential cultural constituents—with a survey of major themes such as Renaissance Humanism, the Picturesque, and the varieties of Modernism, Neo-Eclecticism and most recent directions in landscape and garden design. Prereq., ENVD 2120. Restricted to College of Architecture and Planning undergrads.

ENVD 3124-3. Issues in Planning History. Broadly introduces physical environmental planning in the U.S., examining both historical roots and recent trends in American planning concepts and implementation. Emphasizes an analytical and critical approach to historical and contemporary planning issues, mechanisms, and cases. Prereqs., ENVD 1004 and 1104. Open to nonmajors on a space available basis.

ENVD 4114-3. History of American Architecture and Urbanism. Surveys architecture, landscape architecture, urban design, and planning in the U.S. from ca. 1600 to the present. Prereq., ARCH 3214 or equivalent, or instructor consent. Open to nonmajors.

ENVD 4314-3. Architectural Theory. Surveys, through lectures and readings, the major historical developments and contemporary directions in architectural theory. Prereqs., ARCH 3114 and ARCH 3214.

ENVD 4364 (1-6). Special Topics: History and Historiography of Environmental Design. Provides an advanced seminar on history and historiography of environmental design, e.g., American dwellings. May be repeated for credit by petition. Prereq., ARCH 3214, equivalent, or instructor consent. Restricted to juniors and seniors. Open to nonmajors on a space available basis.

ENVD 4764 (1-6). Special Topics: Theory and Criticism in Environmental Design. Provides an advanced seminar on theory and criticism in environmental design, e.g., architecture now and introduction to design theory and criticism. May be repeated for credit by petition. Prereq., ARCH 3214, equivalent, or instructor consent. Open to nonmajors on a space available basis.

ENVD 4794-3. History of Urban Design and Planning. Examines history of European and American planning and urban design in the late 19th and 20th centuries.

Methods and Techniques

ENVD 1052-3. Design and Communication: Digital. Using both lectures and drawing exercises, this class extends understandings of the representational conventions used by the design professions through its introduction to the possibilities

offered by emerging digital techniques for the depiction of designed artifacts and environments, allowing students to extend and enhance their understandings of advanced practices for design visualization, representation, and communication.

ENVD 1102-3. Design and Communication: Analog. Using both lectures and drawing exercises, this class extends understandings of the representational conventions used by the design professions through its introduction to the possibilities offered by traditional techniques for the advanced practices for design visualization, representation, and communication. Restricted to ARPL majors.

ENVD 2152-3. Geographic Info Systems. Focuses on construction and use of computer-based information systems to represent and manipulate geographic data. Emphasizes the recording, mapping, and transforming of data for analysis and use by planners.

ENVD 3022-3. Technical Photography. Introduces students to the technical and practical aspects of making photographic images: the workings of the camera and lens, principles of depth of field, black and white film processing, printing, and basic darkroom procedures. Open to nonmajors on a space available basis.

ENVD 3052-3. Introduction to Computer Methods in Environmental Design. Surveys existing and emerging computer methods used in the environmental design professions, with an introduction to computer programming. Prereq., MATH 1300 and PHYS 2010, or instructor consent. Open to nonmajors.

ENVD 3122-3. Research Issues and Methods in Design and Planning. Explores topics of current interest in planning. Looks at the development and social consequences of the neighborhood movement, forms of municipal and regional governments, regional settlement patterns, and new communities. Introduces selected methods from the social sciences used by planners and urban designers. Prereqs., ENVD 1004 and 1104.

ENVD 3152-3. Introduction to Computer Graphics Applications. Explores principles and uses of computer graphics in design. Topics include creation and modification of complex two- and three-dimensional objects; orthographic and perspective views; use of color; input using mouse and digitizer; output using screen, plotter, matrix printer, and slides; automated aids for form generation and manipulation; and analysis of current and future trends of computer usage for design. Prereq., ENVD 3352.

ENVD 3212-3. Color Theory. Illustrates color media techniques for the preparation, composition, and presentation of landscape and built environment drawings. Prereqs., ENVD 2002; 2110 or 2120.

ENVD 3252-3. Computer Graphic Programming. Provides an introductory computer programming course designed to teach the capabilities of a computer in providing graphic representations of environments, including buildings. Open to nonmajors.

ENVD 3352-3. Architectural Computer Media. Introduces the integration of computing and the architectural design process and related representational tasks. Studies common computer-aided design programs, emphasizing two- and three-dimensional and animation techniques.

ENVD 4052-3. Digital Presentation and Portfolio. Introductory course creating interactive web sites. Covers use of Hypertext Markup Language (HTML) and Flash to create linked pages containing text, images animations, menus, and buttons. Covers principles of site navigation, page layout, and graphic design for designers and planners. Credit not granted for this course and ENVD 2352.

ENVD 4112-3. Architectural Graphics 1. Illustrates techniques of graphics communication and presentation for architectural design. Includes advanced delineation and use of color. Prereqs., ENVD 2002 and 2110.

ENVD 4122-3. Advanced Technical Photography. Focuses on working with a variety of alternative photographic processes intended to give students an array of photographic techniques to incorporate into studio course presentations and portfolio work. Processes include hand-applied color to black and white images, using two or more negatives to produce black and white combination prints, shooting color slides to produce graphic arts, high-contrast black and white prints, and documentary photography of Colorado architecture and urban landscapes using color slide film. Students must provide their own 35mm SLR camera. Prereq., ENVD 3022 or ARTS 2191 or instructor consent.

ENVD 4152-3. Computer Graphic Applications. Introduces the mechanics of entering 2-D images and 3-D objects into the computer. Once entered, graphics are interactively rotated in space, walked through, and displayed in perspective from

any position. Also covers the mechanics of other computer programs allowing additional manipulation of images and objects.

ENVD 4212-3. Architectural Graphics 2. Covers development of an architectural set of construction documents combined with job administration, field observation, and guest speakers from related construction and architectural disciplines. Prereqs., ENVD 2002 and 2110.

ENVD 4322 (1-6). Special Topics: Graphics. Provides an advanced seminar on special issues in design communications. May be repeated for credit by petition. Prereq., upper-division standing. Open to nonmajors on a space available basis or by instructor consent.

ENVD 4352 (1-6). Special Topics: Computer Methods. Topics include animation and environmental simulation, computational methods of technical evaluation and optimization, and computational mapping and analysis. May be repeated for credit by petition. Open to nonmajors on a space available basis.

Physical Factors

ENVD 2003-3. Ecology and Design. Introduces basic principles and techniques of ecology as they relate to the design and understanding of the built environment. Includes a study of hazards and the impact of modern technology on the natural and built environments. Open to nonmajors on a space available basis.

ENVD 3003-3. Site Planning. Introduces the site planning process including: site analysis and its relationship to building program and site concept, and preparation of site plans. Emphasis is placed on the planning of the physical site through a thorough understanding of process, land use, site constraints and synthesis of ecological, functional and aesthetic considerations in the site planning process. Prereq., ENVD 2120. Restricted to College of Architecture and Planning undergrads.

ENVD 4023-3. Environmental Impact Assessment. Provides a field-oriented seminar in current environmental impact controversies. Gives attention to history, theory, and application of impact analysis at state levels for designers, land-use planners, and others involved in resource decision making. Prereq., instructor consent. Open to nonmajors on a space available basis, by instructor consent.

ENVD 4233-3. Environmental Aesthetics. Explores the interdisciplinary field of environmental aesthetics, examining the history of landscape tastes, theoretical approaches to the study of aesthetic responses, and contemporary attempts to incorporate matters of aesthetics in American planning. Emphasizes developing analytical and critical approaches to aesthetics in the public realm.

ENVD 4363 (1-6). Special Topics: Physical Factors in Environmental Design. Includes such topics as appropriate technology, public policy and natural hazards, organization of the designing and building process, and physical elements of urban development. May be repeated for credit by petition. Prereq., upper-division standing.

Social Factors

ENVD 2001-3. Human Behavior in Design and Planning. Examines reciprocal relationships between people and their built and natural environments, tracing major issues and approaches in design research to understand how people are influenced by the environment and how they can create healthy, just, and livable places.

ENVD 3001-3. Environment and Behavior. Examines the social and behavioral aspects of relationships between people and the designed environment. Gives special attention to antecedent factors (why we have the environments we do), implications of given arrangements for special population groups, and responses to incongruent environments. Open to nonmajors on a space available basis.

ENVD 4311-3. Housing Policies and Practices. A seminar providing students with a descriptive knowledge and analytical understanding of the use and development of residential settings in different political economies, globally divided into advanced capitalist nations, collectivist economies, and the third world. Prereqs., ENVD 2001, 3001. Open to PLAN majors only, except by instructor consent.

ENVD 4361 (1-6). Special Topics: Social Factors in Design. Addresses variable topics in the relationship of human experience and behavior to the built environment, e.g., social research methods in environmental design. May be repeated for credit by petition.

Technology and Practice

ENVD 3015-3. Introduction to Historic Preservation. Introduces methods for identifying historic structures and evaluating their materials. Considers techniques for preserving and restoring and legal options for promoting preservation efforts.

ENVD 3115-3. Introduction to Building Materials and Systems. Surveys building methods, materials, and assemblies from the designer's perspective.

ENVD 4005-3. Design and Planning Law. Teaches students how to research the various codes and to draft and pass laws. Covers environmental, water quality, property, zoning, and building codes and laws. Open to nonmajors on a space available basis.

ENVD 4035-3. Solar and Sustainable Design. Introduces aspects of solar technology relevant to the environmental design professions. Includes readings and lectures on the nature of energy limitations, energy needs, and the potential role of solar energy in meeting these needs. Prereq., PHYS 2010 or equivalent. Open to nonmajors on a space available basis.
